ANSWERS TO CORRESPONDENTS.

A NATION'S HONOR.

FAR away in the northwestern corner of Washington Territory is a little reservation occupied by the Puyallup Indians. They number 560 individuals, and the reservation covers about 18,000 acres of land, so that they have about thirty-two and a half acres apiece, or not far from a quarter section—160 acres—to a family of five persons. These people are entirely self-supporting and derive four-fifths of their living from the cultivation of their farms. These have been allotted to them on the reservation, and they hold them solely by allotment certificates issued by the Government in the year 1881.

The Puyallup Indians are to all intents and purposes civilized. They are farmers, mechanics, laborers. They earn their bread by the sweat of their brow like other men. Two-thirds of them have made valuable improvements on their lands, cleared off heavy forests, built houses, cultivated lands, provided homes for their families. Besides this they have, without assistance, purchased an eight horse power thrashing machine, seven mowing machines, sixty-eight horse rakes, ninety-three wagons, and all that is necessary for farming in the way of plows and smaller tools. They have teams and cattle, their lands are fenced, they are a well-to-do farming community. Their children, to the number of sixty or eighty, attend the school at Puyallup, which is within one-half mile of the limits of Tacoma.

Almost without help these Indians have raised themselves from a condition of barbarism to one of civilization. They are constantly improving. Each year the attendance at the school has grown larger, and it was never so good as last year.

One thing they have to fight against, one thing discourages them in their attempts to make their farms valuable, leads them to feel that it is useless to work hard, paralyzes their industries. They do not own their lands.

The allotment certificates recite that a certain man is entitled to a certain specified tract of land, and that he "may take immediate possession of said land and occupy the same, and the United States guarantees such possession and will hold the title thereto in trust for the exclusive use and benefit" of the Indian named and his "heirs, as long as such occupancy shall continue." The certificate then goes on to state that it is not assignable, except to the United States, or

to other members of the tribe. There is nothing in it, however, which gives the holder any reason to believe that he has any right to occupy this land permanently. He is a tenant at will. At any moment he may be evicted at the pleasure of a Government officer. At any moment he may be expelled from the home which he has made for himself, losing it and all the labor which he has expended on it.

These Indians are deeply attached to their land. This country has from time immemorial been their home. Here their fathers were born, lived and are buried. Here this generation have passed their childhood and their youth. Here their children were born. It is their home. On these lands this simple people carried on the great struggle which has lifted them from barbarism to civilization. They cleared away the virgin forest and fenced in the wild land. Their hands subdued the stubborn soil; their labor converted it into fertile farms. Once barren it is now productive; once worthless, it is now valuable. By every tie of sentiment and affection they are bound to these homes; by every right which patient industry confers, these lands are theirs. To take from them these farms, with the improvements which they have made on them, would be injustice, would be outrage, would be robbery.

This is just what the United States tried to do. The agent for the Puyallup Indians, knowing the attachment that they feel for their lands, knowing that they had all made their locations, built houses, and made some improvements on their allotments, and that they are intensely desirous to obtain patents for their lands and would by no means consent to sell them, sent on to the Interior Department a statement of the condition of things at the agency and urged the prompt granting of the patents to the people. This is the reply he received:

DEPARTMENT OF THE INTERIOR,
WASHINGTON, D. C., March 3, 1885.
Sir: I have your telegram concerning the patents to the Puyallup Indians. I do not think it for the interest of the Indians to have the patents issued. The land they occupy is valuable for farming and town site purposes and ought to be sold and the money used to establish them in another place. I shall therefore decline to allow the patents to issue, hoping Congress may make suitable provision for their removal and the sale of their land and the investment of the money for their benefit in some other place. Very respectfully,

H. M. TELLER, Secretary.
MR. EDWIN EELLS, U. S. Indian Agent, Tacoma, Wash.
Their homes were to be taken from them and sold and they with their families were to be moved off to some desert place, and having been located there were to be encouraged to become civilized, to become self-supporting. This is the Government method of encouraging the Indians to follow the white man's road.

The robbery thus contemplated was never carried out. Secretary Teller went out of office before this could be done, and the present administration has recommended the granting of the patents to the Puyallup Indians. But the action of this Cabinet officer is a fair example of the shameful course of fraud and oppression carried on by the Government toward the Indians.

THE INTERNATIONAL MATCH.

THE letter from the National Rifle Association here to the Association in Great Britain has up to this writing brought no response. This is not surprising, since it is a matter not to be lightly decided, and besides the lapse of time has hardly been great enough to permit a reply to reach our shores. There is considerable doubt whether or no a match will be held this year. With Sir Henry Halford lying at death's door, the American marksmen lose the service and active aid of one who has borne almost the entire burden of organizing and carrying out previous matches between the two countries.

The Council will in due time consider the American letter and do what they can to bring about a contest. It is not at all unlikely, however, that the response will come in the form of a counter proposition for a match to be fought on British soil. The victory now lies with the foreign team. We are a defeated company, and the most natural way would be to send a challenge for the championship and follow it up with a strong team. It may strike the British riflemen as smacking somewhat of presumption for a defeated team to send over an invitation for the victors to come and give a chance for reclaiming the lost laurels.

The great Wimbledon meeting is a fixture. An American team going abroad may be sure of finding the very pick of the marksmen from the entire Kingdom gathered there, and a victory over such a team on such a field would be one of

which the Americans might be justly proud. Such a step would be the natural one to take, and thus the onus of getting back their laurels would rest on our foreign cousins. We regret that they show no disposition to take away our small-bore honors, and our regret would be more than doubled if the great army of Volunteers should ever follow the example of their small-bore, long-range comrades and rest quietly in the ranks of the defeated. At present we on our side the water have but a partial victory to our credit. We know we have the better long-range weapons. We are certain that we can make the better military rifle, and find men to shoot them, too. Let us do it, and in a manly fashion, too, by going over with a strong team, armed with home-made weapons, loaded with home-made ammunition, and fighting both the British weather and the British shooter.

Just at present there does not seem to be very much excitement ament the proposed renewal of international hostilities, but then we have a way of jumping in with a rush, getting ready for victory, getting the victory, and getting back to business again, which is peculiarly our own. If an American team is to be organized, a good percentage of it ought to come from other than the vicinity of New York. Boston and the West ought to contribute men. The Pacific slope keeps up a great deal of shooting of a sweepstake sort. Let a few of the California shooters come over and gain the skill in long-range work they have in short-range shooting, and there will be no trouble about satisfactory results.

SPRING WOODCOCK.—A gentleman who recently returned from Washington, informs us that woodcock are now being served up there at certain restaurants. He was told by John Chamberlain, that he was receiving about 25 woodcock daily. The idea of serving up nesting birds—as woodcock killed during the month of March certainly are—is sufficiently shocking and calls attention to the miserable inefficiency of the game laws of the District of Columbia, and the equally miserable inadequacy of their enforcement. It is a shame that the seat of the United States Government should be the scene of such an abomination as eating breeding woodcock. The sportsmen of the District of Columbia are entitled to some consideration at the hands of Congress, and a suitable game law ought to be introduced and passed without delay.

INITIALS ARE NOT NAMES.—If every correspondent who writes to the FOREST AND STREAM on business should sign his bare initial instead of his name, the paper would shortly suspend. Some stupid folks do send in such semi-anonymous letters, and they are always a source of bother and vexation of spirit. Sometimes such letters contain money; sometimes the writers want something sent to them; sometimes the letter relates to a sick dog. There are all sorts of demands, requests, inquiries, written by people who do not know enough to sign their names. It takes all sorts of people to make up the world. Even fools have their place in the economy of human nature, for as said the Elder Cato, wise men may learn from them.

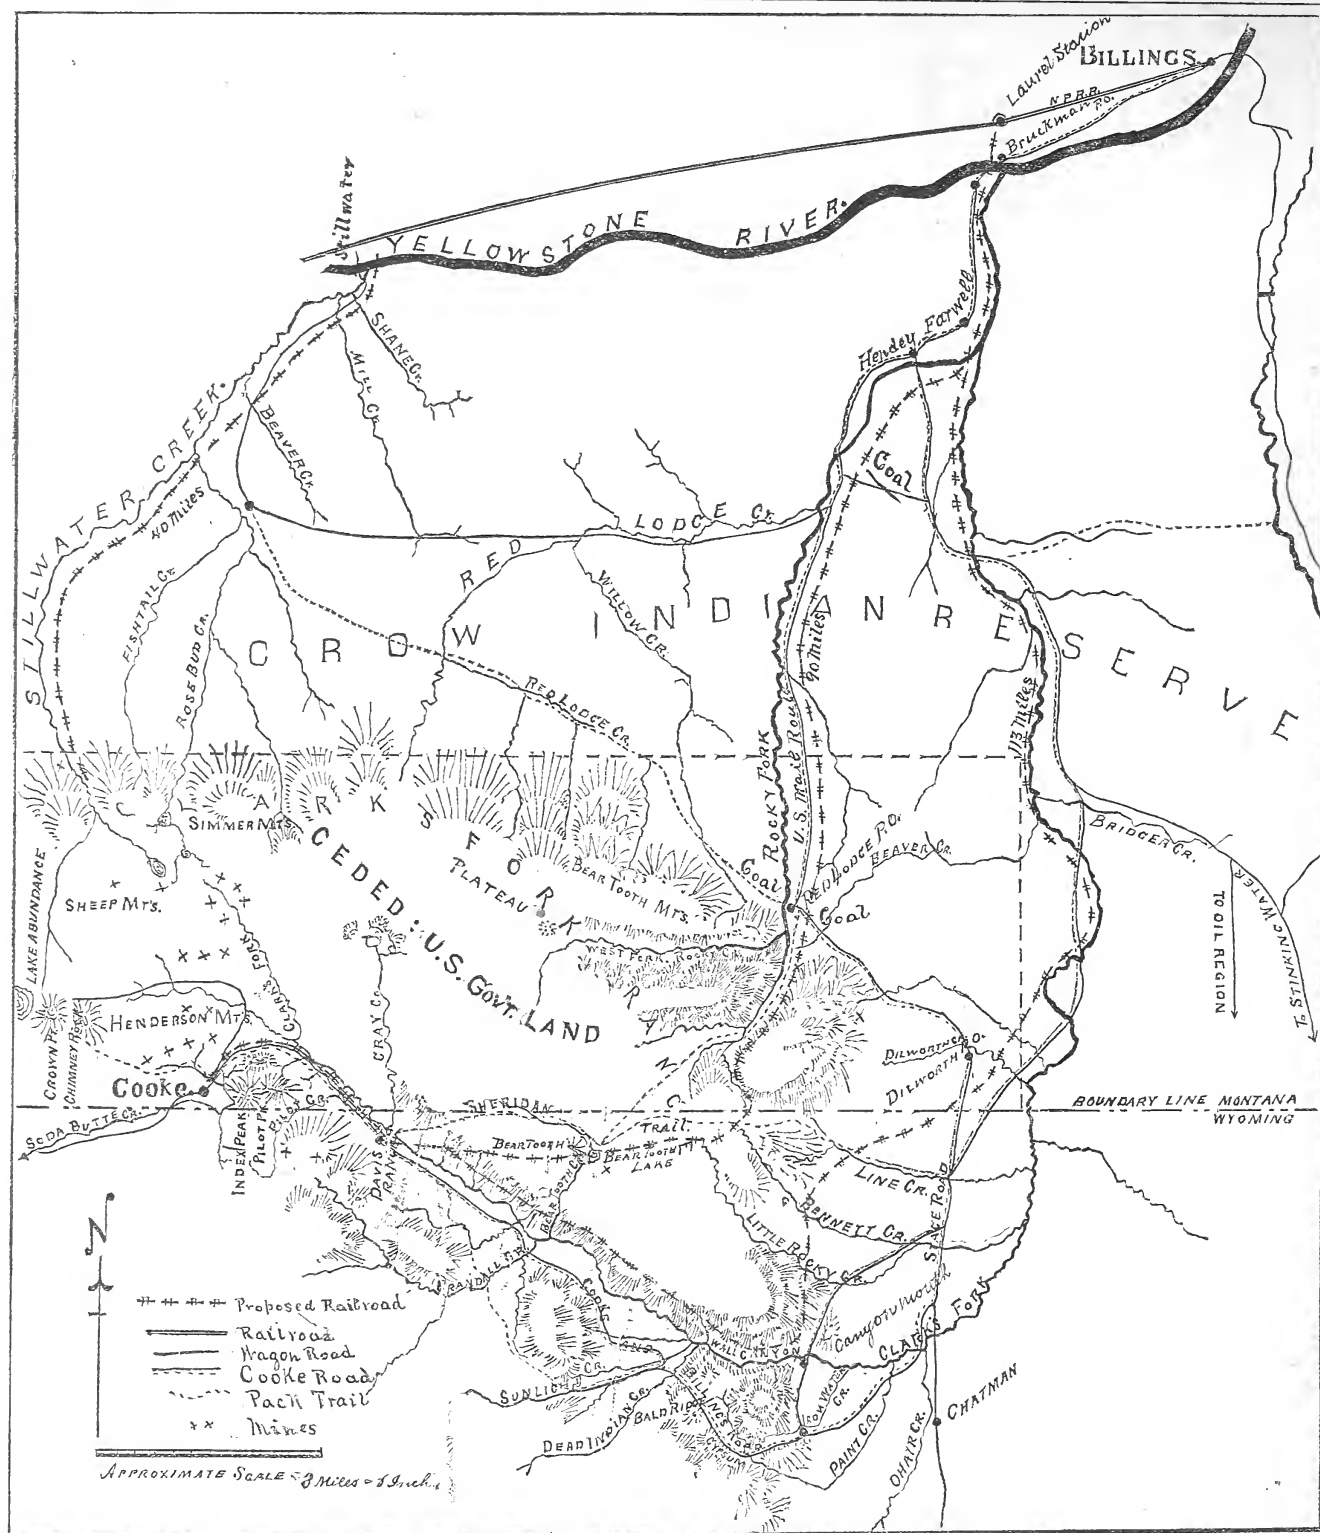

SPRING SHOOTING.—A correspondent suggests that the speediest way to legislate against spring shooting would be to secure the enactment by Congress of a law forbidding the spring killing of migratory birds. Unfortunately, however, Congress has no jurisdiction in the matter; it can only legislate with reference to the game of the Territories. The stupid and bungling fashion in which Congress handled the buffalo question a few years ago, showed that little intelligent game conservancy is to be expected from that body, even where it has jurisdiction. The abolition of spring shooting must be secured by State legislation.

CHICAGO HAS A QUAIL NET FACTORY. Quail nets are more familiar institutions in the South and Southwest than in other parts of the country. Their use ought to be forbidden everywhere. The only mitigating feature of the netting business is that some of the live birds are bought by sportsmen to restock depleted game grounds.

THE YACHTING SEASON of 1886 promises to be more active than that of 1885. The canoeing season will be made notable by the international races.

THE HOUNDER'S MOTTO.—A deer in the water is worth two in the woods.

THE MILLINER'S MOTTO.—A bird in the hat is worth two in the bush.

RAILROAD ROUTES TO THE CLARK'S FORK MINES.

A BOOM FOR COOKE CITY.

THESE are great days for Cooke. That inconsiderable and almost wholly undeveloped mining camp is brought into undeserved prominence by the project to build a railroad to it from Cinnabar, the end of the Northern Pacific Park line, up the Yellowstone River to the East Fork, and up that and Soda Butte Creek almost to the divide. What the mines at the head of Clark's Fork may contain no living man knows to day. We have seen specimens of ore, said to be from this region, that were enormously rich, but whether they came from these mines or not we are unable to say. Ore specimens are not difficult to obtain in the Western country, and there never was a prospector yet who lacked specimens to show that his mine was one of the most valuable ever discovered. Cooke City has been fortunate in that a number of prominent men are interested in the mines on the head of Clark's Fork, and they have brought to bear on Congress influences which have resulted in a favorable report by committees in the Senate and the House of Representatives on a bill to grant the right of way to a railroad through the Park. The rights of the people are thus most seriously threatened.

The practicability of this route is not, so far as we have been able to learn, vouched for by any disinterested person. On the other hand, we have the testimony of Mr. Arnold Hague, of the U. S. Geological Survey, who has examined the Third Cañon of the Yellowstone River, that it is extremely rough, and that the construction of a railroad through it would be attended with very great difficulties. Such a road even if constructed would be a mere side line, having no traffic except what it might draw from the mines; and it is as yet wholly uncertain whether this would be much or little, whether it would or would not justify the construction of this line.

So far as actual business possibilities go, any one of the routes on the east side of the range, *i. e.*, the Stillwater, the Rocky Fork, or the Clark's Fork lines, is much more favorable. The Stillwater route would tap the mines at the foot of Henderson Mountain, would open up a fine grazing country, and a region producing coal, marble and gypsum, but would not for the present have much local traffic. The Rocky Fork route would develop a coal region and would tap all the mines of the district. The Clark's Fork route, after running for about eighty miles over a level prairie, where the cost of construction would be very slight, would turn up the river, and, passing above the cañon, proceed to the mines. From this it would bring down their ore, and it would be an easy route for the tourists who might wish to visit the wonderful Hoodoo country. It would open up a great stretch of valuable agricultural and grazing country into which settlers would pour as soon as permitted by the Government. A spur to Rocky Fork would develop the excellent coal mines of that region. Another spur to the south would reach the new petroleum fields of Wyoming, whose development promises such rich results. The road would not be dependent on the possible results of mining at the head of Clark's Fork. It would have a far more certain, substantial and enduring source of revenue than this.

General Anderson, of the Northern Pacific R. R., is quoted as stating that there is no practicable route to those mines from the east side of the range; but General Anderson has never in person been over the ground referred to, nor, so far as we can learn, have any of his subordinates. The U. S. topographical surveys have been over the ground and their reports speak of slight divides or easy passes between the heads of Soda Butte Creek and Clark's Fork, and the same is true of the heads of Soda Butte and of Stillwater.

We print this week another map of the region under dis-

cussion, showing the results of rough surveys of the three routes on the east side of the range, with the approximate lines to be followed and the length of each. As we have already pointed out, the Stillwater line can be still further extended up that stream to the foot of Henderson Mountain. These platings are the results of a careful examination of the ground, and will be found to be approximately correct.

There seems to be a very fair prospect that a road up Clark's Fork will be built, whether the Cinnabar & Clark's Fork Railroad obtains its right of way or not. Articles of incorporation for the Billings, Clark's Fork & Cooke City Railroad were recently filed at Billings by Messrs. Thomas Hanlon, Philip M. Gallaher and Geo. B. Hulme, of Billings; Geo. V. Sims, of New York, and Henry Kelley, of Philadelphia. The capital stock of the corporation is \$1,000,000 in 10,000 shares of the par value of \$100 each. This corporation has its engineer now in the field making surveys, and it is stated that the work will be pushed forward as rapidly as possible. Another road is projected up Stillwater, and surveys have been at work along this line.

Under any circumstances, therefore, it seems probable that Cooke will have its railroad, and on this point the capitalists of that district and their friends in Congress may feel easy in their minds. The development of the region does not call for the giving away by Congress of a portion of the people's pleasure ground. That must not be tampered with, must not be taken away from those to whom it belongs, to put dollars into the pockets of a few men. The region must not be thrown open so that, as was the case last year, a lot of people can rush in and stake out coal claims all over one of the most beautiful and interesting portions of the Park. The game and the timber, now so abundant along the East Fork, must not be handed over to the tender care of the hide hunter, the tie chopper and the charcoal burner.

The Park must be preserved.

The Sportsman Tourist.

A SLICE OF LUCK.

HOW fully, as he casts a retrospective glance over the vanished years, the hunter realizes that there are days and days. Days when, in spite of all his ingenuity and perseverance, the shades of night turned his steps homeward weary and unsuccessful, or days when, with the minimum of effort, a Benjamin's portion fell to his lot; when the unfriendly snow, hardened by last night's frost after yesterday's thaw, snapped crisp warnings of danger to far-away, vigilant ears, or when, powdery and silent, it muffled and deadened every footfall and bore him on to glorious victory; when the fickle and eddying gusts carried to remotest hiding places the taint of his presence, or when the steady and favoring breeze baffled the keenest-scented monarchs of the wildwoods; when the untimely crackle of a broken twig at the crucial moment forfeited the ore chance of the day, or when, no matter whether noisy or still, his star of luck was ever in the ascendant; again, when, worst of all, the hunted and wounded game eluded his most persistent search only to die a lingering and lonely death, or when, even with the most risky and all but hopeless opportunities, bullet upon bullet sang prompt and decisive death knells. We have all known our good and our bad days, but we naturally prefer to permit memory to linger on the clattering reminiscences of the lucky ones; so I now recall what was, taking all things into consideration, the most fortunate hunting experience of my life.

I was living at the time on Grand Prairie, a small settlement situated some thirty or forty miles southeast of Kamloops and eighteen or twenty from the nearest accessible point of the present Canadian Pacific Railway. In spite of its pretentious name the prairie is only a narrow valley a couple of miles or so in width, and probably three or four times as long, with a small stream, dignified by the title of Salmon River (I suppose on the *lucus a non lucendo* principle, for, so far as my observation goes, it is destitute of salmon), winding through it. The trend of the valley is east and west. On the north and south are timbered foothills, covered with a luxuriant growth of fir and pine, running up to meet the precipitous heights that cap the mountains. Here and there the ruddy volcanic cliffs rise almost directly from the grass-covered plain without any intervening slopes, and from their crowns a further stretch of rolling, timbered ground leads to the uppermost tier of rocks. Along the mountain breast, with its dark, deep gulches, its grassy and brush-dotted slopes, its tiny, rippling, crystal streams, that are sucked up by the thirsty land before they can reach the prairie, the deer wander in happy and safe seclusion, save when the Shuswap Indians, with whom this is a favorite hunting ground, are laying in a supply of meat, or when some venison-appreciating settler leaves his work-a-day life for a while to enrich the family larder with a fat buck.

In the winter of 1881-2, a number of Indians were camped on the prairie, and they several times told us, during their periodical visits to the house, of a mountain sheep with fine horns which they had occasionally seen on their hunting expeditions but had failed to capture. Now a genuine Rocky Mountain sheep was game of a class I had hitherto had no opportunity of hunting, and I felt proportionately anxious to try my luck, though it seemed almost absurd to expect success where so many had met with disappointment. However, the thought kept forcing itself upon me that such a chance might never present itself again, seeing that we were separated from the Rockies by at least two minor but far from despicable chains of mountains, the Selkirks and the Gold Range, and that this was the first sheep seen in our vicinity for a number of years. While hesitating and uncertain whether to start on such an apparently wild goose chase or not, one of the neighbors, who had been on the top of the mountains to the north looking for stray horses, dropped in to say that during the day he had seen thirty or forty deer and the coveted sheep—the latter leisurely picking his way along a rocky sidehill half a mile or so from him. This news decided me, and I prepared for a hunt on the morrow.

When morning dawned I took my rifle and a lunch in case of any delay and started up the mountain. Very fortunately for the success of the enterprise there had been a slight snowfall during the night, and as I toiled upward I noted with hopeful satisfaction the excellent tracking and the noiselessness of my steps. The whole mountain was familiar ground, for I had killed deer in almost every part of it, so there was no difficulty in selecting the proper course to pursue to reach the place where the sheep had last been seen. Straight upward till the base of the highest line of cliffs barred further progress in that direction, and then I turned at right angles along the face of the hill, and cautiously picked my steps among the scattered rocks that had fallen from above, till I gained a point up which a steep but practicable path to the summit ascended. Right on the trail there was a solitary downward track that set my pulses throbbing tumultuously, for, though I had never seen a mountain sheep's hoof-prints before, I knew I saw them then. With watchful gaze and ready rifle, step by step, I followed down the mountain. Down went the track lower and lower, over grassy slopes, where the mildness of the morning was already wasting the new-fallen snow; through belts of fir and pine, where my senses needed to be doubly on the alert. Onward and downward the sheep had gone, never stopping to nibble the grass or to crop the tiny shoots of the underbrush, but ever pressing steadily downward. Downward till I knew that I was nearing one of the points where the lower cliffs directly overlooked the prairie; downward, till my heart began to sink and my mind to be filled with misgivings lest the game had eluded my pursuit by crossing the valley to the possibly more congenial, because more inaccessible, heights to the south.

Near the southern edge of the last narrow fringe of timber that lay between me and the front of the mountain, the sheep had for the first time varied from the unswerving directness of his march, and had zigzagged in and out a little among the brush. By this time the snow had almost disappeared, and it had become a matter of some little difficulty to follow the windings of the track, but still the melting snow had softened the ground sufficiently to leave the hoof-prints perceptible enough on close examination. Slowly and patiently I followed the animal's steps, stealthily moving, yard by yard, till finally I stood behind the outmost tree, looking anxiously across the hundred and fifty yards of open rocky ground that alone separated me from the bluff in front. More than ever did I fear that the chase had been in vain, for the only possible bit of cover that could shelter the sheep was a diminutive stunted juniper growing alone about fifty

yards from where I stood. The brush was so dwarfed and small as to seem quite incapable of concealing any animal as large as the one whose trail I had been following; but as it was the only spot of cover within sight, I watched it much as a cat would watch a mouse-hole. As I stood, with rifle cocked and half raised, debating in my mind what course to pursue, a movement behind the juniper brought the rifle to my shoulder just in time to cover the shoulder of the ram as he rose quietly from his resting place, and leisurely stretched himself, apparently quite unalarmed, but with his head half turned toward me, a clean broadside shot. The low bush concealed his legs, and thus prevented me from appreciating his appearance properly; but I must confess that my first feeling was one of keen disappointment, for he looked squat and ungainly to eyes accustomed to the more slender and graceful deer. His head, too, surmounted by its monstrous horns, was seemingly so utterly out of proportion as to largely enhance the first impression of his ungainliness.

How long I stood in that fashion drinking in every detail of his appearance—and I am candid enough to admit that his style became much more striking as our acquaintance progressed—I don't know, possibly not more than two or three seconds, though it certainly seemed as many minutes. A slight motion on his part suggested meditated flight, so I pressed the trigger and assisted him to make up his mind a trifle more promptly perhaps. Half a dozen rapid bounds to the left carried him to the brink of a steep cleft in the rocks down which he literally slid on all fours. There was no snow and on the bare ground I could not see a drop of blood. I ran to the edge of the gulch so as to get another shot if he attempted either to run down to the prairie or to climb the opposite bank, but there was no sign of life. Down in the bottom of the ravine, however, on a patch of snow which the sombre shade of the sheer cliff had preserved, was a long streak of red. It was utterly out of the question to follow his short cut to the bottom, so I climbed back up the mountain till I could manage to scramble into the gulch with safety. Carefully following it down to the prairie, I presently spied the ram jammed between the trunk of a pine and the rocky wall of the ravine. I was morally certain he was stone dead, but, to remove all doubt, I gave him another bullet. It was unnecessary, however, for the first one had gone clean through his heart. He was lean, but, without the head, dressed 140 pounds. The head was a noble one, and to-day graces the dining-room of a Spallumcheen friend.

Often in thinking over the subject of this sketch, when I remember the rarity of the animal so far west of the Rockies, the bare chance there was in such a stretch of country of even striking his track, the strong possibility of not getting a successful shot even if he was started, the fortunate snow fall which just lasted long enough for the needs of the occasion and no more, and the accommodating manner in which he journeyed homeward so as to save the trouble of packing, I cannot help regarding the work of that January morning as a huge slice of luck.

THE AUDUBON SOCIETY.

THE AUDUBON SOCIETY has given form to what may fairly be characterized as a national movement. The widespread circulation of FOREST AND STREAM has penetrated to the remotest towns and villages of the land; the press has been stirred up and the best sentiments of the American women have been roused. Local secretaries have been appointed in different towns in almost every State in the Union, and correspondence is flowing in from all the States and Territories, as well as from Ontario, Quebec, and the maritime Provinces of the Dominion. The registered membership is well into the thousands, and several thousand of the Society's pledges are in the hands of its local secretaries. The Utica (N. Y.) Secretary heads the list with a membership of upward of two hundred, which will probably be soon eclipsed, for while the movement advances generally with a steady glow, it occasionally bursts into a flame of enthusiasm. At Grand Rapids, Mich., there have been numerous public meetings within the past week, and the question of discarding feathers put to the vote at the women's clubs and carried in the affirmative by two-thirds majority, amid the sighs of the minority. At Davenport, Iowa, too, an influential public meeting secured a very important adhesion to the cause, accompanied by resolutions to organize for the propagation of the movement in affiliation with the parent Society, while from secluded villages come letters from isolated women, who unmoved by any evidences of enthusiasm around them, announce the destruction of their feathers and ask permission to labor for the cause. The Natural History Society of Toronto is taking comprehensive measures for securing the co-operation of the clergy of all denominations throughout the Province, but beyond and above all this the New York milliners, anticipating the results of the movement, have brought out their spring stock prettily decorated with bright flowers, ribbons and artistic bead works. The head gear of the women on the streets is a moving museum of stuffed birds and fragments of birds, but the shop windows reflect back few feathers excepting the graceful plumes of the ostrich. These are gratifying results from a movement which is but yet in its infancy. The promoters and officers of which have hardly had time to consider the details of their organization. We are happy to announce that the certificates of membership, with a beautifully executed portrait of John James Audubon, the painter naturalist, are now ready for distribution, and we wish that all secretaries who do not receive their quota within the ensuing week would send us a list of their membership. Those members who have been in direct communication with the parent Society will receive theirs as early as possible, but the secretary's hands are full.

Dr. I. E. Nagle writes of the bird destruction in Florida: "What a sad contrast to all that is the present condition of things. So-called hunters have shot out and frightened away all of the game and singing birds in the State, except those which hide in the almost inaccessible portions. And though it is almost as rare a thing to see a bird in a day's travel as it is to find a hen's tooth, yet the hunters go tramping in search of the poor birds, which they call game. It is a pitiful and pitiable sight indeed to see a big overgrown lot of a fellow, after being out all day with a gun, come home in the gloaming, totting a tom-tit as big as one's thumb, and act as if he

had done a great thing in shooting away a pound or two of shot to do the deed of killing. The noise that such shooters make with their guns, popping all day long, frightens all song and plumage birds so that not a chirp or chirrup, except what comes from the pugnacious and fearless sparrows, are heard in the land. So if you want to hear a mocking bird or red bird, you have to go to some barber shop or drink shop or elsewhere, where the 'critter' is kept prisoner in a cage. The past cold winter and the shooters have almost annihilated the birds in this section, and if there ever was a time that demanded a cessation of such wholesale slaughter of the poor birds, now is the time, and we earnestly hope that the gun clubs and sportsmen's associations will urge the matter and inflict the most stringent punishment against these promiscuous and abominable gun snappers and powder-burning wretches."

On page V. is printed the pledge blank of the AUDUBON SOCIETY. Those of the readers of FOREST AND STREAM who are interested in the work of the Society may cut out this pledge form and return it with signature; and receive in return the certificate of membership to which its signer is entitled. Where no local secretary has been appointed (the Society wishes to have one in every town), applicants for membership may send their pledges directly to the Society. In no case will a certificate of membership be issued before the receipt of the signed pledges. The signing of any of the pledges will qualify one for membership in the Society. It is earnestly desired that each member may sign all of the pledges. Beyond the promise contained in the pledge no obligation nor responsibility is incurred. There are no fees, no dues nor any expenses of any kind. There are no conditions as to age. Address THE AUDUBON SOCIETY, No. 40 Park Row, New York city.

HABITS OF THE BLUEJAY.

Editor Forest and Stream:

"A wahsoose" alludes in a recent communication to a foolish prejudice existing among the farmers against the bluejay. That this feeling exists there is no doubt, nor that it is widely spread. There is no question that this bird steals a good deal of corn, both from the ear while still upon the stalk and from the corn cribs, where he can manage to find entrance to such. In this region there is much complaint of his depredations upon the wheat in shocks and stacks, and it will be difficult to convince the people that the bird does not do a great deal of mischief with little benefit of any sort arising from his insect-destroying proclivities.

Now the jay, as I have before stated in the columns of the FOREST AND STREAM, is a particular friend of mine, notwithstanding his intractable voice, and I have been on familiar terms with a good many of them. I have not harmed one for more than thirty years, and I am sorry that my knowledge of their habits during the milder portion of the year is insufficient for me to decide how far they are beneficial or otherwise to the farmer's crops. My intimacy with them has usually ceased with the close of the snowy months, during which I have often had many of them as pensioners upon my bounty. So far as I know, they spend their summers in the woods.

Will some Thoreau or Burroughs kindly enlighten on these points the friends and enemies of this beautiful bird?

I often regret that I have not been favored by circumstances in the accurate study of ornithology, but if I have missed many facts I have also learned a few. My favorite bird is the woodpecker. I like his ways and admire his persistence. I have derived much satisfaction from watching the methods of the bird in its different varieties, and have sat within a few feet of the pileated woodpecker while he, with his combination tool chest, created a pile of woodenware as large as a fair-sized cooking range. I have seen one of a different variety tapping upon one of the iron suspension rods of a bridge over the Oconto River, in Northern Wisconsin, and this upon the 10th of January. I could not identify the species, neither could I suppose that the racket he made had an amatory purpose, and I had too much respect for the mental characteristics of the genus to think that he expected to derive any sustenance from that piece of iron. On the whole I am of the opinion that he was seeking to keep up appearances, just as sailors are said to have been set to pounding the anchors during a calm.

Not to occupy too much of your space with these matters, I desire to offer a suggestion. There are certain varieties of birds which are specially banned, and devoted on principle to destruction by most who cultivate the soil. If the AUDUBON SOCIETY could issue for distribution among farmers a circular or pamphlet, especially devoted to the consideration of the habits of this class of birds, pleading their cause where reason exists, and enforcing the plea with facts, and in the case of any feathered felon whose predatory or destructive propensities outweigh his services, admitting the fact and proposing remedies, it might be beneficial. It is hard to persuade the average countryman that all birds should be spared. I myself cannot take that stand, although I have signed the three pledges of the AUDUBON SOCIETY.

KELPIE.

APRIL 14, 1886.

HAWKS VS. PARTRIDGES.

Editor Forest and Stream:

If hawks kill so many more partridges than guns do (as all huntsmen who are opposed to the protection of game by law try to make us believe), is it not right funny that where the report of the gun or rifle never breaks upon the stillness of the scene there game is always plentiful. The cold winter of '87 destroyed all the partridges in Virginia west of Richmond, and when the war broke out they were still scarce; yet in the fall of '65, after four years of peace alike to the hawk and the partridge, the latter were more numerous than the oldest inhabitant had ever seen before, and I venture the assertion that more of them were exhibited for sale in the streets of Richmond that fall than have been seen there within the last ten years all put together. I suppose it is the hawk that has so thinned out the muskrat in tide-water Virginia and not the trapper; that it is the hawk which has well nigh extirpated the wild pigeon of the West and not the pigeon shooting, and that the wolf and panther have been the slayers of the vast herds of bison of the plains and not the fur hunter.

For my part, I wish all the hawks and all their tribe, with all the *ferre natura*, were at the bottom of the deep sea. But it surprises me that every one who has given the subject a moment's thought does not see at a glance that man is the destroying angel of all the animals upon this earth when he sets himself to the work.

VIRGINIA, March, 1886.

SPARROW HAWKS WISE AND FOOLISH.

WE have now been told by one having authority, that "classic crickets" and "brown old grasshoppers" are plenty around Washington "warm sunny days" in January. Shall we next be told that June bugs also are plenty in January? I perceive that Mr. Henshaw has "bit off more than he can chew." I understand him now to say, cold wintry days, when "full knee deep the wintry snows are lying," those foolish virgins of the *sparverius* family who have not flown south, do then feed on English sparrows, not having "brown old grasshoppers" in their silos. It is not my intention to force the learned gentleman to the wall, but I suggest it to him that the English sparrow nuisance being of recent origin, is, speaking after the manner of a great personage, matter to this issue *aliunde*. Before there were any English sparrows what did poor *sparverius* do then? It is admitted those foolish virgins of the *sparverius*, having no silos and no brown old grasshoppers in their cold wintry days, do then, as we, perform, taste of field mice. Like-wise *aliunde*, as I maintain, is removal of the capital beyond the Mississippi. If the soldiers and the politicians and the parsons found that scheme too much for them it will not, as I believe, materialize if now taken up by the grasshoppers and the sparrow hawks and the savants.

Excluding, therefore, matters *aliunde*, the issue here to be tried narrows itself to three considerations, viz.: (a) Do all wise sparrow hawks go south in winter? (b) If "festive hoppers" are plenty around here warm sunny days in January and February, what are they feasting on? (c) How many "grasshopper days" are there hereabouts from Dec. 1 to May 1? On this point I demand a bill of particulars and I give notice of intention to put Professor Riley on the stand. I am of opinion that all wise sparrow hawks do not go south in winter, and I will argue this point further on. Further I am of opinion that neither "warm sunny days" nor "brown old grasshoppers" are plenty around here in January and February, and I omit here all reference to June bugs for the sake of brevity and perspicuity.

I have not, as has Mr. Henshaw, upon my head and down upon my flowing beard, even unto the skirts of my garments that sacred Smithsonian oil, but all the same I will not "take a dare" from him. How dare he so misrepresent the wisdom of the sparrow hawk to the misleading of the readers of FOREST AND STREAM as to pretend that he goes south in the winter to get "brown old grasshoppers," thereby showing his wisdom, whereas all the while "brown old grasshoppers" are plenty around here. An argument which carries with it its own contradiction and contains within itself the principle of self stultification.

The fact is, Mr. Editor, that Mr. Henshaw in the outset overstated his case. Neither winter nor summer, in my opinion and belief, does the sparrow hawk feed on insects by preference, but according to my observation and knowledge always by preference upon field mice, thereby rendering important service to the farmer, for he can and does keep these pests in check. But if he were exclusively an insectivore, his labors in that behalf would amount to little, seeing the paucity of his numbers and the size of his maw. I have very rarely seen them attack any manner of small bird, but I have seen them neglecting swarms of small birds hard by, following the cartmen all day in hauling out fodder to cattle, day after day, cold wintry days hovering over head on expectant wing, and dropping like a bolt upon every mouse uncovered by the removal of the fodder. In mid-summer when the grass fields were literally alive with "brown old grasshoppers," I have seen a pair of these diminutive falcons ignoring the insects wholly, bringing in to their young mouse after mouse, and mice exclusively, for hours together. I depend on my own long familiarity with these birds when I say that I think them absolutely harmless and very useful to the farmer, and it is a downright, diabolical shame for any man to shoot them.

I am convinced that but for the sparrow hawk, the marsh harrier, and certain owls, the field mouse would so multiply as to become an extremely serious and destructive pest. I have repeatedly sought to call attention to the shameful folly of destroying these and other useful and innocent and beautiful birds, which add so greatly to the charms of rural life, and I beg to add my voice to those more potent in behalf of the preservation of birds as put forth so much to my satisfaction through the columns of FOREST AND STREAM, and am ready to shake hands across the bloody chasm with Mr. Henshaw and join hands with him in this good cause. M. G. ELLZEY, M.D.

ANGLERS AND BIRDS.—*Editor Forest and Stream:* The disappearance of our native song birds and those that are purely ornamental when alive, and not so when dead, is a matter that is deplored by anglers as much as by any other class. You know my belief that it's not all of fishing to fish, and the birds contribute not a little to the sum total of pleasure in a day's outing. One can lay on his back in the green grass, sniff the odor of the pine, listen to the murmur of the brook and the songs of the birds, and return home feeling that the day has been one of joy, even if there is no fish in the creel. The birds are part of an angler's day out, and I am right glad your paper has taken the matter up and I trust your efforts may result in righting this great wrong to our friends, the birds. My wife, daughter and self wish to be enrolled as members of the AUDUBON SOCIETY.—A. N. CHENEY.

PRAIRIE DOG'S HABITS.—Philadelphia, Miss.—We have a pet prairie dog, brought from Wise county, Texas. It drinks water.—S. P. NASH.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Two striped hyenas (*Hyena striatus*), male and female, three Campbell's monkeys (*Cercopithecus campbellii*), one male aoudad (*Ovis tragelaphus*), two hog deer (*Cervus porcinus*) male and female, one female African porcupine (*Hystrix cristata*), one male tiger (*Felis tigris*), two Japanese squirrels (*Sciurus vulgaris*) male and female, one male banded anteater (*Tragulus scriptus*), one male red kangaroo (*Macropus rufus*), one female silver pheasant (*Euplocamus nycthemerus*), four Mexican jays (*Xanthura beccheyi*), two golden-headed parakeets (*Tragopogon tui*), two European waxwings (*Amphisp garrulus*), two cardinal redbirds (*Cardinalis virginianus*), two ground doves (*Chamaepelia passerina*), two goldfinches (*Carduelis elegans*), one black bullfinch (*Pyrrhula rubicilla*), one petz conure (*Conurus petz*), one cactus conure (*Conurus caferum*). Presented—One Macaque monkey (*Macacus cynomolgus*), one Brazilian squirrel (*Sciurus aestuans*), one muskrat (*Fiber zibethicus*), one red fox (*Vulpes fulvus*), one common deer (*Cervus virginianus*), one rock blackbird (*Quiscalus purpureus*) and one white sparrow (*Passer domesticus*). Born—Two Angora goats (*Capra hircus*) male and female, one striped hyena (*Hyena striatus*), one male eland (*Oreos canna*) and three turtle doves (*Turtur risorius*).

NEARLY EIGHTEEN THOUSAND MEN in 1884 were paid cash benefits under accident policies in the Travelers, of Hartford, or 57 for every working day.—*Adv.*

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

LINES

ON FLUSHING A QUAIL IN THE CITY STREET.

AH! whistling wings with startled rush,
I hear your flurry at the flush;
To hear thy drumming pinions raise,
Here in the dust of city ways,
Brings back the "flight" of other days—
The field, the hollow and the swale,
Where erst I knew thee, royal quail.

Hath fright then wak'd thy whirling wings
From silent sylvan woods and springs,
To linger 'mong the haunts of men,
From field and wood, the copse and fen,
Where grieves disconsolate thy hen—
Her truant love, her mate, her male,
Her royal master, Bob White quail?

Make haste then "Rob" and fly the town,
And seek thy bonny mate of brown;
Take on again thy household cares,
Rear well thy brood, avoid the snares;
Rear goodly bevies from the "pairs,"
And next October, without fail,
I'll see you, royal Bob White quail.

CLEBURNE, Texas.

FOLK.

THE DEER HOUNDING BILL.

A CORRESPONDENT who was present when the bill was discussed by the Senate writes: The dogs will soon be loose again. Senators Vedder, Fassett, Raines, and Hendricks made a hard fight, but the Senate was fixed. All the New York and Brooklyn senators were against us. I believe they are inspired to this by the Governor and by the promise of help from the Republican members of the House who favor the bill. Still it took over two hours to pass it, and it only passed by the united efforts of Messrs. Erwin, Tuck, Barnes, Palmer and Hadley, all of whom were on the floor of the Senate holding up Senators who had promised to vote for it or could be induced to do so. The singular spectacle was presented of the sergeant-at-arms of the Assembly actually circulating among senators and soliciting votes.

Senator Fassett moved to strike out the lines allowing the use of dogs. A long discussion followed. This and the motion against water killing, offered by Senator Hendricks, were defeated. It was agreed that St. Lawrence should be exempt. Senator Marvin asked that Delaware be also exempted. This was at first refused, but to conciliate matters, agreed to. Then the three-deer clause was moved. This led to quite a discussion, but was at length agreed to. It was then moved to progress the bill. Hon. Senator Vedder again renewed the motion to prohibit water killing, supporting his motion by two strong speeches. Senator Fassett also warmly supported this motion. Senator Raines also addressed the Senate. For a few moments it looked as though the thing would carry, but the vote stood twelve for and sixteen against the amendment. The bill was then read a third time and passed. McMillan spoke briefly. Wemple said nothing, but worked the Democratic side of the house.

So ends the fighting of '86. We have had great odds against us all the time. ALBANY.

From the Albany Evening Journal, April 14.

The special order of the Senate was the deer-hounding bill, but two hours were given to general business before it was reached. Then Mr. Hendricks offered an amendment which prohibits wounding or killing deer while in the water. He denounced as brutal and cowardly the methods of jack-hunting and Mr. Fassett joined in this opinion. Mr. Kellogg protested against attempts to load down the bill with amendments with a view to killing it in the Assembly. This was done at the instigation of a member of the Assembly. Men were opposing the bill who had no knowledge of the subject. Mr. McMillan said the bill was the result of the best thought of the committee and it ought not to be amended as proposed. Jack-hunting was restricted by the bill. Mr. Vedder said no one could defend jack-hunting. All that could be said for it was that it was good for city consumptives to sit about on a log, hear the baying of dogs, and shoot the deer while they were helpless in the water. The amendment was lost, ayes 9, noes 15. Mr. Marvin moved to except Delaware county from this act. They had a few deer down in that county and they wanted to keep them. Mr. Kellogg said that this was another attempt to kill the bill. Mr. Fassett maintained that each amendment should be treated fairly. Deer hounding was brutal butchery, and if Delaware county wanted to be excepted it should be. Mr. Kellogg declared that it was true that a member (referring to Gen. Curtis) was on the floor trying to beat the bill by inducing Senators to offer amendments. Against his judgment Mr. Kellogg said he accepted Mr. Marvin's amendment. Mr. Fassett moved to amend by prohibiting deer hounding in any county. He believed it would be a good thing if all killing of deer could be prohibited for five or ten years. Deer hounding was prohibited last year and there was no reason why it should now be permitted. Mr. Kellogg held that if still-hunting is permitted, deer hounding should be permitted. Deer hounding is more manly than still-hunting. The opposition to the bill comes from those who make merchandise of still-hunting. Where one deer is killed by hounding, four or five are killed still-hunting. Deer hounding makes the deer shy and more difficult to kill. He read letters from New York city sporting clubs in favor of the bill. The guides, too, who are dependant on city sportsmen for earning a livelihood are forced to still-hunt for merchandise unless deer hounding is permitted and city sportsmen visit the woods. Deer carcasses could not find a market in his county last year under the prohibitory law, so many deer were killed still-hunting. Deer hounding gives consumptives a brief experience of manly sport, and for this reason—sentimental though it be—should be considered. Mr. Fassett held that the city sportsmen, without muscle, in English clothes, who wish to hear the baying of the hounds, desire hounding, because when the deer is all tired out and

driven in the water these city sportsmen can then kill it with a shotgun if the guide holds it by the tail. It was absurd to say that the deer are protected by being made shy by the hounds. As well say that cats protect mice, and wolves protect sheep. If the city sportsmen want to hear the baying of the hounds he suggested dragging the anise-seed bag in the North Woods as Long Island and Newport sportsmen do. Mr. Smith believed that no harm could come from deer hounding during September. Mr. Sloan believed that practically deer hounding was no more cruel than still-hunting. He believed the encouragement of tourists in the North Woods would put to check the extermination of deer, as deer killing was not then left the only means of a guide's livelihood. Mr. Wemple declared this game bill was the best ever introduced. The only manly and humane way to kill deer is by hounding. Mr. Fassett's amendment was lost—ayes 6, noes 18. Mr. Vedder moved to amend by prohibiting persons from killing more than three deer in a season. Accepted. Mr. Vedder renewed Mr. Hendricks's amendment which prohibits killing any deer in the water. Replying to Mr. Vedder, Mr. Kellogg held up a picture from FOREST AND STREAM, and declared that its representation of men in tall silk hats mounted on horses showed all it knew of deer hunting in the Adirondacks. Mr. Kellogg said that Mr. Fassett's position was not a surprise to him. He had been on the "off" side of everything this winter. Mr. Vedder's amendment was lost, and the bill was passed—ayes 21, noes 8. [Kellogg was mistaken about the picture. That should be credited to Dr. Ward. The FOREST AND STREAM picture was of Mr. Kellogg's friends with the club and the "tail holt."] Following is a list of the members of the New York Senate with their votes on the deer hounding bill:

VOTED IN ITS FAVOR.

Fagan, Dem., Maspeth.
Pierce, Dem., 7 Montague terrace, Brooklyn.
Worth, Rep., 182 Graham avenue, Brooklyn.
Murphy, Dem., 441 Washington street, New York.
Reilly, Dem., 35 Ridge street, New York.
Daly, Dem., 230 East Twelfth street, New York.
Dunham, Dem., 68 Murray street, New York.
Cullen, Dem., 219 East Thirty ninth street, New York.
Plunkitt, Dem., 442 West Fifty-first street, New York.
Nelson, Dem., Sing Sing.
Hoysradt, Rep., Hudson.
Comstock, Rep., Lansingburgh.
Parker, Jr., Dem., Albany.
Wemple, Dem., Fultonville.
Kellogg, Rep., Elizabethtown.
Knapp, Rep., Lowville.
Sloan, Rep., Oswego.
Coggeshall, Rep., Waterville.
Smith, Rep., Morrisville.
Walker, Rep., Batavia.
McMillan, Rep., Buffalo.

VOTED AGAINST IT.

Marvin, Rep., Walton.
Hendricks, Rep., Syracuse.
Barager, Rep., Candor.
Fassett, Rep., Elmira.
Raines, Rep., Canandaigua.
Pitts, Rep., Medina.
Vedder, Rep., Ellicottville.
Griswold, Rep., 43 Fort Green place, Brooklyn.

DID NOT VOTE.

Connelly, Rep., Kingston.
Low, Rep., Middletown.
Traphagen, Dem., 14 East Sixty-third street, New York.

The bill again passed the Assembly last Friday by a vote of 99 to 11.

From the New York Times, April 15.

The bill passed by the State Senate yesterday in respect to the hunting of deer in this State took a very unsatisfactory shape. Mr. Fassett's amendment preventing the running of deer with dogs should have been adopted, as necessary to preserve the deer. There was no argument against it. The plea that a consumptive might soothe his declining years by setting dogs after deer was as nearly worthy that name as anything that was said. If a wise system of game laws had been adopted fifty years ago, the extinct animals of the Adirondack wilderness, like the moose, might still be found there and be hunted under suitable restrictions. In spite of the restrictions contained in the Senate bill, it is to be feared that if that bill becomes law, sportsmen already elderly will see the time when there is not a deer left in the North Woods.

The Legislature does well in shortening the deer hunting season, and in virtually stopping the slaughter of deer for market by the provision that no person shall send game out of the forest or bring out more than one carcass; and in restoring to hunters the privilege of hounding it thinks to save the deer by preventing still-hunting, which last year proved very destructive. But last season was exceptional, and after a study of the testimony of sportsmen on both sides, we reached the conclusion that hunting with dogs is not less destructive than the rival method. Aside from other considerations the practice of hounding is abominably cruel. Persons of much refinement know that the deer should not be hunted at all and the slaying of these animals in the State Park should be prohibited; but the entire public is not yet enlightened on this subject.—*Syracuse Standard*, April 16.

VICTORIA, Texas, April 10.—*Editor Forest and Stream:* I inclose you a clipping from a Southern newspaper: "A wild hog in Northern Alabama has become the acknowledged master of a large tract of wooded country. Hunters give the place a wide berth. A few days ago the animal lacerated a pack of hounds so badly that they will never be of service again." If the New York Legislature repeals the non-hounding law, how would it work to capture this animal and turn him loose in the Adirondacks?—C. S. W.

APRIL DEER HOUNDING.—Chateaugay Lake, N. Y., April 12.—Deer have wintered nicely in this part of the Adirondacks. I saw the tracks of at least thirty different ones in a walk of eight miles last week. Grouse very scarce. No end of foxes and rabbits, for we never hunt them. Fish are very plenty. We catch large quantities of whitefish or shad, weighing from one to four pounds. Salmon are very plenty on the shoals where we fish for shad, and are often hooked, but are lost through using too light tackle. The hounds were out yesterday and killed a nice doe on the lower lake.—R. M. SHUTTS.

THE UTICA ASSOCIATION.

THE sixth annual meeting of the Utica Association for the Protection of Fish and Game was held April 14. President I. J. Gray presided and John D. Collins acted as secretary. President Gray read his annual report, which was as follows:

To the Members of the Utica Fish and Game Protective Association:

The report of our treasurer shows a balance on hand at the close of the year of \$48 85, and that we have expended during the year the sum of \$84 85. That the amount expended in but a small degree indicates the work performed by the officers of the association, is shown by the report of our secretary; indeed it will appear that the board has been more than usually active, while it has kept in view the greatest possible economy. I am gratified to be able to say that the members of the board of directors have each and all shown much zeal and considerable self-sacrifice in behalf of the cause.

I think I can safely say that this applies with much force to our secretary, as the excellent and convenient synopsis of our game laws—almost entirely his work—and drafts of new game laws and amendments of the old, newspaper discussions of protective measures and an extensive correspondence will prove.

Much of the work of the association, from its very nature, can not appear on the surface to give proof of its extent and value.

Much has been accomplished—but infinitely more remains to be done, and as the people become awake to the need and value of protection, we must become more aggressive. The unprincipled market hunter, increased facilities for killing wild animals, the destruction of their haunts by the agriculturist and the manufacturer, all combine to diminish the domain of the sportsman; and he already dreads the coming of the day when he will "feel like one who treads alone some banquet hall deserted, whose lights are fled, whose garlands dead, and all but he departed."

The time has come when we should demand that our game animals should be exempt from slaughter for gain. We can not begin the agitation of this subject too soon, and I hope this association will take the initiative here and now.

I must not close this communication without again making an appeal for a large increase of membership. Can it be that the interest of the citizens of Utica and vicinity is to be measured by the pittance of less than \$100 of dues annually paid into the treasury of the association for fish and game protection? There should be at least \$500 collected annually in dues alone. The State protectors are doing much, but they can not cover the ground. We need private detective work. They are not sufficiently mobilized, nor are they in sufficient numbers. Every man in Utica who is interested in the cause of protection should become a member of this association, and pay his dues promptly. Our battle is going on bravely, but we need, and must have, reinforcements.

The report was adopted and ordered placed on file. Secretary Collins then read his annual report, which was as follows:

To the Members of the Utica Fish and Game Protective Association:

This association is now entering upon its sixth year. It was organized as you will recollect because the so-called State association and local clubs were not managed according to the needs of fish and game protection. Their management was degenerating into mere tournaments of prowess, dexterity and contests of destruction.

Protection and preservation as such had become a mere incidental matter. Our earlier efforts though crude were in the right direction, and under the management of your trustees its efforts have gradually been perfected into a system strictly of the business affairs which relate to replenishing, restocking, detection and prosecution of violators, the supervision of laws before the Legislature, and the drafting, preparing and consideration of new laws for enactment as may from time to time seem to be necessary to the purpose of protection.

The dues upon membership which have been each year contributed constitute the only revenue of the association. As the reports of officers will show, these funds, although limited, have been judiciously husbanded and so prudently expended to the purposes intended as to warrant good results.

In the administration of our corporate affairs the duties of your trustees have not been those of pastime or pleasure. They hold no festivities, entertainments or tournaments of any kind. On the contrary their duties have been wholly of labor requiring the exercise of judgment, discrimination, wisdom and consideration.

In this respect your board have been effectually aided by the legal advice and assistance contributed by those members of the board of that profession. The most important duties of the board are of a legal nature, particularly as to detections, violations, prosecutions and framing of laws.

In former years it was necessary to employ and pay counsel, an expense which crippled our resources, and left but little for other purposes. This expense during the past two years has been avoided by the advice and efforts which the legal members have contributed without charge beyond their actual expense; bestowing their service gratis and paying their annual dues like other members. The result of this has been a larger surplus to devote to the purpose of restocking and replenishing, also to publish and distribute an abbreviation of the game laws, to the purpose that the law will be better observed and enforced by being more widely known.

The association has already acquired a reputation and esteem over the whole State. The success within our own and neighboring countries has been equally beneficial, well worth our contributions, by promoting public regard for protection and a more general observance and sanction of protective laws. Observance has been the rule where formerly it was the exception. Such of us as are sportsmen will no doubt appreciate the benefits. When we take a day off at considerable expense and effort, we wish some assurance, and our pleasure depends on the success we meet.

In this connection your board of trustees would feel themselves guilty of neglecting an important duty if they were to suffer this meeting to pass without bringing to your notice the invaluable aid to our efforts which have been ably contributed by the press. The *Morning Herald* and *Evening Observer* and the *Forest and Stream* of New York have each during the past year been magnificently bountiful in allowing us their valuable space and by articles written in the dissemination of information bearing upon this subject. That this has been done without money and without price is

a matter we should not only appreciate and esteem, but should tender them an especial mention of our gratitude. The *Daily Press* has also shown us the same spirit of courtesy and has contributed its full share in the promotion of our objects. The benefits which these newspapers have accorded have been such in some instance as your trustees would not have felt at liberty to accept without paying for them except under the circumstances of our voluntary contribution of funds and services in objects of a public nature. We have accordingly assumed that their contributions are in the same spirit which prompts our own and that they are fully awake to all matters of interest. Too much has been said that the protection of fish and game is for purposes of sport and recreation. We do not so entirely esteem it. If sport and recreation were the only objects for cultivating and protecting fish and game, we should consider our efforts and expenditures trivial and trifling.

In the discharge of our duties, we have discovered that the popular notion of "sport" has been a hindrance rather than an aid to our efforts. It has been a leading consideration, when in fact it is only a matter of secondary or incidental importance; so that protection has received not only an indifference of attention, when it is entitled to an important consideration, and place among the affairs of state.

Fish and game constitute a source of wealth and supply. They come like our fruits and cereals with the season, but without husbandry and without care.

They are self-producing and self-sustaining—are wild in their nature; are capable of self-replenishing to a degree of present waste; unlike cattle and sheep. Whoever gathers them into possession becomes the owner at common law; hence the need of restrictive laws. The Adirondack wilderness has lately become a public park, as to State lands. This region embraces millions of square miles of forest, lake and stream. It has a capacity for feeding and sustaining tens of thousands of deer, with vast amounts of other game and valuable fish, which by the common law are public property and a public source of wealth and food. In this view the subject is one of importance in the economic and domestic affairs of the state. Beside it, the matter of "sport and recreation" is insignificant. This source of wealth and food is in proportion to the plant. If the plant be large, the annual supply is vast—small and of little consequence if the plant be small. When this plant has become so far reduced that its self-producing power is not sufficient to supply the annual waste and ravages of the vicious and law-defying, no laws can avail to prevent total extinction. The "goose is dead that laid the golden egg." The question is now, before too late: 1. What is the self-sustaining capacity of the Adirondacks? 2. What measures are necessary to bring the yet remaining plant up to the sustaining capacity? 3. What efforts can we make to bring it to the proper notice of our legislators, and gain their impartial ear, amid the din and clamor of loud-mouthed pot-hunters and job seekers that infest legislative halls—a state of things incompatible with that mature consideration and preparation which all good laws so necessarily require?

From all indications around us we are gratified and encouraged by the assurance that public opinion is steadily advancing to a better comprehension of this subject and its importance. But the work is by no means completed. There is still more before us. Our game laws are yet imperfect, and can be greatly improved in time when public sentiment has become more matured. The greedy spirit of the pot-hunter, and the selfish and inconsistent clamor of impatient and enthusiastic sportsmen with new rods or guns, are obstacles yet in our way, asking for more liberal or loose laws to accomplish personal aims or conveniences. These constantly need our watchfulness, lest our legislative work may be undone by inattention, since bills of this nature are constantly offered. Our present Legislature is no exception in this respect. It is rather to be signalized by an over amount of effort to annul good laws.

In respect to our song birds, there is a vast field of labor before us, which needs the combined effort of every member, not only of the association, but of community. Our song birds are depleted to an extent that will seem marvelous to the unreflective mind. Yet it is a fact that can be witnessed the coming season. If we will notice the number of ladies who wear the plumage of birds we will wonder that any be left.

The prevailing fashion in this respect is one of giddy thoughtlessness, of the fact that every birdskin or wing worn upon bonnets cost the life of a bird. The avarice of merchants knows no bounds in supplying them to all who have money to pay for them. As a consequence we may soon expect insect ravages only equalled by the grasshopper plagues. The combined efforts of community are needed without delay, to discountenance this dangerous fashion, worse than folly, and to teach our ladies the direful consequences of their indulgence in this sort of decoration. Another form of destruction is by parents allowing their boys to have guns, and who go about the fields on holidays killing every bird they meet. If the small boys must have guns they should be taught to spare the birds.

Ladies are cordially invited to co-operate with us in this work, as it must be from their influence and example that practical benefit must come.

The following resolution was adopted: Resolved, that the thanks of this association and of its members be tendered to the *Utica Morning Herald*, the *Utica Daily Observer*, the *Daily Press*, of this city and to the *Forest and Stream* of New York city, for their efficient aid to the efforts of this association and in behalf of the preservation of fish and game.

The following officers for the ensuing year were unanimously elected: President, Colonel I. J. Gray; directors, I. C. McIntosh, John D. Collins, Frank I. Meyers, W. C. Harris, W. K. Gilmore, Dr. C. M. Hitchcock, William Townsend. The vice-president, secretary and treasurer are appointed by the board of directors.

The *Forest and Stream* takes strong ground against the building of a railroad through Yellowstone Park. A committee of the Senate has reported favorably on a bill granting the right of way, and the *Forest and Stream* tears the report into shreds, and shows that there is nothing in it except a mere pandering to rich monopolists. This is about the way such things are generally done. It is not a difficult matter for rich capitalists to lobby any scheme through Congress. We are sorry to say it, but it is so nevertheless. Yellowstone Park is too far away for us to feel any interest in this particular case, but we are opposed to it upon principle. The public lands belong to the whole people; to the poorest as much as to the richest man in the country and should not be surrendered to the speculators and grasping monopolist to be despoiled.—*Sardis, Miss., Southern Reporter*.

SPRING WILDFOWL SHOOTING.

Editor Forest and Stream:

Occasionally the suggestion is made that there ought to be a national prohibition of spring wildfowl shooting; but, so far as the writer is advised, there has been no general agitation of the subject. With all due deference to the men who have so ably and gracefully conducted journals especially adapted to the tastes and interests of the sportsman in this country, it does seem that this is one important subject that has not received the consideration its importance merits. It is a well-known fact that on some of the migratory lines of duck, geese and brant more birds are killed in the spring than fall. When it is considered, first, that the killing of one wildfowl in the spring is equal to the destruction of from two to a half dozen in the fall, there is good and sufficient reason for asking that the spring slaughter should stop. When the further argument is added that the spring birds are comparatively unpalatable, there is really no reason why any sportsman should shoot them.

Of course the pot-hunters and keepers of spring resorts will oppose any legislation interfering with their trade. But these are probably the only parties who will object to an act of Congress prohibiting the shooting of any wild game fowl in the spring of the year. National legislation is the only way to reach this matter. It is useless for Indiana, for instance, to prohibit the shooting of duck in the spring when there is no such inhibition in Kentucky, Illinois or other adjoining States. But if Congress would pass a well considered act, the remedy for the evil of spring shooting would be complete. Its effects would soon be apparent. In less than four years the number of wildfowl in this country would be doubled, and with thereafter twice or three times the fall duck shooting there is now, the birds would still be abundant.

This is a matter worthy of the serious attention of sportsmen and of the journals devoted to their interests. It is also a popular movement. A well-known and widely-circulated journal like the *Forest and Stream* can render sportsmen a real service by taking up this matter, pressing it upon the attention of Congress and securing the passage of an act preventing the annual spring slaughter of the wildfowl in the United States. JAP.

NEW ALBANY, Ind., April 12.

GROUSE AND THE SNOW CRUST.

Editor Forest and Stream:

My experience and observation has been so directly opposite to that of "Dry Snow" that I am perfectly willing to stand up and count one in opposition to his conclusions.

That ruffed grouse do perish, and in no inconsiderable numbers, from being crusted in the snow, is to my mind beyond question. I know it. I know it because I have found them beneath the crust dead; found them beneath the crust alive, dug them out and secured them alive. Let me relate my first experience in this matter. My boyhood was passed in Ossipee, N. H. The winter of my thirteenth year, early in January, there was an exceptionally heavy fall of light, dry snow, followed, however, by hail and two hours of pouring rain late in the evening. The next morning there was a crust that would bear me up, and twenty-four hours later, a crust upon which heavy teams moved without difficulty. Several days after the crust formed I went to the woods with my father after a load of fuel. Near a grove of small hemlocks my dog commenced to bark, and made frantic endeavors to dig down into the snow. Going to him we could discern a dark object beneath the crust, and a few blows of the axe brought to view a dead ruffed grouse. A few yards away we dug out another, which was alive but so nearly starved that it died before I could get it to the house. That same day, under a low, bushy pine, where the crust had not formed so solidly, we found yet another grouse which had picked its way up through the crust until a tiny hole was made, through which the bird had thrust its head, and there, unable to withdraw its head or further use its beak, had died of starvation or cold. I remember that the poor prisoner's head was sadly bruised, and remember also that my eyes grew strangely moist.

I know not what part of the globe "Dry Snow" tramps, but certainly he is not a New Englander, or has lamentably failed to see all there was in the woods, for I have found ruffed grouse helplessly imprisoned beneath the crust in Maine, New Hampshire and Massachusetts.

I have hunted in more than half of the States of the Union, and am convinced beyond a doubt that wherever snow falls to any considerable depth, grouse do cover themselves in it, though the number that perish in consequence of this habit is of course largely confined to those States or localities where sudden changes of the temperature is conducive to hard crusts.

With all deference to "Dry Snow," it is respectfully suggested as unwise to make war upon animal instinct, or hold Providence responsible for a snow crust. Birds and beasts do not always exercise their instinct and experience judiciously. J. FRANK LOCKE.

PILLSBURY, Minn.

JEKYLL ISLAND CLUB.—The members of the new Jeckyl Island Club are: Gen. Lloyd Aspinwall, New York; Com. John C. Barron, N. Y. (yacht Athlon); C. N. Bliss, N. Y.; Francis Bartlett, Boston; Erastus Corning, Albany; W. Bayard Cutting, N. Y.; John Clafin, N. Y.; John Eugene Du Bognin, Georgia; William B. DeWolf, N. Y.; John De Koven, Chicago; Wirt Dexter, Chicago; Lewis Edwards, N. Y.; Rudolph Ellis, Philadelphia; Newton S. Finney, N. Y.; Com. L. A. Fish, N. Y. (yacht Grayling); N. K. Fairbanks, Chicago; Marshall Field, Chicago; Walter Roger Furness, Philadelphia; G. E. Gray, San Francisco; Jas. B. M. Grosvenor, Providence; Ogden Goellet, N. Y.; A. Lawrence Hopkins, N. Y.; Henry B. Hyde, N. Y. (Pres. Equitable Life Ins. Co.); B. S. Henning, N. Y. (Pres. Florida Railroad System); Judge Henry E. Howland, N. Y.; A. Foster Higgins, N. Y. (Pres. Carroll's Island Club); Oliver K. King, N. Y.; Franklin M. Ketchum, N. Y.; L. M. Lawson, N. Y.; J. Mason Loomis, Chicago (yacht Viking); J. Pierpont Morgan, N. Y. (yacht Corsair); E. B. Ogden; Attorney, Alfred J. Crovatt.

ALMOST A MISS.

HUNTING on the headwaters of the Wolf River, Wis., in the fall of '51, as my wont in those days, I was one day returning from an unsuccessful tramp; for being after big game, the partridges and rabbits that abound were allowed to go by unheeded.

Having passed a large marsh, I was ascending a gentle rise of ground covered with tall grass, and marching along rather carelessly—as it was mid-day—when my attention was aroused by the soft musical hum of a bullet overhead followed by two rifle cracks in quick succession.

The cause of this fusillade was soon apparent, as a deer bounded over the high grass and made for the marsh I had left, passing me diagonally at a distance of fully eighty yards. I only noticed that his flag was down, as throwing my gun well ahead of him when he descended from his long bounds, the heavy barrel rang out under the double charge of Dupont; but the bolt seemed to have sped in vain, for the only apparent effect of the shot was an increased speed, and he kept on for some two hundred yards, when he was lost to view in a bunch of bushes and thick grass.

Looking up my new allies I found that they had jumped the deer from his bed in the pleasant sunshine, at a distance of about three rods, and had both fired at him as he stood broadside and perfectly still, with what result was unknown. We proceeded to the place where he was last seen, and to our surprise found him quite dead; a spike buck of fair size and in good condition. Examination showed that one of their bullets had passed through his ham, close to the edge; the other had evidently been in more dangerous proximity to me than to the deer. Both were fair hunters and used to the rifle, but had practically missed a deer at a distance of fifty feet; my conical bullet of forty-five to the pound from a Billingshurst had struck him near the shoulder and was found to have passed out at the loin on the other side, nearly his whole length. We divided the spoil equitably, as per the hunter's code—they taking the skin and I the venison.

C. J. T.

THE TURKEY SHOOT.

Editor Forest and Stream:

I have read with a great and increasing interest Napoleon Merrill's article, "A Turkey and Chicken Shoot," in your paper of April 8. To a person about to buy a rifle it would seem that there was nothing in rifles worth having except the M. L., judging, of course, from the tenor of the article referred to above. I, myself, cling to extreme accuracy and value any rifle according to its accuracy.

"The crowning efforts" killing or wounding four turkeys, any rest, thirty-two rods distance, by shooting twenty shots, is by no means wonderful. Why! at a range in a small country town a few miles from here, where nothing is used but breechloaders, they shoot eighty rods at chickens, not old hens, and kill them, too, and more than four out of twenty shots. That club uses Sharps, Whitney and Remington rifles, without a gyratory motion to their bullets. Their rifles are safe, accurate and symmetrical, fine polished and fashionable. They are not men of fashion, but they use fashionable guns. They reap and do not go empty-handed. The world has moved for them.

The owner of the Sharps rifle, in my presence, July 4, 1885, fired five consecutive shots in a 3-inch ring, 33 rods. Is that to be condemned on account of fashion? This same rifle has placed 7 out of 10 shots in an 8-inch ring, 80 rods. If accuracy is the main thing, why do all M. L. men say, "You cannot shoot as short a bullet as we do with any degree of accuracy"? Neither can you, M. L., shoot as long a bullet as we who use a B. L. and do as fine work. I use a Maynard .3540 for patched or lubricated bullets, and, while it may not be quite as accurate as the finer M. L. guns of the present day, I consider it quite accurate. It does not scatter badly; not as badly as some M. L. guns I have owned and seen. I have many targets in my possession made with it and witnessed by others of 10 consecutive shots each in a 1½ inch ring, 10 rods. I have four targets made by lamp-light at night, each of 10 consecutive shots, striking an inch ring, distance 10 rods. I have one of 5 consecutive shots, 20 rods, all striking an inch ring. Mr. Merrill, is that poor shooting viewed from your standpoint? If so, report your targets to FOREST AND STREAM. If the M. L. can do much better I want one, but it must not scatter. J. T. CLAPP.

GEDDES, N. Y., April 16.

Editor Forest and Stream:

There are turkey shoots and turkey shoots. Reading with much interest Mr. Merrill's account of turkey shooting, in FOREST AND STREAM of April 8, I feel constrained to give a short description of the only turkey shoot I ever attended. This occurred some eight years ago and being at that time a mere boy, I took no part in the shooting, but remained a deeply interested looker on.

Although young, I was familiar with muzzleloading rifles and a tolerable shot at short range. The turkeys were set up on a box, distant 275 yards from the shooters (here in Ontario turkeys are never shot at distances less than 250 to 350 yards), with a background of running water.

The day was cold with a moderate wind blowing across the range from the left. The rifles used were as follows: Two muzzleloaders (mounted with globe and peep sights), weighing respectively, 21 pounds and 10 pounds, the heavier of the two being a costly gun, made by a reliable maker of turkey rifles. The breechloaders comprised two .46-caliber R. F. Kentucky Ballard's, with coarse open sights, and two or three Snider-Enfield rifles used by Canadian volunteers.

I will speak now of results. After an half day's bombardment the twenty-one-pounder secured three or four birds. It scattered its pellets on all sides, and there was no talk of ruling it out. The light muzzleloader did very well, securing a very fair proportion of the birds killed. The winning gun, however, was a 46 R. F. Ballard, which secured about a third of the birds killed. The other Ballard and the Sniders compared very favorably with the light muzzleloader in the number of birds secured, although they were heavily handicapped by using open sights against aperture sights. About thirty-five birds were killed in the afternoon, the turkey man getting a very moderate price for his fowls.

Why does Mr. Merrill imagine that after killing four turkeys in twenty shots he was about to "wipe out" the man's turkeys in such deadly style? He does not tell us whether the other rifles were mounted with aperture or sporting sights.

Mr. Merrill unsparingly condemns all breechloading rifles; that he is in error, see account of turkey shoot No. 2.

I have used a number of muzzleloaders, but never saw one which surpassed in accuracy my 8½-pound Colt, .44 caliber

W. C. F., mounted with Lyman sights. I have killed crows with this rifle, off-hand, at 200 yards, and consider that it takes a "putty tollable" good muzzleloader to beat it.

RAMROD.

TRENTON, Ont., April 15.

MINNESOTA GAME NOTES.—Ruffed grouse wintered well and are more numerous than I ever knew them to be at this season of the year. The indications are favorable to extra fine sport in that line this fall. This immediate locality has never been considered promising pinnated grouse territory, but there has been a wonderful multiplication of the numbers of this game bird within two years. Hereafter they will afford prime sport. Though the streams are nearly all open, and the weather is so warm that seeding is in full blast, but few ducks have arrived. Full battalions of them will probably be along soon. The last open season for deer was an unusually poor one for hunters, owing to the want of snow, and as a natural and desirable result a good stock of this noble game is left over. Four deer, all apparently in excellent condition, were discovered rubbing against a wood-pile near this village yesterday. Fish are beginning to "run," and already the murderous, barbarous, and altogether abominable spear is thinning their ranks. Lovers of the rod and gun who are casting about for a place to spend their vacation cannot, I believe, do better than come hitherward.—J. F. L. (Pillsbury, Minn.).

SEASONAL CHANGE IN RUFFED GROUSE.—Attention is called by our correspondent "Jay Bebe" to the fact that recently the naked supercilious strip in a ruffed grouse in his possession has become vivid orange red. Two other birds, known to be females, show no change of color. Our correspondent suggests that the bird is probably a male, and that the change is due to the approach of the breeding season.

"THE YEAR'S SPORT."—We are advised by Messrs. Worthington & Co., the American publishers, that the price of "The Year's Sport" is \$6 and not \$2.50, as stated in our issue of the 15th inst.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—VIII.

IT was still raining when we got out in the morning, and it kept coming down steadily until near the middle of the afternoon, when Jim and I concluded to cross the lake and hunt up Al's trout stream (Maybert's Creek), and try for a "mess" of them spotted minnows," to quote Ben, as our trout tooth had begun to be a trifle bothersome after nearly a year's disuse. But we misunderstood the directions somehow, and wandered up the road and through the woods hunting for the trail and the stream till too late to do but little fishing had we found it, and we were glad enough to get back to the boat and camp with the last glimmer of daylight.

We went to bed that night with the trout tooth unappeased. More rain in the evening and during the night and all next day, but we were accustomed to it, "fur the Joneses never was used to the very best o' weather, nohow." In the afternoon, however, Dan and I made a short run down the lake, struck a couple of fish but lost them because the wind blew such a gale. I could not hold the boat even for Dan to handle a fish, and it took nearly an hour of hard work to get back to camp, leaving behind us a blue streak of anathemas on the weather, with which we were overcharged.

But under all these trials and discomforts we had not lost our spirits nor our appetites, and we enjoyed the supper Prince Al spread for us that evening with a relish and a "capacity" that would have an average tea-and-flabby-cake-for-supper boarding-house keeper feel discouraged. In looking over an old memorandum book found in the tray of the "camp trunk," I find, in Kit's handwriting, the following "programme" for supper on that identical evening, which is herewith presented:

Fish, Fried.	Poached Eggs.	Pickles.
Cold Ham.	Potatoes (in jacket).	Cheese.
Side Meat.	Onions (raw).	Bread.
Coffee.	Tea (for the girls).	Apricots (in can).
Roly Poly.	Raspberries.	
	(Mosquitoes, 14,030,000.)	

The above may serve as a sample of several other "programmes" I find in the same old book, varied frequently with some additions as trout, biscuits, cake, "corn pone," etc., and "lunch" at alarmingly frequent intervals. I am a little inclined to think, however, that Kit put rather a high estimate on the number of "skeeters" engaged for the chorons that evening, as I have been thinking it over quite seriously since looking over the old book, and can only recall about eight and a half millions of the melodious pests as being present on that particular night, and as the "old man" has had considerably more experience in estimating skeeters than Kit has, she is evidently in error by some millions. As to "roly poly," I give it up; it's a new kind of dish on "the skipper."

After a late breakfast the following morning Ben and I determined to find Maybert's Creek and some trout if it took all day, and getting plain directions from the philosopher we crossed the lake equipped with a short stiff rod each—a limber fly-rod is of no earthly account in the "bresh"—a bait box of worms, a few flies in case we found an open space where we could make a cast, a pocket compass and rubber coats, for we were having a little more rain with no symptoms of it letting up very soon.

We were to follow the road that led around the base of the hill, a matter of three-quarters of a mile, till we came to an old blind trail leading off to the right a quarter of a mile or more, to where a pine tree had been felled, tradition said, many moons ago by the Indians, and out of the log they had fashioned a famous canoe, doubtless a craft similar to our "holler log." From the old stump, still standing, we were to go due south ten rods, and we would find the stream. We found the trail which the philosopher had made with his jack-knife on a good-sized maple sapling near the road (Jim and I had not known of this blaze), and with some difficulty followed it to the old stump, where it ended in a dense tangle. Here we took our course by the compass, for there was no sun to steer by, and started, climbing over old fallen, decaying trees, crawling under one occasionally, and working around tangles of brush and bushes where it was too thick to get through, every bush we touched bringing a

shower of water on us, till we thought we had certainly traveled a mile instead of the ten rods laid out for us.

We stopped a few minutes while Ben wasted a dozen matches before he succeeded in firing the briar root, after which we went ahead again for the stream, Ben remarking as he straddled over a rain-soaked log, "Hickory, ef anybody was to offer me ten dollars fur it, I don't b'lieve I could find that ole stump agin in this durned—cuss a fishpole that's always a ketchin' yer line on to somethin' when ye don't want it to," with a savage yank that stripped the leaves from a green twig on which the line had caught as he dragged his rod after him through the bushes. He was so mad that he let the pipe go out, and while he stopped to relight it he forgot all about the stump.

Moving on, we came to a less dense place in the woods that had rather a familiar look and directly we were in the same old trail, and as we turned a slight bend in it, there was the same old stump, the same old decaying chips, the remains of the dead trunk and limbs off to the left, from which we had taken our bearings three-quarters of an hour before.

"Not so hard to find the old stump after all, eh, Ben?" And Ben's answer as he took the pipe from his mouth to give due force to the brief sentence, "Well, I'll be durned!" or words to that effect. And then we stood there in the rain and laughed, ashamed to look each other in the face for our stupidity, and wondered—I speak for myself, at least—what Jim and Dan and Muller and the girls would say, could they peer through the bushes and see how sheepish we looked.

Two smart old woodsmen, we. We had gone chattering heedlessly through the woods, avoiding a fallen tree here or a dense group of bushes there, always bearing to the right, as it proved, till we had made a complete circuit and came back to exactly where we had started from. No wonder that we were ashamed of our woodcraft and tried to laugh it off, and charge it to the rain and cloudy weather, and half a dozen other causes that might be accountable for our blunder. Tell it not to "Yo" nor yet to "Appekunny," lest they smile a "voriferous sneaker" at us for a pair of tenderfeet. I record this brilliant maneuver of ours only to show how easy it is for even those who are usually clear-headed in the woods, to get turned around and lost on a cloudy day if they don't pay close attention to the course laid out and read aright nature's handwriting on the trees.

We started again, and Ben said: "Keep yer eye on the south end o' the needle in that compass, an' ef ye come to a tree don't go 'round it, jest climb it an' come down on t'other side an' holler, an' I'll come around."

By the exercise of a little common woods sense, and without the aid of the compass we soon found the stream, not more than seven or eight rods from the old stump. It proved to be a small brook not more than four or five yards wide at any place we found, and oftener barely two yards, and shallow except for frequent deep holes from a foot to three and four feet in depth. The tangle through which it flows is not quite so dense as that along Cedar River, Cold Brook, or Shanty Creek (from this "Norman" can form an idea as to the comfort of fishing it) but the general ground plan is much the same: a net work of fallen trees and limbs covering it except at infrequent intervals, the low banks overhung with trees and "bresh," just the thing to compel the angler every few minutes to untangle his line from an exasperating limb overhead; a convenient fallen tree every few rods under which you may crawl and scrape the cuticle from your "dorsal," or maybe three or four lying close together bristling with dead spikes through which to flounder and fall and bark your shin; and after you are well over you find your line caught on the further side on a stubborn, intensely crooked cedar limb that never lets go. The line is always sure to take from nine to thirty-five turns around a limb of that kind in as many different directions, and the safest way out of the "category" is to lay your rod down gently, rub your barked shin once or twice before starting, crawl back through the spikes, and free the line without saying anything, bark the other shin in getting back, then pick up your rod. This was about the experience Ben and I worried through that day, and Maybert's Creek is one of the easiest of Michigan trout streams to fish, but then "the Joneses never was used to the very best o' trout streams nohow."

Finding we could do nothing with our flies on account of the overhang, and the logs and limbs infesting the stream, we fell back on our reserves, the time-tried, regulation trout persuader—plain "fish worm."

"Speakin' o' fly fishin'," said Ben, as he impaled a squirming worm on his hook and "spit on it for luck" (so tenaciously do the teachings and superstitions of boyhood cling to us). "some feller hes wrote that fly-fishin' is the poetry ov anglin'; but, as I don't go much on poetry, a chapter er two o' plain prose is good enough fur Ben, an' that I kin git out o' wurms an' clams an' bacon an' equir' meat, an' sech, to say nothin' o' hitchin' on a cricket er a grasshopper once 'n a while for a change." Here he stood his rod up against a bush and proceeded leisurely to fill and light the briar-root, talking the while, as he wasted three or four matches searching for the right kind of a dry spot on which to scrape them. "I'd like to see ye git any poetry out ov a limber fly-rod an' a whole haful o' artificial flies along a branch like this er the Cedar [the memory of Ben's first trip up the Cedar River and the swarms of black flies that made life a burden to us that day seemed yet fresh in his mind], where the bresh is so thick that a groun' squir' would git lost and forget the way back to his hole." The briar-root finally under headway, he took up his rod, and, tiptoeing stealthily to within a few feet of the bank, dropped the baited hook into the water with, "It's a heap o' sport to handle a fly-rod where ye hev room to cast yer fly without gittin' hitched on to a limb or—somethin' like that cussed thing up yander." This explosive finish to the sentence was caused by a bite and a jerk that wrapped the line around a twig on a bush hanging over the water a few feet above him. Stepping cautiously back, he pulled the bush down slowly and carefully, freed the hook, and let it back in the same manner, so as not to alarm the fish. "Durn a fish hook, anyhow! Ef there's a limb in a half a mile ov ye it's bound to ketch on it. I was too fresh, though, that time, secin' as it was the first bite, an' I jerked with a little too much vigor." (I may say that during this time I was a couple of rods below Ben, making good, with a short piece of a sharpened twig, the loss of a suspender button that had taken its departure under the strain of crawling under the last fallen tree.) Adjusting the worm on his hook he dropped it in above a half-sunken log, and the next moment the rod was given a smart twitch with, "Fooled ye that time, ye spotted sardeen!" and as the rod came up I could see a pretty little trout dangling and twisting in the air and Ben reaching for it.

I was not over four or five inches long, not up to the lawful length of six inches, and after carefully extracting the hook he returned it to the water with, "Shucks, ye ain't big enough for good bass bait; hie off under yer log an' stay there till ye git big enough to make a smell in a fryin' pan."

He took a couple more of about the same size and then moved on up stream muttering something about "an old crank a-ketchin' minners with a bass rod." We fished the creek for half a mile or more, counting in the "kinks." Ben ahead and out of sight most of the time and found it literally swarming with trout, but of small size.

In one pool, however, where the water was near five feet deep and almost hidden by closely packed drift and logs, I saw four or five good sized ones—a half to three-quarters of a pound in weight perhaps—lazily fanning the gravelly bottom with their fins, all unconscious of my presence, for I had walked softly out on one of the tree trunks lying clear across the stream to where I could see the bottom through the only opening in the mass of drift that promised room to lower the hook into the water. Moving cautiously back a step or two and "skortening" the rod I dropped the baited hook through the opening till it struck the water, when it was instantly seized with a furious jerk that made my hair bristle, and in a twinkling I had a splendid dark backed fellow half out of water through the rift, but a flirt of his tail against the log tore the hook loose and he went out of sight in a flash. He must have left a streak of information after him as he darted under the bank, warning his mates of the narrow escape he had made, for a half hour's patient and persistent fishing failed to "restore confidence in the pool."

A cautious look through the opening revealed nothing in sight but the crystal water and I took my way up stream after Ben in the tangle and drizzle with a heart bowed down with disappointment and defeat.

We left the stream about the middle of the afternoon with fifty six trout, a few of them quarter-pounders, and we had besides put back in the water nearly as many more that we thought were under the lawful size of six inches.

I recall the score from the mental notebook: Hyperboler twenty-nine, Hickory twenty-seven, but the chief glory of the day's sport rested with Hickory, for he had "lost the big one."

A due north course soon brought us out into the road, where we were shortly overtaken by a couple of country lads going after the cows down by the lake side, and in the course of a trouty conversation with them, Ben gathered that the older one had taken a nineteen-inch trout with fat pork bait a few weeks before out of the stream near the point where we had just left it. There are no doubt many good-sized trout in Maybert's Creek, although we got none of them in fishing it three or four times while in camp. However, it is alive with small ones, and if the count fisher and the trout-hog will let it rest for two or three years, an honest angler could now and then get a day of "pure delight" with rod and worm or plain side meat out of its shaded pools, and think nothing of the loss of a section of cuticle from his shin or the labor of working his way through the "bresh" along its sinuous course.

But it is idle to hope that it will be let alone. The trout-hog and the "resorter" and the dude fisherman from the city, with knee breeches and "mutton chops," will scent it from afar, and the native mossback will diligently "thrash its waters" with a total disregard of the beginning or ending of the close season. The hog, the dude and the resorter will fish it for numbers; the mossback for meat. To him a trout is a trout whether two inches or two feet long, and represents so many moufals, more or less, of "succulent sustenance."

Verily the days of the wild *Salvelinus* (this will have to stand good for trout till some aspiring half-fledged naturalist digs up a name from the original Choctaw with more "priority" to it) are numbered, unless some better law is enforced to give the fingerlings a chance to grow up.

But how is one to tell the length of a trout in the water when he takes the bait under a log and out of sight, and how are you to prevent the little ones from taking the fly or bait? The Michigan law says (I write from memory): "It shall be unlawful for any person to take trout under six inches in length." If we take one only five and a half inches long, do we satisfy the law by returning it to the water? In many cases, in freeing the hook from a small fish it is unavoidably wounded so it will die even if returned to the water. If we keep it and take it to camp, we violate the statute; if we put it back in the water dead or hurt it so it will not recover, do we not break the law by complying with it?

Somebody show us the way out of the fog.

But after all I don't see why trout fishing is to be classed as the sport *par excellence* for the angler, although there is a fascination in it not to be accounted for, and I am not ready to admit that a six-inch trout is superior in game qualities to a six-inch small-mouthed bass. If there is more sport in handling a pound trout than there is in handling a bass of the same weight with the same tackle—and I deny it—it must be solely because he is a trout and not a bass, and because he has the "priority" over the bass in the matter of a fighting record. *Micropterus dol.* (the latest name out I believe, but it is getting a trifle old) is building up a reputation, however, as a fighter of many parts, and he has come to stay.

And while in a fighting vein it might be mentioned that a six-inch "blue gill" will kick up a fight with great celerity, and to my notion is about as tough a customer to handle as a trout of the same length, though not so long-winded, and when you have taken one you can hold up your head and exult over the victory, and not feel that you are a culprit in the eye of the law, as you do after subduing a fingerling trout.

Old Ben says, "There's jest as much fun a flippin' out good big chubs an' shiners as there is in ketchin' them little sucklin' trout;" and I am inclined to fall in with Ben's way of thinking, even at the risk of having a figurative rock shied at me for an old foggy who believes there are some other good fish besides trout, and that plain bass fishing with fly, and even minnow and frog, is "good enough for the Joneses."

As we stepped back in the boat to start for camp Ben tied the trout over the side to "freshen 'em up like," as he said, and after bailing out a few gallons of water with an old peach can, said with his usual gravity of speech, "Hickory, 'pears to me we've struck on to a new kind o' trout in that crick. What's the matter with callin' 'em *Sal-mo infantalis*, an' gittin' Jim to publish it in his paper for a new species discovered by his nibs, Professor Hyperboler Jones?" And then the old bronze-back scraped a match and hovered over it to keep the wind from blowing it, chuckling to himself, I fancied, at the neat manner in which he had relieved him-

self of this "fool notion" that had been weighing him down for the last half mile.

We found the happy family somewhat out of sorts at the state of the weather, for it still rained, and the wind was cold and raw, and worse than all, the lake was most of the time too rough to fish, but a yell of "trout" from Ben worked a magic change in the camp. Rain, cold and wind were forgotten, as the girls came trooping out of the big tent to see our "speckled beauties" (a brand new name for trout that it is hoped will cause old "priority" to take a back seat) where Ben had spread them out on the table in a manner to make the best showing, as any other conscientious angler would have done. The Editor lost interest in a game of cribbage that old Dan and Muller were hotly contesting despite the chill in the air, relieved his long suffering camp stool of its burden, shook himself together, and came in under the fly to cast a mouth-watering glance at the spread out and give vent to his feelings in a regretful, "wish I had gone with you two old lunatics this morning;" and then the Philosopher came crawling out of the "Knots" tent, where he had been cat-napping, and expressed his satisfaction at the catch; and finally from the big tent, in measured rumble from Muller, "fifteen two, fifteen four, and a pair," and from the old Pelican in a sort of "umpirish" tone that implied a strong leaning to the "national game" even in matters of crib, "game called on account of rain, let's go and see the trout;" and at last the entire Jones family were under the big fly, all talking at once and all talking trout, utterly unmindful of the weather and all happy, with Ben and the Skipper a couple of lengths ahead in the matter of "complacent serenity," notwithstanding we were "a trifle stiff in the joints," as Ben said, "an' hungry as a sucklin' wolf."

Bob and Kit were at once seized with a desire to catch a trout, but when told of the difficulties a woman would labor under in getting through the "bresh" with skirts and the other flummery they are usually oppressed with, their ardor cooled somewhat, but I have no doubt had not the scheme been discovered and the enterprise nipped in the bud, these two mischievous madcaps would have "sneaked out papa's two old pair of extra breeches," rigged themselves out for the occasion and made a trip to Maybert's Creek or some nearer stream the very first time I was out of camp for a day with the bass. But "the best laid scheme o' mice and girls are oft knocked higher'n a kite" (slightly altered from Burns) and the twins are yet pining over that lost opportunity to distinguish themselves as trout fishers.

The trout were dressed and many of them, notably the smaller ones, were found to be full of spawn, and this raised the question, how long will the wild trout last in Michigan or any other place, if they are allowed to be taken during at least a month while the females are full of eggs? Is it any more destructive to leave the season open up to the very day of spawning? We fish for trout all through the month of August, till darkness drives us from the stream on the 31st day, when the season closes, because the law allows it, but we don't seem to realize that we kill the goose that lays the golden egg every time we take a fish that is in spawn, and lessen our chance for sport for each succeeding year till the streams will be utterly barren. But we all do it, and will keep on doing it to the end, simply, perhaps, because it is not unlawful, and yet I don't believe there is a solitary, conscientious angler in the land but will say it is wrong to kill a fish that is full of eggs. And this may apply as well to early spring bass fishing.

This little digression may be something for the honest angler to think over, but it is not intended to reach the trout hog and the count fisher, nor yet the native and the dude; they will fish in season and out of season; they never put a fish back in the water, alive or dead; some of them would shoot a timid mother doe with a week-old fawn pulling at the teat.

At breakfast next morning the trout were so toothsome that Ben was moved to say: "Ef there's any fish that has more of a flavor to it than another, strikes me it must be a trout; beats side meat clean out o' sight," and as he deftly extracted the backbone from his second one and dropped a section of the savory flesh into the rift in his countenance, he added, with a glance up and down the table, "guess James Mackerel an' me'll hev to slip over an' ketch another mess o' them minners in a day or two," and then, as Kit turned to help Mother Jim to another "minner," the old sinner hastily gathered all the fish bones within his reach and furtively deposited them alongside of her plate. When she faced around to replace the trout dish (a tin pan), she discovered the sudden accumulation of bones, but aside from a flash of color in her face and a quick glance at the old culprit, she showed no sign of anything amiss. Ben stirred his coffee in an absent-minded sort of way, meantime delighting little Top with a yarn about "a famous place jest around the pint, where he would take her some fine day when it quit rainin', where she could hev dead loads o' fun with the sunfish."

As the yarn was finished, he solemnly passed the trout pan to Kit with: "It's 'stonishin' what Michigan air an' a few days' campin' out'll do in the way o' creatin' an appyтите fur fish in some gals. Ef Miss Kit keeps on the way she's started in an' don't git a backset, it'll keep her daddy an' me a hustlin' aroun' to ketch trout enough fur her from the look o' that pile o' bones."

Top clapped her hands and laughed in great glee (Top had suddenly become Ben's fast crony on account of the promised frolic with the sunfish), and her happy laugh seeming to be infectious, the whole camp "joined in," even the usual gravity of old Dan's face relaxed into a broad grin, and Kit was forced to follow the example of the others to hide her confusion.

A morning or two after, however, Ben inadvertently sweetened his coffee with salt in place of sugar, and as he emptied the cup behind him after the first taste, he looked at Miss Kitty, who sat opposite, and remarked, without the twitch of a muzzle in his mirth-provoking old face, "Must a some o' them trout bones got into that coffee from the taste of it," and we knew that retribution had overtaken him at the hands of Miss Innocence across the table, who was demurely stirring her coffee with a complacency that betokened a keen satisfaction in getting even with "Hyperboler."

Miss Top felt it her bounden duty to laugh at about everything "Uncle Ben" said, and when she bubbled over it started the others, older heads and all, and merriment and hilarity reigned in the Kingfishers' camp despite the rain, that kept up a steady, monotonous patter on the canvas overhead. But it takes little to make one laugh in the woods, when all the cares and worries of life have been left behind. A whole camp will roar at an asinine remark that ought to be the death warrant of the perpetrator. Old, stale jokes that have been worked over and done service for years, that

have lost all their edge and brightness from oft recurring use, are brought forth and burnished up in the light of the camp fire till they are almost as good as new and we laugh at them and enjoy them with the same keen zest that we did a score of years gone by. Some one has said all this before, and I quote it, in effect, only because it is so true. The camp in the woods, too, is a great equalizer. The clerk stands as high as his employer, the owner of a block of bricks; the shover of the plane sleeps and snores under the same blanket with the dignified judge; the undertaker cracks business jokes with the dispenser of physic; the sun-browned follower of the plow ranks equal to the M. C. "from the flat-rock deestrick," and all partake with equal relish of the same stew concocted in the same old blackened and battered camp kettle that has weathered half a score of rough campaigns. In the woods social distinctions are lost sight of; no lines of caste are there to mar good fellowship, albeit lines are often cast, and all the certificate required for admission to the circle around the camp fire is a love of rod, gun and the woods, and to be possessed of the instincts of a sportsman, which are always gentlemanly; and I am going to record it that I don't take any stock in the terms true sportsman and gentleman sportsman, for I take it a sportsman can be nothing but a gentleman, however, a gentleman may not be a sportsman, but "sportsman" covers the whole ground, whether he be a respected Governor of a State or the humblest woodchopper in the pineries.

But the trout bones have led into a digression.

KINGFISHER.

CINCINNATI, Ohio.

THE TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

Food makes trout grow. After the interesting letter of Mr. Livingston Stone, in last week's issue, it seems needless to cite instances from the experience of pisciculturists, anglers and naturalists in this country and England to prove the above. Abundance of digestible food is a condition which Sunapee Lake meets in its countless millions of smelts, which supply the black bass and the *salmonidae*. These fish, two or three inches in length, are tender-fleshed and easily disintegrate in the stomach of the trout, and there is practically no limit to a trout's voracity. Mr. Henry R. Francis, in the recent pages of the Badminton Library, mentions a trout caught by him, weighing a little more than $\frac{1}{2}$ pounds, that had "forty-six small minnows in its maw, the uppermost freshly swallowed, while those furthest down were more than half digested." The same author further instances a brook trout, whose stuffed skin is in the possession of the Driffield Club, that attained a weight of 17 pounds from feeding upon minnows that swarmed in the neighboring Beck and its tributaries.

It is every way probable that the *ogusasse* taken in Sunapee last fall attained their remarkable proportions in six years. Mr. Livingston Stone seeks to account for four pounds more than the steelyard proves. The largest trout taken, according to the testimony before us, weighed but 6 pounds; that there were 10-pounders on the spawning bed was a guess. Now, according to Dr. Merriam, six pounds is not an unusual weight for *ogusasse* rapidly to attain in the salt waters of the Lower St. Lawrence. The same little despised four-ounce "blue back," give it an abundance of appropriate food and the tonic effects of a favorable change of waters, develops in the Godbout, the Migan and the Trinity River, as well as in Sunapee, into a giant worthy of the angler's skill, in accordance with nature's simplest laws. I fully agree with Col. Samuel Webber that our noble fish are sprung from his 1879 plant.

JOHN D. QUACKENBOS.

COLUMBIA COLLEGE, New York, April 14.

P. S.—Permit me to add the following postscript; in reply to your correspondent who has seen fit to enter this scientific discussion under the shadow of a pseudonym. It is rather late in the day to speak of four ounces, as the maximum weight of the *Salmo ogusasse*, it having been repeatedly shown in the columns of this paper that *ogusasse* have attained a weight of six and eight pounds; nor is it absolutely certain that the "blue-backs," of Rangeley, "do not average a quarter of a pound." Let me engage our opponents for a moment with their own weapons. They gravely inform us that monster *ogusasse* probably make their home in a number of New Hampshire lakes. It would not surprise me, therefore, at any time to learn that there are in Rangeley Lake *ogusasse* trout weighing from six to eight pounds. The "blue-backs" swarming in the inlets during October may be the callow offspring of astute giants that rise annually from fathomless waters to spawn upon some mid-lake shoal unknown to the genus *homo*, and after a few days recede into depths where no lure can reach them. Assuredly, it is as probable that such Solomons among *Salmonidae* have eluded the vigilance of Caucasian man for a few decades in Rangeley, as that they have reproduced their species for a century in Sunapee unmolested by the net or spear? What is sauce for the goose is sauce for the gander. Your correspondent does not know that these large *ogusasse* have always been in Sunapee any more than he knows they are not to-day actually in the lakes of the Rangeley chain. If the latter be a fact, then the presence in Sunapee of six pound fish from the 1879 plant would by no one be regarded even as remarkable.

The time museum analogy is so absolutely inapplicable as to be undeserving of serious notice.

Once more, the largest *Salmo ogusasse* taken from Sunapee weighed six, not ten, pounds. To quote Charles F. Imbrie, when the weight of a trout is in question, "I would rather believe a poor pair of scales than George Washington."

J. D. Q.

Editor Forest and Stream:

I have lately noticed in the FOREST AND STREAM remarks on the different species of trout in Sunapee Lake, N. H. I will say to the readers of FOREST AND STREAM, and others, that I began fishing for trout in that lake in 1857, and have fished every year since, more or less, therefore am able to state to you the different varieties of trout in the lake. When I first began to fish for trout in the lake there was but one species of trout in it and that was the native speckled trout. We have at this time four different varieties of trout in this lake, viz., the speckled trout, the white trout, blue-back trout, and landlocked salmon. The speckled trout sometimes weigh 5 or 6 pounds; the white fish average a little more than the speckled trout; the landlocked salmon average 8 or 10 pounds, and the blue-back not so much. As to the white fish being a species of the speckled trout I should say they were not, but are a species of the real St. John River trout. These four varieties of trout are caught in great abundance.

JACOB R. HUTCHINSON

NEWPORT, N. H., April 6.

BIG TROUT.

Editor Forest and Stream:

Having read in your always truthful journal several accounts of very large trout which have been caught in various places and at recent dates, I trust you will not object to publish, and thus perpetuate, an account of the biggest kind of a trout, although caught "in the days of long ago."

While sojourning on Long Island several years ago I became conversant with the following facts—I say facts, because there are living witnesses enough who were personally cognizant of them to establish their truth in any court:

In June, 1822 or 1823, a trout was caught in Carman's River, South Haven, L. I., below the mill dam and about three miles from the South Bay, which weighed 14½ pounds. When discovered in the "mill hole" a strong net was stretched around it, and after having been kept in confinement for some time was killed and sent to New York to some noted fishermen of those days, who sent in return a check for \$100 to its captors.

Daniel Webster and other noted sportsmen of the old school were often guests at Carman's celebrated hostelry, and enjoyed fishing in this stream. Trout of three and four pounds' weight were not uncommon there at that time. The waters of this stream, at the time I was there, were, and I think are still, controlled by the Suffolk Club, a party of gentlemen and true sportsmen.

The following named gentlemen are now living who saw this wonderful fish, and declare it to have been a genuine brook trout—viz., Nathaniel Miller, Joseph Carman and D. M. Clark, men of undoubted integrity, who can be found at Brook Haven and South Haven, L. I., to verify the above statement.

A better account of this trout may have been published at the time it was caught. I hope so, and that this mention may be the means of reviving it. If no account was ever published, I am sure you will deem this worthy of the space it requires.

Chicago, Ill., April 13.

VARIATION OF BROOK TROUT.

Editor Forest and Stream:

Seeing a communication from Mr. Webber, ex-Fish Commissioner of New Hampshire, in which he says that perhaps the trout in lower Diamond Pond are identical with the blue-back-trout in the Rangeley Lake, reminds me that some time ago I thought of writing an article for FOREST AND STREAM in regard to the variation of the brook trout in our different waters.

But the execution was for some reason delayed, until the discovery of the new variety of trout in Suapee Lake by Mr. Hodge again brought the idea to mind.

I am pretty familiar with nearly all the trout streams and ponds in Coos county, N. H., and excepting the lake trout (*Salmo namaycush*), found in First and Second Connecticut lakes and South Pond, in Stark, I think we have but one variety of the *Salmo* family native to our waters, although they vary much in their general appearance as well as habits. The causes of some of these variations are still a puzzle to me, and a discussion on this subject will be of great interest to me and I think to many others.

I will state some of the differences in size, shape, color, habits, etc., of trout caught in different localities, and perhaps some one will tell us the cause. Of course there is a reason why the trout in one pond scarcely ever attain a weight of ½ of a pound and never exceed 1 pound each, while in another only a short distance from the first and connected by quite a large stream, they are often taken weighing from 2 to 3 pounds each. This is the case with the trout in the Diamond Ponds near Colebrook. In the lower pond I have never seen a trout taken that would weigh more than ½ of a pound, and a native fisherman who has fished it every season for over 30 years, told me that he had never caught one larger. The Swift Diamond (the outlet of the pond) is a very prolific stream, and small trout are continually running into the pond during the summer season, and they are certainly genuine brook trout when they enter the pond, and I think they still remain the same, although they gradually change their habits and appearance. Their food is not so abundant in the lower pond as in the upper one, but is that the cause or one of the causes of the difference in size of the fish?

Another common difference in trout taken in the same pond, and fed and raised under the same conditions, is that one specimen has white meat and another red, but outwardly they are the same. Are they the same variety, and if so what causes the difference in color?

Where trout have an abundance of food they grow faster than where their food supply is scanty, but in the pond where the food supply is the best of any pond that I know they never exceed 2 pounds in weight, and the most of them go from ½ to ¾ of a pound each.

Another pond where the fish have a different appearance from the ordinary brook trout is North Pond, in Stark. They are quite long for their weight, light colored below, and average ½ of a pound each. The pond is fed by mountain streams and springs, but the natural food supply is small and the native fish is small although of fine flavor. Good fishermen who have fished there for years say that they never caught one there that would weigh more than a pound. The waters discharge into the Ammonoosuc River, where formerly large numbers of trout were caught of 3 and 4 pounds weight.

In Big Dummer Pond, the trout caught will average 2 pounds each if caught in deep water. I caught one a few years ago that measured 21½ inches in length and was 13½ inches in circumference. They are of almost a bronze color and scarcely ever rise to a fly. In Greenough Lake some of the fish are of the same color, but they are not as large.

There is a small pond in Errol, of probably not over seven or eight acres in extent, that contains very finely flavored trout and of very good size, and they are the gamiest fellows one would wish to find. A dish of these fish baked in cream at the Errol House, some time during the summer of 1884, is often spoken of by the participants as something to be long remembered, and the gastronomic gymnastics of Clark, the Magalloway stage driver, were something simply wonderful for so large a man.

At Success Meadows is the junction of two streams called respectively Black Strap and Silver Stream, together with the outlet of Success Pond, forming the Chickwolnepy River which empties into the Androscoggin at Milan, N. H. In Black Strap the trout are very dark colored and thick-bodied and in the other they are long and slim, and almost as silvery as a true salmon. A greater contrast in trout found in different streams whose waters unite is probably not found in the State.

In Mill Brook in Stark the trout in the upper part of the stream are orange-colored on their sides and bellies, and I have noticed that they were exceptionally fine-flavored, but they are of small size, scarcely any weighing over four ounces each. But the best of all our trout are those found in Little Millsfield Pond. Probably hundreds of small fry run up into the pond every year, but after they have been in the pond a few months they don't look enough like those in the stream to be brothers. Their change of food and habits make a wonderful difference in the appearance of the fish. So much so that Dr. Elmendorf, of Brooklyn, N. Y., threw away a half pound specimen caught in the stream below the pond, because it bore so little resemblance to those we had been catching from the pond that he thought there was something wrong about it and so threw it away. These trout have the smallest heads of any trout in our waters and a gamier trout never rose to a fly. They are very dark-colored above and white beneath, and take a fly very readily. There is a great uniformity in the fish after they have been in the pond for some time, but once in a while I have caught small ones that were like those in the stream below.

I have enumerated some of the peculiarities of the trout found in our waters, the cause of which I will leave to be explained by some one with more knowledge on the subject than myself. There must be a cause for all these variations, but some of them seem very singular.

In mentioning our different ponds I have made mention only of the native trout. Some of them have been stocked with land-locked salmon and black bass, but this article has reference only to fish native to Coos county. Our waters can only stand the great drain on them by restocking by the State. But let them be stocked with trout, for black bass are a poor substitute for our beautiful brook trout.

S. J. G.

LANCASTER, N. H.

NEW ENGLAND TROUT STREAMS.

THE Massachusetts trout season has not yet been very productive, though the snow and ice are about out of the way, even in the western part of the State. There is a complaint that favorite trout streams are not "panning out" very satisfactorily, even to the annual visitor for many years. The dealers in the Boston market are much dissatisfied. They claim to be able to obtain a fair supply of trout, but the demand is small. This they attribute to the law, which prevents their selling trout in winter. "It is so long between seasons," they say, "that the public lose the taste for trout." If they could be allowed to sell Canada trout in winter, there would be a good trade in native trout in the spring, and thus a good deal of money made. This is their argument. It sounds as reasonable as that of the boy who desired to be fed on strawberries in January, simply because he was fond of them. These marketmen imagine that because they can get all the trout they can now sell from Sandwich and other towns on Cape Cod, that a continued supply could be kept up, the same as in codfish or mackerel. They desire to make a market fish out of what must be regarded as a rarity.

Besides, the privilege of selling trout from the Provinces in winter would simply mean more smuggling from the Maine waters at that season; and the marketmen are well aware of it. One of them recently confessed as much to me. He also further remarked that the whole fish protective laws of New England, Maine especially, were non-constitutional; that he had the money—made in the fish business—and had he the time and the desire to go into the courts, he would drive the trout and salmon laws from the Maine statute books and the fish commissioners and wardens out of business. Truly it is the marketman that the angler has to fear, as well as does his fellow sportsman with dog and gun. It gives the angler the headache to see such a strong desire for traffic in that which is so dear to him, and that which, in spite of all protection has done, is yearly growing more and more scarce.

Recent letters from those familiar with the Maine waters suggest an early clearing of the ice from the lakes, though this is probably based chiefly on theory. The snow has been very deep late in the winter, causing thinner ice and rapid melting from below. The trout season promises well. The law has been well obeyed, as to close time, and rough weather and deep snows have prevented residents from fishing since Feb. 1, to the extent they otherwise would have done. All this is favorable to the angler. So far as the big catches through the ice are concerned, the Maine papers have told of but very few this spring. It is to be hoped that another session of the Legislature of that State will repeal the law which allows residents to take trout and land-locked salmon through the ice after Feb. 1. The law is abused. Non-residents only have to go to "the holes" and "watch the residents fish," to get all the trout they want. Commissioner Stilwell put the matter in its true light when he told the Legislature of that State that their fish and game were worth as much as her lumber—that her fish and game drew in millions of dollars every year from summer visitors who come into that State for no other purpose than for fish and game.

But very few fresh salmon have yet been received in this market. Two from the Penobscot came in Tuesday, and sold at \$1 per pound. It is a pity that the *Salmo salar* is not better protected by law below tide water in the Penobscot River. That river is now known to be the last resort for eggs of the true salmon for propagation, and yet the parent fish are the prey of the marketmen, till the arrivals from the Province bring down the price to where it no longer pays to net the Maine salmon.

SPECIAL.

CRAWFISH.—H. A. Kelly's note in your last issue reminds me that after R. S. Tarr's paper on crawfish, I wrote you that he was mistaken in saying that they were found in only one locality in New England. When I was a boy, we used to find them often in a brook on my father's farm, and it is not more than ten or fifteen years since I saw one in the same brook, but have seen none there since. Then the brook was perennial, or at least, there was always water in the deep pools. Now, in summer, its bed is as dry as the highway. I am told that in some of the brooks emptying into Lewis Creek, crawfish are yet to be found in considerable numbers. Thompson's "Vermont," 1842, says: "It is very common in many of the small streams in the western part of the State."—AWANSOOSE (Ferrisburgh, Vt., April 10).

MINNESOTA BASS FLIES.—Hastings, Iowa.—In reply to H. P. Ufford, would say that I found the grizzly king the most attractive to the bass last summer. Will some of your correspondents in Colorado, along the Denver & Rio Grande Railroad, please give some information as to trout fishing localities, etc., and whether streams have to be waded or fished from bank, also flies used?—HOLLOW RIB.

THE BRANDY POINT TROUT.

Editor Forest and Stream:

In one of the issues of FOREST AND STREAM last fall, I noticed an article by one of your regular correspondents, the sum and substance of which was that the large trout taken the latter part of September near Brandy Point by a New York gentleman did not rise to the fly, but was taken in an unsportsmanlike manner; and all the ground the writer seemed to have for his suspicion was the idea that large trout did not rise to the fly at that season of the year as they were "down on the spawning beds." If your correspondent is really the sportsman that he evidently would have the readers of FOREST AND STREAM believe him to be, it is very singular that he should be so ignorant of the habits of large trout.

I took the gentleman and his guide to Brandy Point on my steamer the morning of the day that he took the large trout, also the following morning. He told me that the trout rose fair and took the toodle bug fly; also of the hard fight of an hour he had with him before the guide slipped the landing net under him. I had not at the time, and still have not a shadow of a doubt but that he told me the truth. I have seen that guide many times since then, and have been with many of the guides continually from the time the trout was taken to date. The only intimation that I have ever seen or heard that the trout was taken otherwise than fairly is what I have seen in the FOREST AND STREAM.

The last few days of September were very favorable for the fishing ground in the vicinity of Brandy Point. The same gentleman who took the large trout took, the last day of September, three trout of 4, 7½ and 8½ pounds. Three New York gentlemen, members of the Oquossoc Anglers' Association, with their guides fished near Brandy Point the day after the large fish was taken. These gentlemen are old time frequenters to our lakes and the mention of their names to those who know their fishing principles would be a guarantee that whatever the record was it was a clean one. No trout comes to their landing-net except by fair angling with the artificial fly, and then usually only to be weighed and let go again. These gentlemen took one each which is worth mentioning, one 5½, one 7½ and one 9½ pounds. One of the guides told me lately that the seven-and-a-half-pounder came for the fly three times before he struck it, as smart as he ever saw a small trout. These trout were all weighed and then permitted to go again. How is that for a New York angler? Can any city show a better illustration of a true gentleman sportsman? And is it to be wondered at that when gentlemen from a distance take so much interest in keeping up our fishing, as to put back not only the small ones, but trout of this size, that we who are directly and peculiarly interested, should feel kindly toward them, and when a slanderous statement, like what appeared in FOREST AND STREAM, comes under our eye that we should feel like letting some one have it right from the shoulder?

I once used to guide a New York gentleman, and I was never tired of sitting on the piers at Upper Dam or in a boat at the Cove, with the landing net in readiness watching "my man" cast or handle his trout. After I got to running a camp and boat he stopped with me, and one day, with no other object in view than that of patronizing the boat, he took a round trip. At the Upper Dam I had a landing to make to connect with the boat on Mollechunmunk Lake. We had a little while to wait; so he took his rod and said he would go down on the pier and make a few casts, if he "struck anything" he would halloo, when I should come with the landing net. It seemed that he had had hardly time to get there before I heard him halloo, as only the angler can who has struck something and thinks he is in a hurry for the net. I caught up the net and scrambled down on to the pier. I found him with only the butt joint of the rod left in his hand; the rest of it and most of his line was out of sight under water, the water was swift but the trout swifter. While he would reel in and snub, the trout would pull out and try not to be snubbed. After about half an hour of this kind of work we began to occasionally see the broken joint of the rod, the tip being suug down to the leader. Then all of a sudden the trout made a run for the pier where we stood, but he made a mistake and landed in the net instead of under the rocks. Out he came, a good eight pounder, and as I lifted him from the water the fly dropped from his mouth, where it had been very lightly hooked. The best of handling was all that saved him; and I should like to see one handled better, just to see how it is done.

CAPT. BARKER.

CAMP BEMIS, Rangeley Lakes, April 6.

"A TRIP TO THE INTERMEDIATE LAKES."—Your correspondent, "J. O. S.," in issue April 1, is substantially correct in his statements, so far as I can remember. He and his friend did call on "Kelpie"—how they found him I know not—probably through some process of generalization and deduction, for there was no sign out. He says that one of them looked like the Old Scratch, and the other still worse. If by the O. S. is meant the devil, I believe that authorities differ as to his appearance. If we accept the Japanese ideal I should say that "J. O. S." did himself and friend less than justice, though they did look rather the worse for wear. If I had known that they were man hunting I might have been ready with a rifle; as it was, when I overheard them wondering whether their rags would hold together until they reached Traverse City, I thought of offering one of them my other suit (consisting of an old jumper and overalls). I did not act on this benevolent intention, partly from native modesty—I am a very modest man; partly because the O. S. aforesaid could not have told which of the twain was the more dilapidated, and partly owing to the fact that these hung about them an indescribable something which to a close observer indicated that they thoroughly enjoyed the situation, were having a glorious vacation, and asked no odds or favors from anybody. It was a surprise to me to learn that I had been "interviewed," but the crisis is past, and here I am. They were visitors of the right sort, and I shall be glad again to greet them when next they visit the Intermediate Valley.—KELPIE (April 10).

THOSE LONG ISLAND TROUT.—The bill relating to trout illustrated, in the engrossed act as filed in the Secretary of State's office, the value of punctuation points. The first section sets out to amend Section 19 of the laws of 1879 so as to have it read as follows: "No person shall catch, or attempt to catch, or kill, or expose for sale, or have in possession after the same has been caught or killed, any speckled trout, brook trout, salmon trout, landlocked salmon, or California trout, save only from the first day of May to the first day of September in each year, except in the counties of Queens and Suffolk, where it shall be from the first day of

April to the first day of September in each year. And such speckled trout, brook trout, landlocked salmon, and California trout taken in said counties of Queens and Suffolk during the month of April may be had in possession in other counties of the State, but shall not be exposed for sale. In the counties included in the Adirondack preserve, established by Chapter 283 of the laws of 1885, it shall be lawful to catch, expose for sale, and have in possession after the same has been caught, speckled trout, brook trout and California trout from the first day of May to the fifteenth day of September, and salmon trout and landlocked salmon from the first day of May to the first day of October." The engrossing clerk overlooked the period after the words "shall not be exposed for sale." By omitting to put in that point and by beginning the word "in" with a small i the law virtually reads, "But such speckled trout," etc., "shall not be exposed for sale in the counties included in the Adirondack preserve." That is to say, the whole intent of the act, so far as prohibiting the marketing of trout caught in Queens and Suffolk counties within the period during which they are allowed to be caught, is changed to mean that they may be marketed in every county of the State except in the counties of the Adirondack region, wherein the State has a preserve.

OPENING OF THE MAINE TROUT SEASON.—Recent letters from the Androscoggin Lake region in Maine give it as the opinion of the guides that the lakes will clear of ice by May 1 or a few days later. This is especially true of Oquossoc or Rangeley Lake. The weather has been unusually warm down there for April, and the guides claim that the ice is rapidly melting. May 1 would be very early for these lakes to clear; the average date for the past eight or ten years has been May 14. There is very much of uncertainty about the matter, however. When the ice goes the trout season begins, and the event will be hailed by sportsmen ready for the annual fishing trip. Indeed, one or two parties propose to leave Boston a day or two before the telegraph brings the news of departed ice, in order to be on the ground for the first trips of the little steamers to the fishing grounds.—SPECIAL.

WHITEFISH AND GRAYLING.—Timber Line, Montana.—*Editor Forest and Stream:* In the Yellowstone River, and in the Madison, Gallatin and Jefferson rivers, which unite to form the Missouri, there is a fish which rises to the fly, and which is called the grayling or whitefish. An old Scotchman living in the camp says they are the same fish in every respect which he had caught in Scotland, and were there called the grayling. Last summer I showed some of them to a gentleman from Michigan, who said they were not grayling. A day's catch in the Yellowstone shows about two-thirds trout and one-third "grayling," so called. In the Gallatin the catches average about one-half trout and one-half grayling.—F. M. H. [Both whitefish and grayling are found in these streams. The latter have distinct teeth and a dorsal fin of seventeen to twenty rays. The whitefish have no teeth and a dorsal fin of ten to twelve rays.]

BASS FLIES.—Athens, Pa.—*Editor Forest and Stream:* I see that some of your readers want to learn how some killing bass flies are made. I will give you a description of my favorites: Dark orange body, with gold tinsel, red and yellow tail, cinnamon brown hackle, and the rayed feathers of the mallard colored yellow for wings. This I find the most killing fly for all times, dark or bright days, early or late in the season; that is, in the Susquehanna, Chemung and Clyde rivers, Canandaigua outlet and the lower lakes. My next is all black (crow's wings), hackle black, with silver tinsel, tail black. Next is the hackle fly, which is the same as the first, without any wings. Next is the Reuben Wood and scarlet ibis, with orange body and gold tinsel. I also use the Ferguson; but the first one, the yellow one, "takes the cakes."—E. W. DAVIES.

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

THE AMERICAN FISHERIES SOCIETY.

THE fifteenth annual meeting of the Society was held in the Palmer House, Chicago, on April 13 and 14, pursuant of a call issued by the executive committee some months previously. During the session there was a fine display of fish and fishculture in the Permanent Exhibition Building, which is situated within a short distance of the Palmer House. This display was made by the United States and the Michigan fish commissions, and by private persons.

By a coincidence hatching car No. 3 of the United States Commission, in charge of Mr. J. F. Ellis, was at Chicago at the time. It had started from Northville, Mich., on April 11, with three million whitefish fry in cans, to be planted at Michigan City, Ind., and also three million whitefish eggs in McDonald hatching jars, from the Northville station, to be hatched en route and planted at Waukegan, Ill. After planting the whitefish at Michigan City the car was then on its way to Waukegan, and as the fish were not hatched, Mr. Ellis stopped at Chicago to give the society a chance to view the operations of hatching in transit.

In the building Mr. Frank N. Clark, Superintendent of the U. S. Fish Commission stations at Northville and Alpena, exhibited whitefish one and two years old which he had grown from the egg; Loch Leven trout one year old, grown from eggs received from Sir James G. Maitland, Howieton Fishery, Sterling, Scotland, sent as a gift to Professor Baird; grayling, one year old, from eggs taken on the Au Sable River, Michigan; brown trout, two years old, from eggs presented by Herr Von Behr to Mr. F. Mather and hatched by Mr. Clark, together with fry produced from the same fish; lake or salmon trout fry, rainbow trout, one and two years old; whitefish eggs in process of hatching and fry.

The Michigan Fish Commission, through its superintendent, Mr. W. D. Marks, exhibited large brook trout from one to two pounds weight, large grayling (white fish), rainbow trout, landlocked salmon, two years old; hybrids of lake and brook trout, lake and brook trout fry from their ponds at Paris, and a so a model of the Shaw fishway.

A very interesting exhibition of pounds, fykes, gill and pocket nets, with other apparatus for capturing fish were shown by Carpenter & Company, of Chicago. A very handsome display of fishing tackle, comprising everything used by the angler, from an expensive salmon outfit down to a modest hand line rig, was made by A. G. Spalding & Bros., Chicago and New York. An exhibit of rowboats and sportsmen's boats was made by R. J. Douglas & Company, Waukegan, Ill. The meeting was called to order in the ball-room of the Palmer House, on Tuesday the 18th, at 11 A. M., by Vice-President Dr. W. M. Hudson, who, not expecting to preside, had not prepared a formal address, as it had been understood that

Colonel McDonald would be at the meeting. The following letter was read by the secretary:

WASHINGTON, D. C., April 10, 1886.—Sir: I am requested by Col. McDonald to inform you that his baby died this morning, and it will be impossible for him to attend the meeting of the Fisheries Society, which he exceedingly regrets. I send you by to-day's express a package of papers, minute book, etc. Very respectfully yours, J. J. O'CONNOR.

Letters of regret were read from Mr. E. G. Blackford, Mr. A. N. Cheney, Dr. R. E. C. Stearns, W. V. Cox, Geo. Shepard Page and D. H. Fitzhugh.

The morning attendance being very light, Dr. Hudson suggested that it would be well to get through with such routine work as was necessary, and leave the reading of papers until the afternoon session, when no doubt the attendance would be better.

During the meeting the following new members were elected: S. P. Bartlett, Quincy, Ill.; J. H. Bissell, Detroit, Mich.; C. C. Hinckman, Detroit, Mich.; Dr. S. C. Adams, Peoria, Ill.; Herschel Whitaker, Detroit, Mich.; Walter D. Marks, Paris, Mich.; N. K. Fairbank, Chicago; A. Booth, Chicago; Dr. E. S. Holmes, Grand Rapids, Mich.; J. N. Dewey, Toledo; Dr. R. O. Sweeney, St. Paul; W. D. Tomlin, Duluth, Minn.; James Nevill, Madison, Wis.; Philo Dunning, Madison Wis.

The chairman gave notice that during the meeting the following papers would be read:

"Oyster Culture," "Smelt Hatching" and "Work at Cold Spring Harbor, New York," by Fred Mather.

"Fishculture as a Practical Art," by J. H. Bissell.

"The Michigan Grayling," by Herschel Whitaker.

"Intentional and Accidental Destruction of Species," by Dr. R. E. C. Stearns.

"Deep Sea Dredging on the United States Steamer Albatross," by F. L. Washburn.

"Transportation of Fish in the British Islands," by W. V. Cox.

"History of the Iced Fish and the Frozen Fish Trade of the United States," by A. Howard Clark.

The following gentlemen were then appointed by the chair as a committee to nominate officers for the coming year, to be elected on the following day. This committee consisted of Messrs. May, of Nebraska; Butler, of Michigan; Bartlett, of Illinois; Sweeney, of Minnesota, and Downing, of Wisconsin.

The meeting adjourned until 2:30 P. M. A full report of the meeting will follow.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22.—Eight annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

April 27, 28, 29 and 30.—Third Dog Show of the Cleveland Bench Show Association. C. M. Munhall, Secretary, Cleveland, O.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

July 30, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3616.

ENGLISH KENNEL NOTES.

XXXIV.

OUR bulldog fancy that quite boiled over has now settled down again. The match between Rustic King and Tom Ball was an event, and recalled the glories of bar-parlors in the neighborhood of St. Martin's Lane. There was never any doubt that the well-known prize-winner would gain the day and at the same time the owner of Tom Ball may be said to have gained his purpose, as for an outlay of railway fares and a £10 note, he succeeded in making an unknown animal the topic of the hour. Three times the amount spent in advertisements would not have achieved the like. I understand that Tom Ball can be bought for £100, I think he is well worth £80. Mr. Lyell never exhibits, he buys on his own judgment and sells for his own profit. He is a straightforward, shrewd and canny Scotchman. Since the match, the bulldog men have prostrated themselves before the new idol. Rustic King rules supreme and has hedged himself with blinding divinity. But for a' that and a' that Grabber can spare him a few points.

At the late Hanley show an unexpected and undeserved defeat overtook the rural monarch. The committee had displayed more originality than judgment in the selection of their judges. Among the same was a certain Mr. Pemberton, not Leigh Pemberton, but a member of the Bulldog Club. This gentleman is one of those fools of the fancy, who rush in where angels of judgment fear to tread. He judged from a light-hearted, light-headed point of view that must have been distractingly comical to his victims. Rustic King and Queen Mab were before him in the challenge class. He was as polite as he was shallow so he put the lady first. When the storm burst as it certainly did, the poor weak vacillating judging confessed he had made a mistake, he was very sorry, he chattered, and he wouldn't do it again—boo-hoo. Well, what could a man say more, or a woman for the matter of that? Mr. George Raper was satisfied, Rhadamanthus had stepped down from his seat and grovelled on his stomach for pity, he had erred and apologized, George was satisfied, *voilà tout*. That is Act I. Act II, opens in the Aquarium Terrier Show. The Hanley judge has recovered from his fright and now pluckily protests he never withdrew his award, not he, why should he, he still thought the bitch better than the dog, come now, who's afraid? These matters crept into print and a befogged editor querulously inquired, "Now which is it, if you please, did my reporter circulate a false account or did Mr. Pemberton really apologize for the award at Hanley?" Until now the judge and reporter remain dumb. Have they been got at? I am sure I can't tell you; as they say in the law, "My lud, this case has been settled out of court." One thing can be relied on and that is Mr. Mouse-heart Pemberton will never be asked to perform again. The Bulldog Club's next show is announced to take place at the Westminster Aquarium in the summer. Mr. Ellis will judge for the first time.

The terrier show in the same place was a glowing success. I got there on the second day and could scarcely get to the benches for the crowd of well-dressed, perfumed and gay *beau monde*. The fox-terriers were a weak lot, somebody picked up a bargain in a first prize wire-hair for £30. I noticed a couple of good mustard dandies, Scotch terriers were not bad but provokingly misjudged by a merryman named Pratt who carried the joke so far as to pluck hairs out of the exhibits' back to examine with a microscope—those that had not three prongs at the root he declared belonged to dogs that

were not thoroughbred; after that fooling looking in the dog's mouth to estimate his breeding by the color of his palate is comparatively quite sensible. The Airedales showed up remarkably well. Among them was a very fair second rater entered at £3; from the opening of the show to the closing hour this terrier furnished a deal of hard labor to the frantic clerk in the office, as everybody who saw the price rushed with the speed of a writ-chased debtor to claim the good thing.

But what a wauderer I am, I hadn't done with Hanley and here I am in the Aquarium; well, back to Hanley for a few words. When you are in Rome, do as the Romans do—so did the Hanley exhibitors. They went to the circus and stopped the performance, they went into the street and stopped the procession, and generally continued to behave themselves "as sich" with contentment to themselves and to the well expressed contempt of a population not over nice in their manners or appearances. It was playing it a few notes too low down.

The smouldering ill-feeling against the ubiquitous all-victorious Mr. S. Boddington at Hanley, burst into a vicious flame. The unbroken successes of his kennel have long soured his rivals and competitors. "He is always on the make," they exclaim, "dogs are not his hobby, he makes a business of them; he's a pot-hunter—look at his prize record; he's a mug-hunter—look at the sales he effects. Oh, this sort of thing won't do for us, its nothing but our Mr. Boddington's who travels for Collic, Collic & Co." Trauslated this earping reads thusly: Mr. B. has judgment and money, by the exercise of a deal of the first and the outlay of a little of the latter he contrives to secure the best dogs which he wins with and sells to a profit, and there is not one of the grumblers who would not do the same if he got the chance. I don't think the progress of the breed much troubles Mr. Boddington, but I do think he involuntarily advances it all the same by putting decent dogs into circulation.

His last offense consists of having "picked up" a good dog at a fair price (£50) that was in a subordinate position at the Crystal Palace. At Hanley this dog beat the C. P. winner, The Squire, and the latter's owner, Mr. Charles, made a scene in the ring and swore the dog was lame, but this not the judge, the vet., nor the onlookers could see. No matter, Mr. Charles who, with Mr. Ashwin and one or two others, is known to subscribe to the mean suspicions of the now infamous and notorious "collie circular," had kept his envious wrath corked long enough, so he let loose his frothy feelings and soon everybody knew that according to Mr. Charles, his successful opponent, Mr. Boddington, squared judges and made the awards safe over night. Every impartial person who examined Rob Roy MacGregor asserted that the lump on his leg, the effect of an old accident, in no way interfered with his level gait, still Mr. Charles was not to be baulked, he had received an anonymous telegram from Birmingham "putting him up to it," that Boddington's new dog was lame; so he deposited his sovereign and the Kennel Club have to consider the objection. When I heard of Mr. Charles's passionate charges against his successful opponent, I remarked it was a great pity all this sneering and snarling among men in the same hobby, a pity that the pursuit of pleasure and prizes should thus make bitter enemies of former friends. "Not a bit of it," I was told, "why, I did hear they shook hands before going to lodge an objection against one another." I gazed at the speaker with despairing incredulity. My brain was softening, as George Sims' (Dagonet) lines ran through my head:

They called one another the vilest of names,
They played one another the shabbiest games,
They ascribed to each other the meanest of aims—
But still they were personal friends.

They struck one another with poker and tongs,
They did one another the cruellest wrongs,
They labelled each other in scandalous songs—
But still they were personal friends.

They stabbed one another with knives in the back,
They tried hard to get one another the sack,
And each put the tecs on the other one's track—
But still they were personal friends.

Each tore out by handfuls the other one's hair,
Each scratched till the other one's cheek-bones were bare,
And each made the other one halloo and swear—
But still they were personal friends.

At last they fell senseless and smothered with gore,
The doctor arrived, and said both were no more;
They had sent one another to Pluto's warm shore—
But still they were personal friends.

LILLIBULERO.

[Letters from England to be addressed to "Lillibulero," care of Mr. T. Hambien, 16 The Higher Parade, Leamington.]

DOG SHOW SECRETARIES AND "SPECIALS."

Editor Forest and Stream:

"V. M. H." lately gave some very sound advice on the first of the above subjects, using the late Pittsburgh show as a text, and I feel like enlarging on the same matter. We will all admit that the exhibitor is responsible for the correctness of his entries, that on him rests the onus of seeing that all is in accordance with rule and letter; but does this absolve the secretary from all responsibility? For instance, the premium list clearly sets forth that three wins at shows given "under the auspices of clubs members of the association" are required to qualify for entry in the champion class, and gives a list of clubs members of "this association." It was painfully evident at Pittsburgh that not the least attention had been paid to this by the authorities; entry after entry appeared on the catalogue that did not show sufficient wins to qualify. In one of the champion fox-terrier classes neither of the competitors were eligible!

Now, will it be contended that it is simple honesty for a club to take the money for an entry when the entry form plainly shows that the animal is not eligible under their own rules? and does it help the honesty of the transaction to accept the entry and then shamefully deny their own published rule by refusing the protest that follows, as was done in the St. Bernard puppy class? In other words, are dog show clubs under any obligation of treating exhibitors with common honesty?

I was speaking with the brains of the Pittsburgh Club about their folly in so curtly refusing exhibitors their plain rights to a hearing, when he said, "The right thing to have done was to refuse an entry that was wrong, and not to take a man's money and then beat him out of his winnings." "Brains" is nearly always right, and he was not far from it here; but he fails to recognize the rights that a protesting exhibitor has. I thought there was a purpose to punish Philadelphia exhibitors for their upsetting the show last fall; at all events, I heard more complaints from Philadelphia than from all others.

Your remarks on specials were to the point, but you might have written a book on the ludicrous aspect of the phenomenon. Just think of an Irish water spaniel winning a cooking stove! I twice noticed a fine, jolly looking gentleman studying that wonderful cooking stove that was stuck up on stilts at the entrance to the show in the most prominent position that could be had. After conjuring over the cause of his deep interest in a very small and common looking stove, I came to the conclusion that he was an old bachelor contemplating matrimony and he was studying up on the matter; but I was set right on this before the show closed, by learning that he was an Irish water spaniel fancier; I warrant that he was

wondering what in the world he was going to do with that stove. Then the wonderful variety of articles that foxhound owners had to compete for. I wonder what our jolly squire did with that silk dress, barrel of Rhine wine (made on Troy Hill, Allegheny county), cask of "merline" beer, etc., that he won! The silliness of offering cooking stoves, castors, perfume bottles, bad cigars, etc., as dog show prizes, does not seem to strike the authorities, as "getting specials" seems to be the height of their ambition. The donors of these wonderful collections are not responsible for the foolishness of it, as they are simply dunned to "give a special" and they give something in their line as a bit of cheap and very poor advertising. Surely no exhibitor sends a dog four hundred miles on the inducement of winning a cooking stove, a black silk dress, a cask of "merline" beer (what in the world is that?), a box of toilet soap, one of five ice cream sets, a meerschaum pipe, a brass scone, a lady's umbrella, a piano cover, a horse blanket, a shooting suit (six of these were offered), a pair of shooting boots (this was dead sure not to go two miles from the show building), or any of the many curiosities offered.

In a word, is it not a trifle silly, to call it by the "most tenderest" name, to have 110 classes and 84 specials? or are exhibitors still the fools of yore to be humbugged *ad libitum*?

Of course when I use the word "secretary" I mean the clerical officer or officers of the show, be he secretary, superintendent or plain clerk.

W. WADE.

HULTON, Pa., April 10.

THE HARTFORD DOG SHOW.

THE inaugural dog show of the Hartford Kennel Club was held at Hartford last week, in the Union Armory. The building is rather small for a large show, and is not well lighted. The benching was patterned after that of New Haven, and as well arranged as possible. The management was first-class in every respect. There were 369 dogs entered of which 44 were absent. Many of the classes were weak in numbers, and with the exception of a few well-known prize winners, some of them were very poor in quality. This was notably the case in the English setter, pointer and spaniel classes. We expected to see a good turn out of pointers and setters, as there are many fine specimens of each breed owned in the State. There was an innovation in the making of a class for red native setters that cannot be too strongly condemned. The principal objects for which dog shows are held are to improve the different breeds of dogs and to educate the public as to the points of merit peculiar to each. How this can be accomplished by making a class and offering prizes for mongrels or even for well bred animals that cannot win a card in their regular class, we fail to understand. Aside from this view of the case it was wrong to make a class for these dogs without due notice to the public, in order that the competition might have been open to all instead of to a select few, as appears to have been the case. We feel sure that the intentions of the managers were of the best, and we also feel sure that upon reflection they will agree with us that the class should have been omitted. The attendance during the show was very good, and we were informed by the secretary, that the club would net at least \$500. This is a very good showing and places Hartford on the list of cities that will support a dog show. Much of the success of the show is due to the untiring effort of the secretary, Mr. A. C. Collins, who has devoted a large amount of labor to the cause. Spratts Patent had the feeding of the dogs. They were well cared for and had plenty of exercise and clean bedding. The judging was nearly all done on the first day, and, except as noted in our comments on the dogs, gave general satisfaction. In some of the cases noted there was considerable talk, but so far as we were able to learn no protests were made. Following is a list of the judges: Pointers, Mr. J. M. Tracy, Greenwich, Conn.; English setters, Mr. J. O. Donner, New York; Irish setters, Mr. W. H. Pierce, Peekskill, N. Y.; Gordon setters, Mr. H. C. Glover, New York; beagles, Mr. N. Elmore, Granby, Conn.; trick dogs and retrieving dogs, Mr. B. Waters, Chicago, Ill.; all other classes, Mr. James Mortimer, Babylon, L. I. Veterinary, Mr. H. C. Glover.

MASTIFFS—(MR. MORTIMER).

There were fifteen entries in these classes, three of which were absent. Homer, Rosalind and Prussian Princess represented the champions. The winners in the open dog class are well known and were properly placed. Odin, vhc., is just a fair specimen, deficient in head, feet and forelegs. Adyk, placed second to Bal-Gal in the bitch class, is a lengthy specimen of fair type. She is light in bone, faulty in eye, and lacks depth of muzzle. Tamora, the other entry, was absent. The class was correctly placed. Hannibal, looking better than he did at New Haven, but still very light and tucked up, was first in the puppy class for dogs. Guess, placed second, is a very poor specimen, not worth a prize in any company. He has a long, bony head, a peak that would do credit to a bloodhound, crooked forelegs and faulty ears. Rex, c., is faulty in head and ear, light in bone, leggy and lacks substance. He is quite as good as Guess. There were no entries in the bitch class.

ST. BERNARDS—(MR. MORTIMER).

Don II. and Leila were alone in the champion classes. Mr. Tucker was the only exhibitor in the open dog class. His dogs were properly placed in order of merit, although Mt. Velan and Seeldan are far behind the others. Flora I., the only entry in the bitch class, is faulty in head and lacks bone and substance. Lodi had the dog puppy class to himself, and Gemme was equally fortunate in the bitch class, but the prize was withheld for want of merit. Duke of Leeds and Gertie represented rough-coated champions, and in the open dog class Merchant Prince was properly placed first. He lacks character in head and is faulty in expression. He is a big, fine dog, not good either in markings or coat, and he stands badly on his forelegs. Bosco II., second prize, was fully described in our report of the Newark show, as was Rudolph II. vhc. Monk Detrich, c., is faulty in head, quarters, eyes, body and color. Prince, vhc., is faulty in back and stily behind. Loyal was absent. Miranda, Lady Athol and Stella were properly placed in the bitch class. The other entry, Barone, was absent. Monk Detrich, c. in the open dog class, was given first prize in the class for dog puppies, and the bitch class did not fill. We have previously expressed our opinion as to how the dogs that were entered in these classes should be placed, so that it would be egotistical to say they were well judged.

NEWFOUNDLANDS—(MR. MORTIMER).

There were no entries in the champion class, and of the three in the open class we failed to find Tom, and Prince was transferred to the puppy class, leaving Carlo to score a bloodless victory. He is faulty at both ends, but has good body, legs and a fairly good coat. Prince, the only exhibit in the puppy class, was given first prize, and he is evidently a lucky dog.

DEERHOUNDS—(MR. MORTIMER).

Mac, as usual, beat Bran in the class for champion dogs, and in the bitch class Lorna II. was alone. The magnificent Chieftain proved an easy winner over Berys III. in the next class, although the last named is by no means a poor specimen. He is too straight from the hocks down, and is not nearly so good as Chieftain either in head, expression, neck or in quarters. Bras, vhc., was badly shown. His ribs are not well sprung, and he is faulty in shoulders and hind parts. His head is fairly good. Bruce, hc., was not worth a card in such company. He is very small and has no coat. Duncan was absent. Of the two bitches shown, Wanda was much the best at all points. Blithe, small and lacking in character and short of coat, was not worth the second prize. There were four entries in the dog puppy class. Braie, given first prize, is not very good in head and his pasterns are light; he may, however,

improve in the latter. King of the Forest is a fairly good puppy; he stands on the best of legs and feet, and is above the average in head, body and coat. Braco, vhc., is faulty in head and rather light in body. Lancer III., hc., is faulty in coat, color and eyes. Ramona was alone in the bitch class. She was on the sick list, but if all goes well with her she will be heard from again. She is a big bitch, of good quality, fairly good in head, body and coat, and excellent in legs and feet. These classes were well judged.

GREYHOUNDS—(MR. MORTIMER).

Memnon and Mother Demdike were the entries in the champion classes. Harlequin, described in previous reports, was first in the dog class, Stranger in White coming second. His head is fairly good, but not first-class, he has a good neck and shows his good breeding. He is light in bone and faulty in feet, shallow in body and rather heavy in ears. Notwithstanding the fact that old Ben has been knighted, he was not worth a vhc. card. His mouth is gone and he lacks power at all points. Jack C. is leggy and shows little true greyhound character. Hawthorne Belle, the New Haven winner, was first in the bitch class, followed by Sister in Black. The latter, a racy looking one, is not very good in shoulders, loin, pasterns, or feet. Sorceress, vhc., is a bit light in bone, plain in head and straight from the hocks down, but she is a greyhound. They were properly placed. Stranger in White and Sister in Black took the prizes in the puppy classes, and had no competitors.

POINTERS—(MR. TRACY).

We were much disappointed with the display of pointers, the more so because we had been given to understand that the pointer men would be out in force. Thanks to the Graphic Kennels, four good dogs were shown. There were no entries in the champion classes for heavy weights and in the open dog class Graphic fairly smothered the rest of the class. Taimany was second. There is a wear-and-tear look about him that we like, but he is not quite up to first-class form. Duke of Bergen was absent and Captain Fred was not for competition. Sport, Prince and Shot are not show dogs. In the bitch class Revell III. was much the best. She was described in our Newark report. We saw her gallop at Hartford and did not like her shoulder action. Nell, winner of second, is well-known; Topsy, vhc., lacks character. Robin Adair, the only entry in the champion light weight class, was absent at the time of judging, but came later and was given the prize by the committee. The next class was a very poor one and we agree with the judge that he would have been justified in withholding the prize for want of merit. Bracket scored a one-sided victory. This is a good dog, the best light weight in America. We like him better than either Donald II. or Rush, although he is not so good in tail as either of these dogs. Fritz, Sancho and Game are not show dogs. Only three bitches were shown. Meally's good body and excellent legs, feet and shoulders placed her much ahead of Happy Medium, who is very faulty in legs and feet. Phyllis, vhc., should have been second. She was fully described in our report of the New Haven show. There were only three puppies in the two classes and they are not show dogs.

ENGLISH SETTERS—(MR. DONNER).

These classes were very thin and the quality was below what we have ever seen at a kennel club show. There was not a good one shown in the open classes, and we never remember having seen such a lot of puppies at any show. Rockingham, not looking quite so well as he did last year, was again placed over his old opponents, Plantagenet and Foreman. Modesta, badly shown, was alone in the champion bitch class. Her forelegs are growing more crooked, and she is wider in front than she was. The quality of the next class may be estimated when we say that Mack B. scored an easy win. We sympathized with the judge in his endeavors to find a decent looking specimen for second place, but we cannot indorse the award in favor of Pride. He is a big, coarse, heavy dog of Gordon type, heavy in head, cheeky, throaty, faulty in shoulders, straight from the hocks down, very bad in stifles, and almost as curly in coat as a retriever. Dan, chained next to him, although not noticed, is of the same type and is quite as good. Spot, vhc., should have been second. He does not stand straight on his forelegs, but is better at other points than Pride, and shows some quality. Dashing Prince Regent, faulty in eyes, straight behind and long in loin, was third best. We did not see Lanman's Dan. Vixen III., a strong bitch, plain in head, and faulty in ears and eyes and curly in coat, scored an easy win in the bitch class. Belva, placed second, must be a good felder if she finds a purchaser at catalogue price, \$50. She is snipy, out at the elbows, crooked in forelegs and faulty in ears. Lulu, vhc., was described in our New Haven report. Mistleton, c., should have been higher on the list, although she was shown much too fat. We will not attempt a criticism of the two dog puppies. The prizes should have been withheld. We liked Lulu, in the bitch class, better than Countess Helen. Both were shown at New Haven. Pansy, the best of the three, did not compete.

IRISH SETTERS—(MR. PIERCE).

These classes were well represented, and Mr. Pierce, who made his debut as a judge, handled them in a masterly manner. We were unable to detect a single error of judgment, and the classes were better handled than we have seen in many years. Elcho, Jr., looking fairly well, was alone in the champion dog class, and Noreen and Bella Glenduff did battle for the ladies. Noreen is not nearly so good in front as she was in her younger days, and good bitch that she still is, she is not rangy enough for our liking. Bella Glenduff, a bitch of nice quality, is a trifle light between the couplings and not so good in stifles and thighs as we would like to see; she is also a bit too straight from the hocks down and would do with more bone. She has a nice clean head, straight legs and good feet, and in coat and color she is fit for any company. Of the fifteen entries in the open dog class, one only was absent. Gerald was correctly placed at the head of affairs. He is a big, fine, up-standing dog with rather too much daylight under him, and although his head is above the average, he is rather too flat in skull and small and light in eyes. In shoulders there is room for improvement. His legs, feet, back, loin, coat and color are good, and he was shown in superb condition. Glencaire was not looking his best, but made a good second. He could be improved in "stop," and his ears are not very well carried; he does not stand quite straight on his pins, is rather light in middle and flat in loin and straighter from the hock down than we like to see. In other respects he will do. Glencho's Boy carries his flag too high, is straight from the hocks down and has a moderate head and style. Echo, vhc., was not well shown. He is deficient in skull, muzzle and might be better in hind parts. Patsy, hc., is a useful looking dog, not quite up to show form in head and ears. Garry, hc., is not good in head and is faulty in back, quarters and chest. Robin Kildare is light and weak behind, faulty in head and shallow in chest. Old Elcho was shown in this class, but not for competition. He was looking well and is in excellent condition. Molly Bawn, a bitch of rare substance and quality combined, was first in the bitch class. Her faults, which are few, are well-known to our readers. Lorna, placed second, is not so good in head as her kennel companion, Noreen, and she is too round in barrel and short on the legs. Noreen IV., vhc., has a fairly good head, but she is too high behind, does not stand well on her forelegs, is light in thighs and faulty in tail. Nannie, hc., has a poor head, is light in limb, straight from hocks down, and light in first and second thighs. Her good coat and color got her the card. Noreena, vhc., is too long and is faulty in loin, skull and stop. Her ears are nicely placed and she is good in muzzle and fairly good in other respects. Maud, hc., is faulty in coat, color, eyes, and body. She is fairly good in head, ears, legs and feet. Two dog puppies were shown.

Mickey, placed first, has not improved since he was first shown. He is pretty good in head and bone, but is light between the couplings and faulty in color. Fritz, placed second, is faulty in head, coat and color. This was a poor class. Madcap was much the best of the two bitches shown. Her faults are in muzzle and stop. She is above the average in body, coat, color, legs, feet and strength of limbs.

GORDON SETTERS—(MR. GLOVER).

There were no entries in the champion bitch class, and in the dog class Royal Duke was properly placed over Argus. The former is a good dog; he is rather cheeky, lacks depth of muzzle and is too heavy in neck; he stands on the best of legs and feet, is fairly good in body, and exceptionally good in quarters; in coat, color and markings he will do for any company, and he carries himself very gaily. Flash, winner in the open dog class, is faulty in head and tail, but showed more character than the balance of the class. Gift, second, is of different type; he occupied the same position at New Haven. Koehler's Dash got a letter more than he did at New Haven. The others were a poor lot. Gordon Chloe, first in the bitch class, is a fairly good one, but not a crack; she is faulty in muzzle, stop, color and tail; she was shown much too fat. Heather Lass, vhc., is well known. Maud, hc., is much too leggy and light, and is faulty in color and quarters; her fairly good head won her the card. Two puppy classes failed to draw more than one entry, a very seddy-looking specimen, faulty in skull, muzzle, body and bone. With the exception of an unnecessary distribution of cards, these classes were well handled.

SPANIELS—(MR. MORTIMER).

Nine classes were provided for these dogs, but only fifteen were shown, and the quality was much below the average. Two classes were provided for Clumbers, but there were no entries. Newton Abbot Lady was alone in the champion class for field spaniels, and in the open class Black Beau, Jr., who took first, was opposed by three mongrels, and the other prizes were withheld. Shina was opposed by Brahmin in the champion class for cockers. The bitch scored an easy win. Brahmin should be relegated to the field spaniel class. He lacks cocker character. There were two entries in the open class for dogs and Young Obo won, second prize being withheld. The bitch class was even worse, and of the three entries Miss Nance was the only one present. She is well bred, but is a long way removed from high-class form. The two dog puppies are not up to show form. Three bitches made a better class, and Black Flash was much the best. He is fairly good in body and legs, but might be improved in head and eyes. Dot, hc., was not worth a card. She is a weedy specimen, faulty in head and ears. The judge could not have felt complimented by the entries in these classes.

FOXHOUNDS—(MR. MORTIMER).

Five foxhounds were shown and all received notice. Lady Stewart was placed first. She is not so good Rackett, winner of second. The others are good looking animals, but not of the type called for by the standard. All of them are heavier than the average New England hound and all looked like workmen.

BEAGLES—(MR. ELMORE).

There were twenty-one beagles entered with only one absent. Little Duke was alone in the champion class over 12 inches. In the open dog class first went to Triller. This dog was ruled out at Philadelphia last fall as being over 15 inches. Mr. Elmore, however, after m-asuring him, decided that he was within the limit. As we have before remarked of him, he is a useful-looking, well made dog. He was not in the best of condition. Leader, placed second, was the only one in the class that is unquestionably under 15 inches. Tony Weller, vhc., looks decidedly above the limit, he is also too long in body and light in muzzle. He stands straight on the best of legs and feet. Flute L. c., is nearer 17 than 15 inches. He is fairly well formed. In the bitch class the decision at Boston was properly reversed and Twinkle won over Chase. Silver received the same award as at Boston while Vixen received one more letter and Midget two. March Boy I., was alone in the dog class under 12 inches. In the bitch class first went to Magnet, a very pretty little bitch, with the sweetest head that we ever saw on a small beagle; she is a trifle out at elbow, a bit long in body, and has flat open feet, for this reason we preferred Ruby for the place; she is not quite so good in head and is also a trifle out at elbow, but she has a good body with capital legs and feet and a good tail. In the puppy class first went to Snowflake, a nicely made puppy; her worst fault is a much too fine muzzle. Belle, winner of second, has a good head and is well formed, but she is not quite straight on her forelegs.

DACHSHUNDE—(MR. MORTIMER).

There were but two dachshunde shown. Rubenstein, the winner, is a long way ahead of anything we have seen recently; he is fit to win in any company. Judy, placed second, had the same position at Boston.

BASSET HOUNDS—(MR. MORTIMER).

The only entry, Canace, was absent.

FOX-TERRERS—(MR. MORTIMER).

The judging of these classes caused much dissatisfaction and we do not remember having seen so many blunders committed at any previous show. Fennel scored an easy win over the spitz-headed and woolly Pelgrave Primrose, and in the bitch class Richmond Olive had a very easy win, being better than Diana in coat, back, loin, quarters, legs, feet and bone. The open dog class was a fairly good one and the judge placed upon his book the following rather astounding statement: "An exceedingly fine class. Probably nowhere in England has so much quality been seen in one class." We can assure the judge there was a better class at Birmingham more than ten years ago when Tyke was first and Foiler second. Splauger could not be compared with either of these dogs and could not have taken a card in such company. This dog is sadly overrated and is a very ordinary specimen. He is faulty in muzzle, ears, skull, eyes, ribs, back, loin and quarters, and is very deficient in terrier character. Bacchanal, placed second, is a terrier all over and was much the best dog in the class. We are not at all certain that Richmond Olive can beat him and must reserve our opinion on that until we see the dogs side by side. Shovel, vhc., should have been second. He is a bit cheeky and wide in front and his ears do not lay close enough to the head, but he stands on capital legs and feet, has a good coat and shows that indispensable requisite—"character." Baby Jack, hc., is getting too light of flesh and needs rest. Scarsdale, growing coarse, was in his proper place. Valet, vhc., is a good terrier and deserved his card. Stableford Joe, hc., should have been vhc. and Nick, vhc., got more than he deserved. He is fairly good in legs and feet, but is light in middle, full in body and faulty in expression. Nina, vhc., in the bitch class, should have been first. Marguerite, placed first, is not nearly so good looking as we expected to find her. She is too cheeky and round in skull, wide in front, does not carry her ears very well, and would do with more bone. Cornwall Duchess, second prize, was first at Newark. We like her quite as well as Marguerite. Warren Winsome is very long cast and was shown in wretched condition. She should not have been noticed. Thistle, vhc., was overrated; she is too large and is faulty in head, coat and chest. Diadem, Jaunty and Hollywood Lyra were absent. Nobby, placed first in the dog puppy class and catalogued as weighing 16 pounds, is very much too large for a puppy. Tansy, c., is a better terrier; he is not so good in head, out is shorter on the legs, of better size, and surpasses Nobby in body, legs and feet. Ulster Joe is faulty in feet, ears and head. Richmond Tyrant, second prize, excels in legs, feet and bone, but is cheeky, heavy in the ears and long cast. Dunrobin, hc., is much too big for a

puppy. Allspice was much the best of the bitches, but Blenheim Marigold, placed second, should not have been noticed. She is a monkey faced specimen, with prick ears, and is faulty in quarters; her legs and feet are good. Blenheim Thyme, c., is better than Marigold. These dogs are owned by Mr. August Belmont, Jr. Blue Belle, vhc., should have been second. She is fairly good in head, has plenty of bone, and is above the average in body. She does not stand quite straight on her pins, but will improve in this respect. Peep Bo, hc., is also better than the second-prize winner. Her faults are in head, ears and legs. Of the ten bitches entered in this class six only were shown. Trophy was the only wire-haired terrier entered. He is a fairly good dog, rather wide in front and light in bone.

COLLIES—(MR. MORTIMER).

In the class for champion dogs, Ben Nevis was very properly placed over Roy-boy. They are well-known. Lady of the Lake was alone in the bitch class. The open dog class was a poor one. Bonnie Dunkeld, the winner, is a useful looking dog, not quite up to first-class form in head, body, coat, legs, feet or tail. Oscar II., second prize, is faulty in eyes, ears, hocks and shoulders. King Bruce, vhc., is faulty in ears and tail and his coat is not straight. Rab, hc., is not worth a card in any company. He is bad at almost every points and it was with difficulty he moved around the ring. Lass O' Lowrie, faulty in head, ears, tail and coat, was first in the bitch class. The others did not deserve notice and are not show dogs. A bad lot. Two dog puppies were shown. Tramp, awarded first prize, was purchased by the judge for the Hempstead Farm Co., before the class was passed on; at least we were so informed by the person in charge of him. He is faulty in head, eyes and shoulders. Frank, second prize, is faulty in head but has a better coat than Tramp. Four bitches were shown, and of these Janet was correctly placed first. Popsie, vhc., is rather soft in coat, but is a better bitch than Gladys, winner of second. Madge, c., is a very poor specimen, not worth a card in any company.

BULLDOGS—(MR. MORTIMER).

These classes were well represented, and the prize winners are all known to our readers. The classes were well handled.

BULL-TERRIERS—(MR. MORTIMER).

Victoria and Grand Duke were the entries in the champion class for heavy weights. The prize was given to Victoria, but we think Grand Duke the better dog. There were four entries in the open class, and Count again took the blue ribbon. Grand Duchess, placed second, should have been first; she is better at both ends than Count, and, barring a trifle too much length in body, not much fault can be found with her. The others were outclassed. Little Maggie, rather stouter all over than Little Nell, beat her; it is a close thing between them; both are faulty in head and eyes, and Maggie has the best of it in legs and feet, while Nell is much the best in tail. White Violet, first at New Haven, was the only puppy shown.

BLACK AND TAN, ROUGH-HAIRIED, DANDIE DINMONT, IRISH, BEDLINGTON, SKYE, YORKSHIRE AND TOY TERRIERS—(MR. MORTIMER).

There was only one entry in the black and tan terrier classes; a moderate specimen that was described in our Newark report. The prizes were withheld in the rough-haired terrier class. Two Dandies were shown and were placed as at New Haven. The only Irish terrier entered was absent, and there were no Bedlingtons on view. Of the four Skyes entered only one, Highland Nellie, was deserving of notice; she is faulty in head, ears and coat. Five Yorkshires were shown in the two classes, but none of the winners are good in either coat or color. Brighty, one of Mr. Dan O'Shea's half Irish and half Scotch (a good cross) was the only entry.

PUGS—(MR. MORTIMER).

Bradford Ruby, in grand trim, was alone in the champion class. Four of the five entries turned up in the open dog class, and a poor lot they were. Mr. Mortimer got things badly mixed. Puck, the first prize winner, was catalogued as weighing 20 pounds. We should say he weighed nearer 30 pounds. He does not show the slightest particle of pug character, has a long, wolfish head, and stands like a bulldog in front. He should not receive notice in any pug class. Dude, placed second, is a much smaller dog, although he is catalogued as weighing 30 pounds. He is a plain animal, faulty all over, and should not have been noticed. Thunder, vhc., and Dick, hc., were the only pugs in the class. The former should have scored a very easy win. While he is not a good one, he is worth all the other dogs in the class. Dick was second at Newark.

TOY SPANIELS—(MR. MORTIMER).

King Pippin was alone in the class for Blenheims, and Roscius had the King Charles class to himself. These dogs are well known.

MEXICAN HAIRLESS—(MR. MORTIMER).

Me Too, Judge and Nellie were the entries in this class, and they were placed as at New Haven.

MISCELLANEOUS—(MR. MORTIMER).

Four equal first prizes were awarded in the heavy weight class to Sir Lucifer, an English bob-tail sheep dog (first at New Haven), Black Bess, a poor specimen of the English retriever, Nestor, a bloodhound (first at New Haven), and Mollie, a fair Irish water spaniel, faulty in eyes. Onomoo, another Irish water spaniel, was given vhc. This dog is faulty in head, tail and forelegs, and has some white on the chest. Gyp, hc., should not have been noticed. He is a very poor specimen, and a class was provided for mastiffs. There were two entries in the light weight class. First was given to Charlie, a Prince Charles spaniel, faulty in muzzle, short in coat, feather and frill, and too heavily marked. Cuckitt, placed second, should not have been noticed in this class. He is a toy terrier, and a class was provided for the breed.

ITALIAN GREYHOUNDS—(MR. MORTIMER).

Minnie, placed first and catalogued as weighing 7½ pounds, is too heavy, and is faulty in body and quarters. The New Haven winner was second. The others were outclassed.

SPECIAL PRIZES.

Several mistakes were made in the distribution of these prizes. We have always said of Merchant Prince that he is a good dog, but he is not nearly so good as Duke of Leeds. The latter shows much more character, has a much grander head and expression, stands better on his legs, and is infinitely superior in coat, color and markings. Merchant Prince stands a trifle higher at the shoulder, and carries his tail better, but such points should never be allowed to outweigh the more important characteristics of the breed. We feel sure that if the judge will again examine the two dogs, he will agree with us that Duke of Leeds is vastly superior to Merchant Prince. Memnon begins to show age, and we agree with Mr. Mortimer in placing Mother Demdike first. The deerhound puppy prize should have gone to Ramona instead of Braie. Lady Stewart was not the best foxhound shown, and Grand Duchess should have won the special for the best bull-terrier. There were a dozen better fox-terrier dogs than Splaunger. The prize should have gone to Bacchanal. Mr. Thayer and Mr. Belmont showed better kennels than the Messrs. Rutherford.

ADDITIONAL AWARDS.

Robin Adair won champion prize in small pointer dog class. The Irish setters that came first on the list published last week should have read, "Red Native Setters" in foxhounds. F. C. Clark's Tip was very high com., F. W. Rossiter's Rock, Jr., and Pinto were high com. and com.

BEAGLES.—OVER 12IN.—CHAMPION: A. H. Wakefield & Co.'s Little Duke.—OPEN.—Dogs: 1st, H. F. Schellhass's Tracker; 2d, A. H. Wakefield & Co.'s Leader. Very high com. W. H. Child's Tony Weller. High com., E. E. & H. W. Lord's Flute L.

In pug puppies, first prize was given to E. C. Vander's unnamed. In baset hounds, Canace, the only entry, was absent. In miscel-

laneous large class, F. R. Gildersleve's Black Bess was equal first in kind of S. Scoville's Jack, and W. Ehlers's Onomoo was very high com. In the small class, Cuckitt was first and Charlie second.

SPECIAL PRIZES.

MASTIFFS.—Best kennel, Winlawn Kennel. Best pair, Homer and Prussian Princess; best American bred, Homer; best dog or bitch, Prussian Princess.

ST. BERNARDS.—Rough-coated: best dog or bitch, Merchant Prince; best bitch, Miranda; smooth-coated, best dog or bitch (two), Lella; best puppy, Loni; best in open classes, Apollo.

GREYHOUNDS.—Best kennel, H. W. Smith; best dog or bitch, Mother Demdike.

POINTERS.—Best kennel, Graphic Kennel; best dog or bitch, Graphic; best in open classes, Graphic; best small, Bracket.

ENGLISH SETTERS.—Best kennel, Blackstone Kennel; best dog or bitch, Cockingham; best dog in open class, Mack B.; best bitch in open class, Vixen III.; best with field trial record, Foreman; best brace, Foreman and Plantagenet.

GORDON SETTERS.—Best dog or bitch (three), Royal Duke; best puppy, Fly.

IRISH SETTERS.—Best kennel, Dr. Wm. Jarvis; best dog or bitch (two), Elcho Jr.; best bitch, Molly Bawn; best red native setter, Josie.

BEAGLES.—Best kennel, A. H. Wakefield & Co.; best over twelve inches, Twinkle; best under twelve inches (two), March Boy and Magnet scored the same.

TERRIERS.—Best kennel, J. E. Thayer; best in open classes, Chit-fain; best puppy, Bracie.

BULL-TERRIERS.—Best bull terrier (three), Count; best bitch, Grand Duchess.

FOX-TERRIERS.—Best exhibit, L. & W. Rutherford; best kennel, L. & W. Rutherford; best dog or bitch, Richmond Olive; best in open class, Splaunger; best American bred, Nina.

COLLIES.—Best dog or bitch (two), Ben Nevis; best bitch, Lady of the Lake; best puppy, Tramp; best bob-tailed, Sir Lucifer.

COCKER SPANIELS.—Best dog or bitch, Shina; best bitch Shina; best in open class, Young Obo; best bitch puppy, Susette. B-st-for bound, Lady Stewart. Best kennel bulldogs, J. E. Thayer; best in open class, Bellona. Best pug, Bradford Ruby; best in open class, Lady Flossie. Largest dog, Merchant Prince. Best Mexican hairless, Me Too; second best, Judge. Best King Charles spaniel, Roscius. Best Skye terrier, Highland Nellie. Best retriever, W. Tallman's Flash.

THE BUFFALO DOG SHOW.

[From a special correspondent.]

Editor Forest and Stream.

The dog show held here this week under the auspices of the Society for the Prevention of Cruelty to Animals, has been a great success financially, and the Society have realized a handsome amount. The building is commodious and the management was first-class. The weather was delightful, and immense crowds attended the show. There were 235 entries; many of them were ordinary specimens, although there were quite a number of fairly good animals shown. There were some fair mastiffs, a few middling St. Bernards, one good Newfoundland, a few fair setters, two or three good pointers and two nice collies. There was a fine display of greyhounds and foxhounds. The terriers were a mixed lot with few well-bred ones, except two good Dandies. The judges were Messrs. John Davidson, Monroe, Mich., and John Hammond, Thorald, Ont. Following is a list of the

AWARDS.

MASTIFFS.—Dogs: 1st, Buffalo Hat Manufacturing Co.'s Hero; 2d, J. D. Wilson's Prince; 3d, J. S. Metcalf's Giant. Bitches: 1st, G. S. Metcalf's Vic; 2d, G. S. Metcalf's Lady Nelson. Puppies: 1st, Little D. Milburn's Max; 2d, E. E. Welch's Ward; 3d, Gustav Fleischmann's Romeo.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, H. Schifferin's Barry; 2d, C. Ransom's Pius; 3d, A. Meldrum's Hero. Bitches: 1st, A. Meldrum's Leo; 2d, O. S. Laycock's Maida. Puppies: 1st, G. I. Williams's Reginald; 2d, R. Evans, Jr.'s, Bruce II.; 3d, C. F. Kopp's Nora.—SMOOTH COATED—Bitches: 1st, J. P. Davis's Beatrix.

NEWFOUNDLANDS.—1st, G. Barrett's Rich; 2d, Miss A. Powell's Neptune.

GREYHOUNDS.—1st, A. S. Wasburne's Nellie; 2d, Ph. Horu's Lucy; 3d, F. Stettenbenz's Belle.

POINTERS.—Dogs: 1st, J. Koch's Jeff; 2d, L. D. Rumsey's Doncaster 3d, O. G. Prince of Orange. Puppies: 1st, Omega's Print; 2d, E. H. Rounds's Spot; 3d, G. W. Kilbourn's Budde.

ENGLISH SETTERS.—Dogs: 1st, T. S. Coburn's Noble Philip; 2d, B. B. Laising's Lord Lynwood; 3d, H. H. Smith's Rex Hydrogen. Bitches: 1st, L. D. Rumsey's Belle; 2d, H. M. Clay's Fannie. Puppies: 1st, H. M. Clay's Fannie.

BLACK AND TAN SETTERS.—Dogs: C. R. Wilson's Glenn; 2d, J. S. Metcalf's Grouse; 3d, T. S. Clark's Don Gordon. Bitches: 1st, J. S. Metcalf's Josephine; 2d, F. W. Caulkins's Beauty Gordon; 3d, E. Fleming's Belle. Puppies: 1st, G. Beistein's Snap; 2d, R. P. Wilson's Bruce; 3d, G. Fleischmann's Dasi.

IRISH SETTERS.—Dogs: 1st, F. A. Bell's Brakeman; 2d, F. A. Bell's Conductor; 3d, F. Sibley's Don. Bitches: 1st, G. Fleischmann's Belle. Puppies: 1st, J. W. Brown's Sultan; 2d, T. C. Welch's Mugwump; 3d, G. H. Field's Fred.

IRISH WATER SPANIELS.—1st, S. Somerville's Pete; 2d, C. M. Graves's Milo; 3d, W. M. Enos's Sport.

FIELD SPANIELS.—ANY COLOR EXCEPT CLUMBERS—Dogs: 1st, Charles D. Marshall's Rex; 2d, Park Kennel's Con; 3d, Park Kennel's Dot. Bitches: 1st, J. W. Harrington's Anna Flint; 2d, R. W. Metcalf's Lady; 3d, Harvey H. Johnson's Fan.

COCKER SPANIELS.—BLACK—Dogs: 1st, Chas. E. Lewis's Sambo; 2d, H. E. Philip's Sport. Bitches: 1st and 2d, Charles E. Lewis's Black Diana and Topper. BLACK PUPPIES.—1st, Charles C. Hampel's Jack; 2d, Rev. J. W. Brown's Jet.—ANY OTHER COLOR—Dogs: 1st, James P. White, Jr.'s Fritz. Bitches: 1st, James C. Evans's Venus; 2d, S. H. Cowles's Flora. Puppies: 1st and 2d, Charles C. Hampel's Speed and Flora.

FOXHOUNDS.—1st and 2d, John D. Kamman's Tramp and Lady K.; 3d, W. D. Dieffenbach's Ratler.

BEAGLES.—Dogs: 1st, C. C. Ruppel's Trimmer. Bitches: 1st, Park Kennel's Tiny. Puppies: 1st, Mrs. Matthew Waser's Ginger.

FOX-TERRIERS.—Dogs: 1st, A. P. Wright's Brownie; 2d, G. Fleischmann's Charlie; 3d, L. D. Rumsey's Ned. Bitches: 1st, J. G. Milburn's Fox; 2d, H. Hamlin's Judy. Puppies: 1st, J. N. Stevenson's Topsy; 2d and 3d, H. B. Cilley's Jack and Jill.

COLLIES.—Dogs: 1st, Dr. B. Fellwell's Bruce; 2d, A. F. Payne's —; 3d, A. Meldrum's Roy. Puppies—1st, Julia T. Sherman's Roderick Dhu.

BULL-TERRIERS.—1st, J. N. Powell's Patsy; 2d, H. J. McCartney's Jim; 3d, W. W. Miller's Sam.

BLACK AND TAN TERRIERS.—1st, W. E. Cameron's —; 2d, R. and F. Inglehart's Daisy; 3d, Mrs. E. C. W. O'Brien's Fly.

ROUGH-HAIRIED TERRIERS.—1st, Grace Fobush's Leo; 2d, A. W. Horton's Buzz.

SCOTCH TERRIERS.—1st, W. Harrington's Bargo.

DANDIE DINMONT TERRIERS.—1st, J. Rae's Bobbie Burns; 2d, Mrs. J. Rae's Elsie.

SKYE TERRIERS.—1st, J. E. Marshall's Denis; 2d, D. McIntosh's Jesse; H. C. Laverack's —.

PUGS.—Dogs: 1st, Mrs. L. Doty's Bobbie Shafto; 2d, Mrs. Townsend Davis's Fritz; 3d, Mrs. L. Doty's Spirit. Bitches: 1st, Gustav Fleischmann's Beauty. Puppies: 1st, Mrs. A. J. Wright's Bunch; 2d, Mrs. C. Daniels's Towser; 3d, Sister Louise's Gipsy.

YORKSHIRE TERRIERS.—1st, Mrs. W. P. Henry's Buzz-fuz; 2d, C. B. Cook's Nellie; 3d, P. C. Cornell's Crab.

BLenheim SPANIELS.—1st, Mrs. C. F. Bingham's Daisy.

ITALIAN GREYHOUNDS.—1st, Mrs. S. N. Hayton's Beauty; 2d, Marjorie N. Noye's Roscoe; 3d, M. W. Kammerer's Roxey.

POODLES.—GERMAN—First, Julius Dorn's Nellie; 2d, Julius Dorn's Bruno; 3d, Richard John's Curly. FRENCH—1st, J. S. Williams's Pinky.

GREAT DANES.—1st, Gustav Fleischmann's Jack; 2d, Agnes Loeh feld's Jessie; 3d, N. P. Hickley's Turk.

MISCELLANEOUS.—1st, N. A. Dane's Mexican hairless dog Jip; 2d, Frank Mauermann's Spitz; 3d, Annie Gail's Colonel Witzelben.

ST. LOUIS DOG SHOW.—Editor Forest and Stream: The judges selected for our show are: Major J. M. Taylor, Cleveland, O., pointers, English setters, hounds and beagles; Mr. W. H. Pierce, Peekskill, N. Y., Irish and Gordon setters; Mr. J. H. Naylor, Chicago, Ill., all other classes. The entries are coming in fast. We have nearly one hundred special prizes so far, with more coming in daily. Please announce that entries close May 8.—GEO. MUNSON, Manager.

THE FOX-TERRIER CLUB'S COAT OF ARMS.

BELOW will be found the coat of arms of the Fox-Terrier Club. The design is neat and appropriate. The legend

was undoubtedly suggested by a judge of the breed just after deciding upon the merits of a well-matched brace.

ENTRIES FOR THE NEW YORK DOG SHOW.—The entries for the New York dog show number 995. The different classes are represented by 45 mastiffs, 85 St. Bernards, 12 Newfoundlands, 14 Great Danes, 25 greyhounds, 15 deerhounds, 85 pointers, 93 English setters, 37 black and tan setters, 65 Irish setters, 77 spaniels, 15 foxhounds, 27 beagles, 4 baset hounds, 7 dachshunde, 86 fox-terriers, 100 collies, 21 bulldogs, 24 bull-terriers, 6 black and tan terriers, 2 hard-haired, 3 Dandie Dinmont, 4 Irish, 8 Bedlington, 7 Skye, 19 Yorkshire and 8 toy terriers, 28 pugs, 16 King Charles, 3 Blenheim, 5 Japanese, 10 Prince Charles and ruby spaniels, 6 Italian greyhounds, 15 poodles and 18 miscellaneous.

DOG SHOW AT WILKESBARRE.—Wilkesbarre, Pa., April 20, 1886.—Editor Forest and Stream: The Ninth Regiment, N. G. P., have decided to give a bench show of dogs in connection with their fair, to be held in this city May 25, 26 and 27. Entries to close May 15. Mr. James Watson has kindly consented to act as judge, and will handle most of the classes. It is expected that Mr. W. F. Streeter, of Lehigh Tannery, will judge some classes, and that R. M. Lindsay, Esq., of Scranton, will also officiate. Although rather late in the season, it is hoped that this show may receive such support as will contribute to the increase of the armory fund, and encourage the admirers of dogs in this section to make it a permanent institution.—W. H. TUCK, Secretary.

VETERINARY MEDICAL ASSOCIATION OF NEW JERSEY.—At a meeting held a few days ago at Morristown, Dr. Wm. B. E. Miller, of Camden, was re-elected president, and Dr. Wm. Herbert Lowe, of Paterson, State Veterinary Surgeon, was re-elected secretary. The Association is incorporated under the act of the Legislature for the promotion of veterinary science and art, and has already done much in advancing the interests of the profession throughout the State of New Jersey.

BEAGLE SPECIAL AT PITTSBURGH.—Cleveland, O., April 15.—Editor Forest and Stream: In your list of awards of the Pittsburgh show you give champion Bannerman the prize for the best beagle under 12 inches. Will you please correct that, as Mrs. C. E. White's beagle bitch Bonnie won it.—MRS. C. E. WHITE.

SETTER DOG LOST.—Strayed or stolen on March 30, a large white and orange English setter dog. Orange head and ears, large orange spot on back and small one on side. A liberal reward will be paid for information that will lead to his return. Address C. A. Tuttle, Newmarket, N. H.

THE CLEVELAND DOG SHOW.—There are three hundred and forty entries for the dog show to be held at Cleveland next week.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of each form (300), bound, for retaining duplicates, sent postpaid, 30c.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks. Duchess. By City View Kennels, New Haven, Conn., for silver fawn pug bitch, whelped March 16, 1886, by Little Duke (Gallant-Gipsy) out of Lady Cloudy (Max-Lady Flora).

Lady Claire. By City View Kennels, New Haven, Conn., for silver fawn pug bitch, whelped March 16, 1886, by Little Duke (Gallant-Gipsy) out of Lady Cloudy (Max-Lady Flora).

Nina. By City View Kennels, New Haven, Conn., for silver fawn pug bitch, whelped March 16, 1886, by Little Duke (Gallant-Gipsy) out of Lady Cloudy (Max-Lady Flora).

Ko-Ko. By City View Kennels, New Haven, Conn., for silver fawn pug dog, whelped March 16, 1886, by Little Duke (Gallant-Gipsy) out of Lady Cloudy (Max-Lady Flora).

Lulu. By City View Kennels, New Haven, Conn., for silver fawn pug bitch, whelped March 16, 1886, by Little Duke (Gallant-Gipsy) out of Lady Cloudy (Max-Lady Flora).

Waverly Daisy. By J. W. Rushforth, Yonkers, N. Y., for orange and white cocker spaniel bitch, whelped May, 1885, pedigree unknown.

Mertin. By Thos. Jackson, Metuchen, N. J., for black and white ticked Llewellyn setter dog, whelped Nov. 11, 1885, by Gun (A.K.R. 1338) out of Morning Star (A.K.R. 1541).

Marked-Eyed Kitt. By Geo. W. Dixon, Worcester, Mass., for white bull-terrier bitch, whelped March 14, 1886, by Dutch (J. Dutch-Nell) out of Nellie (Rebel-Kitt II).

Dutchman. By Geo. W. Dixon, Worcester, Mass., for white bull-terrier dog, whelped March 14, 1886, by Dutch (J. Dutch-Nell) out of Nellie (Rebel-Kitt II).

Jingo. By E. W. Jester, St. George's, Del., for fawn Italian greyhound dog, whelped Feb. 7, 1886, by imported Duke out of Nellie (Silk Socks-Naughty).

Glen Arma. By E. W. Jester, St. George's, Del., for lemon belton English setter dog, whelped Jan. 29, 1886, by Glen Rock (A.K.R. 1616) out of Armida (Leiceser-Pocahontas).

Owen. By Clarence Sackett, Rye, N. Y., for red Irish setter dog, whelped Aug. 4, 1885, by Snap (Chief-Tilley) out of Di.

Shela. By Lynn Kennels, Lynn, Mass., for liver-cocker spaniel bitch, whelped March 30, 1886, by Beau (E. 9,278) out of Bessie Obo (Obo II)—Hornell Ruby.

John and Lady B. By Lynn Kennels, Lynn, Mass., for black cocker spaniel bitches, whelped March 30, 1886, by Beau (E. 9,278) out of Bessie Obo (Obo II)—Hornell Ruby.

Beaumont. By Lynn Kennels, Lynn, Mass., for black and white cocker spaniel dog, whelped March 30, 1886, by Beau (E. 9,278) out of Bessie Obo (Obo II)—Hornell Ruby.

Mark C. By Henry Bass, Augusta, Ga., for lemon belton Laverack setter dog, whelped Nov. 30, 1885, by Harry S. (A.K.R. 224) out of Mary Belle III (A.K.R. 1373).

Birdie Croxeth. By J. W. Houghton, Milwaukee, Wis., for liver, white and ticked pointer bitch, whelped Dec. 3, 1885, by Royal Croxeth (Croxeth-Countess Rival) out of Birdie (King Bow-Chess).

Jobo. By C. S. Davol, Warren R. I., for solid black cocker spaniel dog, whelped Aug. 29, 1885, by Obo II (A.K.R. 432) out of Darkie (A.K.R. 250).

American Cocker Kennels. By Wm. West, Camden, N. J., for his cocker spaniel kennels.

BRED.

Notes must be sent on the Prepared Blanks. Bess-Bradford Ruby. R. W. Maguire's (Milwaukee, Wis.), pug bitch Bess (Napoleon-Beauty) to City View Kennels' Bradford Ruby (Lovat-Jenny), Jan. 16.

Lady Duke. By City View Kennels' (New Haven, Conn.) pug bitch Lady Cloudy (Max-Lady Flora) to Little Duke (Gallant-Gipsy), Jan. 16.

Beauty-Master Tragedy. City View Kennels' (New Haven, Conn.) pug bitch Beauty (Hecksher-Daisy) to their Master Tragedy (Max-Lady Flora), March 9 and 12.

Pinkey-Bradford Ruby. T. H. Adams's (Pawtucket, R. I.) pug bitch Pinkey (Elcho-Racket) to City View Kennels' Bradford Ruby (Lovat-Jenny), March 21.

PIGEON TOURNAMENT POSTPONED.—Ottawa, April 13.—*Editor Forest and Stream:* I am directed by the Committee to advise you that owing to the difficulty they have experienced in procuring a sufficient quantity of live birds, the pigeon tournament advertised to be held in this city on May 4 next, has been postponed until June 23 next.—W. L. CAMERON, Secretary of Committee.

Our arrangements for the night were easily made. I unpacked the canteens, made the beds in them and set the tents in them, while Undine made a fire, boiled coffee, fried bacon and eggs and cooked hot cakes. Then, by the time I had laid a piece of tarpaulin on the ground and set the tin dishes on it, we were both ready for our dinner, which seldom took the cook more than half an hour to prepare. The dinner over, I washed the dishes in the usual way and hung them up in the sack to dry.

Scarcely had I finished when a few large drops of rain fell, and we noticed that the black cloud had spread itself nearly over us, and its edges were whirling about in an ominous manner. Undine's tent being waterproofed, he simply weighted the edges down by tying rocks thereto, and then turned in to wait for the storm to wreak its fury on my devoted head. Borrowing his rubber blanket, I tied it over the top of my tent in the same way that he had secured the edges of his tent, and then ran guy ropes from the mammoos to the ground and fastened them to pegs, so that the canoe might not be blown over by the fury of the wind. The rain was not long in commencing, and we heard a tremendous roaring in the

back of us. Ere I could get under shelter a gust of wind tossed my hat into the river and sent me under my tent in a hurry, without waiting to see what was coming to come next. It seems to us as we look back that everything came next—tornado, hail, rain, with flying sticks and leaves, in a way that would amply fulfil the alarming prognostications of a dyspeptic weather prophet. The canoe rocked and the tent flapped in the wind as fast as the sails of a schooner. The violence of the gusts there was a drop of wet that entered either one of the canoes; and Undine, at the risk of having his scalp blown off, stuck his head out to ask if it was not glorious, to which I replied that it was—inside, and then proceeded to enjoy a smoke, to show that I appreciated my immunity from the attacks of the elements. Undine followed my example, as I could see by the smoke of his pipe. The last of the gusts of wind was the fiercest, and the tent on the lee side, and as he was on that side we could carry on a conversation quite easily through the intervening bad weather.

The storm continued until about 7 in the evening, when, with a final dash of hail that sent a chill through us, it ceased as suddenly as it had commenced, and we gladly crawled out of our nests, to make a fire and get something warm in our stomachs. The sand and gravel held no moisture and was dry almost as soon as the rain ceased to fall, so that it did the firewood service so efficiently that the rain had no power to retard it. In fact, the contrast the flames burned all the brighter by contrast with the leaden sky that hung over us like a seamless dome, muffling all sound. We gathered a large store of drift, and after we had heated some coffee, piled up the fire until it illuminated the whole camp; which had been gradually swallowed up in the gathering darkness. Having drunk our coffee, Undine determined to go to the sugar-bush to get some of the berries, and I followed her across the river to the little island, behind which the current had carried us in the afternoon. There he set the traps in the most likely places, and then came back to camp to bake bread, as he said that he would be unable to obtain any for the next few days. I was not deeply interested in the bread making process as I knew nothing about it and Undine did, or at least he said he did. So I went to my truck and opened up my ummoleg, and found that I reserved a few of the berries coming to the water, and a few of the Talisman far into the middle watch, each time for flour I presumed, and by the looks of the bread next day, it must have been so.

The next morning I awoke early, a most unusual thing for me, and found the reason for it was that I had been almost eaten alive by mosquitoes, my face being of the complexion of a rare beef-tack. However we were getting into the mosquito country and I had to make up my mind to take my chances. If it was not for the mosquitoes, we had allowed the mosquitoes to inflict themselves upon us, was enough to repay all damage done by them. Without waiting to dress we got up to look about. The storm of the day before had cleared the air and brightened every leaf, while the birds, appreciating the beautiful day, that nature had assumed to greet us with, had their songs. I thank God for the morning's combat with the increasing warmth of the sun, was too much to be resisted, so tossing off our shirts, we sprang into the river simultaneously, and there swam and ducked each other like two schoolboys. The sun had been up for half an hour before we were willing to leave the water, and it was high time for us to get under way. After disposing of our coffee and hot cakes, we put an allowance of coffee in a bottle and some cold quail and hard tack in a handy place to the canoes, as this was to constitute our lunch, thereby saving one ston. There being not the slightest indication of a breeze, we racked all sails and spars below and went on in for a hard day's trading, as it was so hot in the forenoon the town of Olmito that night, and in order to do it we would have to work until after dark any way.

We first crossed the river to where the traps had been set the night before, and were disappointed to find nothing but two coons in them, although there were other signs all round. We did not wait to skin the animals then, but knocked them on the heads, and, as we thought, killed them, and then threw them, traps and all, into the Undine. Shortly after we started down stream one of the coons gave unmistakable signs of life, and when the captain of the tramp and I jumped overboard, he jumped overboard, and the blood-curdling snarl and jumped overboard, taking his trap with him, and disappeared beneath the water. Just as we were giving up all hope of seeing him again, he came to the surface nearly a hundred feet down the river, swimming for dear life. We immediately gave chase, and the coon, although hampered by the weight of the tramp and wounded as he was, still managed to give us a lively race. We finally intercepted him and he was then disheartened by a blow from the captain's oar. We missed him, but he was not far off, and he would come in, too, suddenly we started in an impromptu race of the "go as you please" variety, the one who kept it up the longest to be the winner. Some curious deviations of the lower channel sometimes sent the surface current diagonally across from bank to bank, leaving the water almost motionless on one side while it ran like a mill race on the other. This gave a pleasing uncertainty to the race which it would not have possessed if we had only our own strength to rely on. Sometimes one of us would be well ahead, then all of a sudden, his opponent would pass him, and then all of a sudden his opponent lay flat at the rate of nine or ten knots an hour. After half an hour's hard work we remained still unknosed as to which was the faster.

The heat was now getting intolerable. I was wearing nothing but a sleeveless jersey and a pair of light duck trousers with stockings and slippers; on my head a linen hat with a moderately broad brim. Undine was attired in the same costume and had his feet bare, so that he could stick them over the deck into the water when he felt so disposed. The result was that he got a terrible sunburning which spoiled his morals every time he mentioned it.

[TO BE CONTINUED.]

THE CANOE EXHIBITION.—A meeting will be held on Friday next at the Harvard Rooms, to complete all arrangements, and on Saturday the exposition will open. Everything points to a large display, and to accommodate the visitors the exhibition will be continued until the 15th inst. The exhibition will be a most interesting one, canoeing will be represented and an opportunity afforded to novices and those unfamiliar with canoeing, to obtain all information about the sport. Yachtmen and rowing men are especially invited to visit the exhibition, which is situated at the corner of the Fifth and Sixth avenues, and see just what the mosquito's feel is composed of.

THE CALLA SHASTA CAMP - The programme for the races on Monday is as follows: At 9:30 A. M., paddling race, half mile and turn; 10:30 A. M., tandem paddling race, half mile and turn; 11 A. M., hand paddling race, 200yds.; 11:30 A. M.; novice sailing race; 1 P. M., sailing race, no limit to rig or hulls; 2:30 P. M., sailing race, no limit to rig or hulls; 3 P. M., sailing race, no limit to rig or hulls; 3:30 P. M., standard race, 200yds.; 4 P. M., open sailing race; 5 P. M., consolation race, sailing and paddling. The prizes will be two in each event, and will be flags.

WISCONSIN RIVERS - We have received the following answer to the inquiry published last week: "Oshkosh, Wis., April 10. To get into the Fox River from Winneconne you will have to go down the Wolf River for about three miles. The mouth of the Fox is on the right side. There is a canal from the Fox to Wisconsin River about two miles long, which you will easily find. If you come to Oshkosh before starting we will give you maps and all necessary information, having made the trip twice. - FRANK HELLARD "

THE KENNEBEC AND DEAD RIVERS—A correspondent asks the following questions: can any of our readers in Maine answer them for him? What is the state of the Kennebec River from Augusta to the carrying place, and is it suitable for a canoe or is it all rapids? About where and how long is the shortest carry between the south branch of the Dead River and Lake Quossoc; on Farrar's latest map there is no carry marked?

A. C. A.—Messrs. R. S. Hubbard, Philadelphia, and E. N. Barstow, Boston, are proposed for membership. The name of Mr. Geo. Brown, Ottawa, lately published, was an error. It should read Geo. Burn. The programme and rules for the coming meet are now ready and will be published in pamphlet form for distribution, as was done last year.

PUBLICATIONS RECEIVED

A WINTER IN CENTRAL AMERICA AND MEXICO. By Helen J. Sanborn. Boston: Lee & Shepard. Cloth, 321 pp., price \$1.50.

DOWN THE WEST BRANCH; or, Camps and Tramps Around Katahdin.
By Capt. A. J. Farrar. Boston: Lee & Shepard. Cloth, 311 pp., price
\$1.25.

FORGOTTEN MEANINGS; or, An Hour with a Dictionary. By Alfred
Waites. Boston; Lee & Shepard. Cloth, 75 pp., price 50 cents.

EXERCISES FOR THE IMPROVEMENT OF THE SENSES. For young children. By Horace Grant. Boston: Lee & Shepard. Cloth, 157 pp. price 50 cents.

SALAMBO of Gustave Flaubert. Englished by M. French Sheldon
New York: Saxon & Co. Cloth, 421 pp., price \$1.50.

PUBLISHER'S DEPARTMENT.
A PREMIUM of \$100 has been offered by A.G. Spalding & Bros., of New York and Chicago, to the individual who will correctly guess the relationship of the eight League clubs at the close of the championship season of 1886. All contestants must send in their guesses before June 1, and inclose 25 cents and receive one of their complete catalogues of 180 pages, which amount will be returned to the subscriber on the first purchase amounting to \$1 and upward.

Pachting.

Address all communications to the Forest and Stream Publishing Co.

FIXTURES.

There are still many clubs not represented below, and some of the dates in the table are not official. We ask the aid of club secretaries and others in completing and correcting the list:

THE ATLANTIC.

AT Bay Ridge everything is bustle and activity along the water front, but of course the chief center of attraction is at Mumma's yard, where the Atlantic is now in such shape as to be seen to advantage. Every day brings crowds to visit her, and on Sundays the throngs are prolonged from morning to night. The outside of the yacht is now planked with oak, and the hull is finished with a gold stripe. The finished, the oak rail is in place, and the gold stripe completed. The bottom has received a coat of verdigris. Decks and coaming are finished. The former is sprung with the sides, a fashion that looks well where there is a wide cabin trunk and narrow gangways, but in the present case, where the hulls all come in the middle line of deck, it is a disadvantage. The hulls are now in place, and the space between two heavy locust bitts, and amidships and on each quarter are six locust bollards, four in all. The stern is very narrow (the boat being practically a double-ended) and gives an appearance of great width amidships. The bowsprit is of Oregon pine, a round spar of iron withe on the extreme end being fitted with a sheave on each side. The bowsprit is of iron, and the bowsprit shrouds are of iron, which the preventer bostays and shrouds will be made fast. There are two pairs of bolt, for the bowsprit shrouds, one about six, above the other. An iron plate, as long as the spacing of the timbers, is let into the planking to take each of the bolts. On the stem are two pairs of plates for the main and preventer bostays. The yacht will have four shrouds on each side, the chainplates, $3\frac{1}{2} \times 3\frac{1}{2}$ in., being in flush and fastened with $\frac{3}{16}$ in. bolts. The plates are each cut, six long over all.

The workmen have laid the bilge ways and the yacht will be ready for launching at any time the tide serves. The basin is so shoal that some dredging may be necessary unless the tide should be unusually high.

Cast iron floors each 3ft. long, 4½ in. wide and 1½ in. thick at middle are being fluted and bolted, so as to connect the heels of the timbers to the trunk, faying on top of each with four bolts in each arm. The partners are of yellow pine, 6 in. thick, filled in solid between the adjoining beams, and the step is cut in the keel. In addition to the four rods on each side of the trunk, two 1½ in. iron rods have been run through the deck beams, one just forward and one abaft the mast, also set up with turnbuckles. The rudder is hung and all outside work is completed. The spars lie on the beach at the clut grounds, a mast 18½ in. at partners, 16 in. at hounds and 80 ft. over all with 10 ft. of masthead, tapering to 14 in. at the upper cap. No flimsy iron work, but heavy oak deck pieces and locust trestle trees. The foremast is 28 ft. long, 10 in. at the heel, 6 in. at the top, 4 in. at the bottom and is cased into the mast, being bolted firmly bolted through the masthead. On them rest solid trestle trees of 4 x 6 in. locust, 3 ft. long. These are encircled by an iron band 4 in. wide, let into their outer sides. The space for the heel of the topmast is 11½ in. square. Mr. Sawyer has the lower floor of the old ship fitted up as a sail loft and half a dozen men are now at work on the sails. The rigging is being made up in the forebay, and the canvas for the sails will have been parcelled in the eyes with heavy linen canvas covered with shellac, in place of the leather commonly used. The lanyards will be of 4 in. Italian hemp.

LENGTH AND BEAM IN YACHT DESIGNING

Editor Forest and Stream:

Since we have yachts to represent every proportion of length to beam and draft, with and without boards, from the dliship Fanny to the clever-shaped Redoubt, it seems to me the masters in yacht design might give us a standard set of instructions for constructing yachts of all dimensions, and in all the dimensions those they have built. Every designer and builder has his own model to which he conforms the boats which he builds. Every man having a boat built has certain notions of what he would like, but unless he has studied the subject well, and sometimes, after he has done so, he does not have such definite opinions of the main dimensions as would lead him to resist the predictions of a designer. That is, a man may have a boat built to his own ideas, but it may be slow, faulty, and even dangerous in stormy weather. The knowing ones see the errors of dimension, and the owner finds them out after awhile, but having no guide, he plunges into others by remodeling his craft or building another. Now I should like to have you lay down the rules for the two classes of boats, i.e., the centerboard and the keel boats, and tell us what dimensions are the best for each. I have a great deal of interest in this, as well as understanding the figures between the Puritan and Genesee, and would like to get upon the deck of a perfect truce of yacht.

SCLERIA.

[Our correspondent asks a question that has puzzled many before him, but that few who know anything about the subject would attempt to answer by definite figures. To say positively that any proportions of beam and depth are the best for a given length in any particular type of boat, would be a very difficult task, and even if successfully accomplished it would of itself prove a very deceptive guide to the yacht. The secret of yacht design lies in the harmonious balance of every element, and a score of the most famous long experience thorough practical sailing, and a knowledge of natural philosophy. With these the designer will consider first the requirements of the case, and then fit to them the dimensions, form, displacement, ballast, keel or board, rig, sail area, and the thousand and one items that go to make a successful yacht. Lacking them, any set tables of dimensions would be of little value. The safest plan for the amateur who desires to build is to go to some one whose work speaks for him, and who is known as a successful designer. He will give him the best well known rules, and explain the reasons why certain lines and elements may be chosen, which will serve as examples to be closely copied, variations being made by the novice only where their value is manifest. By getting such a boat and availing himself of the literature of the subject now readily accessible, the amateur may secure a fairly good craft as the result of his care and study, but the at

CRUISE OF THE COOT

XX.

WHEN about shoveling off for a large, rambling white building, at the head of Smith's Creek, which had been pointed out to me as a store, a voice hailed me with, "Watcher going to do?" "Come ashore," I said, and I stepped ashore and got some of your kerosene," this latter as a peace-offering to the store-keeper, to whom which for some reason seemed ruffled at the Coote's appearance upon the scene. He glared at me from the bench with amazement, queer reception. I thought from one who ought to pro-titiate strangers for their pocket-book's sake. Stepping from the skiff, I hastened to display a kerosene can as a sign that I meant business to the full extent of the store-keeper's power. "What's that?" he asked, "that's kerosene," he broke out and seemed to know what they use in the kitchen," he would seem purveyor of the hen-roost. "No," I said, "what kind of a store do you keep?" "Sto', sto', I keep no sto'." This was accompanied with such a look of disdain that I saw I had put my foot in it and excused my error as well as I could, blaming the barrels and tubs on the veranda. He was fully six feet high, a blue-looking man with military bearing, a stand up collar and fashionable cut. When he had been assured that the Coote was not capable of stealing, he seemed to relax his hostility, to and that her crew came from New York on peaceful expeditions, he cheerfully unbenet and came down from his colonel-like asperity, telling me with pride that he was from Washington and by implication disowned the country round about. The ground upon which I had landed was known as the Jutland Farm. A magnificent demesne it certainly was, if I interpreted the boundaries right. It covered many green fields of rich soil, had its own timber lands, sawmill, barns, and the wealth of its earlier owners. Having seen the place with his hands. Herds of sleek cattle and flocks of sleek, burly geese with clothed fleeces, strayed over the pastures, through their extent put me in mind of scenes along the railroads through grass-covered Kansas. Corn and wheat are the staples, and the stubble in some old fields attested by their size the rich return from systematic and improved methods of cultivation in these parts. The dwelling was one of the old homesteads built in the scale of colony days and bore the marks of the wear of its earlier occupants. Having seen it all this, and realized the immensity of my affront in addressing the proprietor of the manor as a sordid country store-keeper, I was about relenting towards the great seigneur. But when he in a thoroughly American spirit of materialism wanted to know why I did not take steamboat to Norfolk, my good opinion of the worthy man took a great fall. "What, go down the Bay in that little s-d vessel! Why don't you take steamboat, you will get there so much quicker." He was so much taken aback by my answer that he did not know where to go, where I laughed and told him I knew more about the creeks flowing through his own land than he. Then followed exclamations about charts, the attractions of yachting, etc. But he was irreclaimable from the slough of materialism and set me down as a very queer example who did not care to get somewhere in the least possible time. We walked alone to one gate where he gave me directions to the nearest store and post office, some three miles away. I turned to my horse and said, "Out, you and I." The horse and I, as my son stepped out of a barn. Said the old man: "Ofter a steamer I suppose," after pointing out a short cut to the store. "Yes," "Thought I hear her whistle a while ago." The store proved quite a luxurious affair and stood in evidence of the prebidding power of the country near by. Well bred horses and smart buggies were hitched up to the ridge pole outside and a well dressed crowd of local nobles of the soil had congregated inside about the stove, at the head of the room, and a very few of the country gentry were voraciously doing them no harm. The proprietor of the establishment, likewise the postmaster, was a polite young man with a city cut to his rize. I waddled out with the car filled between two score of eyes and one score of open mouths and heard a darky identify me as "de cabin boy de cat from New York." Some awful dogs came for my shanks under full sail and nothing but the most persuasive wiles kept them from laying me aboard. A huge dog, well as a wolf, came up to me, and I said, "Fudge, Fudge," he whined and was careless, but laid a plan of battle which was to shy the can at the dog's head to his confusion, and shin up the nearest tree, in accord with the policy recommended in a certain sporting book when pursued by a bear. The dog merely sniffed at my heels and let me pass on, for which I was exceedingly thankful. He had seen me, or rather smelt me before, with his master and he remembered my particular flavor. I was not much to the credit of his nose, seeing the length of time which had elapsed since certain articles of clothing had been refreshed.

The following morning I turned out bright and early, and at once turned in again. It was blowing a strong gale from S.E., directly in my teeth going out of the Potomac. At noon the wind shifted to N. W. in a few minutes and brought down a terrific electrical storm. Somber and threatening nimbus clouds towered one above the other and advanced rapidly until overhead. Then the vivid flash of lightning and a burst of roaring thunder loomed, the lightning crashed and the rain fell in a half an hour's sudden deluge. As the storm had come in, it ceased. The sky cleared and the evening sun crowned the moist foliage with golden tints. The atmosphere had become helmy as in spring, though it was the last day in December. I stripped off an over-jersey and stood in the cockpit bareheaded. Could this be the "warm weather" I had all along tried to slight ahead, or was it only the forerunner of some violent change, certainly not far off? I turned my head and saw a small boat, which had shifted her berth into the first branch joining the creek from the eastward. Among the little collection of houses near a landing there is a pump suffering from exhaustion, but which yields good water after starting it into life with a bucket full poured down its throat. The old people were on the door steps and children played about in bare feet and arms, yet the next day was to usher in the new year. From a native, I had the first glimpse of the new year. I had been with crowd-sown retired, a flourishing little farm and some oyster beds. I learned that Little Wicomico, just inside of Smith's Point on the south side of the Potomac, could be entered and a harbor made, if I could not reach round seven miles further in the Great Wicomico. That evening I beheld the most beautiful sunset I have ever witnessed, whether from the sea or perched twelve thousand feet within the rocks. For a moment the sky was a purple, a red, a russet, a blush, could have approached this gorgeous spectacle. As the dusk faded into the silvery gloom of a moonlit sky, the wealth of gold and crimson, the richest blues, the greens which were almost startling in their intensity, and the most delicate grays, slowly passed through many fashions the modifications, paler, the while, till all was finally merged into a half lit night of mystic spell. It was late when the daydreams in the cockpit gave way to

mindless runner in a sailing boat. The Coof forced sheet down the Potomac and reefed before its impulse to such an extent that I wished for two reefs in the sail, but still not quite enough to induce me to come-by and haul out the earling. The first day of January should be inaugurated by a run fit to go on record. But "man proposes, etc." Instead of hugging the northern shore around Cornfield Harbor and running well into the Bay before hauling up for the south, I put the Coof on a direct course for Smith's point after emerging from the cove. The hurried departure was most unfortunate. Penetrating through the inevitable zone of calms already spoken of, From the low cockpit floor of a small boat you cannot see far ahead and I ran out of the wind before the extent of the calm zone could be appreciated. It kept on blowing a gale along the northern shore, while for three hours the Coof and other vessels in her company tossed about upon an irregular swell and through some tide rips. It seemed as though we were locked for good in the doldrums. The Coof headed in all directions, jibed and jibed, rolled and plunged in an aimless way. The larger boats, on the other edge of the doldrums, the boat crawled and fancied across, then followed down the shore, edging in to get a look for the narrow entrance to the Little Wicomico, as it was already well along in the afternoon, nearly calm and the next harbor more than seven miles away. A small pumple with a flag at the masthead was loading up with oysters brought alongside in canoes. Seemingly a sand bar stretched across the former entrance to the harbor and the water was so shallow. Soon upon the entrance of the pumple and called to by her crew, I peered through the glasses, I discerned several stalks and noted the side these were left on by the canoe. Sailing down into his wake, a long gutter like passage between the sand spit and Smith's Island was easily made out. The water became so shoal that the boat was poled along with the oar. As the head of the gut was reached the ebb was found rushing out like a sluiceway, and the greatest exertion had to be used to force the Coof against it without letting her slow round on to the shoals each side.

In spots the channel was not more than twenty feet wide and three feet deep on the last of the ebb. Once round Smith's Island, the ebb lost its strength and the Coot let go her anchor, after grounding, having missed the best water, which runs close along the back of the island and also along the mainland, the shoals being in the middle. This involved the unpleasant duty at midnight of shifting ballast, carrying out an anchor and hauling the boat off at high water, so as to be sure of a start early next day when the tide would be on the ebb.

There was an absolute calm at seven A. M., and the Coot sluggishly drifted out to sea on the tail end of the ebb. Off Smith's Point, the anchor was let go and a breeze whistled for it. It came not. But in due course of events it once more turned ebb, permitting the Coot to resume her drift southward. Light airs finally assisted her round the red can off Fleet's Point, and a few boards took her into Cackle's Creek for the night. On the way down a youngster in a dilapidated yawl boat from a small schooner gave chase and ran alongside. First he asked for a mess of meat. My stock had run down to a remnant of bacon, so he had to refuse him. Then he asked for tobacco. Mine was out. Then he asked for a loan of some shot. I had only one cartridge. So he let it go, and in admitting the yacht as "the nearest thing he ever did see" and scuttled back to his skipper empty handed. The schooner never offered oysters in return, but took it as a matter of course that I would fork over for the asking. In Cackle's Creek, there was a good deal of life. Oysters were the mainstay of the population. Schooners had scores of canoes about them and were hoisting in the coveted game by the bushel. Substantial houses crowned the tops of the hills along the shores which were quite picturesque here and there. Ugly and ill-smelling structures with stocks and kettles and platforms gave notice that vile stenches would pervade the whole river region, as soon as the menhaden fishery opens in spring. Nearly all the rivers and havens south of the Wicomico suffer from like pollution. There is a country store after the usual pattern on the north bank of the first branch on the eastern shore of Cackle's Creek. This same branch affords affords perfect shelter and lift of water.

The next day and the forenoon following the Coot was compelled to swing killy at her anchor on account of a dense fog. When

It lifted the second afternoon, the yacht was among the first of a fleet to clear out—light northerly airs. Around Fleet's Point these looked us on, and an adverse tide made our progress impossible. Meanwhile a heavy bank of clouds had gathered on the east and the sun was reduced to a red spot through the damp atmosphere. The skipper of a schooner at anchor was hailed to tell me what day and date it was, as I had lost my reckoning, having been without any authentic sources for some time. He was surprised to read the Coot's halting port under her stern and still more so to hear where she was bound. "This looks threatening up there. It is no kind of weather to leave port." So I thought too, as the sky had assumed a very ugly look, though not a breath was stirring. The sweep was shipped and the Coot scudded into Mill Creek for a change of scenery after the abortive attempt of the day to make any southings. It was well she lay in a snug berth, perfectly protected. Ere midnight the gale swooped down with a great din. For nearly sixty hours the music was kept up in the rigging. Not until noon three days after seeking the refuge, could the Coot poke her nose outside to continue her voyage, and this under two reefs. The wind fell away fast, and after passing the black buoy off Dammeron's Marsh whole sail was made. Then a calm ensued and some hours were put in at drifting.

Suddenly a fresh breeze struck across the Chesapeake from N.E. Fifteen minutes later the Coot was rounded up and the second cringle hauled down. The breeze was quartering and the boat tore along in good fashion, lifting her haunches to the flowing sea which was rapidly rising. Passed Dividing Creek we flew with a boiling wake, then hauled our wind a bit to weather the horizontal stripe buoy marking the Bluff Point shoals. From here we squared away for Little Bay, and ran in for Little Bay. Until North Point was rounded, there was a constant danger from jilting, as the bow roller and dipped her boom into the sea. Fetched round North Point and stood in to the Horsepen, picking a way between a maze of stakes and abandoned nets. Anchored in 6 ft. An invitation from the burly skipper of a puny, jumping in the middle of Little Bay, to tie his stern for the night was declined. The run for the afternoon was about fifteen miles.

During the night the wind subsided, but pipped up fresh again upon going under way next morning. A poisonous Gale, the usual shelter sought at the head of Little Bay, Northwesterly wind necessitated a few boards to weather North Point on the passage out. After jilting to port the Coot had it quartering down to the light house on Rappahannock Spit. Seven feet can be carried half way between the light house and the shore, but the red light off Stingray Spit, across the river must be left to starboard. The Rappahannock has the reputation of being a breezy and boisterous river. More than one yacht has come to grief at crossing its mouth in a northwesterly wind. The wind has a great many turns, and the river is between three and four miles wide. As usual, the wind has greater strength drawing out of the river than some distance out in the Bay. When the Coot had opened Mosquito Point and quit the protection of a weather shore, she found sea and wind in dead earnest and I was glad that the two reefs of the night had not been shaken out. The sea was abeam which made it very trying for the boat as she wallowed heavily in the trough and shipped much water in the weather rail. But after experiences in the Potomac, the rough passage across the Rappahannock was by comparison not serious. Constant lulling to puns worked the Coot out above the Stingray light, so that she had to be squared down river a bit. Shaved the screw pile structure pretty close and swapped greetings with the light house keeper who remarked it was a rough day and watched the Coot's behavior intently.

The entrance to Planktank river is well buoyed and easily made though in the dusk a strange sound was heard to the Stove Point a wide enough berth. The usual anchorage is in Fish Bay, around this long projecting tongue. The Planktank has become more or less celebrated on account of some bold Amazons of the oyster fleet who are said to have tripped anchor and sailed merrily away from pursuit by a State governor in an armed vessel on the lookout for infractions of the oyster laws which prohibit dredging in Virginia waters. The river is pretty and invites the cruiser to tarry in some of its numerous branches and attractive coves. It was growing cold again, so the Coot was squatted in the fog and ran out to Hill's Bay in search of the obscure entrance to Millford. The light house keeper, who had launched his boat from lolly daisies to give the Coot a brush, had, by cutting across lots, gained on me considerably, so I have to for directions. He was bound into Queen's Creek, but pointed out a schooner in the southwestern bight of the bay as the object to steer for. Nothing but low sand being visible ahead, the yacht's way was reduced by dropping the peak and half spilling the sail, for the rate at which she was driving before the gale was such a risk in doubtful water. The tongue of sand overlies the entrance to Millford so as to hide it until nearly abreast. You then turn up, pass through a gut and suddenly open up a miniature inland sea. Near the entrance is a fump with but 1 to 2 ft. thereof. It is marked by a brush. You may pass either side. A short distance further is another and larger lump marked in the same way. Plenty water on each side. Beyond that the Haven is broad and deep with 10 to 16 ft. and good holding ground. In the lateral branches 7 to 10 ft. can be found, the Haven itself is protection enough for any boat. The Coot rode in to leeward of some schooners and stowed canvas in time to escape the rapidly increasing cold, the thermometer being down to 28.

The harbor affords plenty of interest and to look at, as do all the feeders of the Chesapeake. The population derives its support from the water and may be said to have its being afloat. Everybody has a canoe (locally corrupted into kanner). The well-to-do, and there are plenty of them judging by the neat and even ornamental dwellings ashore, branch out into snub bukeyes, sloops, pungies or schooners according to their aspirations. There is a constant movement on the waters. Boats of all sorts passing and repassing either under sail and very smartly handled, or propelled by a paddle with a graceful swing of the body, recalling the half indolent swaying of the Venetian gondolier. The paddle in universal use in the Chesapeake is a springy board of long triangular form. It is worked in measured sweeps over the head of the sternpost as a pry, the bottom standing and facing aft. A very fair rate of speed is maintained. Oars and rowlocks are almost unknown in this world of dugouts. You may meet the long gracefully hewn log mule away from port with the crew placidly working the peculiar paddle in preference to pulling with oars. Broad shouldered Africans of Herculean mould can be seen, whose manner of working the blade is the exemplification of mainly grace.

NOTES FROM THE DELAWARE.—For the first time the Quaker City Y. C. will have a race for large schooners, as two, the Helen and Avelon, are now owned in Philadelphia, and will meet in the regatta in June. The Helen, Mr. C. D. Middle-ton, is 70 ft. over all, 62 ft. water line, 24 ft. beam, 6 ft. draft, and 5 ft. draft. The Avelon is now being built for Dr. W. H. Vallette, and is 50 ft. over all, 50 ft. water line, 20 ft. beam, 6 ft. draft. Both are modeled and built by Alonzo E. Smith, of 111. The sloop Venezia has had a new overhang put on, and is now 59 ft. 7 in. over all, 53 ft. 4 in. waterline, 15 ft. 4 in. beam, and 5 ft. 4 in. hold. A new sloop, 33 ft. over all, has been built at Trenton, by Whitehead Bros., and Minerva has been altered aft. The Agile has also been changed since last year. The sloop Carrie Z. has lately been enrolled in the club; she is 33 ft. 7 in. over all, 30 ft. 10 in. water line, 11 ft. 4 in. beam, and 3 ft. 11 in. hold. The sloop Cherie has had a new keel and fastenings, with a larger mainsail. The Lucine will come out with new sails and spars, and the Foam has received a cutter 3 ft. long. The prizes given by the Q. C. Y. C. this year will be compasses, logs, and similar articles, in place of the flags previously given.

YACHTING IN NORTH CAROLINA.—Wilmington, N. C., April 16. —Editor Forest and Stream: Your correspondent has just returned from a visit to the Sound, eight miles from Wilmington, where he found all of the fleet belonging to the Carolina Y. C. Great preparations are being made to have each yacht in perfect order when the season opens. The yachts Mascotte, Idler, Vixen, Riddle, Lillian, Florence, Louie and Restless, are ready to be launched and look very handsome. The others are undergoing repairs. The first meeting of this club will be held on the first Monday in May, when all the races will be arranged and officers for the coming year elected. It is proposed to extend an invitation to the Charleston fleet to visit this city, and have a regatta on the Cape Fear River. There is great interest manifested in these races, and the all-absorbing topic of conversation is the yacht racing this season. It promises to be the most exciting season ever had by the club. We hear of new boats being ordered from Northern builders, which will add wonderfully to the interest in the club.—X.

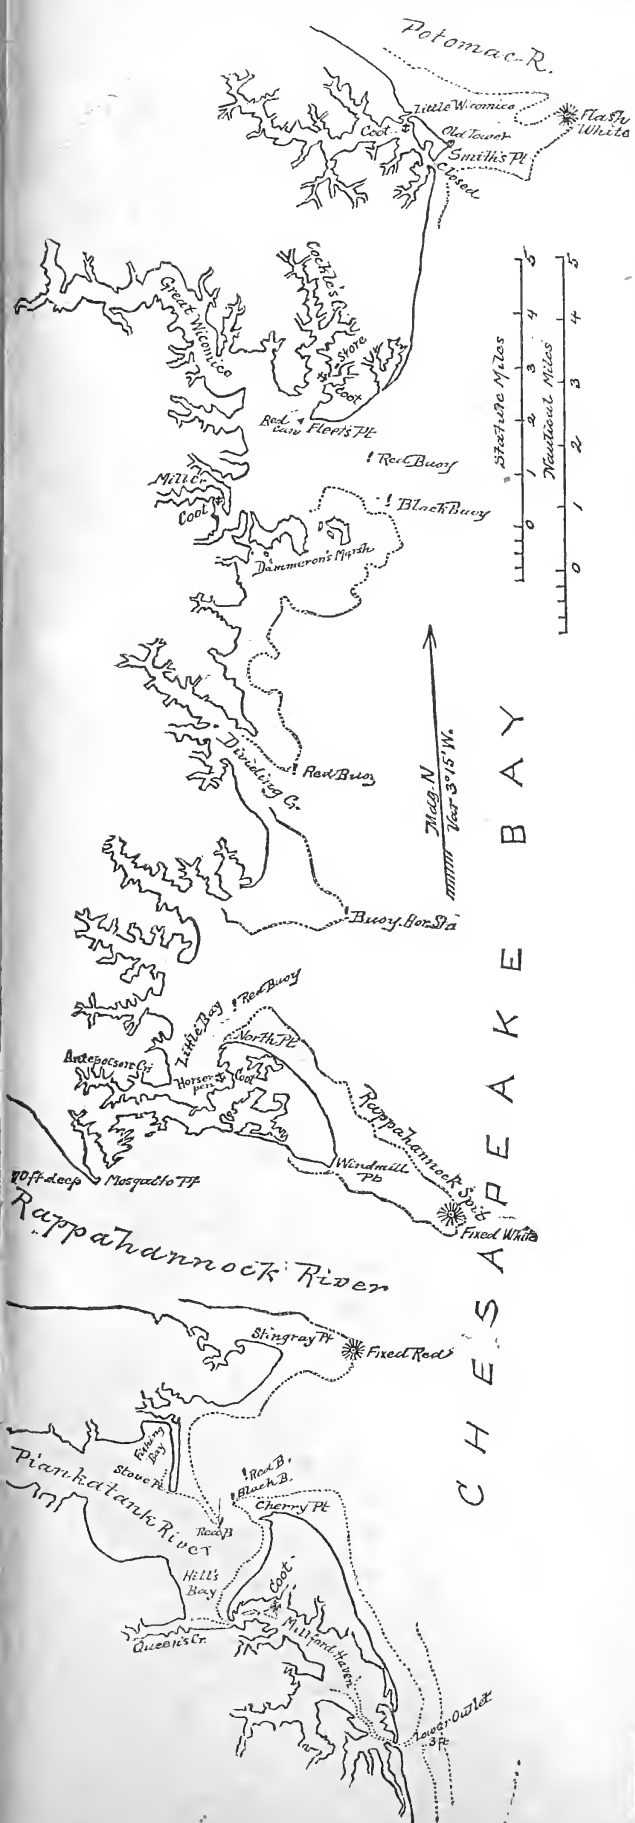

AT THE WHEEL.—Captain Joe Ellsworth will, of course, sail the Atlantic this season. Captain George Cooley, of Red Bank, the ice boat sailor, and for some seasons captain of the schooner City, will sail the Priscilla, the City being laid up, as her owner, Mr. Anson Phelps Stokes, will go abroad. Captain M. V. B. Stone will probably sail General Paine's new yacht. Captain Gibson, last season in the Priscilla, will handle Gracie this year. Captain George Petuck is now fitting out Bedouin, and will sail her in the season. Captain James McOrmond, who has sailed Gracie for two seasons, since the death of Baker's death, will probably command the Crusader. Captain Barr will be out soon with his crew to look after Clara. Captain Crocker, of the Puritan, will sail the Thetis and Shadow. Captain Eldridge, formerly of the Yosemite, will sail the Vision, sloop, this year. Captain Than Clock, so long known as the successful skipper of the Mischief, will probably command the new schooner Avelon, of Philadelphia.

YACHTING NOTES.—McManus has completed a new suit of head-sails for the Puritan and is busy with much other work. He is making the sails for Burgess's new schooner, a mainsail for Gen. Paine's yacht, a first sail for Mr. Fay's yacht, one for George Lawley's sloop Edna, for Mr. Fort's new yacht, the yacht Windward, the schooner Acton, Mr. Haskin's Louette, Mr. Driscoll's 25 ft. catboat, Mr. Lombard's catboat and the cutter building for the Neptune Club, for Mr. Anderson's cutter, and has much repair work besides. It is reported that Puritan will have her flush deck cut and a cockpit put in this season by Smith. Covers will be fitted for use in racing. Harbinger, schooner, the handsome little yacht designed two years since by Mr. A. Cary Smith, has been sold to Mr. H. B. Russell of Providence, R. I. Mr. Burgess has also disposed of the sloop Countess and Ethel. The Neptune Club.—This club is a fishing club only and not a yacht club. They have, however, had a yacht built for the use of the members by Thos. Eddy, of East Boston. This craft is 37 ft. 10 in. over all, 32 ft. on waterline, 13 ft. beam, 6 ft. depth, with a cabin 16 ft. long. The mast is 45 ft., heel to truck, and sin. diameter, boom 37 ft., raft 20 ft., bowsprit, outboard, 14 ft. She is white outside with copper bottom, and hardwood finish inside. Zulu, keel sloop, has been sold to Mr. C. P. 150. J. J. G. Driscoll's Pottery Beach, Greenpoint, Mr. Keil's little cutter, 27 ft. open racer, is ready for launching. She is 11 ft. wide and 2 ft. 10 in. deep. The open boat Thetis, Mr. Fred Oakley, has received a new bowsprit and plankseer with general repairs. Mr. Driscoll is also busy with a 23 ft. open boat from Mr. Smith's design, for Mr. Wm. Kent, Larchmont Y. C., and is repairing Mr. Haezner's open boat. Eugenia, the catboat, of Marolene and Beverly, will be lengthened and rigged as a sloop. Gen. Butler now proposes to alter the America under Mr. Burgess' supervision. Rev. W. H. H. Murray, of Adirondack fame, is about to have a 45 ft. sloop built for Lake Champlain, and cruises in inland waters. She will be of 11 ft. beam and 3 ft. 4 in. depth, with accommodation for twenty men on a cruise, and will cost, finished in hard wood, \$300. Who has designed and who will build this wonderful craft, is not stated. Vera, keel sloop, has been sold by F. J. Carter to Dr. J. B. Coolidge. Hull Y. C.—The regatta committee have abolished the 6th class, under 18 ft., and have added a 4th class 20 and less than 22, for keels. The 4th class, centerboard boats, are 19 and under 22 ft.; the 5th class, 22 and over 24 ft. A race of the Musquito fleet will be sailed at the regatta, on O street, Boston, on April 24. Dolphyn, cat, South Boston, will be changed to a cutter rig. Lavinia, schooner, Mr. Thos. Woods, was at Nassau, N. P., last month, bound for Bermuda. Fleetwing, schooner, was docked at South Brooklyn on April 16, for inspection. Sophia, steam yacht, now owned by Mr. Augustus Schermerhorn, will be known as the Empress. She will soon be ready at Newport. Isis, cutter, Commodore Canfield, L. I. Y. C., is laid up yet at Mumm's. Melvina, sloop, K. Y. C., has had 5,000 pounds of iron added to her keel. Elephant, sloop, is being thoroughly overhauled at Tebo's pier. Hoiden, sloop, has been sold to Mr. Allen, Red Bank, N. J. Atlanta, schooner, is hauled out at City Island. Leatha, schooner, has been sold to Mr. Nathan Ryerson, who has named her Elsa. A steam launch has been lately built by Lennox, of Brooklyn, for Mr. Wilson, of Harlem. She is 51 ft. long, 6 ft. beam, 3 ft. 9 in. draft, with an engine 6 1/2 x 6 1/2, and upright tubular boiler 44 ins. in high and 35 ins. diameter, 150 pounds working pressure. The composition wheel is 43 in. diameter, 3 blades. Lennox is also building two launches, 28 ft. x 6 x 2 ft. 6 in. for Messrs. Wm. Young and Thos. Robert White of Brooklyn. Magnolia, steam yacht, was at Wilmington N. C. on April 11, with a broken shaft. Nautilus—This dory, which has lain in the Old South Church since her trip across the Atlantic, has been taken to Pertram's yard to fit out for a cruise to the South. The Andrews Brothers will use her. Radha, steam yacht, Mr. J. M. Seymour, will be fitted at once with a Kinsmaster steering prop, and the Thrion, schooner, will repair and fit out at Greenport after wintering at Mumm's. Resolute, schooner, is fitting out at Tebo's pier. Speranza, schooner, rebuilt last fall at City Island, is fitting out at Essex, Conn. She will have a new suit of canvas. Ruth, schooner, is fitting out at Noank. Psyche, keel sloop, of New London, has been sold to Mr. Edward Winslow, of New York. Noa, schooner, formerly the Nellie G., has been sold to Mr. G. K. Brooks, of Boston, from which port she sails. Amaryllis, catamaran, is at Lenox's yard for an overhauling. Mantel, cat, is at Frank Bates's, where she is receiving new spars and general repairs. Uncas, steam yacht, Mr. Buchanan Henry, is having a new engine and wheel put in at the same place. Wanda, New Haven Y. C., is at Oyster Point. She will have a smaller rig and less ballast than before. Wild Duck will be painted white, instead of black, and will have a new stern and bowsprit. Viola and Wild Pigeon are fitting out at Stony Creek. Ceres will have more keel and a rail added. Happy Thought has had still more lead added to her keel. Many sloop, is fitting out in her winter berth at Islip. The hull will have out for painting at Mumm's. Huron has been hauled up at Smith's for more lead on her keel. Wideawake, sloop, has been sold by Mr. John Dimon to Mr. L. W. Parker, of New Bedford. Octopus, yawl, is fitting out and will be ready by May 1 with new sails. At Piegrass's yard Mr. Iselin's new yacht is planned and painted, her ironwork is on, and she is ready for the water. Her mast and spars are completed, and the sheer legs are in place to step the former before she is launched. Plumbers and joiners are at work below. On up her new stern is about completed. The planking is of yellow pine, and inside a new stripe of 2 1/2 x 12 in. has been run, of which is a yellow pine clamp 4 x 6 in. The interior has been entirely removed, and nothing remains of the old boat but the frames and the bottom planking. As soon as she is off the ways the steam yacht Sappho will be hauled up for alterations. Azatha, Gen. Franklin's steam yacht, is now in frame, filing up the lower door of Smith's shop. Though a comparatively small yacht, she will possess good sailing powers, being schooner-rigged and with a deep keel. The frame is of steam oak, light and strong in appearance. A novel point in the construction is the use of a back water knee for both sternpost and hornrimber in one piece. Another good idea is to be seen in the oak wale, which is 3 in. thicker than the upper streak about it, so that all the timbers are let into the wale, steadying their heads and stiffening the frame. Puzzle, Mr. J. Lorillard's yacht, is lying in the upper end of Water street, the hull being painted, the three-bladed propeller in place, and the yacht ready for launching. On Monday, Mr. Lorillard's new steam yacht, was looked at Monday at the foot of Gouverneur street, where the wheels, each four-bladed, were put on the scags were put in place, and the rudders, of which there are two, were hung. She is about completed. Arab, sloop, Mr. M. D. Lawton, was launched on Monday at Mumm's yard. With her taut spars, her outside weight was not sufficient to keep her on an even keel. Gitana, schooner, Mr. Wm. Weld, arrived in Boston on April 19, after an absence of exactly three months. It is reported that she is improved by the lengthening of last fall. Smith will refit her at once and her summer rig will be put on her.

CUTTER MEN IN THE YACHT CLUBS.—The statement by the London Field that the New York, Atlantic and Seawanhaka yacht clubs had turned out of office all the cutter men, with the idea of giving the America type of yacht "at least a fair show," is hardly borne out by the facts. It is true that Elbridge T. Gerry, who succeeded James Gordon Bennett as commodore of the New York Y. C. is not known as an advocate of the cutter, but neither was Mr. Bennett. Both of these men prefer large and elegant yachts to any other. A Cass Canfield, the commodore of the Seawanhaka Club, is well known as one of the most intelligent and consistent of cutter men. He not only sails a cutter, but he designed a most excellent one, his Isis. The Atlantic Y. C. never had more than the faintest suggestion of a cutter race, and the question of cutter or sloop never entered into its politics. The only serious blow that cutter interests have received at yacht club elections recently was the election of F. C. Lawrence as vice-commodore of the Seawanhaka Club. He is the owner of the sloop Vixen, and the fine qualities of his sloop have made him prejudiced in favor of this type. But Mr. Lawrence has held office in the Seawanhaka Club before, and has never waned the organization from its ancient faith in the cutter. As a matter of fact, the question of type has had nothing to do with recent yacht club elections. They have turned, unfortunately, on less sportsmanlike questions.—N. Y. Tribune.

SAN FRANCISCO.—On April 5, at a meeting at Irving Hall, the Cornithian Y. C. was organized, with a roll of 25 members, and the following officers: Commodore W. C. Moody, President; Commodore R. B. Chapman, Vice-President; George B. Billings, Recording Secretary; T. F. Tracy, Jr., Financial Secretary; and J. C. Nava, Treasurer. The club is limited to yachts of 45 ft. over all. Their opening sail will be on Decoration Day, and the first regatta on June 16. Measures will be taken at once to secure a club house and anchorage. The club have been out in the Spray looking for a location, which will probably be at Lyford's Cove, three-quarters of a mile below Tiburon Ferry. The proposed house will be 40 x 30 ft. The membership is now 45, and the fleet includes the Dawn, Spray, Ripple, Thetis, Lively, Fawn, Sea Nymph, Nellie and Nova. The club flag is a red triangle containing a white star at the head and a white center stripe, bordered above and below by blue. The other yachts are all out and in commission, and the season has fairly opened.

A FINE CUTTER FOR SALE.—Over a year ago Mr. J. Malcolm Forbes ordered the cutter Bayadere from young Fife, and she was shipped out here last spring. Since her completion he has laid idle, her owner being interested in the Puritan, which he now owns and will sail this season. The Bayadere is offered for sale in consequence. She is a fine little vessel of 45 ft. lineal and 10 ft. beam, very strongly built and handsomely fitted inside.

GEN. PAINE'S YACHT.—It is not yet decided to christen the new yacht *Mayflower*, and her owner may select some other name. The bowsprit and spreader are shipped, and the chain plates and other ironwork are fastened. The topsides have been painted white and the bottom has had a coat of red. All the work inside is well advanced, the rigging and gear are ready, and as soon as a comfortable berth is dredged out for the yacht to lie in, she will be launched, probably about May 1. Wilson has completed her head sails and McManus is finishing the mainsail in the Navy Yard sail loft. McManus will also make the sails for the new schooner, now said to be for a Boston owner, not Providence, as at first reported. This yacht, now being planked, has a clipper stem, but in other respects resembles Gen. Paine's boat. She is intended for racing as well as cruising. Her sails, which will be ready by June 1, will be of the canvas specially woven for the Puritan. Mr. Fay's yacht is partly planked up at Lawley's.

AN ENGLISH STEAM YACHT.—On April 8, at the yard of Ramage & Ferguson, Leith, was launched an auxiliary steam yacht, designed by Mr. St. Clare J. Byrne, for Sir George Curtis Lampson, Commodore of the Royal London Y. C. The hull is of steel, 139 ft. between perpendiculars, 24 ft. beam, and 15 ft. 6 in. moulded depth. The deck house is of steel plating sheathed with teak, and fitted inside with rosewood and tapestry. The dining saloon forward is fitted in mahogany and old gold, the cabins and staterooms being finished in maple, sahnwood and oak, with paneling of tapestry and silk plush. The engines are triple expansion, 13, 21 and 33 in. by 24 in., with Joy's valve gear. The boilers have Fox's corrugated flues. There are sixty electric lights throughout the vessel. She has been named *Miranda*, after the famous schooner built for the late Sir Curtis Miranda Lampson, father of Sir George Lampson.

ALVA.—This name has been selected for Mr. Vanderbilt's new yacht. Her machinery will be made entirely by her builders, the Harlan & Hollingsworth Co. The main engines will be inverted direct acting compound, with one high and two low pressure cylinders, 32 and 45 in. by 42 in. stroke. The high pressure cylinder will be in the center, with a low pressure on each side. Joy's patent valve gear will be used, with Thom's patent piston valves. The surface condenser will be fed by a circulating pump with an independent engine with another for the dynamo. The air and water will be attached to the main engine in the usual manner. There will be usual auxiliary engines for the capstans, steering gear, ash hoisters, ice machine, etc. Steam will be provided by two horizontal tubular boilers, each 19 ft. long and 17 ft. diameter, with Fox's corrugated furnaces. The working pressure will be 100 lbs.

PRISCILLA.—Work is progressing rapidly on the *Priscilla*. The bow has been opened, the stem reforged and replaced, making a considerable reduction in the forefoot. The plumb sternpost has also been removed and replaced, the keel being shortened 8 ft. aft, giving a corresponding rake. The high side has also been reduced, the plates being clipped off. The chainplates will be finished without channels, as the hoist is 10 ft. less than last year. The sail area has been altered by a considerable reduction in height and a proportionate increase in a fore and aft direction, the distance from jibstay to end of mamboom being 10 ft. more than before, 8 ft. being on the end of the bowsprit. As soon as the alterations are completed the yacht will sail for New York and will be in readiness to leave the S. C. Y. C. fleet on Decoration Day. Captain George Cooley, formerly of the schooner *Clyde*, will command her this season.

A BOON IN CATBOATS.—About the middle of last season a new catboat, the *Wraith*, designed by Mr. Burgess for Gen. Paine's sons, made her appearance in the races of the new Corinthian Y. C. at Marblehead, and astonished her rivals by the way in which she, a deep keel boat, defeated all comers, especially the centerboards. Her success has led to a demand for similar boats, and Mr. Burgess has been called on for a number of designs. One of these is a keel boat for Philadelphia, besides which are three or four others for the vicinity of Boston. Mr. McManus, the sailmaker, will have a centerboard cat 18 ft. waterline and 23 ft. over all, to be built by Lawley, and another centerboard 20 ft. 6 in. long has just been designed by Mr. Burgess for a western gentleman.

FAST FISHING VESSELS.—Boston is building up a fleet of very fast fishing vessels, and considerable interest is felt among the owners as to the swiftest of these new craft. One has lately been launched at East Boston for Mr. P. Whelan, and Lawlor, of Chelsea, is to commence another at once for Mr. Sylvester Whelan. Mr. Burgess has also been called in, and will design a similar craft for a party of fish dealers, with whom is associated Mr. J. H. McManus, the sailmaker. The two will be built side by side, as Mr. A. D. Somer, of Essex, has taken the ground adjoining Lawlor's yard, and will build the Burgess boat. This latter will be 100 ft. over all, 20 ft. waterline, 24 ft. beam, 10 ft. hold, and will carry 15 tons of iron outside, with more stowed inside.

A NEW CRUISING YAWL.—On April 8 the *Dove*, a yawl of 39 tons, was launched at Fay's yard, Southampton, where she was built for Mr. R. Moss, of Weston Grove. She is 55 ft. 6 in. between perpendiculars, 12 ft. 6 in. beam, 10 ft. draft, and 53 tons displacement, with 16 tons of lead on her keel. The fittings below are excellent for a cruising boat, 7 ft. head room under the beams, from forecabin to after cabin. There is a large main cabin, a stateroom forward, owner's stateroom and ladies' cabin. The latter has two beds, two sofas, two wardrobes and washstand. The cabins are fitted with pine, trimmed with teak mouldings, and all fittings on deck are also of teak. The ironwork and fittings are very complete, including a Canteloastian.

CORINTHIAN Y. C.—This club has taken in 45 new members this year, making a total of 155, while it is not yet one year old. A club house, to cost \$500, will be erected at once at Marblehead, the money being now subscribed. It will be fitted with sleeping accommodations for the members. The sum of \$300 has been devoted by the club to the regular races, while \$100 extra has been subscribed for an open regatta outside the harbor. A new classification has been adopted, as follows: First class, 25 to 30 ft.; second class, 21 to 25 ft.; third class, 10 to 21 ft. The races this year will be started shortly after the arrival of the noon train from Boston. There will be three championship races, with cash prizes of \$10 and \$5.

TORONTO SKIFF SAILING CLUB.—On April 15 a meeting of the club was held at which the following officers were elected: Commodore, J. Walker Dick; Vice-Commodore, J. B. Kilgour; Captain, Percy A. Both; Secretary and Treasurer, Hamilton S. Hall (re-elected); Auditors, T. P. Cowan and H. W. Pringle, and a committee consisting of Dr. B. L. Riordan, Evelyn Macrae, F. N. W. Brown, N. Macrae, J. T. C. Boyd, F. W. Green and J. Denny. The committee on classification of skiffs and also the committee on accommodation presented their reports.

PELIAM Y. C.—A meeting was held on April 16, at which the following officers were elected: Commodore, J. M. Waterbury; Vice-Commodore, Sidney Chubb; Rear-Commodore, Geo. C. Foster; Secretary, F. H. Ballard; Treasurer, F. D. Pelton; Governing Committee, W. F. Pelt, Philip Cross, Thos. E. Brown, Jr., J. Frank Patterson, F. P. Walter and Wm. G. Wimmerling. The constitution and by-laws were amended to meet the increased growth of the club. Several new members were elected.

BOSTON Y. C.—The fixtures for 1886 include races on June 23 and July 22, in each of which there will be three classes, schooners, 33 ft. and over, sloops, 33 ft. and over, and sloops under 33 ft. The craft cup, won twice by the *Kitty* and twice by the *Edna*, must be won once more by either in order to retain it. Vice-Com. J. B. Meer offers two silver cups, one for first class schooners and one for sloops, to be won twice, besides which cash prizes will be given.

NOTES FROM NEWARK.—The dates for the Newark Y. C. fixtures are May 15, opening sail; May 31, regatta; July 3-12, cruise in Long Van Pelt; Sept. 6, open regatta. An open sweepstakes is proposed for July. The races are now afloat, the *Vixen* has a housing topmast and her bottom has been plated. *Emma C.* has a new bowsprit and has been painted white.

QUINCY Y. C.—This club has taken in 16 new members lately and is now in a prosperous condition. They propose to erect a club house and have appointed a committee to consider the matter. Races are arranged as follows: May 22, 1:30 P. M., Hough's Neck; June 22, 2 P. M., Germantown Point; July 8, 3 P. M.; July 24, 3 P. M.; Aug. 7, 3 P. M.; Sept. 3, 1:30 P. M.

ADELE.—A steam yacht of this name has been built this winter at the foot of Twentieth street, South Brooklyn, for Messrs. Boyer, from a design by Mr. Jas. Kaine. She is 37 ft. long, 8 ft. beam, 4 ft. hold, 2 ft. 4 in. draft, with a hull of teak, copper-fastened. The engine is 4 and 7 ft. 6 in. X 6 in., with a return tubular boiler, 5 ft. long and 3 ft. diameter, carrying 250 pounds. The little vessel is very handsomely finished throughout.

MORE FOREIGN INNOVATIONS.—According to a daily paper, the *tout ensemble* of the *Crusader* has lately been materially altered. It is bad enough to see the numberless British notions that have of late found their way into the rig and model of Yankee yachts, but it appears now as if the French were to be taken as models.

LICENSES FOR SMALL STEAM YACHTS.—Our correspondent "Norman" who writes on the above subject, has neglected to send us his name and address.

OFF FOR ENGLAND.—The *Norseman* was towed through Hell Gate last week and sailed for Newport, arriving at 2 A. M., April 19. She will sail at once for Cowes.

Evans, New York.—We should say from your description that you have a good Dandie Dinmont.
W. G., Toronto.—A receipt for waterproofing was published in *FOREST AND STREAM* for Nov. 8, 1883.
C. P. P., Boston.—We have published several articles on oil stoves of late. Consult our files for 1885-6.
W. B. B., Brooklyn.—You do not give sufficient particulars. See "Small Yachts" for drawings of sails.
I. H. F., Spencer, Mass.—The best book giving descriptions of game animals, birds, and fishes is Hallowell's "Sportsmen's Gazetteer."
J. T. W.—How long does a pug bitch go after visit to dog before giving birth to her young; how many weeks? Ans. Seven weeks.
J. F. K., Washington, D. C.—We know of no material which would answer your purpose. You can write to the *Field*, 316 Strand, London, Eng.
D. DeM., East Rockaway, L. I.—Please tell me what time of year wild geese lay. Ans. In late May and early June; earlier in the South than in the North.
W. G. A., Racine.—A good yacht will lie from 3½ to 4 points from the wind, and a canoe about the same. This refers to the angle at which the boat's course lies, irrespective of leeway. It is best to build

with streaks in one length, if possible, but one or two seams on a side are no serious detriment if well made, and are sometimes unavoidable.

C. C. R., Simcoe, Ont.—Please tell me the highest temperature of water that a brook trout will thrive in? Ans. Seventy degrees Fahr., if there is a good flow.

C. M. S., Olean, N. Y.—Your steamer will need a certificate of inspection, and must be run by a licensed engineer and pilot, who have been duly examined.

X. Y. Z., Salem, Mass.—Can you tell me of any party who has live quail? I want fifty or more, but if I could get half a dozen I should like to get them? Ans. We know of none now.

J. F. P., New York.—See "Canoe and Boatbuilding," for plans of canoe sails. A mast of about 9 ft. above deck, boom 8 ft. and yard 7 ft., will suit a sail of 50 ft. area. Bamboo is very good if it can be obtained.

C. B., Staunton, Va.—A. and B. shoot a match. A misses a bird and claims his gun hung fire. Is he entitled to another bird? The gun was discharged, but he claims he had started to take it from his shoulder. A. scores a miss.

T. M., Philadelphia.—Copper bronze is more expensive than other bottom paints. It makes a very handsome bottom and is also smooth, if properly applied. It can be had ready mixed for yachts of C. T. Reynolds & Co., Fulton street, N. Y.

J. E. M., Grand Marais, Minn.—We can have working drawings of sharpie made for you at a cost of about \$25. They would have to be specially made by a draftsman. You will probably find what you wish in "Small Yachts," in which book several sizes of sharpies are given.

J. W., Spencer, Ind.—Last December I killed a mallard duck on White River near this place that had the body markings of the duck and the green neck and head of the drake. Is such a freak unusual? Ans. It may have been a young male bird just changing from the young to the adult plumage.

T. S. B.—1. Please define the term "battery." Is it applied to a box sunk in marsh or beach, so that the top of the box is on a level with the surface of the ground? 2. Is a snookbox a battery? Ans. 1. It is usually applied to a floating box sunk to level of the water. 2. We have never heard it so called.

H. V., New Berlin, N. Y.—Unadilla River forms the boundary line between Otsego and Chenango counties, flows south and empties into the Susquehanna. Has any person a right to use a net in this river for the purpose of catching suckers? Ans. No. See chap. 534, laws of 1879, as amended by laws 1884, chap. 127.

ROSELLE, N. J.—1. When is the law off of black bass in New Jersey? 2. In bait fishing for black bass with light tackle is the reel held on top of the rod or underneath? Ans. 1. June 1. 2. It is held on top so as to check the line with the thumb, if you cast the minnow. If, however, you use a float and sinker, it makes no difference.

H. W. B., Binghamton, N. Y.—Will you please state some of the most essential requirements in brook trout culture: that is, the condition of water, pond or brook, etc.? Ans. A good flow of spring water, with fall enough to lead it where you wish; a series of ponds, large and small, and cheap food for the fish. Added to this, some knowledge of the business is necessary.

X. Y. Z., Bridgeport, Conn.—Please give me the best method for preserving the mounted heads of animals from moths. How would a weak solution of corrosive sublimate and water answer? Ans. The preparation commonly used by taxidermists is, we believe, a saturated solution of corrosive sublimate in alcohol. If, after drying, a white deposit remains, it can be removed with stiff brush.

FLY ROD.—Some few years ago I had a very fine fly rod presented to me. I have never used it, but expect to this summer. Consequently it must be very dry. What would you advise me to do? Would you varnish it or wet it when the fishing grounds are reached? Ans. We do not know of what material your rod is composed of, nor its condition. Take it to some rodmaker or to any of our dealers in fishing tackle.

F. S. S., Halstead, Pa.—A man who now catches pickerel in a net set on an unwatered flat contends he has a right to take any fish in any manner he chose so long as the fish is not taken in running water. Has any one a right to set a net, fyke or seine on flats covered with water, caused from an overflow of the river, and take pickerel at this or any other season of the year? Ans. The law permits fyke nets in streams not inhabited by brook trout. When pickerel or other fish taken by fyke nets have been introduced into the stream by the Fish Commissioners they must be returned to the water. The overland flat is subject to the same law as the running stream.

AWAITSOOS, Ferrisburgh, Vt.—What is the bird, described as follows: Top of head gray, edged with black on sides and front; white line from behind eyes above them to upper mandible and over it; black line from eye to lower mandible; cheeks black; bill the same, rather stout and straight; throat white with narrow black bar across it; throat about bar yellowish-white; belly and breast white, as nearly as I can make out, by "goggling it through a glass;" back brownish-gray; a runner, not a hopper, some of the black feathers above the eye are slightly raised at will, so that the head seen from in front looks a little like a small-eared owl's. I do not find that I made a note of the size, but you may say a very little larger than the English sparrow. Will some of you tell me what the birds were? They were about a barn where I foddered a flock of sheep, and were seen first March 10, 1885, then for a week or more and never since. Ans. It must be the shore lark (*Eremophila alpestris*) from description.

INFORMATION WANTED.

I noticed some articles in *FOREST AND STREAM* some time ago relative to the vast amount of quail to be found in Montague county, Texas. I wish to know something about the various kinds of game to be found in this and adjoining counties.—S. P. NASH (Philadelphia, Miss.).

HUMPHREYS' Veterinary Specifics for HORSES, CATTLE, SHEEP, DOGS, HOGS, POULTRY. Used by U. S. Government. Chart on Rollers, and Book Sent Free. Humphreys' Med. Co., 109 Fulton St., N. Y.

WINCHESTER FELT GUN WADS.

THE BEST.

White Felt Wads, 3-8 inch Thick, Equal to the Best Imported Bag Wads.

Ask Your Dealer For Them.

WINCHESTER REPEATING ARMS CO.,

Send for 76-page Illustrated Catalogue.

NEW HAVEN, CONN.

Dickerman Pat. Hammerless Single-Barrel Shotgun.

DESIGNED ESPECIALLY FOR

TRAP SHOOTING.

12-GAUGE NOW READY.

Weight 6½ to 7 lbs.

Warranted to throw 300
No. 8 shot in 30-inch circle
at 33 yards.

All Modern Improvements.

Automatic Safety Pistol Grip, Double Bolt, Rubber Butt Plate, Full Choke, Blued Frame, with Twist, Laminated or Damascus Barrels.

The Top Snap is utilized as the lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The Safety Button is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the **Finest Single Gun Made.** INTERCHANGEABLE RIFLE BARRELS OF ALL CALIBERS furnished for these guns if desired. SEND FOR CIRCULAR.

Manufactured by THE STRONG FIRE ARMS CO., New Haven, Conn., U. S. A.

Neat and Elegant.

A great addition to the appearance of any lawn. Just the thing for porch and lawn use and for camping parties. Light and strong and folds compactly. Can be carried as easily as a common camp stool. Send for illustrated catalogue of Hammock and Invalid Chairs free to any address.

MESSES A. G. SPALDING & BROS., CHICAGO, ILL.:

GENTLEMEN—Agreeably at your request I tried the new "Hammered" Spoon Bait at Gogebic Lake, where, from the scarcity of live bait of any kind, a trolling snoon becomes almost a *stae qua non* at such times when the bass refuse to take anything but a live bait. I was very happy, indeed, for it is hardly possible to devise a more attractive lure, as all who have used it can affirm. It is well and carefully made, has good action and well deserves the name of a *FRESHWATER* Spoon Bait. Very truly yours,

CYNTHIANA, Ky., Sept. 25, 1885.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, APRIL 29, 1886.

VOL. XXVI.—No. 14.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. SOME POOR MEN'S RICHES.

THERE are many who have inherited the hunting instinct and were born too late to find game enough in the region of their birth to make hunting worth while for the game that can be got by the most persistent seeking, and who have not inherited wealth, nor the faculty of acquiring it, so that they may go for a week, or month, or more of a year, to places where game is still abundant. Some of these sometimes wonder whether this inheritance, come down to them through a thousand generations from wild ancestors, is not under such conditions an entailed ill-fortune, a whole-some desire, given without the opportunity of satisfying it, a purse of gold that one must always carry but never spend.

Most assuredly it is an unprofitable dower if it leads one to too continual pursuit of what at best he can get but little of, mere game. But if it takes him to the woods and fields for that reasonable share of recreation which belongs of right to all, rather than to questionable pastimes among ill-assorted associates, then it is something to be thankful for. With a gun to excuse his day's outing he goes forth. His wits are sharpened to find the haunts of the infrequent woodcock or quail or grouse, that should of right be in the swamp, or field, or copse that of old their tribes possessed. All these he must search, and study how changed conditions have wrought changes in the habits of those few survivors. Their wits, too, are sharpened. The woodcock does not wait till the dog's nose is almost above him before he springs up with a twittering whistle, but flushes wild, and alights afar off. The scant bevy of quail goes off out of gunshot in a gray flurry to the mazes of the woods. The ruffed grouse carries not to cry "quit! quit!" nor strut along the dim aisles of his woodland sanctuary, but hurtles away unseen, almost out of ear shot. If by good luck one of these falls to the unaccustomed aim, if a woodcock tumbles in a shower of leaves to the ferny carpet of the swamp, if a quail drops to the earth out of a whiff of feathers, if a grouse slants from his arrowy flight and strikes with a fluttering thud upon the fallen leaves, or a woodcock started from a willowy bend of the river, splashes back into it before the powder smoke has unveiled him, how the heart is warmed with a thrill of the satisfaction of well-doing!

Without even this appeasing of the sportsman's gentle bloodthirst, there is more and better to be got of a day's

wandering with the helping burden of a gun. The companionship of Nature, the eavesdropping and spying to catch her secrets, the studying of the ways of all the little wood people, not worth, or inestimably more than worth, powder and shot. Who has ever heard the last word the jay has to tell him in her many voices? or who has tired of visiting with the chickadees, or of watching the nuthatches creeping headlong down the mossy tree trunks, or the squirrels' sancy tricks, or the ways of strange woods plants growing and blowing and seeding, and the odd freaks of trees' growths, and no end of things that he would never have heard or seen if it had not been for this wooden and iron excuse that he lugs about with him? Thanks be to its first inventor, in spite of all the woeful mischief it has wrought. How many happy days it has gone to the making of, from boyhood to old age, in the lives of those who love it. What a comfort is the ownership of a good gun, though one seldom shoots it. What a pleasure its owner has in those seasons when it cannot be otherwise used, in putting it in order for the days fondly looked forward to—days when the woods have put on their last and bravest attire of the year—days when they have cast it off and all the landscape is veiled in the gray haze of Indian summer, and days when all the fields and frozen waters are white with the first snows and the wild music of the hounds stirs the woods.

When these days have come and gone and winter winds are howling, who so much as he, born to the love of field sports with small opportunity of enjoying them, delights to read by his cheerful fireside what others more fortunate have written of their outings, and to share with them in spirit the happy hours in camps by wild lakes, the tramps in primeval forests, and hunting tours in far away lands that he may never see.

THE SENTIMENT ON SPRING SHOOTING.

IT is an encouraging sign of the times that the sentiment of the West, where spring shooting is chiefly carried on, is changing on this subject. It was formerly as much a matter of course to kill ducks in the spring as in the fall, but of late, individuals in great numbers, and in some cases the press, are protesting against the scandalous folly of this wasteful practice.

The Milwaukee Wisconsin of April 17 says:

The annual spring slaughter of ducks in Wisconsin and other Northern States has begun rather earlier than usual and appears to be pursued with more than common energy. Thousands of ducks are being killed daily. The Oskosh Northwestern states that the birds which are being killed in that vicinity are "mere skeletons." This is usually the condition of ducks in the spring, and for that reason alone the shooting of them should be forbidden by legal enactment. But another and still better reason is, that each pair of birds killed would raise a large brood during the summer if they were unmolested now. Thus every duck destroyed stands for several which might live. There are a few hunting clubs in the State which have bought or leased tracts of marsh where the ducks are allowed to live through the summer and breed without molestation. This plan makes the best of shooting in the fall at those places, and but for them the ducks would be nearly exterminated in Wisconsin.

Comparatively little spring shooting is done along the Atlantic seaboard, for the very excellent reason that there are few places where birds are to be found, and few birds to shoot, but in the West the case is different. The experience of a number of clubs in Western States has shown conclusively the advantage which may be derived from the prohibition of shooting at this season over limited areas. On the grounds of the Winous Point Club ducks are protected in spring, and as a direct result of this protection, the birds are wonderfully numerous and tame in the autumn.

It is, perhaps, hopeless to think of inaugurating the abolition of spring shooting in the East at present. The miserably foolish and short-sighted action of the Legislature of the State of New York on the deer hounding question, recently, shows how narrow and petty is the view taken by our legislators on the subject of game protection. Still, people are being educated, though very slowly, and we trust that a few years more will see game of every kind protected everywhere for all the year, except a short period in autumn and early winter. The recent change in the Canadian game laws, and the change of sentiment among sportsmen, point to an awakening on the importance of a general alteration in our laws, and as soon as the shooting public begin to think seriously on this matter it will certainly be brought to the notice of the different State legislatures in a way that will compel their attention.

MAINE AND ADIRONDACK WATERS will soon be open for the angler, and many gentlemen are anxiously awaiting the telegrams which shall announce that the ice has gone out.

FOREST PROTECTION.

IT is well understood that whatever the damage done by the reckless cutting away of our forests, this injury is inconsiderable when compared with that caused by forest fires. Those who are familiar with the mountains of the Far West have seen the fearful havoc there wrought by fire, and know a long way off the cause which gives to many a lofty mountain its curious silver-gray appearance. For years after being burned over, the dead and bleaching tree trunks stand as witnesses of the terrible destruction brought about by carelessness or malice. The loss of life and property caused by forest fires in Michigan is too recent to have been forgotten.

The importance of this matter has long been appreciated by those who have to do with large forest areas. One of the principal duties of the police of the National Park is the guarding against the spread of forest fires, and the value of their services is shown by the fact that in the Park, a country especially liable to this scourge, there were last year no forest fires of any considerable magnitude.

The New York Forestry Commission recently adopted a series of rules and regulations for the protection of the Adirondack woods, which are as follows:

First. All persons having occasion to burn a fallow or start a fire in any old chopping, wind slash, bush or berry lot, swamp, "vlaie," or beaver meadow, for the purpose of clearing or improvement, shall give five days' notice of such intention to the nearest fire warden, forester, or agent of the Forest Commission. He shall also give notice to any neighbors who may have fields or woodlands adjacent and liable to injury at least one day previous to the setting of such fires. Such fires will be permitted only when the wind is favorable, and competent persons must remain on guard until the fire is completely extinguished on the surface and in the "duff."

Second. All hunters, fishermen, loggers, guides, tourists and others lighting fires in or near the forest for cooking, warmth, insect smudges or other purposes, must clear away all combustible material from within six feet of the place where the fire is to be kindled, and must thoroughly stamp out, drench, or otherwise extinguish any such fire upon leaving it either temporarily or permanently; and hunters using firearms with inflammable wadding are hereby cautioned against allowing fires to start from such causes.

Third. Smokers are cautioned in regard to fires arising from any carelessness of theirs, and their attention is called to the penalty for negligence in causing fires. Parents and teachers are respectfully requested to instruct children to avoid lighting fires in the forests or exposed places.

Fourth. Peeling standing trees of their bark for covering camps or shanties is hereby prohibited. For such purposes the tree must be felled, and all the available bark removed therefrom before another tree is cut down. The trees thus felled must be utilized for firewood, and such fallen timber as lies in the vicinity of the camp must also be used for firewood before any green standing timber is cut for that purpose.

The fourth of these rules implies a measure of license inconsistent with any high standard of forest conservancy; and although, so long as no market exists for the timber, it would perhaps be a dog-in-the-manger policy to impose severe restrictions on the utilization of forest products by camping parties, it is desirable that restrictions be imposed on the barking or felling of pine or spruce for any purpose. Camping parties should bear in mind, too, that the sanctions implied in this rule cannot extend to forests in private hands, the owners of which have a right of action for damages for any tree felled on their property. These regulations should be carefully read and remembered by all those who contemplate camping out in the Adirondacks this summer, and advantage should not be taken of the liberal spirit in which the fourth rule is framed to perpetrate reckless waste. Sound growing timber, so situated that there is room for its development, should never be felled, for although it have no immediate market value, it may be in active demand in another decade or two.

It is well known that careless hunters start a comparatively large number of the fires which spread and involve large areas, and too much care cannot be exercised with regard to the proper selection of the spot for the fire and its thorough extinguishment before leaving it.

IN ANOTHER COLUMN will be found that portion of the report of the New York State Fish Commissioners which relates to the protection of fish and game in this State. The document is an important one and contains many suggestions and recommendations which deserve the attention of our legislators. The position taken by this report on the deer hounding question, shows that the Commissioners hold sound views on this subject. The recommendation for the appointment of a Superintendent of game protectors is in line with what we have strongly urged. The report may be read with profit by all who are interested in game and fish protection, and it deserves the prompt attention of the New York Legislature.

The Sportsman Tourist.

DAYS AMONG THE ALLIGATORS.

ON one occasion, while hunting on Lake Bisteneau, in Louisiana, I was returning through the woods by a dim path that led by a small spring of water. The spring was located half a mile from the lake, in a small ravine, on the slope of a hillside and about three hundred yards from where the drainage of the spring, scarcely perceptible in the dry season, emptied into a small and sluggish bayou that flowed into the lake. I was thirsty, and the only drinkable water to be had was to be found in the little spring in question. Many a time had its grateful waters quenched my thirst when returning from a hard day's hunting or fishing on the lake. It was in a secluded spot and but few people ever visited the place.

Often I had noticed, a little to one side and just above the spring, in a small drain formed by an inequality of the hillside, two small pools of water that never seemed to go dry, even in the drouth of summer. They were about twenty feet long, about three feet wide, and apparently only a few inches deep. They were about fifteen or twenty feet apart, with apparently no connection, as no water flowed from either, and from casual observation I supposed they were formed by the drainage water after a rain collecting and standing in two shallow pools. I had taken them for two innocent hog wallows, where I supposed the swine in the woods were accustomed to regale themselves in summer weather, in the mud and water. I had passed there dozens of times and never once suspected that danger lurked in those innocent looking holes of water. I afterward learned that it would have been anything but healthy for a hog or a dog to have made a bathing place of these little pools.

As I approached, riding, I had to pass these pools before I reached the spring, about thirty steps beyond. When about twenty yards from the upper and deeper hole, which had banks about a foot high, my attention was attracted by something dropping from the banks into the water. Looking that way, I thought I had never seen so many snakes in one place in my life. The banks and the water seemed full of them. I immediately dismounted and began an investigation of the matter. By this time all had tumbled into the water and many of them were still visible swimming about. On approaching the bank what was my astonishment on discovering that what I supposed were snakes were in reality a brood of young alligators, many of them whining like young puppies. On my approach, however, they rapidly disappeared in the most mysterious manner, and it was with difficulty that I captured one of the little rascals before all the rest were gone. I could not tell where. The one I caught was about fourteen inches long, and as vicious for his size as any venomous reptile ever dared to be. If I put a stick close to his head he would snap at it, and once getting a hold, I could almost make a whip cracker of him before he would turn loose.

I could not understand the sudden disappearance of the others, as I at first supposed I could catch the whole brood. To investigate the matter I got a stick and commenced to poke it all around in the water and under the edges of the banks wherever I thought one could hide. In doing this I could stand with one foot on each bank. Suddenly as I was feeling about with the stick under the bank on one side my stick failed to touch bottom. I reached as far as I could and still did not touch bottom. To say I was surprised is putting it mildly. I got a longer stick, and still could not touch bottom. I shot it into the hole with a plunge. It went out of sight—I was amazed. I then began an inspection of the surroundings. Just out on the bank was a lot of old rubbish composed of twigs and leaves, etc. On going to the lower hole of water I discovered a fresh track of a large alligator coming up from the direction of the bayou and entering the pool. The pool had no steep banks at all and I had no idea from its appearance it was anything but a common hog wallow with mud and water four or five inches deep, at most. What puzzled me now was I could find no trace of the alligator coming out of the hole. I examined carefully the soft ground around the margin of the water and it was very evident he had not come out. Anybody could see very plainly he had gone in there and only a short time before. It was equally evident he was in there then. Where was he? The question. The mysterious deep hole under the bank in the upper pool gave me a clue, and getting a long pole I commenced feeling about in the water which was not over four or five inches deep but too muddy to see the bottom. Suddenly my pole went down, as it had before in the other hole. A further investigation showed that this was an alligator's den. He had burrowed just below the surface of the water around under the bank from one hole to the other. How he ever kept these holes filled with water in a porous soil, and on the slope of a hill, is a question I have never been able to solve. I learned afterward that an alligator had nested in that place for many years. About the same time, I was hunting one day on Brushy Bayou, a small stream that flows into Lake Bisteneau, about seven or eight miles above this place, when I heard what seemed to be the whining of a young puppy in the dense and tangled growth of vines, bushes and trees that bordered the stream. On making my way cautiously in to the banks of the bayou a huge alligator rolled off of a log that spanned the stream and fell with a great splash into the water. Approaching nearer I discovered that the whining noise proceeded from a brood of young alligators that lay around the mouth of their den. This consisted of a hole about the size of the mouth of a large barrel that had been burrowed in the earth just above the edge of the water in the bayou. This hole was full of water to the top, and the young alligators, on the first intimation or danger, sought and found protection in its mysterious depths.

My first experience in shooting alligators was as follows: Happening to be hunting with two boys as my companions on the lake during the period of high water, we discovered an alligator floating on the water about one hundred yards from the bank. I had a short double gun, one barrel a rifle that carried a large ball for shooting deer. We concluded to try to capture the alligator, and getting into a small boat we rowed out for an interview. The saurian was unlike the politician of the present day and seemed determined not to be interviewed. Every time we attempted to approach him he would move off so as to keep at a safe distance. When floating on the surface they expose above the water their eyes which are set in a small elevation on the front part of the skull, the tip of the nose, and the top of the head from the eyes back. These are carried about an inch above the water. Some old ones expose portions of the back and tail while swimming on the surface. The one in question,

whenever we got nearer than he thought conducive to his safety, would lower himself under the water and come up again in a short time further off. After making several ineffectual attempts to get near enough for a shot, I adopted a strategy that worked finely. Paddling the boat toward him until he went under, we rowed rapidly some distance beyond where he was last seen and remained quiet, with rifle cocked and ready. I had heard they could only be killed by a shot in the eye and I wanted to be near enough to hit that organ. We had waited but a few minutes before he rose to the surface, in thirty yards of the boat, and just where I was looking for him. Before he could get his head under again I fired at his eye. He was lying broadside to me. In an instant there was a wild commotion and churning of the water into foam. In a few moments he ceased his contortions, and sank quietly to the bottom. Approaching the place we could discover air bubbles rising rapidly from the water over the place where he lay. There was in the boat a stout fish gig used for gigging the huge buffalo fish that were found in great numbers in the lake. It had three strong barbed iron prongs and a stout handle about ten feet in length. With this I felt about on the bottom until I touched the body of the alligator. The water was about eight feet deep. He did not move when I touched him and I supposed he was dead. Raising the gig above him I brought it down with all my might and felt that I had sent it home. A moment later and I was sorry I had. He was not dead by great odds. He made a tremendous lurch and I soon discovered I was in a very embarrassing predicament. It became at once a serious question whether it was best to turn him loose or hold on to him. I was afraid to turn him loose for fear he would in his contortions upset the boat. To hold on to him was no easy matter. I finally lifted him from the bottom and held him midway between the bottom of the lake and the boat. Fortunately he soon ceased his struggles, but not until my hand was blistered in holding the handle of the gig. We succeeded in towing him to the bank and found that the rifle ball had struck him in the eye, and plunging through from side to side, had put out the other eye also. He was still not dead, but made no further resistance.

Some four or five miles down the lake from this place was a wide deep hole even during the low stages of the water. The hole was about half or three quarters of a mile long and was a great place for alligators. In the summer they could be seen basking in the sun, almost any day, stretched out upon logs or in the mud along the banks, or floating lazily upon the water. There was the hull of an old sunken steamboat that lay midway the lake, and this formed the favorite lounging place of a rusty looking old fellow who was in the habit of crawling up on it for his midday nap. I was riding down the lake one bright day and discovered this old fellow lying in his favorite place on the hull of the boat. He was a wily old dog and always slept with one eye open. As soon as he discovered anyone approaching, off into the water he would roll. The boat was about 80 or 100 yards from the bank. A cluster of cypress trees stood on the bank. I was on the lookout for him, and as soon as I saw he was on the boat, I dismounted and crept along behind the cypress trees until I got to the tree nearest the bank. He was all unconscious of my presence. I had a small muzzleloading rifle. Taking aim at his body just below the shoulders, I fired. He was the most completely surprised alligator I ever saw. He rolled off the boat and into the water with a splash, and not knowing the direction of his unseen enemy he struck out in a bee line to the very place where I was standing, in a manner as if he thought that boat was filled with dynamite and the whole thing would blow up in about two minutes. I concluded the old fellow had taken offense at my unceremonious interruption of his nap and was coming to demand an explanation, and I turned to look after my horse about that time. The saurian did not want me, however, and as soon as he saw me he changed his course and started for the other bank in a double quick gait.

After this, I had some good sport hunting them at this place. I had heard much of their dangerous character, and of the impenetrability of their hides to shot, and of the impossibility of killing them unless shot in the eye. I found all of this the sheerest nonsense. I found them about as timid and as hard to approach as any wild game I ever hunted. I could rarely ever get within one hundred yards of one, if he saw me. I killed several ten feet and upward in length with one shot from a squirrel rifle, and killed them so instantaneously that they would turn belly up and sink without the least struggle. The place to shoot them is just back of the eye from one to three inches. This part is exposed, and offers the best target, while they are swimming on the surface, or floating, and if you can get a plunging shot from above them, and hit them here, they are very easily killed. The frontal bone extending from the nose, or snout, back over the top of the head is very hard and forms almost a perfect shield against ordinary rifle shot fired from in front of them. The ball striking this will be almost sure to glance and leave the alligator unharmed.

I had several times noticed an unusually large one in my trips to the lake that, in swimming on the surface, exposed almost the entire length of his body above the surface of the water. He was so wary that I had found it impossible to get in rifle shot of him. I had only an old-fashioned squirrel rifle. Every time he caught sight of me, if two hundred yards away, he would move off to safer quarters. I determined to get him if possible, and arranged a drive for him. Taking my stand cautiously on a point of land and behind a large cypress tree, on the bank of the lake, about three hundred yards below where I saw the old fellow floating on the water, I sent a negro man, whom I had taken along for the purpose, in a boat several hundred yards above him, with instructions to approach him very slowly and carefully from a point opposite to the place where I stood. As soon as the alligator discovered the negro approaching in the boat, just as I expected he would, he began to move in my direction. He seemingly suspected the trap set for him, however, for he soon got in the middle of the lake, which was about two hundred yards wide at the place, and putting on a full head of steam came down the lake like a young steamboat. When he got opposite to me I fired, and he quietly sank under the water. I was satisfied I had not hurt him, and yet, from the fact that the ball did not strike the water, I felt confident I had hit him. The bank here was high and tolerably steep with a number of old cypress trees standing on the slope. I had a companion with me, and we selected a place about half way up the bank and sat down on a log to eat our lunch. We were screened from the lake by the trunks of two or three large trees. Immediately below us the water was deep and it was a favorite place for alligators to float. The weather was

warm and I suppose we had been sitting there an hour, when I cautiously looked around the tree behind which I sat, when there, not thirty yards off, right below us, lay the big alligator we were after, quietly floating on the water. With a motion to my companion to keep quiet, I cautiously raised my rifle, and passing the muzzle past the tree, took deliberate aim at his head just back of the eye, and in an instant more the clear ring of the rifle reverberated over the lake. When the smoke cleared away we saw this huge monster turn slowly over on his back and with a shiver, sink quietly out of sight. With the aid of a long handled gig, we succeeded in raising his body to the surface and dragging him to the bank. An examination showed that my first shot had struck him on the frontal bone, in front of the eye, and glanced harmlessly off. A short time after this, I was hunting alligators on the lake near where I had killed the big fellow above. The negro was paddling the boat and I was sitting forward with rifle in hand. I discovered a large one floating, and directing the negro to paddle slowly and cautiously toward him, I succeeded in getting a long shot at him. The ball struck him in the eye, and for a time he made things lively. Reloading my rifle as hastily as I could, I made the negro paddle the boat to the place where he was cavorting about in the water, blinded and enraged by the first shot, and succeeded by standing up in the boat in getting a plunging shot at his head as he passed. The ball entered the fatal spot behind the eye, penetrated the brain, and the monster sank to the bottom dead, without another struggle.

This was during the war, at which time the great scarcity of leather and of tanner's oil, in the South, made their hides and oil very valuable. Whenever I killed a large one, my friend, at whose house I was stopping, would have the carcass hauled to the house and skinned and the fat converted into oil, which he found useful for many purposes.

On skinning the last one mentioned above, I discovered that he was the same one I had shot while basking in the sun on the hull of the sunken steamboat. He was lying at the time with his side to me and I attempted to shoot him behind the shoulder, in the region of the heart, but he had his fore leg stretched out beside him, and the ball buried itself in this, near the elbow joint, whence I recovered it.

One peculiarity of alligators is their power of emitting a powerful, musky odor. I never noticed this except when one was killed. Whenever I killed a large one and approached the spot where he sunk, the air and water seemed filled with this strong, pungent odor.

NASHVILLE, TENN.

Natural History.

THE AUDUBON SOCIETY.

THE career of the AUDUBON SOCIETY during the past week has been one of steady and gratifying progress. Additional secretaries have been appointed, and those already at work have been steadily increasing their membership. Many of our branch societies have been organizing their forces for the directing of public attention to the movement, the clergy have responded warmly to the appeal for co-operation wherever called on, and many effective sermons have been preached, which generally had the effect of startling a number of the fair hearers with a sense of the enormity of the practice, to the consequences of which they had never before given a passing thought.

The Educational Department has in some instances exhibited a considerable interest in the movement, and a few schools have been canvassed; in all cases with results indicating that the pupils were very generally impressed with the presentation of the case. Mr. Comstock, principal of the LeRoy Academic Institute, this State, heads the weekly list with a contribution of a hundred and twenty-six members, mostly pupils. Certificates of membership have been issued at an average rate of two hundred daily, and being really artistically executed, promise to become not only an evidence, but an element of success. Compensation for self-denial is found in the artistic evidence of it. With the more advanced students of our colleges a different, but equally suitable, course has been adopted; attention has been directed to the fashion of wearing stuffed bird skins for personal adornment, and to the Audubon movement for its subversion, and the students instructed to study the problem, and make it the subject of competitive themes or commencement orations. Inquiries instituted at millinery establishments confirms the view, that the almost total absence of small bird plumage is due to a change of sentiment on the part of their customers. There is a general unanimity of assertion that their purchases for the approaching season exhibit great falling off in comparison with past seasons. We hear, too, of orders given in ignorance of the movement, which have since been countermanded. In the smaller towns the milliners have been interviewing the AUDUBON secretaries and displaying a lively interest in ascertaining what ladies have joined the Society. These are results affording ample evidence of the general interest aroused by the movement, wherever it has spread; and there is every ground to hope that as branch societies perfect their organization and are able to concentrate as much effort on individual cities, as the Society is now spreading over the whole nation, success will follow in an ever accelerated ratio. The best people of the land lend the movement their earnest advocacy, and what is perhaps as much to the purpose, thousands of women of prominent social position who would not discard the fashion from principle or conviction, will not longer adhere to it when they see it condemned by people whose character and judgment they are bound to respect.

MORE TRUTH THAN FICTION.—Scene in court—A small boy, caught in the act of shooting birds, has been arrested for truancy. Officer—"This, your honor, is the young truant and bird shooter." Judge—"I am deeply distressed to see you, so young a lad, so cruel. Do you not attend both day and Sabbath school, where you sing beautiful songs about the lovely birds and their little nestlings? And does not your own mother teach you when you say your prayers at night, how wicked it is to shoot the dear birds?" Small boy—"Yes, sir." Judge—"Then you must be depraved indeed! Your extreme youth would certainly demand clemency. If you were an outcast, an orphan I—" Small boy—"Then, judge, I wouldn't ha' done it. 'Twas for mother's hat. That bird was ten times prettier 'n the one in your wife's bonnet, 'cause I seen it last Sunday in Sunday school. She's my teacher." Judge—"Oh! Oh! yes! A case of necessity, I see. You were not shooting in mere, wanton sport; discharge the boy and bring on the next case."—Portland Transcript.

THE SPARROW HAWK'S SERVICES.

Editor Forest and Stream:

I perceive that Dr. Ellzey is somewhat incredulous as to the exactness of the information I gave him in the last issue of the FOREST AND STREAM relative to the grasshoppers of this locality, but as he intends to seek counsel of an expert and to put "Professor Riley on the stand," I am quite content, and willingly leave him to the care of the Professor, trusting that the pupil may prove worthy of so good a master.

If he will apply also for information to Mr. Theodore Pergandie, Prof. Riley's assistant, who is particularly well posted on the Orthoptera of this vicinity, he will, I think, find the statements made in my letter fully corroborated.

As the Doctor is on the right side of the sparrow question, or as he correctly terms it, the "sparrow nuisance," I shall be able to forgive him even if he puts a strain on his inclination and "forces me to the wall."

As to what the sparrow hawk did for a living in winter about Washington prior to the advent of the English sparrow, I am unable to say of my own knowledge, as that period preceded my residence here. What evidence has the Doctor that the sparrow hawk wintered here in those by-gone days? If he did—a point I am doubtful upon—I wish I could believe he lived entirely on mice with an occasional grasshopper thrown in, and that his taste for small birds began with the introduction of the English sparrow. I may remind the Doctor that there is plenty of small game to be found about here in winter in the shape of tree sparrows, field sparrows, snowbirds, etc., and a sparrow hawk ambitious for such dainties would have had little difficulty in gratifying his preferences.

I should only be too glad to accept Dr. Ellzey's statement that the sparrow hawk is absolutely harmless, but stern facts forbid it. Too many sparrow hawks have been seen to pounce upon small birds, and too many have been shot with the remains of various species of birds in their stomachs to render such a sweeping statement tenable for a moment. However unwelcome truth may be, it should not be withheld even in so excellent a cause as the establishment of the good character of the sparrow hawk, and the truth is that occasionally the little falcon is the reverse of beneficial in that he kills insectivorous birds. Let me hasten to add that the destruction of insectivorous birds by the sparrow hawk is, so far as I have been able to ascertain, an inconsiderable item as compared with the good it does, and that in making up the balance sheet the harm it does in this way weighs but a feather in the scale against the bird's beneficent habits. That the sparrow hawk lives more or less upon field mice I have freely admitted, and the farmer ought to remember the fact to the bird's credit, since there can be no doubt of the mischievous propensities of these small rodents. But while admitting this, I deny that I "overstated my case," and again assert that the bulk of the food of *Falco sparverius* in the length and breadth of the land consists of insects. Under certain circumstances and in certain localities, as the case cited by Dr. Ellzey, the bird may feed more upon mice than upon grasshoppers, or even exclusively for a time upon the former, but the observations made in no one section will justify a statement of the habits of a species as a whole, especially of a bird so widely distributed as the sparrow hawk.

It is well known that in fall, owing to a scarcity of food, birds leave their summer haunts and winter South or where food is abundant. Mice cannot be said to migrate. They are as abundant in the North in winter as in summer, and form a very considerable part of the food of several species of owls, whose especial value to the farmer is due to the fact that this warfare against mice is not intermittent, but persistent. The owls keep watch and ward when other natural checks upon the mice, as the snakes and most of the hawks, are off duty. One of the hawks, however—the rough legged—stands nearly or perhaps quite at the head of the list as a check to the increase of mice.

If, then, mice form the chief dependence of the sparrow hawk, as Dr. Ellzey asserts, will he explain why it is that the great majority of sparrow hawks leave home—which birds rarely if ever do so long as food is plenty—and go South to winter? If so large a bird as the rough-legged hawk, one of the largest of the family, finds mice enough to live upon far north of the winter home of *Sparverius*, why should not the sparrow hawk? The truth is, the majority of *Sparverius* go far enough south to find plenty of insect food, and there stay till spring assures them of plenty of their favorite fare at home.

I have no doubt that were grasshoppers abundant about Washington all winter—which I stated they were not, though some are to be found every month in the year—the sparrow hawk would be a common winter resident here instead of being, as it is, a rare one.

Dr. Ellzey appears to overlook the important fact that from an economic point of view, the destruction of grasshoppers entitles the sparrow hawk to the gratitude of the farmer no less than does the destruction of mice. This is not the case, of course, in the East, where the grasshopper is not seriously destructive; but it is the case in the West, where the insects have proved a veritable plague, and it is precisely in the grasshopper-infested portions of the far West that this little hawk is most numerous, more so than it is anywhere east of the Mississippi. In many sections of Colorado, Arizona and New Mexico, for instance, the sparrow hawk is found, or perhaps I should say was found, in surprising numbers, and rarely indeed are they to be seen feeding upon anything but grasshoppers and crickets. The number of insects destroyed by these hawks and by their young—for I have seen them feeding their young with grasshoppers—is simply beyond calculation. Notwithstanding this fact, and the no less important one that when grasshoppers are abundant the large Swainson's hawk also feeds almost exclusively upon these insects, the Legislature of Colorado passed a law a few years ago offering a bounty on hawks without discrimination of species. The result was that in 1883 I found that the sparrow hawk had been almost exterminated in districts where several years before they were exceedingly numerous. What a spectacle! A great State expending thousands of dollars to exterminate birds whose value to agriculture is almost incalculable! For admitting, as must be done, that certain species of hawks destroy more or less insectivorous birds, game birds and poultry, there is no room to doubt that the economic value of the hawk tribe as a whole is very great. In one part or another of the country the various species of hawks and owls are busy the year round in checking the increase of mice and grasshoppers. In this silent and ill-requited service of man the little sparrow hawk plays a con-

spicuous part, and, as Dr. Ellzey says, it is shameful folly to destroy them.

A. W. HENSHAW.
WASHINGTON, D. C., April 24, 1886.

Editor Forest and Stream:

I notice that Dr. Ellzey is inclined to doubt the existence of warm sunny days around Washington during January and February, and especially the presence of grasshoppers thereon, as asserted by Mr. Henshaw. He asks, sarcastically, how many grasshopper days there are between Dec. 1 and May 1, and announces his intention of calling Prof. Riley to the stand. I have a record in my note book under date of March 18, 1883, of finding three grasshoppers, of the species *Acridium abustaceum*, in lively condition, while passing through an open field near the Aqueduct bridge. At the same time there was ice under the shadow of a rock in Spout Run. One of Prof. Riley's assistants was in our party. While I have no other record, I am sure that I have seen grasshoppers in February.

HENRY LITCHFIELD WEST.

WASHINGTON, April 23, 1886.

AN OLD AND VEXED QUESTION.—When I was a boy, a long time ago, I read in the brilliant pages of "Frank Forester" that the partridge could withhold his scent at will, and I thought to myself how much more F. F. knows about hunting and shooting than any other man in the world. Lewis and Hallock repeat the same thing; and, in my humble opinion, a more fanciful thing never took hold of men's minds. It is about on a par with the idea that at the first white frost the sora, every one, turns to a frog and lives in the mud all through the winter. I have never seen a covey of birds settle and marked the spots at which they alighted with accuracy that I did not find all or nearly all if I went straight after them. But whenever I have waited to give them time to let go their scent, which I have frequently done in close cover in order to take advantage of good hunting ground between me and them, I have always been left. Like the Arabs they have folded their tents and silently stolen away, knowing full well that that is the sensible thing to do. It may be true that from excessive fright the partridge will press his feathers so close to the body as to suppress all exhalations, but I doubt it. I have all my life been hunting with intelligent huntsmen (who, however, were not up in sporting literature), and I have never yet seen one who would leave a flock of birds that had been flushed and marked down and go off after another flock so as to give the other fellows time to let off the effluvium. The truth is, hardly half of the men who hunt partridges are good at marking them down. They see 'em flying in a certain direction and imagine they are going to alight in a particular swamp or slosh or brush. Off they go and fail to find. Then they say they have all corked up their scent bottles, just as "Frank Forester" tells us is their habit. I would like very much to hear from Dr. Ellzey on this subject. He is not only a gentleman of culture and scientific information, but withal he thinks and observes for himself, and don't take his opinions at second hand.—OLD TIMER.

SPRING NOTES.—Salem, Neb., April 16.—Cranes arrived here March 18, killdeer plover March 19, golden-wing woodpecker April 3, blackbirds and robins about a week earlier, bluebirds (*Sialia sialis*) have been here nearly all winter. I saw the first turkey buzzard this season April 9. There is another bluebird sometimes seen here that is smaller and darker blue than *Sialia sialis*. What are they?—J. F. L. [Perhaps *Sialia arctica*, a common species in the mountains to the west of you, but only accidental on the plains.]

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

GAME AND FISH PROTECTION.

SECTION 4 of Chapter 317, Laws of 1883, provides that "the game and fish protectors shall be subject to the supervision and direction of the Commissioners of Fisheries," and directs that the Commissioners shall divide the territory of the State into protection districts, and shall assign to each protector his district, and shall have authority also to assign for temporary duty in any district a protector from any other district. The protector is to make, at the end of each calendar month, a report, giving "an account of the suits commenced at his instance, the disposition made of such suits, the result of any brought to trial, and the condition of any undisposed of," and no payment of salary or traveling expenses is to be made except on the certificate of the Commissioners that such reports have been made, and that the protector has in all other respects faithfully performed his duty.

For three years previous to the act above referred to there were eight game and fish protectors, appointed especially to attend to the enforcement of the laws for the protection of game and fish. They were selected without particular reference to geographical locality, and had equal territorial jurisdiction throughout the whole State. They were at liberty to proceed according to their own pleasure in the execution of their duties, and were in fact under no official supervision. Under such a system there was of course imperfect performance. In but few localities was there any persistent attempt to enforce the law, and what was done was of a spasmodic rather than a systematic character. Most of the protectors did, in the line of official duty, what fell in their way to do, but there was no concerted action, no directing head, and practically no official accountability. That their work was not more thorough was not altogether the fault of the protectors. Reformation of long tolerated abuses must of necessity be gradual, even when they have the support of moral sentiment. When they lack this powerful backing the task is formidable indeed.

The game laws of the State had been, up to the time of their appointment, dead letters. It was true there were game constables in every town that chose to elect them, but in most cases these officers, if not poachers themselves, were in the interest of poachers. The office was sought principally by those who wished to secure immunity for their own offending. The law, too, made it the duty of every sheriff, deputy sheriff, constable and policeman to take cognizance of this

class of offenses, but as obedience brought unpopularity rather than profit, there were few arrests and fewer punishments.

Game laws were regarded as infringements upon natural right, and until the rapid disappearance of game from the forests and fish from the waters awakened the attention of thoughtful economists, the laws were violated with impunity. In some places the choice of game constables was made in good faith, and the enforcement, which followed, of laws long set at naught, gradually led to a more wholesome public sentiment. It was to this sentiment that the passage of the law was due, creating the office of game and fish protector and the amendatory act increasing the number and making them accountable to the Fish Commissioners was the result of the defects discovered in the first three years' working.

The monthly reports in full of the protectors would take up too large a space and furnish more of detail than is necessary in a document like this. The Commissioners have, therefore, called on each protector for a summary of his work for the last year, which will be found at the proper place in the appendix.

A statement of the unlawful devices seized and of the penalties recovered during the last year, is furnished in the following tables:

NETS AND OTHER ILLEGAL DEVICES DESTROYED IN 1885.

District No.	Trout nets.	Scoop nets.	Scrap nets.	Squid nets.	Seine nets.	Fyke nets.	Trap nets.	Gill nets.	Hoop nets.	Dip nets.	Night lines.	Flat nets.	Leather nets.	Scissors.	Shad drift.	Set lines.	Spears.	Value of nets.
1	3	1	1	1	1	2	1	1	1	1	1	1	1	1	1	1	1	\$ 20.00
2	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	325.00

11	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	330.00
12	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	\$563.50

RECAPITULATION—KINDS OF NETS AND OTHER DEVICES.

2 Trout.	3 Spears.	98 Fyke.
3 Night-Lines.	1 Scissors.	76 Trap.
3 Squat.	1 Scoop.	106 Gill.
18 Flat.	1 Scrap.	2 Hoop.
1 Dip.	3 Shad Drifts.	16 Set Lines.
1 Leader.	15 lines.	

345 of all kinds valued at \$4,688.50.

PENALTIES RECOVERED.

The following table shows the amount of penalties recovered in suits brought by protectors for the year ending Dec. 31, 1885. There are other suits pending, the penalties under which amount to upward of \$5,000:

Dist. No.	Names of Protectors.	Amounts.
1	G. W. Whitaker, Jr.	None.
2	H. Godwin, Jr.	None.
3	Matthew Kennedy.	\$38.00
4	Francisco Wood.	100.00
5	S. C. Armstrong.	110.00
6	John Liberty.	165.00
7	P. R. Leonard.	335.00
8	Thomas Bradley, and \$23.40 costs.	50.00
9	J. N. Brinkerhoff, and \$5 costs.	515.00
10	N. C. Phelps.	150.00
11	F. P. Drew.	100.00
12	W. N. Steele.	None.
13	W. H. Lindley.	75.00
14	John Sheridan, and costs.	25.00
15	George M. Schwartz.	162.00
16	S. A. Roberts.	10.00
Total.		\$1,927.00

The protectors have been hampered a good deal by the insufficient allowance for travel, a difficulty to which attention was called in the last report of the Commissioners, but which the Legislature has failed thus far to relieve. It is idle to expect that a protector can each month travel his district of perhaps two thousand square miles, in some places where no wagon roads penetrate, on the pittance of twenty dollars and forty cents. Often that amount is expended in a single trip, and the protector is powerless to make another during the month, however urgent the case may be. Discretion should be given to the Commissioners to make extra allowances for travel in such cases, and money should be appropriated accordingly. The number of protectors provided by law is sixteen. It was thought at first that thirteen would be sufficient for the duty, and that number only was appointed. The need of the full number became apparent before the end of the first year's service, and in May, 1884, the additional three were appointed. At that time a reapportionment of districts was made to correspond with the full number of protectors. These districts stand at present as follows:

First District.—Counties of Suffolk, Queens, Kings and Richmond. G. W. Whitaker, protector, South Hampton, Suffolk county.

Second District.—New York, Rockland and Orange. J. H. Godwin, Jr., protector, Kings Bridge, N. Y.

Third District.—Westchester, Putnam, Dutchess, Columbia, Greene, Ulster. Matthew Kennedy, protector, Hudson, Columbia county.

Fourth District.—Albany, Schenectady, Schoharie, Delaware, Sullivan, Francisco Wood, protector, Schoharie, Schoharie county.

Fifth District.—Rensselaer, Washington, Warren, Saratoga, and the town of Indian Lake in Hamilton county. Seymour C. Armstrong, protector, Weavertown, Warren county, N. Y.

Sixth District.—Essex, Clinton and all the town of Long Lake in Hamilton except that part lying west of the east line of great lots 4, 5, 41 and 42. John Liberty, protector, Elizabethtown, Essex county, N. Y.

Seventh District.—St. Lawrence and Franklin. Peter R. Leonard, protector, Ogdensburg, St. Lawrence county.

Eighth District.—Montgomery, Fulton and the towns of Hope, Wells, Lake Pleasant, Arietta and Morehouse, except that portion of Arietta and Morehouse lying north of the south branch of Moose River. Thomas Bradley, protector, Rockwood, Fulton county.

Ninth District.—All that part of Lewis lying east of the Black River and of the west lines of the towns of Diana and Croghan; all that part of Willmott, Herkimer county, and of Morehouse and Arietta, Hamilton county, lying north of the south branch of Moose River, and all that part of the town of Long Lake, Hamilton county, lying west of the east line of great lots 4, 5, 41 and 42. John L. Brinkerhoff, protector, Boonville, Oneida county.

Tenth District.—All that part of Oneida lying north of the south lines of Verona, Rome, Marcy and Deerfield, all of the county of Lewis lying west of the west lines of Diana and Croghan, and all of the county of Herkimer lying south of the south branch of Moose River. Nathan C. Phelps, protector, Remsen, Oneida county.

Eleventh District.—The counties of Otsego, Chemung, Broome, Cortland and Tioga, and all the towns of Oneida county lying south of the south lines of Verona, Rome, Marcy and Deerfield. Frederick P. Drew, protector, Washington Mills, Oneida county.

Twelfth District.—Jefferson and Oswego, except Oneida Lake. William N. Steele, protector, Clayton, Jefferson county.

Thirteenth District.—Madison, Onondaga, Cayuga, Wayne, Seneca, and the waters of Oneida Lake in Oswego and Oneida counties. W. H. Lindley, protector, Canastota, Madison county.

Fourteenth District.—Schuyler, Yates, Chemung, Tompkins, Steuben and Allegany. John Sheridan, protector, Penn Yan, Yates county.

Fifteenth District.—Monroe, Livingston, Ontario, Wyoming, Genesee and Orleans. Geo. M. Schwartz, protector, Rochester, Monroe county.

Sixteenth District.—Erie, Niagara, Chautauqua and Cattaraugus. S. A. Roberts, protector, Buffalo, Erie county.

The terms of office of all except Mr. Steele, Mr. Brucknerhoff and Mr. Drew expire on or about July 20, 1886; these three hold until May 12, 1887. The appointments are made by the Governor alone. The term is three years, unless a removal is made meanwhile for cause. In one respect, but in this only, can the protector system be said to have worked contrary to its purpose. It was not intended that this system should supplant all others having the same object, but that the State force should work co-ordinately with the local officers already provided. There is much of the work that may be done more promptly and at less cost by the regular criminal officers of counties and towns, or by individuals having an interest in protecting game and fish, than through the agency of the State protective force. Yet it has become the custom of sheriffs and other criminal officers in cases where complaint has been made to them of violations of which the law required them imperatively to take notice to send the complainants to the protectors.

Many so-called game protection clubs and individuals having a personal interest in the enforcement of the law, instead of using the ample means at their own command for the detection and punishment of offenders, call for the intervention of protectors. If a partridge be trapped, or a pickerel be speared in Tuckertown a message is sent to the game protector living perhaps sixty miles away, when the case might be promptly disposed of by a suit before the nearest justice, which any constable or indeed any individual has a right to prosecute in his own name. If the protector responds to the call, the cost of travel in the case may exhaust his whole monthly allowance, and when an aggravated case of deer slaughter or robbery of spawning beds is reported from some other part of the district, he has no means to pay his expenses in looking it up. There is a general, but of course a false impression, that the protector not only receives a large salary, but an unlimited allowance for travel and expenses. He gets but little aid in the way of private hospitality, even in cases when his host is the principal beneficiary by his visit. Instances have been reported where hotel keepers at prominent fishing resorts have charged a protector, who came at their urgent call, the highest rates of board and boat hire, when in consideration of the services rendered to their special interest, he should have been treated as a free guest; and as sometimes happens, in case a protector pays an official visit to a place where the public sentiment sustains poaching, he must make his own camp for shelter and look to his own pack basket for sustenance. The work of the protectors might be greatly aided by the active co-operation of a class who, though they have the greatest practical interest in the enforcement of law, are too timid or parsimonious to render assistance. There are some who hunt and fish for pleasure or health, who do all that interest and duty demands of them, but there are others, and they are much the larger portion, who clamor for protection, but will not lift a hand to aid. Cases have been reported where proprietors of fishing resorts deriving large profits from waters stocked by the State, find fault because the State does not furnish them with special protection. One instance may be cited where at a lake in which the State has deposited two million of salmon trout fry, there are eight steam yachts owned by as many proprietors of cottages. A protector cannot get one of these for love nor money, for the purpose of removing nets of which these same cottage proprietors complain, but if a poacher wanted to use one in putting out unlawful nets it would be at his service. The excuse given in such cases is, fear of the poachers. "O, I dare not let you have my boat to look up nets; my barn would be burned or my boat destroyed if I did."

In many cases where the protector needs a witness, and calls upon one who could give the necessary evidence if he would, the answer is, "O, I don't want to be known in the case; the poachers would retaliate if I told what I knew; you must find out the facts by some other means; I hope the offender will be punished, but please do not let anybody see you talking to me here; they will suspect me at once of informing on them."

These are the excuses every day made to protectors who are trying to do their duty, but are balked by the cowardice of the class referred to.

The most effective agency that can be brought to the assistance of the protectors in the discharge of their difficult duties, are local game and fish protection societies formed and conducted in good faith as such.

Of this class there are many in the State. It would be invidious, perhaps, to name any particular one as an example, but they are known to the public by their works. They are increasing in numbers and usefulness, and are doing more, perhaps, than any other means to promote a healthy moral sentiment in support of the game laws. They are the co-ordinate remedy which the Commissioners recommended in all places where other means have been found insufficient for local protection. Our letters of instruction to the protectors have enjoined on them the importance of these societies and of their keeping in active working relations with them.

If the honest, law-respecting people of any locality in the State, will unite in an organization, pledged to support the game laws and to stand firmly by each other and by the law, without fear or favor, there will be no barns burned, or boats destroyed in that locality, by poachers.

Of all classes these are the greatest cowards, except those who are afraid of them, and they will yield always before a

bold front. Wherever there is a determination on the part of good men to give the laws honest and brave support, public sentiment will not lag behind.

Not all of the professed protection societies are of the class described. There are some with good purposes but without efficiency, and others whose objects, whatever their professions, are wholly selfish. Beyond the protection of the particular game they covet, they have no interest. There are still others which under cover of specious titles are the shield of other law breakers, or are themselves law breakers. These organizations are best known by their high pretensions and small performance.

It is claimed by many that there should be a larger force of protectors. The Commissioners do not concur in this view. They believe that the State has done all in the premises that it can be reasonably asked to do.

The game and fish interest, it is true, is a public one, but much of the protection called for concerns only special interests. It is not equitable that the State should keep guards and watchmen over waters which are the chief source of revenue to keepers of public resorts, but which do not contribute to the market supply of fish. Those who reap the benefit in such cases should pay a fair share if not the whole of the cost. Nor can we conscientiously recommend in a time like the present, when the taxes on most of the lands in the State are so largely disproportionate to the income, that unnecessary charges should be put on the treasury by the creation of additional officers. The present force of protectors, if properly supported in the manner suggested, is adequate to the work to be done. Experience suggests that a different adjustment of service should be made; and this will probably be done when the appointments shall be renewed or revised next summer.

In those parts of the State where there is only small game to be protected, the local officers and clubs ought to be able to enforce the law. In the great deer country and in the region of the large waters of the border and of the interior, the bulk of the force should be placed. There are lakes like Oneida, Cayuga and Keuka, of such size and of such remarkable fish-bearing qualities that they require constant watching. Where there are lakes lying wholly in one county, or in parts of adjoining counties, they may be provided for under that clause of the game laws which gives power to Boards of Supervisors to furnish protection. The provision referred to is as follows: "Each of the Boards of Supervisors of this State shall have power to raise by tax, in the same manner as other taxes are raised for county purposes, such sum not exceeding one thousand dollars in any year, as they shall deem proper, to further aid in the enforcement of the provisions of this act."

Extract from Section 35, Revised Game Law:

These boards have authority also, given by the same section, to apply all fines (except the moities to which the prosecutor is entitled) under the game laws "Either for the employment of special detectives or the payment of rewards for the detection or arrest of offenders."

The mode of action under this provision would be for the sheriff to appoint a special deputy for service at the particular water or district to be protected or for the whole county. The compensation of such officer to be provided for by the Board of Supervisors under the ample provisions made by the law quoted. Detectives to aid the special deputies might be provided and paid by the same authority.

The Commissioners would feel relieved if the Legislature should devise some other adequate means than the present for the supervision of the protectors' force. This duty was put upon them, not by any request or wish of their own, but in the belief probably that the business was more properly in their line than in any other of the existing departments of the government. They have endeavored to discharge their duties with an eye single to the public interest and "without fear or favor or the hope of reward." They receive no compensation for their services. The time of one of their number, who was deputed to act for the whole board, has been occupied in this official labor practically to the exclusion of all other business for three years, and his ability, mental and physical, has been taxed to the full measure of his duties as a public officer and a citizen. The force is well organized, and its machinery is working smoothly and efficiently. Therefore, the transfer to a new head would not involve the labor and care it has been to the Commissioners. They have all on their hands they can be reasonably required to do in attention to the interests of fishculture, for which they were especially appointed, and have a right, therefore, to ask to be relieved from other official burdens. There should be a responsible head to this force—some officer whose special duty it should be to direct its movements and to see that all its members are faithful to their work; and such an officer should be so compensated for his services that he could afford to devote his whole time to them and be held to full responsibility for his work. A chief game protector, to be appointed by the Governor or by the Attorney-General or by the Forestry Commissioners, or to be selected from the whole force of the game protectors, would serve the purpose.

In the opinion of the Commissioners, the department of game protection should have its head in the office of the Attorney-General. So many questions arise as to the construction of laws and of practice, that the highest legal authority of the State ought to be available to secure the wisest action. This would be the more desirable as there is a reluctance on the part of many district attorneys to perform the duties which the law imposes on them in regard to suits brought by the protectors. While the majority are faithful, there are those who are indifferent. Some are overburdened with duty, which they regard as more important, and are really not able to attend to such cases, and there are a few, the Commissioners are sorry to say, whose sympathies are more with the offenders than with the law. The unpleasant duty fell to us during the administration of Governor Cleveland, of making formal complaint against two district attorneys for refusing to do what the statute plainly required of them. Pressure of business requiring first attention prevented action on these complaints during Governor Cleveland's term, but they are still pending in the executive department.

The moral effect of a prosecution is often lost by the delay in bringing cases to trial. The resources of the protectors and the patience of witnesses are exhausted in attending courts to try cases which are put off to serve the convenience or whim of a district attorney. In some counties there are cases which have been on the calendar for two years. The protector has been several times present with his witnesses, and it would puzzle the district attorney to explain why the cases have not been brought to trial. In the city of New York there have been more than twenty suits pending for two years, and the district attorney has never found time to attend to one of them. In some counties the protector has had to employ counsel on his own responsibility in order to

get his suits before the courts. In such cases, though he may succeed in getting trials and verdicts in his favor, it is uncertain whether he can hold his claim for moities of the penalties, which are so necessary to make up the shortage of his expenses. If the game laws are to be enforced, it is important that the district attorneys cooperate promptly and efficiently with the protectors. The law does not excuse neglect in a prosecuting officer any more than it does in a protector. It is useless for the latter to spend time and money in getting up cases that are never to be tried, or are put off till the chance of conviction is lost.

The ingenuity of the practical poacher in dodging the penalty of the law makes it doubly necessary that the prosecuting attorney should be always watchful. Cases occur where the shrewdest are outwitted. One is reported from Steuben county where the protector detected a man in unlawful fishing. He lost no time in bringing suit, but before process could be served, the poacher had procured a friend to complain to a neighboring justice. The willing defendant pleaded guilty, and was fined a small sum. When in the course of regular proceedings issue was joined in a court of record, the defendant pleaded the justice's judgment as a bar. Though it was apparent from the evidence that the proceedings were not only collusive, but otherwise irregular, with a strong suspicion of fraud, the court held for the defendant. The case was taken to the General Term, where the judgment was, strangely enough, affirmed, the court sustaining the technicality and overriding the merit. This was a case, too, where the district attorney performed his duty ably and faithfully. It was not his fault that "the law's an ass," but it was the misfortune of the people of the county, who had to pay the costs. There was a similar case in Oneida county lately, where judgment was given in favor of the prosecution on all the points.

AMENDMENTS TO THE GAME LAWS.

The many amendments proposed at each session of the Legislature to the game laws, and the frequent passage of some without due consideration of the merits or of their coherence to the general plan, have been a source of perplexity and confusion in the execution of these laws. The Legislature is constantly appealed to to make exceptions to useful general provisions, in the interest of particular localities. The indiscriminate granting of these applications is not wise. If a separate law were made for each county that asked it, the result would be enforcement in none. Exceptions in statutes make profitable work for lawyers, but do not promote law, and they are a stumbling block in the way of honest effort to enforce it.

Two instances occurred at the last session where haste and want of proper consideration led to serious mistakes. One was in case of salt-water striped bass, which was by inadvertence inhibited at the season when it was most serviceable to consumers. The other was to make an open season for trout in one section of the State a month earlier than in another, and thus to permit trout to be taken in one place, but forbidding its transfer, for consumption, to another. One of these errors has been corrected by an amendatory act. The other should be corrected in the same manner. Beyond these cases there is but little need of amendatory legislation. Steps should be taken, however, to eliminate from the law the inconsistencies, contradictions and crudities that have crept in in the course of frequent amendment. This may be best done by the appointment of a commission of not more than three experts, representing the different interests affected, to prepare a concise, consistent and clearly expressed code, and report to the Legislature at the next session. Such a commission need not be an expensive one. Three competent men may be found for this service who would willingly perform it *pro bono publico*, for the simple consideration of their actual expenses.

THE DEER LAWS.

No problem connected with game protection has been so difficult of solution as that of preserving the deer of the Adirondack forest. Up to a period of about ten years ago the deer laws were practically a dead letter. Jack hunting in early summer and the still more detestable practice of crusting in the winter, for the pitiful spoil of the bides, were carried on with impunity, till growing scarcity drew attention to the need of more rigorous measures for repressing these murderous methods. The passage of the law in 1880 for the appointment of State game protectors was the outcome of the situation. Even the few examples made the first year produced a check, and offenses which had been committed before with impunity were done now only by stealth. It was the interest of all classes of legitimate hunters to break up crusting, and the repression of this evil was not difficult. Under the operation of these saving influences the stock soon showed signs of augmentation. In the autumn of 1883 it was not unusual to see in the daytime deer feeding on the shores of lakes much frequented by tourists, where none had been seen before for many years. Hounding, which had been forbidden by a legislative act in 1877, had been meanwhile again legalized. It had been always the favorite mode of fall hunting, and with the replenishment of the game it grew to proportions never known before. In 1883 the woods, from the Black River waters on the south to the St. Regis on the north, resounded with the baying of hounds, and the spoil of the hunter was great. The success of this year greatly stimulated hounding in 1884, and the destruction was estimated from careful sources to have been greater than it has been from illegal modes in any previous year. Deer appeared no more on the shores of frequented lakes. The baying of the dogs had driven them to their distant fastnesses in the forest, whence they emerged only when forced out by their relentless canine pursuers.

The passage of the anti-hounding act of 1885 was the heroic remedy applied to this case. It was doubtless the only logical remedy presented and it had the approbation of the best moral sentiment. But it did not please the hunters and was especially distasteful to the "gentlemen sportsmen" who loved the excitement of the chase and could afford to pay for the noble sport of shooting a frightened and fagged deer at short range in the water. It was especially unpopular with the guides, who seemed to imagine that they had vested rights in the deer and thought they should be permitted to hunt them "for revenue only," against all comers. As it was an object of greater profit to the guide to hunt the deer in this manner, it was to his interest to discourage other modes. So the guide became the ally of the game protector and gave him information and aid in his work. But when hounding was again made unlawful, the guide became indifferent, if not hostile, and so far from aiding to punish violators, was often a violator himself. With these obstacles to encounter, it is not to be wondered at that the enforcement of the law has not been entirely successful. The protectors have done what they could, working with scanty resources in a hostile country.

The guides say, "Give us a limited hounding season and we will aid you against the poachers. Deny this and we are no longer your allies." This is the case as it stands. The pretext—it does not deserve to be called an argument—that deer may be best preserved by running them with dogs, is too shallow to be worth serious notice. It might be as well claimed that the best way to keep ducks on their feeding grounds would be to turn loose upon them each day a bevy of hawks, or that to make trout plenty in the streams it would be useful to put in a school of pickerel to keep them stirring. A further sequence to this claim would be that the farmer or cattle grower desiring to increase his stock should turn into his pasture a pack of dogs to keep the cattle lively and put them in good multiplying condition! There can be no doubt that if all the interests concerned would unite in supporting still hunting and in discountenancing all other modes, the deer would lose their extreme wildness and be accessible to the hunter at any time during the season when the flesh is suitable for food. But, unfortunately, it is one of the failings of human nature to see things, each man for himself, in the light of his own interest. In this case the public interest conflicts too much with selfish interests to encourage hope of unanimity on any measure.

It may be that less deer will be unlawfully slain if the guides, in return for a limited season of hounding, will protect them at other times. It is no uncommon thing in modern legislation to set aside principle for expediency. The Legislature will judge for itself whether such a course would be justifiable in the present case.

The Commissioners will do what the law may enjoin upon them to secure the observance of any enactment the Legislature may make upon the subject.

ECHOES FROM THE PACIFIC.

Editor Forest and Stream:

Always an admirer of your excellent journal, which has done much—indeed its full share—toward elevating and maintaining the standard of sportsmanship throughout America, I have been more than pleased to note its strenuous opposition of late to the proposed legislative recognition in New York of the despicable practice of hounding deer. If the splendid fight that you are making against that ignoble custom shall fail to impress the lawmakers of the Empire State with a sense of the justness of the cause, then indeed may the friends and advocates of game protection make up their minds to soon bid a fond farewell to the few deer that are left in the forests of the East. This thing of deer hounding is not, happily, now practiced to any great extent here in California, still it has not been brought as yet under legal inhibition, and therefore remains as one of the issues over which the real sportsmen of the State will in the coming years have to struggle against legislative stupidity or meanness or both. The general disregard of the importance of game protection is one of the things that has always been a puzzle to me. Somehow or other we have managed to keep upon our California statute books very creditable provisions for the protection of game, but at almost every session of the Legislature a few cranks come near spoiling the whole business and throwing wide open the doors to the game butchers. Four years ago a lot of grangers induced their representatives to insist upon repealing that provision of the game law which protected—or was intended to protect—wildfowl from slaughter from March 15 to Sept. 15. At the same time another set of representatives from horticultural districts demanded the withdrawal of all protection from the quail, which their constituents claimed were eating up their grapes and other fruits. In neither case was there the slightest cause for alarm on the part of the horny-handed (and thick-headed) gentry. By the time the close season commenced the grain crops were too far advanced for ducks or geese to injure them (you see our grain begins to grow in November or December), and the great army of migratory fowl was broken up and its members en route to the Arctic regions. The few ducks that remain to breed in our marshes can injure nobody, of course, during the summer.

Neither are the quail responsible for the loss of the few grapes attributed to them. The berries are eaten by other birds, while the quail go to the vineyards to feed upon the bugs and worms to be found about the vines. I venture to say that nobody has ever found a dozen grape seeds in the crops of quail in as many seasons' shooting. I have never found one. Well, the few sportsmen who took interest enough in the matter to argue with the legislators against the absurd demands of the latter's bucolic constituency, found they could make little headway against the current. The "geomany of the land" were too many for them, and they had to accept a compromise in favor of the quail. Hence the poor ducks are shot at any and all times of the year, and it is a favorite pastime of a certain class of hunters to go to the ponds in the marshes in June, July and August and slaughter the broods of young ducks by the wholesale. To the credit of the local clubs in this section and San Francisco, however, be it said, they have done all in their power to persuade men from disturbing the ducks before the 1st of October. The law still says quail must not be shot between March 1 and Oct. 1, but little attention is paid to it in out of the way places. Indeed it was only a few days ago that a railroad man, who has a young vineyard in the foothills some thirty miles from here, said to me, "Say, whenever you want any shooting this summer come up to my place this summer and kill the d—d quail. No matter what anybody says, you shoot all you want to." He was somewhat taken aback when I told him what I thought of such an invitation, and was almost speechless with amazement when I challenged him to bet a cigar against \$10 that he had ever seen a quail eat a grape. He confessed he didn't know anything about quail except that they did come into his vineyard, and that something ate his grapes. The fact that scores of other kinds of birds also live in the vineyards, and that jack rabbits come into them nightly in droves, had not concerned him much, because his neighbors had told him that the quail were the grape fiends.

One little incident will illustrate the blindness with which farmers go for these little, inoffensive and beautiful top-knotted creatures. On the opening day of the last season a friend and myself went to the foothills, some twenty-five miles off, for quail. Contrary to the rule, there had been no rain in September and the country was dry and parched, and birds very scarce. Late in the afternoon we drove to a large vineyard, owned by a mutual friend, thinking the birds might be there in numbers, where they could find water and cool shelter from the still ardent sun. We hunted that 125-acre vineyard all over without finding a bird. But we had all the grapes we could stuff into us. The great bunches of purple or white berries hung from every vine, and I can assure you the fruit tasted mighty good to us, hot, tired and

thirsty as we were. (How would you like to spend an hour or two of each day's hunt in such a place, where you would have to steer your way through rows of vines above your knees, bearing their loads of from three to five tons of luscious grapes to the acre? You could do it in this part of the State and never be ordered off the place.) Well, when we were about to go the owner expressed surprise that we had found no birds; for, he said, he often encountered them in the vineyard, and the darned things had even gotten away with tons of his grapes. We told him that we had seen evidences of ravages among the vines, but thought he must be mistaken about the quail—that we did not believe they were the cause of it. It happened that when we left the house to prospect the vineyard, a greyhound snaked out and followed us until we returned. He paid no attention to our dogs, but seemed to be on the lookout for hares. These being scarce, he put in his time tearing off bunches of grapes and eating others from the vines. We watched the brute with some interest, and found that within an hour he had destroyed not less than one hundred pounds of grapes; and doubtless this was a part of that hound's daily business on the ranch. His owner, when informed of the above fact, said he had seen the dog occasionally eat a few grapes, but had no idea he was so destructive; and, finally, he admitted that between the various kinds of birds that frequented the vineyard, the hound, and the rabbits, the damage to his grapes might be accounted for. Now, this was his first year in the country; he had bought the vineyard from the original owner, and knew nothing whatever of the habits of quail or other residents of the forests about him, but had accepted without hesitation the opinions of ignorant neighbors to the effect that all injuries done to vineyards are chargeable to the quail.

These are the kind of people who influence legislation in matters of this kind. Only a few years ago some game butchers got around a board of supervisors in one of the mountain counties and induced them to pass a local ordinance extending the open season for deer shooting beyond Nov. 1 and up to Jan. 1. They found an old and obsolete provision in our codified laws, which—by a far-fetched construction—seemed to give them the power to do. The object was to enable parties to slaughter deer in the deep snow, when the poor things could not get away. The cue was taken in other counties, and deer were killed openly, in defiance of the general State law of 1881, all through the foothills. The infection spread like cholera, and it looked for a time as if every county in the State were going to have its own game regulations, or, rather, that each was trying to outdo the other in facilitating the destruction of the wild game of the State. I fought the efforts of these creatures from the start through the public press, despite the opinions of some lawyers, who held that local boards of supervisors had the right to suspend the State law. Local journals in these mountain counties sided with "the boys" of their respective villages, and denounced me personally, and at least one of the San Francisco dailies, which gave some attention to "sporting" matters, contended that, "unfortunately, the thing couldn't be helped." But I knew I was right, that the provision in the law of twelve years before, above referred to, was a dead letter in the face of the more recent laws enacted since the new constitution was adopted, which latter expressly provides against all special legislation (for counties), requiring every law to be general in its application. The law of 1881 was general, and it declared that it would be a crime to hunt, take or kill deer "in any of the counties of this State" between Nov. 1 and July 1 of the following year.

Well, the fight lasted for a whole season, and then the matter finally got into the courts, and my side of the question was sustained. By that time the faint-hearted and the doubting Thomases were ready to fall in, and the shout went up all along the line, "I told you so!" Finding themselves beaten at this game, what did these fellows do—the ones that wanted to run deer into the snowbanks with their dogs, and then shoot or club them to death—but try to prevail upon the Legislature to amend the law so as to allow all boards of supervisors to make laws for their respective counties. All sorts of subterfuges were suggested in order to evade the constitutional provision against special legislation, but fortunately there were several well informed, upright sportsmen in the last Assembly—such men as Hazard, of Los Angeles; Coleman, of San Francisco; Munday, of Sonoma; Pyle, of Santa Clara, and others—and the bushwhackers accomplished nothing. For all that, deer are killed in the mountains at all seasons by the hide hunters. Thousands are slain every year by these traffickers in illicit merchandise, aided by the gangs of youths from the towns, who swarm through the hills in the summer camping season.

I intended to refer to the bad effects of hounding deer in the hills about here some years ago, but I find I am covering too much space. I shall, however, resume the subject in a week or two, although I doubt if any testimony can be given that will be stronger than that published in your latest numbers. There may be "music" in the baying of a pack of dogs on the trail of a deer in the woods, as some contend, but where will the music come from when the last deer shall be run down and knocked in the head? N. E. WHITE.

SACRAMENTO, Cal., April 6.

A DAY ON SHINNECOCK BAY.

HARRY and myself were to have a day off, and how to spend it had been the subject of our thoughts for the past forty eight hours. Finally I proposed a day's ducking on Shinnecock Bay, to which he readily acquiesced, as he is a thorough sportsman and a very good shot.

The arrangements were soon made. Our guide was Eugene Jackson, whose letter about the foul slaughter of our snipe in the spring has no doubt been read with great interest by the upholders of the AUDUBON SOCIETY, in a late issue of FOREST AND STREAM.

We arrived at Atlanticville one Friday evening, and were at once driven to Eugene's house, where after a hearty supper and a little talk about the birds we turned in. We were up betimes the next morning and ready for the ill-fated waterfowl. There was but very little wind, and we had to pole almost the whole way across the bay. As the daylight appeared we could see flocks of broadbills, coots and red-heads scattered over the bay, evidently at their morning meal. This looked encouraging, and Eugene thought we ought to have good shooting. When we arrived near the inlet, which was a quarter of a mile or more away, we dropped anchor and commenced to get the batteries ready. Eugene put out the decoys, while his men and ourselves were at work on the batteries. This took us upward of half an hour, and by that time the sun was up and the birds were beginning to fly.

Finally we ensconced ourselves in the batteries and waited for the birds. The first lot that came along were broadbills, and when our guns spoke, four dropped among the decoys, and the rest, with hurried flappings, winged their way to the westward. Then came some coots, then some red-heads, and we had good sport.

"Here comes a single broadbill," said Harry, "you take him."

On came the ill-fated canard—bang, bang—not a feather stirred, by thunder!

"Yes there is, too," said Harry, "see, he's going down; there, he's struck water!" as the bird fell with a splash, and lay still. So they came, and by noon we had thirty-four birds, red-head, broadbill, boobies and coots.

We signalled to Eugene, and he came, and gave us our dinner cans, and after sailing round and picking up our birds, he left us to do some more shooting.

It was now comparatively dull, as the afternoon flight had not begun, but about 3 o'clock the birds began to come back, and then the shooting was better, but not so good as in the morning. That afternoon we bagged about fifteen birds, mostly broadbill and boobies. When Eugene came for us, about 5 o'clock, our grand total was fifty-one birds, counting in some that Eugene had shot. We got the batteries and decoys aboard in a short time, and started for home, helped along by a brisk sou'west breeze.

I may as well say here, that, if any one wants a good guide, go to Eugene Jackson. He'll give you good board, and, if there's any shooting, you may be sure he'll give you as good as there is on Shinnecock Bay.

We were well satisfied with our day's sport, and went home feeling better for the short respite on our monotonous city life.

J. WENDELL, JR.

ABOLISH SPRING SHOOTING.

Editor Forest and Stream:

It is not my intention to overload the waste basket that leads me to write you again, but knowing that your good paper is always in the lead in pushing any cause that is for the interest of our true sportsmen, I wish to ask if you will not lead a helping hand in stopping spring shooting of all kinds. I have just returned from a four days' pleasure trip, and will own that I was guilty of shooting ducks, but let me add that the bag made by two of us in the four days was less than that made by many in three-quarters of a day. I realized more fully than ever before the harm done by allowing the war on our game to go on in the spring.

I know that the pot-hunter will object, but what of that; he would shoot the mother duck while feeding her young, or steal the eggs and sell them before they were hatched, but I am sure that every true lover of the sport will gladly put his shoulder to the wheel and help along so noble a cause. Let us hear from our brother sportsmen from all along the line, and see if there is not some way to check this growing evil.

It is folly to argue this question in the least. If spring shooting continues we will soon have no shooting at all. What stronger or more forcible proof does any one want than the lesson taught by allowing the thieves to trap and slay our pigeons? Yet the war goes on, and in a very short time that splendid bird will be numbered among the things of the past. Look at the game markets in our large cities to-day. Count the dozens of ducks that come in, and then count the thousands of poor birds that are allowed to spoil and find their way to the dump pile. But I have said enough; let others better fitted to do the cause justice come to the front and help to keep the stone rolling. I am sure we are in the right, and have on our side the God of justice and humanity.

NIMROD.

BATAVIA, N. Y., April 13.

FLIGHT OF BULLETS.

Editor Forest and Stream:

Reading of the erratic flight of bullets brings to my memory an incident in my own experience. In my youthful days I became the happy possessor of a single-barrel muzzle loading shotgun, "Indian Chief" we used to call it. It had been changed from flint lock to a percussion cap gun, and many a day's sport did I have with it. In an unfortunate moment one of my younger brothers suggested the idea of getting a pair of moulds and casting some bullets for it. The moulds were procured and the bullets cast. They weighed about one ounce each. Wishing then to test the powers and accuracy of the old Chief, we set to work and made a target, which consisted of an inch pine board marked off with circles and a bullseye.

We lived at that time in the village of H., and were surrounded by neighbors, the nearest of which, on the right, was a Dr. V., whose house was only a few feet distant.

After finishing the target I went out behind the coach house and placed it against a small building. A large garden and lawn separated us from our neighbor on the left. I loaded the Chief with the usual quantity of powder, and rammed the big bullet down good and solid, then stepped across the lawn and garden, aimed at the bullseye and let her flicker. The idea never entered my youthful head that the bullet would more than pass through the target. I crossed to examine my target, and was rather surprised to find that the bullet had passed entirely through, more surprised to find that it had passed through the two sides of the building, behind which stood a hoghead used as a receptacle for rubbish. Upon tracing the bullet's flight I found it had passed through two sides of the hoghead, thence through a picket on the fence dividing our lot from the doctor's.

Then my hair began to rise. I examined the side of the doctor's kitchen and saw the bullet hole there, and then I legged it for the house with my gun, told my brothers to scatter, stowed away the Chief and became intensely interested in my studies. A few moments later a ring at the door bell became more interesting, and then I heard the doctor's voice inquiring from my mother of her hopeful's whereabouts. I was summoned from my intellectual pursuits and was asked a few leading questions, the result of which was that I was invited to accompany the doctor to his house. He showed me into the kitchen, pointed out where the bullet had entered, having passed through weather-boards and plaster, and making its exit on the opposite side, passing through plaster and weather-boards again, just missing the pump on the outside, and entering the rail of a picket fence close to the pump and passed diagonally through it.

It did not need the doctor's lecture to thoroughly scare me and impress on my mind the criminal foolishness of target practice within the bounds of a village.

AL.

GRAVENHURST, April 19.

VIRGINIA COAST GROUNDS.

Editor Forest and Stream:

The cackle of the mud hen, marsh hen, American rail—all the same bird but passing under different aliases, up and down the Atlantic coast—has begun sounding her familiar note in the night time. As tradition has it: "Coming out of the clouds," alighting upon our meadows to give us, through May, countless numbers of her delicious eggs. Soon to follow we will have the yellowlegs, brownback, black-breast, robin snipe, curlew, with all the other sorts of coast birds. These will make their appearance about May 15, and remain along our shores about thirty days, affording to sportsmen shooting second perhaps to none in this country.

The chief difficulty that we find sportsmen labor under in visiting our coast is an unusual degree of impatience. They don't seem to want to wait long enough to realize what our country really presents in the direction of the object for which they come to see us. One day or so, and if not a full bag of birds, they are up and gone. The fact that tides, weather and the curious way that coast birds have of not frequenting the same feeding ground every day does not seem to present itself to them as a matter of fact.

Near our place lies the pretty little stream known as Machapongo Creek, running north and south for a distance of ten miles, bordered on each side by broad meadows, interspersed by smaller creeks, as well with mudbanks, that abound with insect life, affording fine food for the birds, and acting as an attraction to draw them, by the aid of decoys, almost to alight upon the muzzle of the breechloader. Machapongo Creek has as well fine hiding places in the tall grass growing on the points of marsh, which are naturally formed by the windings of the stream. Here the sportsman may secrete himself for hours, and if a lucky day, get fine shooting. The birds are almost constantly passing on the wing, up and down the stream, coming most frequently in easy range.

If at any time the sportsman should tire of shooting, he would have but to push his boat out in the stream and get the best of fishing. May being the month that trout fish abound in our waters in great quantities.

Again, that most rational of all amusements, fox hunting, can be had within a radius of a mile from where I am now writing. In this amusement there need not exist a fear of disappointment in getting up a fox. The dogs are as sure to raise the fox as the steak is for one's breakfast put on the ice over night. Within ten minutes' walk from this moment, with a dozen or even half dozen good dogs, our neighborhood would be ringing with the sweet sound of a pack in full cry.

There is no need of horses in hunting in our county. The country is as level as a billiard table. No streams to obstruct the speed of the dogs, nor stone nor rail fences. February being about whelping time, the young ones remain near to or in the dens to May 15, consequently the old foxes will not run a great way from home, but circle around the den, through fields and swamps, giving the huntsmen very frequent sight of the fox, with dogs running by sight, and if good ones—due to the soft, level soil—with amazing speed. The writer has seen horses of good speed lost to sight in crossing field of a couple of miles in following a good pack of dogs.

Since the construction of the New York, Philadelphia & Norfolk Railroad through our county, its accessibility is as convenient as could be desired. Eight hours from New York and six from Philadelphia, with fast express trains each way three times a day.

S. A. E.
MAPPSBURG STATION, Va., April 7, 1886.

MASSACHUSETTS POACHING.

PROTECTION sometimes fails of bringing the poacher to justice, even in staid old Massachusetts. She has a law on her statute books providing a close time for smelts, beginning March 15 and ending June 1. This law is designed to cover the spawning time of the smelt, and to prevent their being dipped and nettled to the utter depletion of our rivers and arms of the sea, where they come up in great numbers to spawn. Indeed, so full are these streams at times during the spawning season that a well-directed stone thrown in by a boy has resulted in bringing half a dozen dead fish to the top of the water.

At Quincy the smelt poacher has been in his element of late. It is estimated that several tons of these fish have been dipped and shipped to New York by the Old Colony Railroad from that town alone. From the Quincy canal, from Four River, from Weymouth River and other streams they have been taken under the cover of night. It is not the policy of the smelt stealers to ship their booty from the point where taken, but they are sent by wagons to other stations and shipped by express, thus lessening the danger of detection.

An attempt is being made to stop this poaching, but the offenders are very "sly." They work in bands of three or four; two or three guarding the roadways near, while one man uses the dip-net or seine. The guards have several times been alarmed by people passing, but very quickly have the fish and paraphernalia been put out of sight. The Fish Commissioners have been called upon once or twice to stop this poaching, but they have very little money with which to enforce the laws for fish protection. The State has made a statute, but has not provided the means for its enforcement. The law makes the possession of these fish during close time punishable to the extent of \$1 for every smelt, but the poachers are invariably worthless scamps who cannot pay a dollar. In several cases persons have been apprehended, but as "you cannot draw blood from a stone," so have these worthless law breakers got off without paying a cent.

The Massachusetts Fish and Game Protective Association has been asked to send detectives to catch these smelt poachers, and men might readily be found who could apprehend them; but the task is a costly and thankless one where the offender when caught must be allowed to depart in peace, because he is not worth a dollar.

SPECIAL.

BAY COUNTY SPORTSMEN'S CLUB.—Bay City, Mich., April 20.—*Editor Forest and Stream:* About six weeks ago the Bay County Sportsmen's Club was organized, and the 12th inst. the first annual election was held, when the following officers were elected: T. F. Shepard, President; J. R. Hall, Vice-President; F. H. Durell, Secretary; L. R. Russell, Treasurer. Directors: T. F. Shepard, President; F. H. Durell, Secretary; Benson Couklin, H. P. Warfield, C. A. Eddy. The club starts off with a membership of 175, and with every prospect of success. Had trap shooting practice last week under national rules. Have a fine boat house in contemplation.—F. H. D.

GOOSE AND TURKEY SHOOT.—In your issue of April 15 a correspondent gives his experience and success with a light gun. The methods used at that match were the same that were in vogue in this section, although I never heard of such until about two years ago. Last Thanksgiving ten turkeys were advertised for a shoot under rules similar to those detailed by your correspondent, except that a small circle—about two inches in diameter—was pinned to a board, the pin being placed in center of paper, and the pellet nearest the pin won. Our experience in loading was different from that mentioned, as we used four drams of powder and one and one-fourth ounces shot, in a 10-gauge L. C. Smith gun, and that proportion seemed to work well as we—a friend and myself—won seven of the ten turkeys. After the ten were shot off a gentleman offered to put up a turkey at a certain gap in the fence—afterward found to be fifty-five paces—at five cents per shot. A gentleman handed me a charge of No. 4 shot, and the first fire killed the turkey. Then an envelope was put on the snow, and three pellets of No. 4 were put in it at the same distance. Two years ago this method—shooting at paper targets—was much in use here, and at first a large number of guns attended, but, as your correspondent states, the numbers soon dwindled. Three of us, by taking only two chances on each turkey, won quite a large number, and after eating and dividing with neighbors, we had enough to get up a shoot, and declared quite a dividend on the investment. I never went to a shoot but that I did well, although I tried several guns and varying proportions of powder and shot. These shoots occurred during the winter, and served to vary the humdrum of the season and to furnish a topic for discussion. Game here is scarce, even the hawks seem not always particular in choice of food, as last fall Mr. P. S. Thornton, ex-supervisor, while in the field one Sunday, saw a great commotion among the crows, and going there, found a hawk eating a crow, and it was not a political crow either. Is such a circumstance unusual? I never heard of one before.—MARCELLUS.

SPLITTING ON THE SHOT.—Umpqua Ferry, Ore., April 13.—I see by FOREST AND STREAM of April 1 that "Bedford's" style of bringing good luck—splitting on the shot—is something new to you. I can't say who taught it to me, but I practiced it when a boy and saw others do it. When hunting squirrels with a smooth-bore yager, if I failed to kill the first shot I always spit upon the shot before loading for the second, and imagined the slaughter was more bloody for so doing. But if I thought the load would remain in the gun for any length of time, I refrained, for fear of rusting it with the wet shot.—YAGER.

Mansfield Valley, Pa., April 21.—I did not spit on the shot to make it throw close, but in muzzleloading days we used to oil it. It would make 'em stick together "closer than a brother," but would bunch them, sometimes seven or eight pellets striking in the same place; and it was sure death to anything a bunch like that would hit as they would separate as they struck, the result being much like an explosive ball.—J. H. B.

NEW BRUNSWICK MOOSE BUTCHERY.—Campbellton, N. B., April 19.—*Editor Forest and Stream:* The moose this spring are very plentiful up the branches of this river, and are being slaughtered in an unmerciful manner. Indians are chasing them for their hides only; others—not deserving the name of sportsmen—shoot them for the sport they have, leaving the carcass to rot. A team came down river last week loaded with moose skins, but I could not learn how they were disposed of. The game warden, when spoken to, replied that he was not allowed any salary, and could not afford to spend weeks up river in endeavors to detect law breakers. This is how the game law is observed and protected here, and unless amends are made, the lordly moose must soon vanish from the woods of this country.—HERMIT.

HOW THE BIRDS WINTERED.—Salem, Neb., April 16.—Quail fared badly here last winter, particularly along the hedges on the prairies. The snow drifted so that they had to get out, and then, being scattered and no cover, dozens of them were frozen. Prairie chickens came through all right; they had plenty of feed, as a good deal of corn was left in the fields over winter, some in shock and some stood out ungathered.—J. F. L.

COMING OF THE GEESSE.—Campbellton, N. B., April 19.—*Editor Forest and Stream:* The wild geese have thus far failed to make their appearance here this spring, except a stray one seen flying past now and then. The sportsmen have their ice houses and decoys in place as usual, but have not bagged one yet. Other seasons at this date scores were shot.—HERMIT.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—IX.

THE rain held on that particular morning till near noon when it eased up to a steady drizzle; but the lake was too rough to fish, and the only haven of comfort to be found for the girls was inside the big tent, in front of which a good fire was kept going. Here also the cribbage war was resumed, the opposing generals snugly ensconced in a corner out of the wet and cold.

The note book (mental) records that this beastly weather prevailed till nearly the end of the week. Cold wind and rain every day and night, with only an occasional let up of a few hours at a time, and in consequence there was little fishing done in the lake; only enough to keep the camp "sortin' boues" and prevent a "side meat odor" from getting a too firm grip on the frying pans.

But in face of all these drawbacks the girls were cheerful and happy, which was a great comfort to us, for we had rather looked for some grumbling and a fit of homesickness to attack some of them; but I am constrained to say the growling was mostly confined to Hickory and Hyperboler, and the growls were mainly directed, in a general way, at the weather clerk.

After dinner (we had appetites if nothing else, and took three square meals a day, to say nothing of lunches), Ben cast his weather eye up and down the lake, fidgeted awhile on his seat, and beckoning me to follow said, as we left the shelter of the fly: "Hickory, I've got to do a little plain cussin' or bust. Let's go out behind Dan's tent, where the

gals can't hear us, an' hev a private cussin' match to ourselves on account o' the existin' state o' this weather."

It is needless to chronicle the remarks made behind Dan's tent, the conference ended in our going back to where our rods stood on the dry side of the big popple tree, selecting two for our purpose, and with a box of worms strapped to our side taking the road up lake along the hills for the trout stream near Alexander's point. We splashed along through mud and puddles of water, stopping here and there to pick a handful of luscious red raspberries more tempting than their fellows, that seemed to grow along the road in inviting clusters for the sole purpose of beguiling us from our mission, till we came to the stream, where it flowed through an open field and out through the deadened swamp into the lake.

A few rods from where we stopped to bait our hooks was the "destrict school house" standing on higher ground back from the stream, and while cautiously fishing a couple of small pools as a "feeler," the master, a big, full bearded, sorrel complected, pleasant-faced man, dismissed his four too-headed urchins for a recess, and came down to have a chat and to show us where he had seen a big trout dart under the bank as he crossed the stream that morning on his way to the arduous duty of trying to keep awake during the tedious school hours of the drizzly day. No wonder the hours dragged heavily on the fragile master's hands with such slim attendance, but this, he explained, was owing to the bad weather and the near close of the term. Besides this, as we learned in a ten minutes' talk, his instincts were fishy rather than educational, and he would rather meander along a trout stream, even on a rainy day, than to be peuned up in a little, cheerless log school house, punching the rudiments into the obdurate craniums of half a dozen or so of possible future presidents or commissioners of the Civil Service.

He knew every trout stream along the lake and every hole wherein lurked a big trout, and was never so happy as when poking along their brush-lined banks with "native rod and can of wums."

We felt for the master and Ben was so impressed that he was moved to remark, after we were out of earshot, "What a pity that pore feller hes to work so hard for a livin'; judgin' from the size an' build of him, 'pears to me he's mistaken his callin'—make a hellrackin' good Texas bullwhacker." He dropped in on us several times at camp afterward and we found him to be a pleasant companionable gentleman, and he found his way at once into Muller's good graces by playing a very fair game of chess, even though rusty from long disuse. In looking on at a game of crib between Dan and Muller he had rather scoffed at it and ventured that chess was about the only game worth wasting time on and spoke somewhat confidently of his prowess at the game. There were no chess players in miles of him and he evidently thought he had struck it rich when Muller produced from his trunk a board and small set of chess men and bantered him for a friendly trial of skill, but after the second game which the master won, his glory departed and he was laid out and figuratively sat down on by Muller till he was as flat as one of the philosopher's flapjacks. Many an hour these two chess cranks spent pouring over the board after school hours, when they might have been better engaged with the rod, to the evident disgust of Miss Annie, who at such times was sure to want brother Hen to go after a bucket of fresh water, or to take her and Top out a fishing, and she usually had her way, although at times it was like pulling at a stump to get Hen away from the board. Clearly, Miss Annie was not seriously impressed with the master.

The big trout hidden under the bank where the master had located him seemed to have doubts as to the toothsome-ness of our bait, and all our plans to coax him out were of no avail. If we could not catch him we had a notion we would like to get a glance at his spotted side if nothing more, and becoming a trifle "riled" at last we tried to punch him out with a piece of rail lying handy, but he knew the hiding places in the hole better than we, and I've no doubt he was snuggled away in some cranny in the grass roots under the overhanging bank shaking his fins with laughter at our vigorous but futile efforts to rout him out of his retreat. After working ourselves into a perspiration in a performance that might have delighted a pair of school boys, we left the trout to have his laugh out, and separated, Ben going down toward the lake, while I took my way up stream, fishing carefully along the winding brook in the direction of the woods, above where was the trout-looking pool I had fished in vain the past Sunday.

With all the rain that had fallen the creek was not perceptibly swollen, and the water was clear enough to see the smallest pebble on the bottom, but with the quietest of fishing I failed to start a fin. Crossing a low rail fence inclosing a small, grassy field, a few rods brought me to the pool I was seeking, at the edge of the woods where the little brook, here not over a yard wide, crept under an old brush fence and tumbled with noisy glee over a pebble riffle into a small basin two or three feet deep, just above a great tree whose roots found lodgment in either bank.

The water had washed out a deep hole directly under the trunk of the tree and then taken a sharp turn to the right and came out from under a mass of roots two or three yards below, to find its way over a shallow riffle into another smaller pool some distance away. Above the tree for a yard or two the water was unobstructed by bush or root, and into this I cautiously dropped the baited hook and let the current suck it down toward the tree, when just as it was about to go under the root I saw a trout that looked a foot long dart out and seize it and turn leisurely to go back under the tree. No room to fool with him there; no time to deliberate. A quick twitch, followed by a short but furious struggle, and he was ingloriously swung around back of me and dropped into a small puddle of clear rain water formed in a sag of the grass-grown field.

With a chuckle of intense satisfaction, not to be expressed by any form of speech known to the tongue of man, I released the hook, rebaited it with the most enticing worm in the box, and creeping quietly back, dropped it in as before, but not with the same result. A dozen times I dropped it in at the foot of the riffle and let it drift under the tree out of sight, and then pull it back with many a bewildering and inviting twitch; but not another trout seemed there to be inveigled. Discouraged at last with this fruitless "bobbing," I stepped around a bush to get a better sight at the stream below, and in doing so discovered a small opening in the closely-woven and interlaced roots covering the lower part of the pool, through which I could see the deep, quiet water beneath. Through this opening, but a trifle larger than a brimless hat, I steadied the baited hook till it touched the water a foot below. Instantly a monster trout—a monster, at least, for such a puny stream—seized it, and as instantly I yanked him, for I knew that to give him an inch of line

would be to lose him. But the hook failed to find a soft spot to bury itself in and only turned him up so I could see the whole of his beautifully-spotted side. For a wonder of wonders the hook came up with a swish through that hole without "ketchin' on to a root," but I was so "frustrated like" and nervous that it was five minutes—it seemed an hour—before I could feel steady enough to steer it safely through the opening again.

Talk about "buck ague," I've had it, but it wasn't a marker to what I went through that day, standing there in the drizzle waiting for my heart to stop trying to "knock the chaw tobacker out o' my mouth" (old Dave Edwards). But the nerves finally braced up to their accustomed reliability, the heart ticked off its usual number of beats, and I dropped bait and hook through the opening again without a tremor. I scarcely dared hope he would rise again, but with the same sudden dash the big fellow took it, and at the same instant another one that looked almost as large, darted alongside of him from somewhere under the bank and tried to take the coveted worm from his mouth, but I gave them no time to advance any views as to a proper division of the morsel or to get into a wrangle over it.

A quick upward stroke, and then "sech thrashin' an' twistin' an' wrigglin' an' cavortin'," and such furious plunges and surges to free himself from the deadly barb, were never seen, I have a notion, by mortal man. But in whatever direction he plunged, the almost invisible thread of the finest twisted silk pressed against a root woven over the pool a foot or more from the water, preventing him from getting under the bank, and the very same old rod with which Jim worked a five pound pickerel out from under the boat by main strength in 1880, on Central Lake, was working at him with the same tenacious, soul-harrowing pull, that wore the life out of the longface on that memorable occasion.

For what seemed a half hour, but in reality it was, perhaps, not longer than a half minute, the unequal fight went on, but there was no more buck ague, we were having it out in deadly strife, and the least quiver or false move on either side would quickly decide the battle. The warrior at the tip end of the rod seemed utterly at a loss to understand how a harmless looking red worm could cause him such anxiety of mind and make him hustle around at such a furious rate, while he at the butt end stood firmly his ground, with nerves as quiet and steady as a rock, but not over-confident of the outcome.

Once the old fellow took a turn around a slender root hanging loosely down in the water, and I felt a chill of defeat sweep up my spinal column, for I felt sure the frail thread of a line would part, but the next contortion worked the line clear and he came head up and open-mouthed to the top of the water, materially assisted by the spring of the staunch old rod. This instant that he forgot his wariness lost him the battle, and his life. With a quick pull that must have tested the little line to its utmost, I lifted him straight up through the opening without touching a root and swung him around over the grass back of me, where, with a violent wriggle he freed the hook and fell with a splash into the rain puddle near his mate.

I say nothing about the unsportsmanlike manner of his taking, if it were unsportsmanlike, or of the "science and skill" displayed in the struggle; let the brethren who read this settle that to their own pleasure. I will only say that after he was once fairly hooked I was dead bent on taking him to camp or "bust the tackle." There was no time for parlying; no room to let the reel whizz off ten or fifteen yards of line and then work him back with sundry flourishes of "science," and over the landing net. There was no room to use a net, besides I had none to use, and at no time during the brief controversy was there three feet of line out from the rod tip. It was a square country fight from the start, where main strength was the only factor to win, and I got him out of the pool in just the only way he could have been taken out.

Considering the line and hook used—a No. 10 salmon-trout hook and a No. 1 twisted silk line—it was a famous achievement, and I felt more elated over it than if I had struck him with a "killing fly" in fifty yards of open water, and led him over the landing net with a \$50 split bamboo. Had I been using a limber fly-rod this tale of the big trout would never have been written. And he was a glorious trout, too, for such a tiny stream; just seventeen inches long as he lay on the table at camp, and the most brilliantly colored fish I have ever seen taken from any waters. Dark backed with clean cut carmine spots dotting his sides, the whole belly, and on a line as high as the base of the pectoral fins of the very brightest vermillion, anal, ventral (not neutral, as the types have made me say in a former number of these letters, page 409, line 40 from bottom of page), and pectoral fins broadly streaked with dazzling white, with a stripe of black and red, he was indeed a living poem of glowing colors.

Sitting here now writing of the splendid old fellow, with the old "calamity box" within reach of my foot under the table, and the same old rod, with three of its slender companions standing in the corner under my eye, it comes back to me that as I stood watching that trout, who with his mate was beating the water of the little puddle into a foam, I felt I weighed within a few pounds of as much as I did after I had fought, conquered, gaffed and dragged the big maskalonge over the side of the boat on Bower's Lake, and on that occasion old Dan said I must have weighed upward of a ton.

But I spent short time in looking at the pair in the puddle, for there was another big one in the pool, and possessed as I must have been just then with the spirit of the trout hog, I wanted him too. Pulling the hook down to put on a fresh worm, I found it broken short off at the barb. Was ever noble trout in such villainous luck? A judicious stroke of his tail at just the right time would have robbed me of a year's glory. Since that day I am almost convinced there is something in luck after all.

Tying on another hook and baiting it carefully I dropped it through the opening in the roots into the water, but the other one was too much alarmed or too wary to heed any of the most enticing twitches and bewildering flirts known to the art of bait-fishing, and after trying awhile under the mat of roots and again about the tree, I was fain to give it up.

I knew he was in there and not further away than I could reach with the tip of the rod, for the whole pool might have been covered by a pair of goat blankets, but the mysterious disappearance of his mates was doubtless connected in some fishy way in his mind with the squirming worm, and he was probably all the time peering at it from a secure nook away under the bank with, figuratively, a grin of derision on his usually pensive countenance at my blundering efforts to lure him from his hiding. Or he might have been in a fit of the sulks and waiting for a little more artful coax-

ing. But trout are much like some petulant beauties of our own kind—when they won't they won't, and the more you coax 'em, the more they won't.

Wishing to take my prizes to camp alive, if possible, I took the lace cord from my overshirt, after searching all my pockets in vain for a piece of string and with it tied them to a twig overhanging the water and left them trailing in the current while I fished the stream up through the tangle of dripping woods for forty or fifty rods without, however, seeing or "feeling" another trout.

It was near an hour before I got back to the pool, but the coveted fish was still in the sulks, and would look at neither a fat worm nor a bright-colored fly that had fortunately not been torn from its place in my hat band by the "bresh," and I left the creek with the other two and took the road at a brisk walk for the camp. As I lifted them from the water, I could scarcely believe they were of the same family of fish. The larger one was a dazzle of brilliant hues, while the smaller one was a dirty blackish brown, even to the belly, and only relieved by the carmine spots on the sides. The fins, too, were of nearly the same color as the belly, with no special marking of bright color like the other one, and was withal an unattractive fish, except in plumpness and beauty of form. Yet they were both taken from the same little pool where they had been together, without a doubt, during the entire season, feeding on the same kind of food, sheltered and shaded by the same roots and banks and bushes—for it was a place the sun would not reach only for a short time in the morning—and passing their lives, from day to day, in exactly the same manner, with all the conditions of existence alike.

Writers tell us that the waters in which the trout live have something to do with their color; that certain kinds of food brighten their hues; that shaded pools and overhanging banks give their markings a dull cast, and so on, but must it be a condition that the dull, dirty colored fish pass all its life away under the gloom of the bank, and feed on other diet than his brighter colored brother, in order to be dull and dirty? Must the other one—seemingly of the same spawning—select other food and stay out from under the shadows and in the glare of the sun, that it may be clothed in gorgeous colors?

I confess it is a "category" that I can't see my way out of, nor can I quite follow the "food and shade" theory that seems to satisfy some of the better informed of the brethren. Let us have a better reason for the different shades of color and markings of trout of the same stream, for I am inclined to think, with due deference to the "theory" that it has not yet been found out why one trout's belly is a bright red and another's a lusterless brown. And it may be that some of the scientists who make life a burden to plain anglers by hunting up new names (with "priority" to 'em) for old fish, can tell why a black bass, which, when taken out of the water, was a dirty cream-white all over, could change its color within five minutes to a bright, beautifully mottled green; the change so thorough and wonderful that one might swear it was not the same fish.

But these are things beyond my ken. I am content with nature's handiwork as I find it, and see beauty and good in it in whatever shape it comes to me.

That's my creed for the woods, and I get large dividends of sport and enjoyment and solid comfort out of it with a very small investment of capital.

This may be charged up as another digression.

A lusty yell or two near where I had left Ben failed to get a response, but I overtook him and the master at the little stream near camp, in which the master said he had taken nineteen fair-sized trout a few days before the storm, but from the marks designated on his outstretched hand and wrist as the lengths of some of them, I fear the greater number would have failed to fill the six-inch eye of the law.

While we rested and freshened up the trout in the cold water of the little brook, Ben related how, after we parted near the school house, he had fished the stream clear down into the swamp till he got tired, and back again up to within a few yards of where I had tied my fish, "without a darned solitary symptom," when, thinking I had come to the headwaters of the stream, and becoming disgusted with his poor luck, he had struck for camp, "cussin' the little one-hoss crick fur a fraud." The master had just dismissed school as he came by, and they had walked leisurely down the road together.

Tossing a half-burned match into the water after firing up the briar root, he remarked, with a grave wink at the master: "That's a hellrackin' fine sucker you've got there, Hickory—that feller with the red belly—kind of a red bass, I reckon. Ye didn't catch him in that little branch, did ye?" When told where the pair had been taken and that they were left tied in the stream a few feet from where he said he had quit fishing it, his face was a study. "How I wish I'd a kep' on a little furdur to where them trout was tied," and then he humped himself and laughed till his pipe went out, and the master and I joined in from sheer inability to keep from it, as Ben told how he would have worked off another joke on "old Hickory" by stealing the trout and "hiein'" back to camp, and claiming that he had caught them himself.

"But ye kin bet yer life," as he hunted a dry place on his breeches and scraped another match, "that when I saw ye a comin' I'd a bided off somewheres an' hid till ye got over yer mad, fur it would hev bin a mighty onhealthy place to be a lingerin' around," and then he chuckled again in an absent-minded sort of way till the burning match, which he had forgotten to apply to the pipe, nipped his fingers, causing him to drop it with surprising celerity.

"That reminds me," as he stooped and dipped the scorched finger in the water to cool it, "that I didn't light my pipe at just the right time."

Rare and incomparable old Ben! may he live many years yet to "hev his fun," even at the expense of old Hickory.

With a wistful look at the trout, a look that I fancied would read if put in print, "now there goes a fool for luck," and a pleasant good day to us, the master struck off in the brush on his way home somewhere back in the woods, and shortly after Ben and I stole quietly into camp and laid the fruits of our wet tramp on the table before any of the happy family were aware of our presence.

Then we called them out to see "the biggest trout taken in that neighborhood that season," so the master had said, and Ben was soon tangled up in a graphic and side-splitting description of his experience in "swamp fishin'" near the mouth of the little branch, winding up with a solemn wink at Kit and the query, asked with a most innocent and matter-of-fact expression, "How much, James Mackerel, did you say you paid that country boy for them two trout?" (I have been at some pains since that day trying to convince little Miss Top that I actually caught those two trout myself, but

I am not quite sure that I have made any noticeable headway.

The skin of the big trout was carefully taken off and preserved for an angler friend at home; the peeled frame, with the smaller one, went to the frying pan to furnish a taste around for the girls at supper, while the others of the Jones family looked on with watering mouths, busy, however, in satisfying the cravings of a camp appetite with fried slabs from the side of a pickerel, side meat, eggs and other delicacies usually found in a well regulated camp.

KINGFISHER.

CINCINNATI, Ohio.

BLACK BASS RIG.

"HOW do we fish for bass?" That depends. In the waters accessible to Toledo we get three distinct kinds of black bass fishing, and the rig employed is arranged accordingly.

First—We have three streams, one of them of rapid current, which is fished either from the shore or by wading. Here we use a light rod and small sinker, generally but one hook, and seldom any leader. These waters are scarcely ever entirely clear, and leaders are superfluous.

Second—The fishing in the channels on the St. Clair Flats in August, September and October. Here the water is very clear (too clear at times), with a depth of from eight to sixteen feet, and a current of three to four miles per hour. The rod used here is stiffer, but with spring enough to cast a single minnow and an ounce sinker twenty-five to forty yards from a multiplying reel. The line is the finest size of sea grass or braided silk, and a leader almost indispensable. The two hooks used are No. 1 or 1-0 spout or sneek—the latter has come into use a great deal in the last two years, mainly because it is regarded as the easiest shape for the mouth of a live minnow.

Lastly, comes the fishing on the reefs in the open waters of Lake Erie (May, September, October and November), where the work is done over a rocky bottom from six to twenty-five feet under the boat of the fisher, and, as a rule, most successfully in a good strong swell. The rod for this lake fishing must have backbone enough to carry a two-ounce sinker all day, without weakening or sagging, with a No. 3 or 4 braided linen line, no leader, and two to three hooks twice as large as are used on the flats. Any good multiplying reel finishes the rig, but it ought to be large enough to hold a hundred yards of line, although fifty yards are an abundance to have on the spool. [Pardon me for saying here that the man who makes an easy running quadruplex multiplier, with simply and solely an adjustable click, will meet the wants of some of the practical bass fishers in western waters. A drag is a superfluity, a "stop" is an abomination, and any long-handled contrivance for clogging the swift and simple working of a wheel is little better.]

We use two to three hooks in the lake because when the fish are biting freely, double catches are common and triple ones not infrequent. On the flats we fish with boat at anchor, in clear, quiet running water, with the bait playing over a smooth, sandy bottom, and from twenty-five to fifty yards away. But on the open lake you are constantly drifting over a rough and varying bottom, quartering back and forth over countless acres (like a hunting dog) with your boat constantly pitching in the swell. It takes strong, well made tackle here, and when you strike a school of fish the fun is fast and furious, and every second is worth a dollar. Bad luck comes like an avalanche on the man who has a weak spot in his tackle at this critical moment. JAY BEBE.

TOLEDO, O., April 17.

FLORIDA GAME AND FISH.

Editor Forest and Stream:

I left for Florida last October weighing about 126 pounds, with little or no appetite, a severe cough, night sweats, etc. After spending a month or more in different places without much benefit to my health, and with very little hunting and fishing, I wound up at Capt. J. F. Tucker's, about seven miles northwest of Brooksville and a few hours' drive of the Homosassa River. Here is the best fishing I have ever had the pleasure to indulge in. I had a couple of 11-ounce rods and an automatic reel with 135 feet of line, and I do not recollect of having to wait over ten seconds at any time for a strike. Never have I seen such fishing. Two gentlemen, neighbors of Capt. Tucker, in one hour caught more fish with hooks and line than they could carry home. Our fishing grounds were where the salt and fresh waters meet, and this was the best place to study the habits of the different species of fish that I have ever seen. The water is as clear as crystal and you can see your bait distinctly at a distance of 20 feet in 10 feet of water. The fish are so numerous that they do not appear to notice you, and if they should their fright is soon over. Our catch consisted of black bass, red snapper, sheepshead, channel bass, sea trout and whiting. We found the sheepshead of the gulf coast to be hard fighters, and enjoyed catching them more than any other. A 5 pound sheepshead in these waters will fight as long and hard as an 8-pound black bass. They bite so rapidly that you soon tire of catching them.

On our way to the river I have seen as many as twelve deer at one sight. This was on the Sand Hills pine growth where they can be seen at a long distance.

Captain T.'s residence was on the border of the famous Annattalga Hammock, a large portion of which he owns. It is very productive and is covered with a heavy growth of oak and hickory, and it abounds with deer, wild turkeys, ducks, squirrels, wild hogs, and a few panthers and black bears. We killed quite a number of wild turkeys, deer, ducks, and hundreds of squirrels. Willie T. killed two fine deer in one morning—one weighing 130 pounds minus the entrails. I shall not go into details as to my deer shooting, for I disgraced myself by my numerous misses. Willie T. offered to accompany me in the hammock with a well-loaded shotgun, to prevent, as he expressed it, my being hurt by those horned animals. I had killed a number of deer, and certainly did not have the "buck fever," though I made no defense on that line, for circumstantial evidence was against me. I carried my setter Duke with me and had all the quail shooting I cared for. When I left Captain T.'s for home I weighed 146 pounds, had a splendid appetite and little or no cough. I expect to make the same trip again the first opportunity. SHEEPSHEAD.

MACON, Ga., April 14.

THE FIRST SALMON.—Ottawa, Can.—Editor Forest and Stream: First salmon taken on La Have River, Lunenburg county, Nova Scotia, with fly, was March 13. Several have been taken since. Early for fly-fishing.—F. H. D. V.

THE MAINE ANGLING SEASON.

BY the time many of the readers of the FOREST AND STREAM have seen these lines, the Maine trout and land-locked salmon season will have opened—May 1. Prospects on the streams in that State are earlier than usual. The very warm weather for a week past has dissolved mountains of snow and ice, and put the trout streams in good condition for the early catch. Such weather was unexpected and the season promised to be late; but even in the lakes now locked in ice, the chances are for a very early opening. One letter, from good authority, suggests that the ice will be all out of the Androscoggin lakes by May 10. This is remarkably early. But such prospective clearing of the ice is no earlier than the desires of many sportsmen, usual frequenters of the Maine lake regions. A good many of them will go to the fishing grounds as soon as steam and stage can take them; others will go beforehand and be ready for the first trips up the lakes. One Boston sportsman is bound to eclipse all the rest. He has camped for one or two seasons at The Narrows of Richardson Lake, a celebrated fishing ground with those who know it. This year he sent up his cook stove and blankets a month or more ago, to be left near his camping ground by the lumber teams. He will take his own departure in a day or two, or has already taken it, in order to go up on the ice before it becomes too rotten. At his camping ground he will wait for the ice to leave, or rather, he expects The Narrows to clear some days before his brother sportsmen can reach him and give him fine sport all by himself. Alas for such cupidity! If he desired to go mackerel or codfishing, he could do so with less trouble and exposure; and how much better is catching hungry trout with worms just released from a six-months ice prison, than is deep sea fishing for cod or halibut? If pounds of fish are wanted, then the ocean voyage would be the more satisfactory.

In Weld Pond, in the town of Weld, Maine, some remarkable good catches of land-locked salmon have been made this spring. Alas! through the ice. Salmon as heavy as ten pounds have been taken. This is all the more remarkable when it is considered that only a few years ago—the dates are not at hand—the first salmon fry were put into this pond; a tangible proof of the value of fish-culture. This spot is a particular pet of one at least of the able Fish and Game Commissioner of Maine—Henry O. Stanley. He owns a camp there, which he enjoys in summer with his friends. It is fast getting to be understood that land locked smelts—have I coined a term?—are the best, if not the natural food of the land-locked salmon, just as the minnow or dace, so well-known and so abundant in the Androscoggin Lakes, is the natural food of the speckled trout. In conversation the other evening, Commissioner Stillwell remarked that "one of the first conditions of successful fish-culture is food, and without food there is no success. In the Rangeley—or better, the Androscoggin Lakes—there are minnows by the million, and there we get the monster speckled trout or red-spots. The Sebago waters are renowned for land locked smelts, and there we get the largest land-locked salmon or black spots in the world. In Weld Pond the smelts are abundant."

The sea salmon are putting in quite a remarkable appearance in the Penobscot, just below Bangor, this year. On Friday, April 9, there were taken from a weir two salmon which weighed 37½ pounds. Four more of good size were taken on the following Tuesday. On Monday the 12th one was caught at Verona weighing 18 pounds, and the same day one of 22½ pounds. These were all taken in weirs and sent to the Boston market. Oh! for some force to stop this weir fishing. But a Maine paper says the "salmon fishery is an important industry on the Penobscot and is the source of quite a handsome revenue to down-river people." They buy them off and pension them to let the salmon alone.

Commissioner Stillwell believes that the salmon are increasing in the Penobscot, even under the poor protection the law affords in allowing of no fishing near the dam at Bangor nor at any time above the dam with nets or weirs. Last year an unusual number were caught with the fly above the dam, and there are strong hopes of this season. Salmon anglers went all the way to New Brunswick waters for no better sport than was enjoyed not far from above the dam at Bangor, Maine. Besides the waters are free to every fair angler, royalty having no rights to sell. Perhaps, under protection, the Penobscot above the dam may yet become the Mecca for the fly-fisherman. This can all be done under so good a form of protection as the Commissioners of Maine have organized for moose and deer—only two or three salmon to each sportsman in a season, to be taken with the fly only. How will that do, brothers of the salmon angle? Not enough! Then make it four or five, but stop fishing for numbers and for the market. SPECIAL.

BASS AND PICKEREL.—Amboy, Ill., April 14.—*Editor Forest and Stream:* It is very interesting to read the experience of anglers in taking bass, and reports of big bass in FOREST AND STREAM. It is surprising to see so much prejudice existing against bass in some of the Eastern States, and the statements that they are driving all other game fish from the waters where they have been planted. I have failed so far to find any logic or good proof to sustain any of those arguments. We are fighting hard here for the propagation of bass, both the large and the small mouth, considering them not only the gamiest fish for sport, but the finest for food that the waters in this State will produce. Our Fish Commission in Illinois amounts simply to no commission at all except in name, and it would be a credit to lovers of the rod and reel to have that name changed to a set-still committee. I will give my reasons for thinking that pickerel at least predominates over bass. I have never yet found any pickerel fry in the stomach of a bass, but have often found baby bass in a pickerel's stomach. I have carefully examined the digestive organs of many bass for the purpose of finding their food for the sake of procuring bait suitable to their tastes, for sometimes they seem to be quite dainty. I have often found in the stomachs of black bass, both large and small-mouth, such food as small frogs, crabs, water grubs of different kinds, flies, bees and minnows. In the white bass seldom anything but flies and small minnows. In pickerel I believe I have found every species of fish that inhabits the waters of this State, and some not very small either, with occasionally a green or meadow frog. On a fishing excursion to the Mississippi River one of the party caught a five-pound pickerel and dressed it for supper. In the stomach was a pickerel five inches long, and inside of that one was a pickerel fry fully two inches in length. On one other occasion a gentleman named Barr took a twelve-pound pickerel in Rock River, near Dixon, and in its stomach was a small snake ten inches in length.—J. SWISHER.

PENNSYLVANIA.—The trout season opened in Pennsylvania on April 15. The following is a condensation of the State laws: Sunday fishing and hunting are offenses punishable by \$25 fine. Trout fishing is legal from April 15 to July 15, but only with rod, line and hook. Bass, pike and other game fish can be caught from June 1 to the end of the year, but with rod, line and hook or troll only. Set and fyke nets (the latter a small hoop net) can be legally fished with in March, April and May, and in September, October and November, but must be placed in the open stream and not under a dam, wing, wall or sluice of any kind. Any game fish caught and retained renders the party liable to the fine. Nets found set in the water from June 1 to Sept. 1 can be taken up by any one, their contents put back in the water and the net or nets held until the owner calls for them. Dip-nets for catching bait are legal, and larger dip-nets for suckers, etc., will be tolerated so long as their use is not abused. The only nets recognized by the law are set nets as stated above, dip nets for catching bait and catching fish to stock other waters, and the warden will act accordingly. Outline fishermen who raise their lines do so for the purpose of catching bass and other game fish and are liable to the fine for so catching them. Nets and outlines have no business in the waters on Sundays. They come under the law of Sunday fishing and the owner is liable to the fine of \$25. Laying up new or repairing old fish dams is illegal under a heavy fine. There are other violations which the laws condemn, so well known that they need not be referred to. It is unlawful to kill web-footed wildfowl, such as geese, etc., between May 1 and Sept. 1.

BLACK BASS AT PEELEE ISLAND.—This famous fishing ground in Lake Erie belongs to the Dominion of Canada, and lies near to the mouth of the Detroit River. On Tuesday, April 6, a public meeting was held on the island to protest against a recent law, or order-in-council, which changed the close season by making it unlawful to take pickerel from April 15 to May 15, and black bass between April 15 and June 15. The meeting was well attended and was enthusiastic. Wm. McCormick, reeve of Pelee Island, was appointed chairman, and J. H. C. Atkinson, secretary. A committee was appointed to draft suitable resolutions expressing the sentiments of the meeting. The preamble and resolutions of the committee, which were unanimously adopted, set forth that to enforce such an order would virtually be a prohibition of spring fishing, as by far the most valuable of the spring catch were pickerel and bass, and the close season for these covers the whole fishing season; that this would not only injure the business and capital of the numerous persons engaged in pond fishing there, but would injure the business of the whole island, and stop the running of a steamer to the island, which is now mainly supported by the fisheries. While the meeting approved of the protection of fish, such as existed under the old law, it was considered that the change would work to the advantage of the Americans, because the island was so near the boundary of the two countries, being within six miles, and that as the Americans had no such close time they would catch all the fish. A petition to restore the old law was numerously signed.

SIZE OF THE CHANNEL CAT.—"Cyrtonyx" says that he has never seen a channel cat that weighed over eighteen pounds. When fishing in the Missouri River with trot lines, on a hard, sandy bottom, in a stiff current, we catch channel cats much larger than those he speaks of. One morning about eleven years ago I took from a trot line that had been baited with paw-paws three channel cats, aggregating 170 pounds. The largest one weighed 90 pounds and was 5 feet 4 inches long, and when dressed weighed 60 pounds. They are the same fish, so far as I am able to see, as the smaller ones that we catch in the small rivers tributary to the Missouri. If the large ones I speak of are not channel cat, what are they and what is the difference between them? We never catch any channel cat in an eddy in the Missouri River.—J. F. L.

CALIFORNIA NOTES.—The Petaluma *Argus* says: "After Thursday next it will be lawful to catch trout—but there will be none to catch except in out-of-the-way places. The boys in several places that we could mention have already taken out about all the trout that are large enough to eat. They say that they are tired of protecting the fish until the first day of April for the benefit of the San Francisco sportsmen, who swarm along the banks of the streams and take them all out in a short time." The Sacramento *Bee* makes the following excellent comment on the selfishness embodied in the above, as follows: "The old story—there's always some excuse for violating laws designed to protect game and fish. If everybody acted upon the theory of these boys, there would soon be no fish left in any stream."

DEEP SEA DREDGING ON THE U. S. S. ALBATROSS.

[Read before the American Fisheries Society.]

BY F. L. WASHBURN.

THOUGH the appropriateness of discussing the above subject in the Society of American Fisheries might at first be questioned, second thought assures me that the work now being done by the Albatross will, in the near future, prove of the greatest value to fish-culture and fishery economy.

Thus assured, I ask your attention for a few minutes, hoping not to tax too severely those who are familiar with the process of marine dredging, and trusting the article may be of some interest to our western friends, whose opportunities for deep sea fishing are naturally limited.

In the first place, a word about the Albatross and the purpose for which she was built. She is a twin screw iron steamer of 1,000 tons displacement, 235 feet in length, built in 1883 by the Pusey & Jones Co., of Wilmington, Del. She was constructed for the United States Fish Commission, and intended to make extensive trips along our coast and to other countries, for the purpose of making observations on the ocean fisheries. Her work, principally, consists in determining, by sounding operations, the temperatures of the water of the sea, the nature of the bottom, and the effect of the same on the migrations and breeding of the mackerel, cod, menhaden and other varieties of economic importance to our fisheries. When the vessel can be spared from the regular work of the Fish Commission, she is loaned to the Navy Department, who use her for the purpose of observing ocean depths, surveying harbors, and especially in determining the existence of ledges and shoals hitherto unknown. Her crew numbers between fifty and sixty men. Her commander at present

is Capt. Z. L. Tanner, U. S. N., and she is officered by lieutenants of the navy.

Mr. J. E. Benedict is the naturalist in charge, and there is generally associated with him on board a scientific staff of two or more to assist him in obtaining data and preparing specimens.

The ship is admirably planned and constructed. The captain's cabin occupies most of the after part of the deck, is spacious and well furnished with everything necessary for the commander's comfort. This cabin contains two staterooms, and is lighted during the day by port holes on the side and a skylight above on the poop deck. The officers' ward room is below this, having seven spacious staterooms, a bathroom, and other conveniences not generally found on steamships. The ship is lighted throughout with the incandescent electric light, which not only makes the wardroom particularly cheerful in the evening, but also illuminates the entire deck, so that at night the vessel, as seen from the shore, looks like a brilliantly lighted ballroom. Another thing rendered possible by the presence of the electric light is surface collecting at night.

Mr. G. W. Baird, chief engineer of the ship, is the inventor of a cable to which he attaches a screen-covered electric light. This, when the vessel is at anchor, can be lowered into the water just below the surface, and the numerous young fish, marine worms, squids and shrimp, attracted by the brightness of the light, are captured by means of a hand net and transferred to the laboratory table for examination. This laboratory is amidships. There are really two laboratories, an upper and lower; the first furnished with working tables, a sink, a library of books for reference, a microscope and convenient tanks of alcohol; the second, called the "lower laboratory," is below this, has benches for chemical work, and opportunities for general carpentry and work connected with the collections. Here guns are cleaned and mended, and here too are tiers of drawers in which specimens are stored. Beneath these drawers are large metal tanks filled with alcohol, for containing the larger fish and specimens whose size prevents them from being stored in the small glass jars. Below this second laboratory, in the hold of the vessel, is still a third storeroom, of much the same nature and used for much the same purposes as the one above it.

The apparatus for deep sea sounding, which is placed on the port bow, consists of an easily running wheel supported in a frame. Over this wheel runs a steel piano wire from a cylinder or drum, which holds about 4000 fathoms. When a sounding is to be made, a brass cup is attached to the end of the wire to catch and bring up some of the bottom, that its composition may be observed. Just above the cup is a thermometer which records the temperature of the deep water. To the above-mentioned cup a heavy shot is fastened to accelerate the downward motion. When a sounding is to be taken the ship is kept stationary, that the wire may be straight up and down, and, everything being ready, the weight sinks rapidly to the bottom. The concussion caused by striking the bottom detaches the heavy weight, at the same time the cup grasps a portion of the bottom's surface, and a donkey engine turns the cylinder, whereby the wire is quickly reeled in. Each sounding station is given a number, and a record is kept of the depth of the water, the nature of the bottom and the temperature at that depth.

A long article might be written on the various appliances and mechanisms of the ship, but it would be too great a digression from the subject originally proposed. Most worthy of mention, however, are the annunciators on the upper deck, placed against the wheel house. These are two contrivances, one for the starboard engine and a similar one for the port engine, which indicate to the officer of the deck the movement of both engines. This is also an invention of Engineer Baird, as is, too, the process by which the ship is furnished with a never failing supply of pure, fresh drinking water distilled from the salt water.

Now, as to deep-sea dredging. Just forward of the wheel house, attached by one end to the foremast, is a boom capable of being raised like a derrick and swung over the side. Just below this boom is a donkey engine, and below that, in the hold of the vessel, is coiled a strong wire cable, about one-half inch in diameter and about four miles long. This runs along the under side of the boom and over a wheel at its free extremity. To this end of the cable is attached the dredge, or trawl, as it is sometimes called. This consists of a strong, baggy net, fastened to what looks like a pair of huge iron sleigh runners, kept at a distance of about eight feet from one another by means of an iron rod. It is between these "sleigh runners," in the intervening eight feet of space, that the net is placed. To these sleigh runners is also attached by ropes a stout canvas bag, the mouth of which is kept open by iron jaws. The position of this bag is just behind the small end of the net, and on the sea bottom it is dragged along after the large net, scraping up mud or sand and rocks, thus relieving the meshes of the net from a strain which would be too heavy for them.

Everything being ready for dredging, and soundings having first been taken to ascertain the depth, the net is lowered carefully into the sea, the progress of the vessel being stopped. If the sounding gave 1,200 fathoms, then 1,700 fathoms of dredge cable has to be let out, or even more than that before bottom is reached. This has to be done slowly and necessarily takes a long time. Sometimes when the water is 3,000 fathoms deep, as is often the case, four hours are consumed in one lowering and hauling. This process is also called "trawling." When the bottom is reached, the dredge is dragged slowly along for half an hour and then hoisted on board by means of the donkey engine, at first slowly, then, as it gets clear of the bottom, very rapidly.

It is an exciting moment when the huge net and canvas bag emerges from the water and hangs dripping over the deck. The net is then opened at the bottom and its contents allowed to roll out into tubs, while mud and sand and rock in the canvas bag are emptied into a large sieve on the forward deck, then to be carefully washed and examined for small marine animals.

The contents of the net which have been emptied into tubs consist of many curious forms of life from the deep sea, which are carefully picked out and sorted, each class by itself, and then placed in glass jars containing alcohol. A minute report of each haul is kept in a book for that purpose.

Sometimes the "catch" is extremely interesting, beautiful specimens of *Actinida* (sea anemones), corals; *Echinoids*, or sea urchins, varieties not found in shallower waters. Also specimens of *Ocotopus* (the cuttle fish), rare sponges, and deep sea forms of holothurians or sea cucumbers. These latter so much dislike being torn from their ocean bed that they use a power given them by nature and split into fragments before reaching the surface. Rare forms of starfish sometimes delight the eye of the naturalist who is sorting the contents of the dredge; and deep sea fish, which, on being released from the tremendous pressure to which they were subjected in the deeper water, become distended by the gases contained within them, and often burst, reaching the ship's deck in a rather dilapidated condition. Often, however, the dredge comes up nearly empty, or with but little life in it. To my question as to whether such work was not very disappointing at times, the captain replied: "Not at all; we consider ourselves fortunate if we get the dredge back safely," for it occasionally happens that dredge and many fathoms of cable are lost by the catching of the apparatus on the bottom.

When the bottom is supposed to be so rocky that lowering the dredge would be unsafe, "tangling" is resorted to, which consists in dragging over the bottom large bunches of hemp rope attached to iron bars. These bunches of rope catch and hold in their strands small marine animals with which they come in contact. In the April 2d number of *Science* Mr. Benedict has described the method of surface collecting, so I need

do nothing more than refer to it here. It consists in dragging a large but fine-meshed net from the end of a swinging boom along the surface and through the water just below the surface. It is often done on the port side while dredging is going on on the starboard side. This secures all the surface life found in the seaweed and just below the surface of the water. Varieties of *Tentennarius*, a little, brown-mottled fish frequenting the masses of seaweed, are caught thus in large numbers, as well as small crabs, which also live in the seaweed; a great many marine worms, various kinds of molluscs and other forms lower in the scale of life.

WASHINGTON, D. C.

PACKING EGGS FOR FOREIGN SHIPMENT.—Mr. W. Oldham Chambers, secretary of the National Fishculture Association of England, in his history of fishculture, *Land and Water*, March 27, says: "We may well take a lesson from the American system of packing, which is very simple, but most efficacious in attaining the desired end, which is to diminish as much as possible the rate of mortality through injury. In the first place, the ova are placed into trays, consisting of calico [canton flannel] stretched upon wooden frames, which are deposited one above the other in the center of a large box, each tray being interlaid with moss. Around the pyramid of trays, which are fixed firmly into position, a partition is reserved, serving as a receptacle for ice and sawdust—two most important factors in transmitting ova. On arrival at their destination the eggs can be readily unpacked by removing the trays from the box, clearing away the moss between each, and turning the ova en masse by means of water into the hatching troughs. The originator of this capital method is, I believe, Mr. Fred Mather, of New York. I am able to testify to the fact that not more than thirty eggs out of every thousand sent me at various periods have perished during the journey from New York to London, which is an evidence of the skill displayed in packing them."

The Kennel.

FIXTURES. FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22.—Eight annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Ooster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

May 25, 26 and 27.—First Dog Show of the Ninth Regiment, Wilkes-Barre, Pa. W. H. Tuck, Secretary, Wilkes-Barre, Pa.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3616.

OUR HARTFORD REPORT.

Editor *Forest and Stream*:

I am a staunch advocate of fair and honest criticism, but criticism is one thing and a deliberate attempt to besmirch a judge's reputation is quite another, therefore I cannot allow this last instance of personal animosity toward me as displayed by your reporter in his account of the Hartford show to pass unnoticed. His reference to the note which I made in my book regarding the quality of fox-terriers in the open dog class, I care nothing for, for the simple reason that I question whether he understands or recognizes fox-terrier quality when he sees it; but I still maintain there are few shows in England where so much quality has been seen in one class. Splaugar was a very good second to his litter brother Splinter, who won at Brighton, Baccanah won first prize at the Crystal Palace show, Valet first at Birmingham, Shovel was a champion in England and Stableford Joe and Scarsdale both scored winning brackets there, and Nick, although he may be as your reporter very lucidly puts it, "light in middle and full in body," whatever that may mean, is a terrier of much more than ordinary pretensions. His ill nature culminated when he heard that I had bought a collie puppy and had afterward given it first prize in its class. This of itself would be an offense against good taste were there not attendant circumstances which place the matter in a totally different light. It is true I bought the puppy Tramp. It is also true that there were only two dogs entered in the class, and that both belonged to one and the same owner, and that I could have bought either of them at the same price, I chose that which I thought was the best, and paid for it with the understanding that all prizes which the dog might win were to revert to the original owner. Was I, then, because I bought the dog, to withhold the prize which was rightfully his? Your reporter further says that I bought the puppy for the Hempstead Farm Co. This is a wilful misstatement. I had no commission for the Hempstead Farm Co. or any one else, but seeing what I thought a fairly good puppy at a reasonable price, I bought it. Mr. Terry, who, as you are aware, is the president of the Hempstead Farm Co., Limited, arrived at Hartford late in the day. I told him I had purchased a puppy and asked him to go and look it over. This he did, and coming back expressed his admiration of the dog and a desire to become his owner. To this I readily agreed, and that, as far as I was concerned, I supposed would be the end of the matter.

Is it not carrying spite and jealousy, or whatever may be the impelling motive, too far, to allow attacks of such a personal nature to appear in the columns of your paper, and especially in the report of a dog show? Surely this is not "educating the public as to the points of merit peculiar to each breed," but simply making your columns the channel for an unwarranted and unjustifiable expression of ill will, which you, as the editor of a paper priding itself on its impartiality and truthfulness, should strive to discourage.

NEW YORK, April 23.

JAS. MORTIMER.

[Although Mr. Mortimer has been connected with dogs and dog shows for some years he does not appear yet to have learned that the judges and the animals on exhibition are legitimate subjects for criticism. We are not singular in our opinion of Splaugar. At the Hanley (Eng.) show last year, where there were 774 entries, with nineteen in the open dog fox-terrier class, Splaugar did not get a mention. The well-known judge, Mr. L. P. C. Astley, awarded four prizes, six vhc. cards and three hc., but gave nothing to Splaugar, the winner at Hartford. As we have stated, the open dog class at Hartford was a fairly good one, but by no means deserved Mr. Mortimer's extravagant praise. Our statement about the collie puppy bought by Mr. Mortimer appears to have been inaccurate only in alleging that the dog was bought for the Hempstead Farm Company, whereas he was bought by Mr. Mortimer for himself and afterward sold to that company.

Our authority for our statement was the owner of the dog, Mr. Smith of Hartford. We have refrained from expressing our views on this transaction, but if Mr. Mortimer desires them they are quite at his service. We are quite ready to leave the public to pass on the motives which prompt our remarks on dogs and dog shows. They need no defense or excuse.]

NORTH CAROLINA AMATEUR FIELD TRIAL CLUB

Editor *Forest and Stream*:

A desire for better dogs, and more especially better trained dogs, has induced several of the leading sportsmen in this State to organize an amateur field trials club, open to all non-professionally trained dogs; the object being to induce our sportsmen to learn how to train and handle their own animals. The organization of this club has not yet been perfected, but the chief matters of importance, such as securing hunting grounds, posting it and stocking it with birds, have been attended to and everything will be in order for the trials next fall, just after the Eastern field trials close at High Point, N. C.

The land of the North Carolina Field Trials Club is situated north and northeast of Raleigh, N. C., beginning about four miles from the city, and runs along and between several small streams, including much of the very best shooting ground within reach of the city. It contains in all from 3,500 to 4,000 acres of old field and stubble.

This tract of land has always been considered the best hunting ground in our vicinity, and now that it has been thoroughly posted, planted with small patches of peas, wheat and oats along the creek banks, and nearly two hundred quail put on it, we expect in a year or two to have the finest field trial grounds in the South.

Our sportsmen are beginning to appreciate a dog with a pedigree, and are learning to breed dogs with an eye to speed, nose, endurance and style. Formerly a dog was only required to find birds and remain steady until you came to him. Now we have inaugurated a different school for the dogs and we are determined to have them well trained. With our small beginning we intend to push on each year, adding to our grounds and bettering our dogs, and before long we will extend an invitation to our Northern friends to come down and try dogs with us.

RALEIGH, N. C., April 17.

SPRATTS BISCUITS.

Editor *Forest and Stream*:

The letter of Mr. Cleather in the last issue of *FOREST AND STREAM* opens the door for testimony in support of the statement with which he finds fault. Mr. Cleather, like a good many of my countrymen when they first arrive on this side of the Atlantic, proceeds to air his superior knowledge and alleges that American dog owners are ignoramuses. I rather doubt the good policy of a person in his position taking this step, but that is his lookout. *FOREST AND STREAM* in reporting New Haven show drew attention to the effect Spratts biscuits had on the dogs, and I for one was very glad to see the remarks. Mr. Cleather pays *FOREST AND STREAM* the very high compliment of insinuating that the remarks referred to were dictated by rival manufacturers. Those who know the independent policy of your journal are not likely to be much misled by Mr. Cleather's mistaken views, while those whose dogs suffered, as mine did, cannot but thank you for running your editorial department entirely free from considerations affected by the advertising department. Perhaps we do not know when a dog is purged in this country, and even if we do make a correct guess we are such complete novices that we cannot tell the cause. That is what we are to understand from Mr. Cleather's letter.

I would like to ask that gentleman whether he was at New Haven, and how long a time he spent at Newark show. We can then arrive at some estimate of his opportunity for bringing *FOREST AND STREAM* up with such a round turn.

I will tell my experience with Spratts biscuits. I tried them in England and liked them very well, my dogs relishing and doing well on them. I have also tried biscuits imported by Mr. de Luze and found nothing wrong with them. Knowing that the dogs I proposed exhibiting at Newark and New Haven would be fed on these biscuits, and with the view of accustoming them to that food, I purchased a bag of Spratts biscuits and proceeded to mix some with their usual food, changing the method of feeding as is customary when feeding with these biscuits. I ought to say that my dogs were perfectly healthy and were not old toothless plugs, but strong, well-developed ten months puppies. Looseness of the bowels, at once resulted, but that being usual with a change of diet, I persevered giving a reduced quantity of biscuit. The dogs would pick out everything else from their dishes and only take the biscuit as a last necessity. The passages were never quite natural during the period of probation, and in that condition the dogs went to Newark. There they all started purging, and I did the best I could by giving them bread and milk and bread and meat. Next week came New Haven, and here matters assumed a serious aspect. The purging continued and the passages had the unpleasant smell so well known at dog shows with biscuit fed dogs. I had to leave before the show was over, so the dogs had nothing but the contract food to wind up with. When they got home they were a sorry sight. The dog Heather was passing pure blood, and the bitches, though not so bad, were still in horrible condition internally. The latter I got round by exercising the greatest care, but the dog, I regret to say, succumbed. If any one wants to experiment with the balance of my bag of biscuits they are welcome to them, but no more of them for me, thank you.

Now that Mr. Cleather has opened the door for a relation of American dog owners' experiences with Spratts biscuits, I hope that the subject may be well ventilated.

JAMES WATSON.

A DOG OF ROMANCE.—New York, April 19.—Editor

Forest and Stream: In Mr. F. Marion Crawford's recent novel, "A Tale of a Lonely Parish," one of the leading characters is the dog Stamboul. He is said to be a Russian bloodhound, taller than the tallest mastiff, of a slate color, with closely cropped ears and a fine smooth coat. He is also described as following with great speed a trail twelve hours old, baying sonorously, and killing a man so quickly as to leave it doubtful whether he "hurt him much." Now I should like to know if there is any such dog in the world. I seem to recognize the slate color, huge size and cropped ears as belonging to the well-known Siberian or Ulm dog, commonly called "bloodhound." But was that dog ever known to follow a cold trail, or to bay after the manner of a true hound? The book is, of course, interesting and well written; but novelists ought to be very careful to get the details of their work technically correct. The late George Eliot, for example, used to submit the law of her novels, before publication, to "counsel learned in the law;" whereas Anthony Trollope evolved his law from his inner consciousness. The method of the former was that of the conscientious artist, that of the latter fell short of this standard.—S. H. [The advice of our correspondent to novelists is most excellent; but we very much fear that "poetic license" in the future will still continue to override both common law and common sense.]

PEDIGREE BLANKS.—We have prepared two series of duplicate pedigree blanks, one blank providing for pedigree to fifth generation, the other to third. The former fills a page size of Kennel Record Book page; the latter, same size page, with four on. Price of each, twenty-five cents per dozen pages. The blanks will be very convenient for furnishing pedigrees with sales, etc.

THE CLEVELAND DOG SHOW.

[Special Dispatch to *Forest and Stream*.]

CLEVELAND, O., April 27.—The attendance at the show to-day was good. The arrangements are excellent. There are several new dogs here that are good enough for almost any company. Judging commenced at 2 o'clock and has progressed slowly. The following awards have been made:

ENGLISH SETTERS.—*CHAMPION*—Dog: Absent. *Bitch*: Pittsburgh Kennel Club's Queen Alice.—*Open*—Dogs: 1st, R. P. Morgan's Mandan; 2d, John Davidson's Scottish Chief; 3rd, Reserve Kennel's Prandau. Very high com., J. Denny's Brandon, F. Milham's Blue Hope. High com., J. Cockrell's Tasso, C. W. Fromm's Dash and North, M. Martin's Count. *Bitches*: 1st, H. & D. Bryson's Lillian; 2d, Mrs. E. C. Franklin's Vixen; 3d, J. Donoghue's Jeannette. Very high com., J. Davidson's Swan; R. B. Morgan's Bess M. and Fannie M.; F. Milham's Jealousy, and D. O'Shea's Rosey. High com., R. B. Morgan's Akron Girl, and L. Cobough's Daisy.—*PUPPIES*—Dogs: 1st, A. Sander's Dude; 2d, T. G. Davey's Canada. Very high com., S. B. Conklin's Doc C. Two classes were made of the dog puppies. In the second class—Dogs: 1st, Pittsburgh Kennel Club's Blue Prince; 2d, R. T. Kennedy's Prince Royal. Very high com., C. E. White's Earl of Britton. *Bitches*: 1st, J. Denny's Nantabala; 2d, Pittsburgh Kennel Club's Sparle. Very high com., G. Volker's Lady, P. Wolfender's Bink Bonney, and T. Donoghue's Dart Gladstone. High com., F. Milham's Jealousy.

POINTERS.—*LARGE*—*CHAMPION*—Dog: Absent. *Bitch*: B. F. Seitzer's Lady Croxeth.—*OPEN*—Dogs: 1st and 2d, Whealen and Sander's Pap Smizer and Kingshot. Very high com., Pittsburgh Kennel Club's Sweep. High com., C. T. Eggle's Young Meteor. Com., B. F. Seitzer's Planet. *Bitches*: 1st and 2d, Istone Kennel's Rump and Lass. Very high com., Whealen and Sander's Diana.—*SMALL*—Dogs: 1st, W. C. Nelson's Tippecanoe; 2d, Whealen and Sander's Rumpy. Very high com., P. Wolfender's Don, and Istone Kennel's Doncaster. High com., Whealen and Sander's Bullseye, and W. K. Huntington's LeRoy. *Bitches*: 1st, St. Louis Kennel Club's Kewick; 2d, Istone Kennel's Lillie Bang. Very high com., and high com., J. R. Daniel's Fan and Daisy Donald.—*PUPPIES*—Dogs: 1st, C. T. Eggle's Young Meteor; 2d, W. L. White's Shot. High com., J. Lewis's Frank Sleaford. *Bitches*: 1st, T. Donoghue's Lemmie Croxeth. Very high com., J. B. Bosworth's Dinah. High com., G. M. Hubbard's Belle. Com., W. C. Meyer's Topsy.

DOG SHOW SECRETARIES AND SPECIALS.—Editor

Forest and Stream: Mr. Wade, while commenting upon the above subjects last week, re the late Pittsburgh show, asks: "Does it help the honesty of the transaction to accept the entry and then shamefully deny their own published rule by refusing the protest that follows, as was done in the St. Bernard puppy class?" The facts are more damaging to the club, Mr. Wade, than you have stated. The owner of the St. Bernard dog did not enter him in the puppy class. He brought and showed the dog to Mr. L. F. Whitman, who purposely put him into the class where he would most lightly win. President Gregg made himself a party to this brazen fraud by telling Mr. Hanford, the representative of Mr. Tucker, "This is a poor place for protests; we will have nothing to do with them." "When the superintendent and president 'stand in' to beat an absent exhibitor, what is he going to do about it?" This pertinent question was propounded as we traveled East after the show. The answer was, "Stay at home." I assure you, Mr. Wade, it is not so easy to "punish" Philadelphia exhibitors. We are like the proverbial Philadelphia lawyer—sharp. We fight with facts on our side, and when the lie is passed, as it was at Pittsburgh, the Philadelphian proves it on the other man. A word about the indiscriminate accepting of special prizes to be given to certain dogs really without competition. It is a growing evil and should be stopped at once. It gives judges, reporters and all concerned twice the amount of work, besides bringing into prominence for the moment worthless dogs that as quickly sink into oblivion.—V. M. H.

WILKESBARRE DOG SHOW.—The premium list of the Ninth Regiment's inaugural bench show of dogs has been issued. The show will be held at the armory, Wilkes-Barre, Pa., May 25, 26 and 27. The entries close May 15. The judges, as indicated last week, are: For mastiffs, St. Bernards, Newfoundlanders, greyhounds, collies, bulldogs, bull-terriers, fox-terriers, pugs, foxhounds, toy terriers, miscellaneous, spaniels and others, Mr. Jas. Watson; pointers and setters, Mr. R. M. Lindsay, of Scranton, Pa.; English and Irish setters, Mr. W. F. Streeter, Lehigh Tannery, Pa.; beagles, to be judged by the A. E. B. Club standard, Mr. T. W. White, Wilkes-Barre, Pa. The premiums are \$10 and \$5 for the more important classes, \$7 and \$4 for St. Bernards, spaniels (field, black and any color), foxhounds, beagles (two classes) and collies, and \$5 and \$3 for pointers, English and Irish setter puppies, and for fox-terriers, bulldogs, all other terriers and pugs. The Adams Express Co. will turn all dogs free that are sent by their company. The committee have decided to make a class for Italian greyhounds.—WILKES.

ENTRIES FOR THE NEW YORK DOG SHOW.—Editor

Forest and Stream: I am sorry that the list I gave you of the dogs at the coming show was hardly a correct one; this is partly excusable from the fact that it was hastily and roughly estimated. Following is, I believe, a correct list: Mastiffs, 44; St. Bernards, 51; Newfoundlanders, 11; Great Danes, 11; greyhounds, 24; deerhounds, 15; pointers, 97; English setters, 102; black and tan setters, 35; Irish setters, 67; Chesapeake Bay dogs, 1; Irish water spaniels, 1; Clumber spaniels, 5; field spaniels, 13; cocker spaniels, 59; foxhounds, 14; beagles, 31; basset hounds, 4; dachshunde, 10; fox-terriers, smooth, 81; wire-haired, 8; collies, 100; bulldogs, 22; bull-terriers, 25; black and tan terriers, 6; hard-haired, 2; Dandie Dinmont, 2; Irish terriers, 8; Skye terriers, 8; pugs, 30; Yorkshire terriers, 19; toy terriers, 8; King Charles spaniels, 13; Blenheim spaniels, 3; Japanese spaniels, 5; rubys and Prince Charles, 8; Italian greyhounds, 6; poodles, 15; miscellaneous, 18.—JAS. MORTIMER, Supt.

POOR OLD FELLOW.—Cleveland, O., April 23.—Editor

Forest and Stream: I have an old black and tan dog with me now which has reached the remarkable age of twenty-one years. The usual evidence of old age, viz., failing eyesight and hearing and a general feebleness. His teeth are worn away even with the gums. One peculiarity is very marked, when he sits upon his haunches his back assumes that semicircular form peculiar to the cat when in the same position. Old Prin, as he is called, survived a severe attack of mange the past winter and really appears to be gaining strength every day. Is not this a rare instance?—WATT.

NEW POINTERS COMING.—New York, April 26, 1886.—

Editor Forest and Stream: The Westminster Kennel Club have purchased from Prince Albert Solms the well known light weight pointer Naso of Kipping. Naso has been very successful on the bench and in the field, having won four first prizes at the Crystal Palace, and several first prizes in field trials. He has also proved a successful sire, his son, Naso of Upton, having won first prizes at Birmingham and Crystal Palace, Eng. They have also purchased the heavy weight bitch Kate VIII., in whelp to Priam, and Glauca, by Fluke—champion Glee.—JAMES MORTIMER, Superintendent.

ST. LOUIS KENNEL CLUB.—Graphic will not be shown at St. Louis and the club will therefore enter for competition their pointer dog Robert le Diable. It was their intention to have entered him "not for competition" had Graphic put in an appearance, as under Major Taylor, who judged at Pittsburgh, and is to officiate at St. Louis, Robert won over the Graphic Kennels' entry. Entries for St. Louis close May 8 and not May 2, as incorrectly stated. Entries are said to be coming in very satisfactorily.

"HISTORY OF THE MASTIFF."—Mastiff lovers will rejoice to learn that copies of Mr. Wynn's "History of the Mastiff" are now accessible to book buyers on this side of the water. We have received a small consignment of this excellent work, which is for sale at this office at \$2.50 each. We shall review the work at the earliest moment possible.

which I, for one, will never be able to explain.—C. A. R.

RANGE AND GALLERY.

THE REMINGTON FAILURE.—A Utica dispatch, of April 22, states that "Judge Williams, of Watertown, has granted the motion asking for the dissolution of the corporation of E. Remington & Sons, of Ilion. Addison Brill and A. H. Russell were appointed receivers. Papers were filed in the County Clerk's office of Herkimer county on that day, and soon after the individual and partnership assignment of Philo and Eliphalet Remington to Charles Herter, of Ilion, was also filed. This arrangement is understood to carry down the Remington works, which the Remingtons were the chief backers. There has been little work done there for some time and there are said to be attachments upon much of the property in the agricultural works. Upon the armory works, where the business of cartridge making, sewing machine manufacture, and type-printer manufacture was also carried on, there are understood to be no mortgages or liens of any kind. The judgments secured against the corporation are less than \$15,000, and it was to stop these piling up and to give all the creditors an equal showing that receivers were secured. The receivers are only temporary appointments by the Court. Upon filing a bond for \$50,000 they are authorized to take possession of the works and wind up the business. The "order system" has long prevailed in Ilion, and it is feared that many of the storekeepers there will go down with the corporation, which has supplied almost all of the business of that place." The failure seriously affects not only Ilion and the adjacent towns, but this city as well, where large amounts of their paper are held. The suspension has been inevitable for a long time. When the Remingtons had large contracts for arms, they got money and spent it freely, making no provision for a rainy day. The manufacture of sporting goods, the agricultural works, and the type-printer factory enabled them to live along, but times have been by no means prosperous. The liabilities of the concern are about \$1,000,000, mostly in paper. Only about \$12,000 are in judgments. For years the firm has never had a pay day, and men got their wages in orders on the concern. The merchants took these orders in payment for goods, and when they had a sufficient amount they exchanged them for the Remingtons' notes, which were frequently renewed, and have accumulated until now they aggregate about \$300,000. There were 800 men employed in the works, and the majority, if not all of them, have been paid during the last four or five years in orders only, and have not seen a cent of money. The out-of-town creditors are iron, brass and coal dealers. The plant is valued at \$1,500,000, though it inventoried last January at \$2,000,000. The type-printer works were sold a few weeks ago, and the new proprietors at once established their own plant, and the frequent renewal of the notes, Mr. A. H. Russell, speaking of the affairs of the firm, said: "The plant, of course, are not yet formed. One of the strongest efforts will be to pay the employees in money. I have not had an opportunity myself to look over the correspondence, but I am assured by the Messrs. Remington that they have not known a time in the history of the business when the outlook for arms contracts for foreign governments was as good. No contract is absolutely in hand, but there are very good prospects, and, as is well known, money has always been made on these."

A TEXAS OPINION.—Fort Clark, Tex., April 14.—Editor Forest and Stream: I wish to thank your correspondents Milton P. Peirce and J. S. D., for their prompt response to my letter of April 1. I myself think that 42 inches is too long a barrel, but the gun mentioned was the only well-made gun of the kind that I saw, and I had to take it or none. I wanted a rifle of somewhat larger bore and shorter barrel, but found none except cheap flimsy things. I am not now in a place where I can have it altered, so will have to let it remain as it is. I always thought that kid made the best patching because, when oiled, it stretches around the ball and leaves no wrinkle or fold. I see that "J. S. D." agrees with me. I see that the muzzleloading rifle gets a better send off in your issue of April 8. I think that your correspondent goes in rather strongly for it, and I don't pretend to say that the breechloader is as accurate as the muzzleloader, for any close target shooting, for I don't know; but I do know that the Ballard rifle will hit turkeys at 175 yds. or turkeys' heads at 50 yds. It may throw a wild ball once in a long time, but not often. I know mine will shoot into an 8 in. bullseye at 200 yds., and it is a mighty small turkey that lets much of an 8 in. circle show round him. I am obliged to believe that the fault was in the men, not the breechloader. As Mr. Nye, of New York, says, the breechloader is the best. FOREST AND STREAM trajectory test showed that the breechloaders shot wilder. Some of them did, but FOREST AND STREAM distinctly said that in most cases the aim had to be changed between shots to keep from spoiling the targets for close measurement. Not so very bad for "wild shooting guns," is it? He also says that a 42-caliber breechloader will not shoot accurately with as short a ball as 230 grains. I know that a .45 with a 300 grain ball half in the shell and 85 grains of powder will shoot accurately up to 200 yds., and they shoot closer than I can hold with a red hot 42-caliber like a muzzle-loader as well as most men, but I want to give the breechloader its due.—CHARLES L. SMITH.

NEWARK, N. J., April 21.—The match between teams representing Newark and New York, which took place at the New York rifle range, has been decided. Under no pretense will they shoot in this city, claiming that they were never fairly treated when they did shoot here. A meeting of riflemen was held at the Essex range last Monday evening, with J. Danity chairman and John H. Huegel secretary. A committee, consisting of J. Coppersmith, F. Snellen and A. C. Neuman, was appointed and instructed to arrange a match for \$50 a side; ten men per team, twenty shots per man; one-half the score to be put on a Newark range, and the other half on a New York range, the side scoring the greatest number of points in the two shoots to take the stake. The New York riflemen thought the unfair, preferring to keep all the advantages of range, etc. on their own side. Having been beaten twice by a Newark team is probably the reason for their declining to shoot here again. They informed the committee that they would think the matter over, provided a match could be arranged without necessitating their coming to this city. The teams, when the match is open, and if the ones who were victorious to make a match, should fail to do so, it is hoped that some one of the crack teams or clubs of the metro will take up the gauntlet. A meeting of the riflemen interested will be held at the Essex range to hear a further report of the committee.

In the competition for position on the Newark team, which was begun last evening at Hengel's range, John Coppersmith scored in ten targets 49-15, 49-15, 50-17, 48-13, 49-15, 49-14, 49-16, 50-14, 50-15, 50-18, a total of 493 Creedmoor, or 1,132 ring count. Godfrey Snellen scored 49-13, 50-18 and 50-14 in three targets. The competition will be continued on Monday and Friday evenings, until each competitor has shot ten targets. All riflemen are invited to compete.

THE INTERNATIONAL MATCH.—Gen. Wingate talking with a reporter says of the prospects for the British match: "We have committed the British Association, asking them to send over a team this summer, and have received a reply formally acknowledging its receipt, but that is all. I hardly think we will succeed in bringing about another contest in 1886. There is no doubt that since the last international contest, a marked improvement has been made on this side of the water at the 800, 900 and 1,000-yard ranges, and the English team will have to beat it's previous records to retain the championship. Already from all parts of the West the best shots at Creedmoor. Each State will have its own competitors. The Western men will take the lead in high scores, but no doubt some of our old-timers will succeed in getting a place on the team. The only trouble in the way of a match is the apparent lack of funds at the disposal of the Englishmen."

SAN FRANCISCO, April 18.—There was but a light attendance of marksmen at Shell Mound Range to-day, the majority of the shooters having gone to Schuetzen Park to participate in the benefit given there to the widow and family of the late Alois Schneider. Sergeant-Major Waltham, of the Second Artillery, in a practice shoot, made the following scores: 200 yds. 44-44-45-45-42 300 yds. 44-45-45-44-41 500 yds. 43-43-43-43-47 700 yds. 55-45-45-45-47-91 The following scores were made by members of Company C, First Infantry, in a practice shoot at 200 and 500 yds.: Pembroke 43-40-83 Rudcock 36-43-79 Drers 43-43-86 Poulter 42-36-78 Snook 42-45-87

MANCHESTER, N. H., April 17.—The most successful and interesting regular shoot which Manchester riflemen have held for months took place at the range this afternoon and indications point to a lively season for the sport. The day was bright with half a point of wind blowing from the west. The following scores were completed, although they do not represent the whole number of riflemen in attendance: Practice Match—Rounds 7, possible 35, Creedmoor count: W H Thomas 3 5 5 5 4 4-29 Medal Match—Rounds 10, possible 100, decimal count: E Cole 5 10 8 8 4 7 5 8 5-58 Handicap Match—Rounds 10, possible 100, decimal count: N Johnson 8 9 10 7 6 4 9 10 5-75 Frank Jay 6 6 7 8 4 7 7 9 5-65 Practice Match—Rounds 10, possible 100, decimal count: Frank Jay 9 10 10 10 6 7 10 8 7-67 O B Holdridge 7 9 10 10 7 8 8 8 8-80 O M Henry 7 8 6 9 10 7 10 8 6-80

BOSTON, April 24.—The rifle matches were shot at Walnut Hill to-day. The new 500 yards for military rifles was opened and several competitors made good scores. The wind proved rather to much for the rest shooters, and most of the scores in that match were unfinished. Following are the best scores made during the day:

Victory Medal Match, D.										
J Francis	7	9	9	10	7	9	9	6	10	8-84
A Duffer	6	9	9	10	5	10	7	7	10-83	
R Reid	8	8	8	7	6	9	8	10	8-81	
E B Souther	6	9	7	9	9	9	8	9	7-76	
W Henry (Mil.)	2	8	7	5	9	3	5	6	7-80	
Decimal Off-Hand Match.										
J B Fellows, A.	9	10	6	10	10	6	8	8	8-85	
E B Souther, C.	9	6	5	9	9	8	9	8	10-92	
G B Yeutechi, A.	9	8	8	7	8	7	9	8	7-89	
N F Tufts, A.	10	6	5	6	9	9	9	6	6-84	
N P Bates, C.	6	6	6	7	7	8	7	8	5-69	
A L Brackett (Mil.)	4	10	6	2	5	10	10	6	5-75	

Rest Match.

N Washburn, F.	9	9	9	10	10	10	10	8-96
D L Chase, A.	10	8	10	8	10	10	9	9-93
S Wilder, A.	10	10	9	8	9	10	10	8-92

Creedmoor Practice Match (Mil.).

E C B Erickson	4	4	4	4	4	4	4	4-42
L Grant	4	4	4	4	4	4	4	4-40
W S Simmons	3	3	4	4	4	4	4	4-40

Special Military Match.

W Charles	7	9	10	7	10	8	9	8-84
W Henry	6	9	7	9	7	9	8	10-73
L Herbert	7	5	8	6	8	5	4	7-62

State Militia Match, S. M.—(Winners of Bronze Badges).

A L Brackett	20	20	20	20
J E Darnody	20	20	18	20
W S Simmons	19	19	21	20

500 Yards Match.

D L Chase, A.	455455555-48	F Carlet (Mil) E.	515543555-45
L Grant (Mil) E.	554555554-46	A L Brackett (Mil) A.	532455254-36
S Wilder, A.	554555554-47		

MASSACHUSETTS VS. MAINE.—The Waltham Hillside Club shot a match on April 24, at its range, with the Houlton (Me.) Club. The score of the former is as follows:

Decimal Standard Target—200 yds.

E O Dennison	9	7	8	8	7	9	8	10	4-75
E A Emerson	8	4	5	8	8	10	8	8	6-73
R B Edes (Mil.)	6	7	7	9	6	4	6	4	10-72
J H Munroe	6	10	4	7	7	8	10	7	5-71
W H Stone	9	7	8	5	8	6	7	9	10-72

HAMILTON, April 23.—A match between the Victoria Rifle Club, of this city, and the Toronto Rifle Association, of Toronto, was fired at the Victoria Club ranges, Ainsliewood, to-day. The weather was sultry, and a strong and very unsteady wind from the right made good shooting difficult. Notwithstanding all this, a few remarkably good scores were made, although the shooting was, on the whole, rather below the average. The conditions of the match were 12 marksmen from each club. Smaller rifles ranged, 200, 500 and 600 yds., seven shots on each range, Wimbledon targets and regulations. The following are the scores:

Toronto Rifle Association.					The Victoria Rifle Club.				
200	500	600	yds.	Total.	200	500	600	yds.	Total.
Thompson, W.	23	28	80	Zealand, J.	31	29	20	80	
Mowat, J.	32	30	17	Morris, J.	29	28	21	78	
McDonald, J.	21	24	15	Adam, J.	24	24	23	75	
Foreman, J.	26	25	23	Pain, J.	27	21	24	75	
Bell, J.	26	25	23	Ross, J.	25	25	15	69	
Lewis, J.	29	23	20	Godwin, J.	30	20	17	67	
Mitchell, J.	28	13	25	Robertson, J.	26	19	20	65	
Duncan, J.	27	25	16	Hancock, J.	25	25	13	63	
Lanskill, J.	33	15	24	Murdoch, J.	25	18	17	60	
Anderson, J.	35	20	20	Gibson, J.	29	20	11	60	
McDonald, J.	32	22	17	Panton, J.	25	24	9	54	
Kennedy, J.	36	20	20	Margetts, J.	25	18	4	47	
	327	274	245	846		325	275	196	796

WELLINGTON, Del., April 12.—The regular club matches took place at Schuetzen Park to-day. At the first match the prizes were divided by score classes. After deciding the ties the prizes were awarded as follows: Robert Miller first, Charles Heinel, Sr. second, William A. Bacon third, H. B. Seeds fourth and William F. Seeds fifth. The following is the full score at 200 yds., Creedmoor target. Manz was allowed one point and was the only member of the militia present.

W B Bell, Bal	43144-19	J Manz, Spg	03341-15
W A Bacon, R S	34454-20	A Chapman, Bal	54455-23
W F Seeds, Bal	34443-18	R Miller, R S	54519-33
H Simpson, Bal	34340-14	C Heinel, Jr	45321-21
I W Seeds, Bal	25443-16	W McKendrick, Win	55344-23
C Heinel, Sr, R S	44445-21	C Carleton	53444-18
F S Jackson, Bal	34544-20	W Hartlow, Win	47342-18
J Scott, R S	41544-21	W S Simmons, Bal	43355-19
H B Seeds, Mav	44434-19		

At the second match the Massachusetts target was used, and although a more severe test, some fine shooting was developed. After deciding the only tie that occurred, the prizes were awarded as follows: First, Robert Miller; second, Charles Heinel, Sr.; third, C. Carleton; fourth, Jerome B. Bell; fifth, John Manz. The full score is as follows, out of a possible 60:

Jerome B Bell, Bal	8	9	8	10	10-45
William A Bacon, R S	9	3	8	8	10-38
William F Seeds, Bal	10	9	7	6	8-10-38
H Simpson, Bal	4	8	9	10	4-35
Irwin W Seeds, Bal	9	6	5	9	2-37
Charles Heinel, Sr., R. S.	11	12	9	11	8-32
Robert Miller, R S	9	12	11	9	9-32
Charles Heinel, Jr., R S	11	3	11	9	2-26
John Scott, R S	2	12	10	5	10-30
H B Seeds, Mav	12	9	10	7	5-43
John Manz, Bal	5	12	7	10	11-45
Arthur Chapman, Bal	11	11	10	7	4-43
C Carleton, Bal	11	11	10	7	4-43
William McKendrick, Win	6	11	10	9	4-42
W H Hartlow, Win	3	6	10	5	2-26

WORCESTER, Mass., April 22.—At the regular meet to-day of the Worcester Rifle Association, at Pine Grove Range, the following scores were made at 200 yds.

Record Match.

Brown	10	8	8	5	6	6	8	6	9	9-75
Mathews	9	5	9	9	5	7	5	9	10	7-75
Jones	6	6	9	9	6	8	5	8	7	9-73
Ellsworth	6	6	6	6	9	9	7	5	6	8-71
Lark	10	5	6	10	5	4	7	9	8	6-70
Leighton	10	10	5	4	9	4	9	5	8	8-63

Practice Scores.										
Mathews	8	10	8	6	7	7	10	9	9	10-84
Prown	9	8	8	7	10	10	7	6	7	10-82
Clark	8	9	6	7	6	8	10	9	6	10-79
Ellsworth	9	6	10	6	10	6	9	6	8	9-79

GARDNER, Mass., April 22.—There was a large attendance at the last regular meet of the Gardner Rifle Club at Hackmatack Range. The standard American target was used, the shooting was off-hand, distance 200 yds. Totals of the two strings were as follows: 1st string, 91-170; G. F. Ellsworth, 82, 85-167; I. N. Dodge, 82, 79-161; G. Warfield, 74, 85-159; W. C. Loveland, 78, 79-157; G. C. Goodale, 78, 78-159; C. M. Edgell, 71, 66-137; C. Crabtree, 60, 65-125; E. L. Taft, 57, 52-109; Fred Swain, 54, 52-106; D. E. Warfield, 45, 59-104.

JAMESTOWN, N. Y., April 23.—At the regular club shoot to-day, 200 yds. off hand, Hiram target center, bright light, wind moderate from 8 o'clock, some very good scores were made, I. e., good for us, but very poor for such men as J. A. Huggins, of West Elizabeth, Pa. H D DeLisle 6 8 7 10 8 10 8 7 8-80 R H Burns 7 8 8 6 8 8 8 8 7-76 J R Brown 8 5 9 9 10 6 7 9 6-74 F L Norton 9 4 9 8 6 10 7 8 5-74 "Pinafire" 6 7 5 6 8 8 6 7 4-63 E B Kapp 6 5 6 10 4 8 6 4-63 ZERO.

LONDON, April 23.—Australia will send a rifle team to take part in the Wimbledon contests in July.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

THE OHIO TOURNAMENT.

SPRINGFIELD, O., April 21.—What is proving to be the best tournament ever conducted by the Springfield Shooting Club commenced to-day on the Perrin farm, south of the city. The occasion is the formal opening of the new range at that place with a two days' clay-pigeon tournament, open to any non-professional in the country. The first day opened most auspiciously, with a large attendance of visiting marksmen, four or five hundred spectators, delicious weather, and favorable conditions generally. Among those present from surrounding cities are Messrs. S. H. and McLeish, of Columbus; Underwood and Hornberger, Bellefontaine; Simmerman, Thomas and Allen, South Solon; Ackerman, Lima; Keifer, Dayton; Wendt, Kenton; Wickersham and others. Jamestown: McHenry and Ball, Xenia; McCarty, Huntsville; Mumma, Medway. Some very good shooting was done, the home club taking a large share of the laurels. In the fourth match, detailed below, John Strong won the club medal (which must be won three times to be owned), making a total of 15 out of 20. The contest for the medal was of course a club affair. The leading scores are as follows:

First match, 7 single Ligowsky, \$1 entrance, three purses, 50, 30 and 20 per cent.

Aston	101111-6	Simmerman	0110011-4
McCartney	1110010-4	Wickersham	111011-6
Leffel	11101-3	Thomas	011011-5
Craver	011010-4	McLeish	010101-4
Wilson	111011-6	Allen	00111-5
Smith	111100-5	Wendt	011010-4
Hornberger	111111-7	Ackerman	111111-7
Seibert	1110101-5	Keifer	111011-5
Mumma	011011-5		

First, divided by Ackern and Hornberger; second, Aston, Wickersham and Wilson; third, Allen and Keifer.

Second match, 7 single blue rocks, 25 entries, entrance \$1:

Aston	111001-4	Keifer	1100011-4
McCartney	011001-4	Allen	00110-4
Leffel	011011-4	Perri	111111-7
Mumma	011111-6	Gray	1110100-4
Ackerman	111111-7	McLeish	110101-4
Wendt	011101-5	Peters	010101-4

First, divided by Ackerman and Perrin; second, Mumma; third, Wendt.

Third match, 7 single new American clay birds, \$1 entrance:

Underwood	1101011-4	Wickersham	101111-6
McCartney	111110-6	Rice	111101-6
Wilson	001111-5	Strong	0111

Perrin first, Ackerman, Kiefer and Hinkle second, Leffel and Wickersham third.			
Fifth match, 5 single Ligowsky:			
Aston.....	11100-3	Allen.....	11111-5
Wilson.....	01101-3	Rice (C).....	10110-3
Wendt.....	10111-4	Stiles.....	00111-3
Strong.....	11111-4	Wick.....	11110-4
Mumma.....	01111-4	Ackerman.....	11111-5
Perrin.....	11111-5	Snyder.....	11110-4
McCartney.....	11111-5	Ross.....	10111-4
Perrin first, Strong and Wickersham second, Wilson third.			
Sixth match, 3 pair blue rocks:			
Hebbard.....	01 11 00-3	Leffel.....	10 10 11-4
Strong.....	10 00 11-3	Wendt.....	11 11 11-6
Ackerman.....	10 10 10-3	McCartney.....	10 10 11-4
Wilson.....	10 10 11-4	Quail.....	10 10 11-4
Hinkle.....	11 11 10-5	Monahan.....	11 10 10-4
Snyder.....	01 01 11-4	Young.....	10 10 11-4
Perrin.....	11 01 11-5		
Wendt first, Perrin and Hinkle second, Wilson and Leffel third.			
Seventh match, 10 single Ligowsky birds, \$1.50 entrance, citizens' donation prizes:			
Ball.....	1000100110-4	Hinkle.....	1101110111-8
Scott.....	101011110110-6	Hebbard.....	1110011011-6
Young.....	01010101010-4	Slack.....	1001110011-6
Aston.....	010101010011-5	Monahan.....	0101011001-5
Strong.....	1111110100-7	Jones.....	0010001011-4
Leffel.....	0100111100-5	Wendt.....	1110111101-7
Lessner.....	1010111010-6	Rice, C.....	0111111111-9
Ackerman.....	1100111001-6	Croft.....	1110111001-7
McCartney.....	1110111010-7	Stiles.....	0100111011-6
Quail.....	1100111011-6	Ross.....	0101010001-4
Wilson.....	1010101111-7	May.....	1000011110-5
Perrin.....	0000110111-3		
Rice, first prize, Ed. Volzht's silver cup, valued at \$25. Hinkle second, Wilson third, Scott fourth, Aston fifth, Ball sixth.			
Eighth match, 3 Cleveland blue rocks, \$1 entrance:			
McCartney.....	101-2	Quail.....	011-2
Wilson.....	101-2	Rice.....	111-3
Perrin.....	011-2	Aston.....	111-3
Hinkle.....	110-2	Lessner.....	110-2
First, Aston and Rice; Hinkle second, Monahan third.			
Ninth match, 5 single Ligowsky, \$1 entrance:			
McCartney.....	11111-5	Perrin.....	11111-5
Aston.....	11111-5	Snyder.....	11110-4
Rice.....	10110-3	Wilson.....	01101-3
Hinkle.....	11111-5	Ross.....	01011-3
Aston first, Strong second, Wilson and Rice third.			

THREE TRAPS OR FIVE.

Editor Forest and Stream:

You treated my article on protection of game birds in Kansas with such marked courtesy, that I am encouraged to communicate with you again upon a very different subject, and trust you may find it interesting and instructive. Flying target trap shooting is purely an American institution, requiring the best skill, the clearest perception, the coolest judgment and the quickest handling of a gun of any trap shooting ever yet devised. The day of live pigeon trap shooting is rapidly and surely passing away since the departure and loss of the wild pigeon, for tame pigeon trap shooting is very tame indeed from any style of trap and from any sportsmanlike standpoint. There is a slugging kind of crudity about tame pigeon shooting which I can never bring myself to like, and therefore never heartily endorse. I intend in this article to deal with trap shooting at artificial birds, but more particularly the arranging of traps to secure perfect 5 angle shooting from 3 traps instead of 5, as required by National rules. My object is also to assist young clubs and beginners, and enable them to mark out and establish the lines of flight, and then show them how to make them permanent, so that once having secured the exact position of score, traps and angles of flight, they may be enabled, without any further trouble, to maintain them so long as they may use the same shooting ground. For the purpose of more clearly illustrating my views, and making all the points plain to inexperienced shooters, I send you herewith a drawing of 3-trap shooting versus 5-trap shooting at 5 angles, corresponding as nearly as possible to the lines of flight and distances established under the National rules. Let me say right here that all kinds of American trap shooting should make the National rules apply, and do away entirely with State and local laws, so that from Maine to California, yes, even unto Alaska, there would be but one method of trap shooting, but one style of holding a gun, and but one system of distances, handicaps, etc. If we can have nothing else original, let our trap shooting be purely so—purely American.

In my plan of 3-trap shooting I do not propose to make any changes or offer any suggestions touching the 5-trap shooting, for I think it is about perfect; but it is only suited to great matches, can only be carried out on a large club, and is only a matter of time, and is not suited to the hundreds and thousands of smaller clubs throughout the country. I am writing for the benefit of the younger clubs whose small number of members enjoy the pleasant recreation of trap shooting, but who are not able to lay in a stock of 5 traps. In fact, many of them can only purchase one trap; and as there are so many different kinds of flying targets, the clubs for various reasons may be constrained to have two or three different kinds of traps, and certainly could not purchase five of each kind. Good angle-shooting from live traps is the limit of the National rules. The traps are set in a circle, having for a center the 18 yard score or rise, and each trap is 8 yds. apart (National rules, 5 traps, 5 yds. apart). The traps are numbered from left to right—1, 2, 3—the even number being center trap. Trap 1 throws a right half quartering bird and trap 3 throws a left half quartering to correspond. Both of these lines of flight cross the straightaway or straight outlying line exactly 7 yds. from the center trap (this is the limit of the National rules). By setting your end traps so as to secure as nearly as possible this crossing of lines, you have established a permanent basis. Now mark the exact lines on which your traps are set, and set them ever after on exactly the same square and your angles will be perfect. Of course to give new ground for the pins occasionally it will be necessary to move the traps a little, but be sure you retain the same square. Now, to permanently mark these two half quartering lines, drive a small stake in the ground on the lines of crossing 7 yds. from center trap. Then take a line 33 yds. long, keeping one end on the score and the other on the straightaway line, 15 yds. from the center trap; make your circle to the right, and when you reach the point which forms a true line from you to trap 1 over the stake at the 7-yard crossing point, drive in a small stake with a hole in the end, and put a small flag in it for a marker, as shown in the plan. From this flag continue on your circle to the right, to a point 18 yds. from the stake, line from your flag just set, and there drive another stake, and insert your flagstick. Return now to the point of beginning on the straightaway line, and establish your stakes and flags at the points on the left, corresponding to those on the right. You will by this time find your four flags about equally distant from each other on the circle described, thus giving an equal division of angles. Were you to continue your circle about 13 yds. further on each end and establish flags you would find a line running through the center trap, and thus forming two right angles with the center trap as their vertex described. The National rules do not allow, or rather condemn, screens to protect the trapper, and this may be safe with experts handling the gun, but it is not safe with ordinary club shooting. With the close-shooting guns of to-day in the hands of careless and inexperienced shooters, no trapper's life is safe at 18 yds without an iron screen or a 2 in. plank 36 in. high and 30 in. wide. The correct rule in trap shooting is for each man to stand at the score and shoot at birds from each of the 5 angles before giving place to the next shooter, and so on in turn; hence the time is wasted under the National rules here loaded at one time for each shooter, and the trapper hides himself somewhere by usually unworking in the ground like a fox, or he comes back on a line with the score until the traps are emptied. It very often happens, however, that birds break in the traps and have to be replaced while the shooter remains at the score. The trapper rooting in the ground for fear of being shot, cannot see all of these breakages, as his eyes are only in the front of his head, and much time is wasted before the reloading of the trap takes place. The shooter is still at the score waiting, and often gets nervous and angry before he can get his five shots. Should he miss his bird after all his weary waiting, he is very apt to say something half naughty, and I don't blame him one bit. My 3-trap shooting almost cures this evil in the 5-trap system; for as the trapper sits on the ground with his feet in a hole for comfort, close to the center trap, covered by a screen, he sees in a moment if any breakage occurs, and reloads the traps at once. Another point, there being three different flights from the center trap where

he sits, any mishap there is soon remedied and the shooting goes on, very much to the relief of the shooter. This I consider a very important point in favor of the three traps, and that together with the saving of two traps is worth something to any club, poor or rich. One trapper with three traps as I have described can do as much as two trappers with five traps. This is another saving, and gives security to the trapper. I have thought it best in making the drawing to place the targets upon the lines of flight 5 yds. apart, beginning with 15 yds. from the traps up to 25, 35 and 40 yards, and the figures over the targets determine the distances from the traps. The lines of fire are drawn to each bird in its flight, supposing it to be hit at some one of the points of flight designated, and the distances are carefully given and marked on each line of fire. This is to me a very interesting study, and I believe will be of great service to those who have not had an extended practice in this kind of shooting. They will see perhaps for the first time the necessity for a study of the angles, and then bring their practice into play. Take for instance a bird 25 yds. from the trap on a half quartering line, and they will see that it is but 36 yds. from the score, while the straightaway bird at the same distance from the trap is 48 yds. from the score. The plan shows that the birds thrown over any of the right and left angles will give the shooter 7 yds. longer time than the straightaway bird; and as the right and left quartering birds are harder to hit than the half quartering birds, set your center trap one notch easier, thus evening up the speed or flight of the birds on the 3 lines from the center trap. A lightning shot will catch the bird at 15 yds. from any trap, a first-class shot will smash it at 20 yds., a very good shot will get there at 25 yds. a good shot will be blazing away at 30 yds., a poor shot will fool along until the bird reaches 35 yds., and he who expects to break his bird at 40 yds. from the trap, being from 50 to 55 yds. from the score, will find the judges calling out "lost bird" unless he has a first-class, hard-shooting gun. Poor shooters are not generally blest with the best guns. I would advise every beginner at trap shooting to shoot quickly even if he misses, for in the end he will, with study of flights and steady practice, make the best shot. Learn first to handle your gun with freedom and grace. Throw it up to your shoulder with confidence and firmness, as you cry "pull" throw your elbow well up as the gun comes to your shoulder, press it well against your shoulder, swing your gun with the bird, shoot as you swing, and the moment you get on to the bird, for the motion of the gun being much faster than the movement of the bird, you will naturally shoot ahead of the bird just about the distance required. Don't be afraid about shooting ahead, for in nine cases out of ten you will find yourself behind the bird instead of being ahead of it. Of course, this does not apply to the straightaway birds, but you are more likely to under-shoot them than the others. Hold well up on to the straightaway birds within 30 yds. of flight, but after this you must be a little under. Now let me repeat so as to impress it upon the beginner. Shoot the instant you get on to the bird; don't wait for another aim, but shoot at once, even though you may miss many of them. The longer and smoother the flight of the bird the more likely you will be to daily along with it, expecting still a better aim; but remember, every yard of flight takes it away from you and lessens the chances of putting at least 3 pellets into it.

I desire in closing this rather long letter to acknowledge my appreciation of the many artificial birds now in use, from the glass ball to the Macomber metal target, which I like. All are good, but as a rule too hard shooting for common shooters. It is a mistake, and I am glad to see the American clay bird company of Cincinnati, under the guidance of that crack shot and true sportsman, J. E. Miller, press to the world a target somewhat larger, with a slower flight, just suited to the wants of seventy-five per cent. of all the clubs. All these saucer-like targets still leave an opening for a finer inventive genius to supply a want in trap shooting; something to take the place of live pigeon shooting is what I mean. There is now in process of perfection by W. C. Hinman, of our Leavenworth Gun Club, a target that will, in originality of conception, lay in the shade all known inventions, and I am now at liberty to let you know all about it. Are you listening? It is a metallic pigeon, with a head, tail, back, wing, neck and body so nicely adjusted that three pellets of 7's or 8's at 45 yds., hitting any part thereof, will disjoin the wing, and bring it tumbling to the ground. It will be known as "The Human Metallic Pigeon, Leavenworth, Kansas." The pigeon is made of spring brass so far as wings, back and tail are concerned, and is as pretty as a picture. Some of our boys went out the other day and banged away at it with 6's, 7's and 8's, knocking it every time, but after a hundred shots the pigeon was ready for another flight, and will stand any number of shots. The pigeon is assured, and also a powerful trap invented to throw it smooth and even a distance of about 25 yds. and from 2 to 12 ft. high. The rise will be 25 yds., National rules for live pigeon shooting. O, it's a daisy. Mr. Hinman showed me last evening a letter from England making him a very handsome offer for the invention. Some American firm ought to make a good thing out of it. In live pigeon shooting the trapper has to come back at least in a line with the score to get his birds; with the Human metallic pigeon the trapper will be screened as in my three-trap shooting, and go out for his pigeons the same distance he would have to come back for live

pigeons; and the trapping of the pigeon is so easy as to waste no time. The trap will throw the five angles National rules. You will hear more of this bird very soon. THOS. MOONLIGHT, LEAVENWORTH, KANSAS.

WELLINGTON, April 24.—The regular weekly shoot of the Wellington Gun Club was held to-day, with the following result: First, 6 clay-pigeons: Pond first, Swift second, Stanton and Williams third. Second, 5 blackbirds: Adams first, Pond and Swift second, Sanborn third. Third, 6 clay-pigeons: Sanborn and Swift first, Stanton second, Pond third, Schaefer and Falser fourth. Fourth, 5 blackbirds: Stanton and Pond first, Swift and Williams second, Adams and Littlefield third, Falser fourth. Fifth, 5 blackbirds: Stanton first, Shumway and Williams second, Swift third, Warren fourth. Sixth, 6 clay-pigeons: Adams first, Pond, Swift and Sanborn second, Snow third, Stanton and Shumway fourth. Seventh, 5 blackbirds: Parker and Wilson first, Swift, Schaefer and Warren second, Snow third, Sanborn and Stanton fourth. Eighth, 6 clay-pigeons: Stanton first, Pond second, Swift and Warren third, Shumway and Wilson fourth. Ninth, 6 clay-pigeons: Adams, Swift and Warren first, Sanborn second, Pond third, Suchfield fourth. Tenth, 5 blackbirds: Pond first, Schaefer, Warren and Sanborn second, Williams third, Swift and Stanton fourth. Eleventh, 5 clay-pigeons, straightaway: Adams and Schaefer first, Shumway and Falser second, Swift and Williams third, Snow and Parker fourth. Twelfth, 6 clay-pigeons: Swift and Wilson first, Adams, Williams and Shumway second, Schaefer and Pond third, Sanborn fourth. Thirteenth, 5 blackbirds: Pond first, Schaefer and Wilson second, Swift and Snow third, Shumway fourth. Fourteenth, 6 clay-pigeons: Schaefer first, Shumway, Williams and Adams second, Wilson third, Pond fourth. Fifteenth, 5 blackbirds: Schaefer first, Snow second, Swift and Parker third. Sixteenth, 3 bats: Shumway, Stanton and Sanborn first, Pond and Warren second, Bradstreet and Littlefield fourth. Seventeenth, 5 clay-pigeons, straightaway: Shumway first, Stanton, Warren and Adams second, Snow third.

CINCINNATI, April 20.—The shoot of the Price Hill Gun Club was largely attended. The weather was delightful, bringing out a number of spectators, who witnessed some of the finest shooting ever seen on the hill top. Ten traps were in operation, giving the members all the shooting they wanted. The old American clay bird No. 2 was used, and the way J. E. Miller, B. Teipel and Al. Bandle smashed them was wonderful. Miller making a record of three straight scores of 20, while Teipel followed, making two straight. Such shooting is seldom seen, and these three marksmen may well be called the "big 3," for all are big-six feet and over—and know how to shoot. The following are the scores:

First shoot, 20 single American birds: J. E. Miller 20, J. E. Maynard 15, D. Bemis 11, Bing 7, Mark 15, Shott 15, O. Topf 13, Keller 12. Second shoot, 20 single American birds: J. E. Miller 30, J. E. Maynard 12, D. Bemis 11, Bing 10, Mark 13, Shott 12, O. Topf 16, Keller 8, Clement 11, Al. Bandle 19, B. Teipel 19. Third shoot, 20 single American birds: J. E. Miller 30, Maynard 11, Bemis 16, Bing 10, Mark 13, Shott 11, O. Topf 13, Clement 12, Al. Bandle 18, B. Teipel 17, Carpenter 16, Blarney 14. Fourth shoot, 20 single American birds: Miller 17, Maynard 11, Bemis 13, Bing 12, Mark 13, Shott 13, Al. Bandle 19, B. Teipel 30, Clement 9, Pettit 7, Carpenter 14, O. Topf 15. Fifth shoot, 20 single American birds: Al. Bandle 19, Shott 16, Mark 12, Bing 9, Bemis 13, Maynard 10, B. Teipel 20, Clement 9, Blarney 12, Carpenter 14. Sixth shoot, 20 singles: Maynard 12, Bemis 17, Bing 12, Mark 13, Shott 14, Topf 15, Blarney 18, Al. Bandle 18, B. Teipel 18.—W. A. LOCKMAN, Secretary.

SOUTHERN ILLINOIS SPORTSMEN'S ASSOCIATION.—Sixth annual tournament, Du Quoin, Ill., May 11, 12 and 13. Tue-day, May 11.—Shoot No. 1—7 single glass balls. Shoot No. 2—10 clay-pigeons. Shoot No. 3, Association Special—10 single clay-pigeons and 10 Peoria blackbirds. Shoot No. 4—5 live birds, 26 yds. rise, use of both barrels. Wednesday, May 12.—Shoot No. 5—10 single Peoria blackbirds. Shoot No. 6—5 double clay-pigeons. Shoot No. 7, Association Special, Gold Medal Contest—10 Peoria blackbirds and 10 clay pigeons. Thursday, May 13.—Shoot No. 9—7 Peoria blackbirds. Shoot No. 10, Team Shoot, any 2 to compose team—5 double blackbirds to each man. Shoot No. 11, Association Special, Citizens' purse of \$75 in gold—10 clay-pigeons and 10 Peoria blackbirds. Shoot No. 12—10 clay-pigeons. Special Prizes.—For best general average in shoots Nos. 3, 7 and 11, an elegant silver basket. For second best average in same shoots, 64 pounds Orange ducking powder. For third best, 64 pounds dead shot powder. All matches will be governed by the newly printed rules of this association. Ties will be shot off at 21 yds. rise, unless all contestants agree to lengthen the distance. All matches will be class shooting. If plenty of live birds can be obtained, more live bird matches will be arranged. A cordial invitation is extended to all reputable sportsmen in Southern Illinois to join the association. Officers of the Association: C. A. Hobbs, President; Joseph Victor and A. C. Reuss, Vice-Presidents; Don Onstott, Treasurer; C. P. Richards, Secretary.

CINCINNATI, O.—The trap shooters of this city are agog over the new season trophy which is to be shot for by the gun clubs of this city, comprising the Cincinnati, Independent, Cosmoopolitan, Price Hill, East End and Cincinnati gun clubs, in a series of clay-pigeon matches for one of the handsomest gold medals ever shot for in this country. Mr. A. Bandle, who donates the medal, has made the following conditions to govern the contest and entries: The medal to be open to any teams of five men from any regularly organized gun club organization in Hamilton county only; each club to name its five men and two substitutes two weeks prior to the opening shoot, and thereafter to shoot five of the seven men originally named; the match to be at 20 single American clay-birds each man, 18yds. rise, National Gun Association rules to govern. The medal is to be known as the "Bandle Trophy," and shot for on the 22d of each month, beginning April 22, on the grounds of the Independent Gun Club, after which one match will be shot on the grounds of the different clubs entered for competition. Both H. McMurtry (McDuff) and A. Bandle are barred from competing.

CRESCENT GUN CLUB.—Waltham, Mass., April 26.—A gun club has been organized here to be known as the Crescent Gun Club. The objects of said club are to promote trap and wing shooting. The following officers have been chosen: President, E. Davis; Treasurer, C. Palmer; Secretary, R. G. Marshall; and Directors, C. Palmer, H. Whiting and N. Scribner. The club have purchased traps and entered upon active duty (or sport) last Saturday. The score made was poor, owing partly to defective traps and inexperienced trappers. We look for some good sport this summer, as the boys are quite enthusiastic and much friendly rivalry exists. We have elected Mr. John Higgins, one of our best shots, to the dignity of captain of the team.—*RAIL-BIRD.*

FIRST GERMAN GUN CLUB OF NEW YORK.—At the March meeting it was decided to have a pigeon shoot every month instead of, as hitherto, quarterly. The first of these shoots came off on Wednesday, March 17, at Schwalenberg's Park, Long Island City. Birds were sprung from five traps, 21yds. rise, 7 birds per man, both barrels. The effect of contrary winds can be seen in the scores: Geetz 2, J. Graus 3, Bockelman 3, Novak 5, P. Neusch 3, Pfander 6, Robeno 4, Goerlitz 5, Meyer 3, Pfaff 3, Schwalenberg 5, Carvin 3, Opperman 4, A. Neusch 2, Maish 5. The prize, which was a sum in cash, was won by F. W. Pfander—6 out of 7 killed.—F. B.

SAN ANTONIO, April 2.—*Editor Forest and Stream:* I would like to make the following announcement respecting the ninth annual tournament of the Texas State Sportsmen's Association, which will be held at San Antonio commencing May 18 and lasting 4 days. Don't fail to visit here, as you will have the finest sportsman's tournament ever given in this State. Fourteen matches will be on our programme, including team and individual match for the championship of the State. Six live bird and 8 artificial target matches, the latter consisting of red birds, blue rocks, American birds, clay-pigeons and blackbirds; 3 and 4 elegant specials in each match, also large purse for best average. Programmes will be ready April 18, and mailed on application.—A. THIEL, Sec'y.

OHIO.—At the meeting of the Central Ohio Shooting Association held April 23, it was decided to hold the first association shoot at Columbus May 18 and 19.

OTTAWA.—The St. Hubert Gun Club tournament has been postponed to June 29, owing to the difficulty in getting live birds.

MIDDLESEX VS. JERSEY CITY HEIGHTS.—A very enjoyable time was had on the grounds of the Jersey City Heights Gun Club, Marlon, on the 21st inst. The first of a series of matches between the Middlesex Gun Club and the former took place, 20 men each club, 25yds. rise, 8 birds per man, J. C. H. G. C. rules to govern (that is gun to be below elbow until the bird is on the wing), use of both barrels, but second barrel to count but half bird. The day was everything one could wish. The sportsmen were out in full force, there being representatives from nearly a dozen other clubs from Jersey, Long Island, New York and even Connecticut. The birds were an exceedingly good lot, having been selected by "old South Paw" especially for the occasion, and there was not a duffer or a squealer in the lot, which may account to a certain extent for the low score of some. The chowder prepared under the supervision of oater Carmody was of course, first class, and the encomiums on the same were loud and often, some 50 gallons being put "where it would do the most good." Jerry Maher was captain of the J. C. H. team with Mr. Stevens in same capacity for the Middlesex; Henry Siegler, referee; Major J. S. Hutchinson, judge for Middlesex; Geo. B. Eaton, ditto for J. C. H.; G. F. Sutherland, of Jersey City Evening Journal, official scorer, with Al Heritage grand master of ceremonies "and all over the ground." Everything passed off in the most friendly and satisfactory manner, particularly so for the Middlesex, as they expected (they were sold by a far greater number. But as the Middlesex was only for the birds and a good time we opined the Middlesex went home well satisfied, having lost the match by only 7 birds against the champion club of the country. As in all matches, especially where so many are engaged, some have better luck than others in regard to hard or easy birds. This was especially the case with Dr. Bird, J. R. Vorhees and Mr. Robinson. But the shooting of the third squad of the J. C. H. was simply abominable. The squad that was considered the strongest and most reliable proved to be right the reverse. Cummins, always good for 8 or 7, got only 4; Townsend, an old shot, almost a professional, got but 4½; and Outwater, another professional, couldn't hit an elephant. Quinlan, too, generally sure for 7 straight, retires with only 5, and Geo. Baier! What under the blue heavens was the matter with him? One of the Jersey's most even shooters scores 5 goose eggs in succession and gets but 2 out of his 8. But then we felt proud of "old reliable" No. 1 (Uncle Billy H.), and No. 2 (Uncle Billy S.). They are all ways safe to bet on, and the stakes come to the right side. Some of the members of the Middlesex had exceeding hard birds, among whom especially were Vorhees, Smith and Squires. Of course, there were some excellent good kills on both sides and they were heartily cheered. It is but justice to say that the Middlesex Club lost two dead birds scored against them in their throwing up the gun above the elbow before the bird was on the wing. Had they been promptly changed they would have lost more. It is a good rule to enforce, for how would a sportsman look in the field, and with his gun up near the armpit, before he sees his game? Upon the whole the boys had a good time, and we hope to be present at the return match on the new grounds of the Middlesex not far in the future, where, in all human probability, the result will be reversed, and more so, for they are all good fellows and know how to handle their breechloaders. Al's setter Duke did the retrieving, and as usual, did it well. The following is the score as shot in squads:

Jersey City Heights.			
First Squad.		First Squad.	
Vorhees...0 0 0 0 1 1½	0-1½	Eams...1 ½ 1 0 ½ 1 0 1-5

STANTON GUN CLUB, April 20.—Twenty single clays, 3 Ligow-sky traps, 16yds. rise, National Gun Association rules:
Allen...0110101010101011-13
Nelson...1111111111111111-18
Cochran...0100010101010101-10
Cushling...11111101 00111011-15
Crowder...1010101010101011-11
W. White, 5yds. rise, 11111-5.
Whittle, Summerson and Bargman will shoot in a team match at Hagerstown, Md., in May.

WINCHESTER, Ind., April 14.—The Winchester Gun Club held their first annual shooting to-day, and scored as follows:
W Norton...111001010-6 S D Coats...1100000100-3
Ed Diggs...1010101010-5 M C Nelson...0000100001-3
C Rockette...110011100-5 Rech Wells...1100000001-3

NEW ENGLAND TRAP SHOOT.—The first day of the tournament of the New England Trap Shooters' Association, was held at Walnut Hill April 21, under very favorable conditions, both of weather and attendance. As will be seen by the scores appended, Mr. Stark won the individual badge on a clean score. The scores:

1. Six clay birds, 3 traps.—Eager first, Snow, Renaud and Bates second, Tinker and Dickey third, Nichols and Gray fourth.	
2. Three pair clay pigeons—Cooper and Stark first, Eager second, Faulkner and Nichols third, Williams fourth.	
3. Six blackbirds, 3 angles—Curtis and Stark first, Allen and Williams second, Snow third, Nichols and Dickey fourth.	
4. Three pair clay pigeons—Cooper first, Bates second, Lovejoy and Williams third, Allen fourth.	
5. Three pair clay pigeons—Cooper first, Buffington second, Nichols and Eager third, Williams fourth.	
6. Seven blackbirds, straightaway—Eager and Faulkner first, Stanton second, Lovejoy and Cooper third, Bates and Allen fourth.	
7. Nine clay pigeons, 3 traps—Cooper and Dickey first, Bates and Lovejoy second, Tinker third, Buffington fourth.	
8. Three pair clay pigeons—Stanton first, Dickey second, Adams and Eager third, Lovejoy and Curtis fourth.	
9. Six blackbirds, 3 angles—Pond first, Aldoes second, Dickey and Stanton third, Renaud and Curtis fourth.	
10. Badge match sweep—Stark first, Stanton and Charles second, Faulkner, Buffington and Bates third, Eager and Lovejoy fourth. Conditions—9 singles and 3 pair of doubles:	
Stark...11111111-9 11 11 11-6-15	
Stanton...11111111-9 11 11 11-5-14	
Charles...11111111-9 11 11 10-5-14	
Bates...11111111-9 11 10 0-4-12	
Buffington...11111111-9 11 10 1-5-13	
Faulkner...11011111-8 11 10 1-5-13	
Eager...11011111-8 11 10 1-6-12	
Lovejoy...10011111-8 11 10 10-4-12	
Dickey...10001111-6 11 01 11-5-11	
Allen...11101110-7 10 11 10-4-11	
Lawson...11101111-8 10 10 10-3-11	
Pond...11010111-6 11 10 10-5-11	

11. Three pair clay pigeons—Williams, Stanton and Kirkwood first, Papanti, Faulkner and Tinker second, Bates and Buffington third, Lewis fourth.

12. Seven blackbirds, straightaway—Stanton and Kirkwood first, Knowles and Snow second, Bates, Dickey and Kirkwood third, Faulkner fourth.

13. Nine clay pigeons, 3 traps—Adams, Stanton, Stark and Allen first, Bates second, Hall third, Lovejoy fourth.

14. Three pair clay pigeons—Dickey first, Lewis and Bates second, Eager and Faulkner third, Nichols fourth.

15. Six blackbirds, 3 angles—Adams, Stark, Allen and Buffington first, Dickey second, Nichols and Knowles third, Charles fourth.

16. Miss and out, clay birds, 21yds.—Eager and Cooper divided.

17. Three pair clay pigeons—Curtis and Bates first, Stanton and Williams second, Buffington and Allen third, Faulkner fourth.

18. Seven blackbirds, straightaway, 21yds.—Dickey and Lovejoy first, Knowles second, Bates third, Buffington fourth.

19. Six clay pigeons—Russell, Kirkwood, Allen and Snow first, Cooper and Lovejoy second, Williams and Lawson third, Aldoes fourth.

20. Three pair clay pigeons—Curtis first, Stanton and Eager second, Bates and Knowles third, Aldoes and Dickey fourth.

21. Six clay pigeons—Stanton, Dickey and Snow first, Lovejoy, Cooper and Stark second, Eager third, Hall fourth.

22. Seven clay pigeons, straightaway—Lovejoy and Cooper first, Curtis and Bates second, Stanton and Knowles third, Eager fourth.

The tournament was finished on the 23d. The challenge team badge was won by the M. R. A. team. The standard of the shooting was as good as the average at large meetings and some excellent scores were made. Following are the records:

1. Six clay pigeons—Stark and Cooper first, Holden and Dickey second, Buffington and Swift third, Charles and Nichols fourth.

2. Three pair clay pigeons—Holden first, Suow and Swift second, Eager third, Sturtevant and Lovejoy fourth.

3. Five blackbirds straightaway—Swift and Stark first, Charles and Snow second, Lovejoy and Eager third, Nichols and Holden fourth.

4. Nine clay pigeons, three traps—Holden and Stark first, Eager second, Schaefer and Stanton third, Swift fourth.

5. Three pair clay pigeons—Buffington and Schaefer first, Dickey second, Eager third, Nichols and Lovejoy fourth.

6. Six blackbirds, three angles—Lovejoy first, Gilman second, Holden third, Dickey fourth.

7. Team badge match, sweepstake—Schaefer and Stanton first, Dickey and Faulkner second, Law and Lovejoy third.

8. Three pair clay pigeons—Schaefer and Eager first, Stanton, Nichols, Cooper and Stark second, Charles and Knowles third, Buffington fourth.

9. Seven blackbirds, straightaway—Buffington, Cooper and Dickey first, Adams second, Knowles third, Loring and Eager fourth.

10. Six single and three pairs clay pigeons—Eager and Stark first, Buffington and Hall second, Stanton and Dickey third, Gilman and Schaefer fourth.

11. Six blackbirds, three angles—Eager first, Dickey, Swift and Gilman second, Bailey and Schaefer third, Short and Hall fourth.

12. Nine clay pigeons, three traps—Stark and Gilman first, Dickey and Law second, Smith third.

13. Three pairs clay pigeons—Stanton, Schaefer and Eager first, Stark second, Buffington third, Lawson and Nichols fourth.

14. Five blackbirds, straightaway—Dickey, Adams and Knowles first, Snow and Pond second, Bartlett, Faulkner and Bailey third, Nichols fourth.

15. Miss and out, blackbirds, 21yds. rise—Swift first.

16. Seven clay pigeons, straightaway—Lawson, Stanton and Swift first, Dickey, Schaefer and Pond second, Eager, Faulkner and Gilman third, Snow and Bartlett fourth.

17. Six clay pigeons—Eager and Dickey first, Cooper and Swift second, Stanton and Knowles third, Nichols fourth.

18. Three pair clay pigeons—Eager and Stanton first, Dickey and Schaefer second, Lawson, Short and Faulkner third, Swift and Nichols fourth.

19. Five blackbirds, straightaway—Swift and Dickey first, Stanton and Knowles second, Pond and Adams third.

20. Novelty match, six clay pigeons—Eager first, Adams and Gilman second, Knowles and Stanton third, Short fourth.

21. Six clay pigeons—Knowles and Dickey first, Nichols and Swift second, Pond and Adams third.

22. Seven clay pigeons—Stanton and Snow first, Pond and Dickey second, Adams third.

Gold Team Badge Match.
M. R. A. Team...011101010-6 11 01 11-5-11

Lawson...10111110-7 01 00 11-3-10
Lovejoy...11101000-5 10 11 11-5-10

Francis...11000001-5 11 11 00-9-9
Schaefer...11110111-8 10 10 11-4-12-53

The Massachusetts Rifle Association team will hold the challenge badge until it is completed for again.

SACRAMENTO, Cal., April 18.—The Forester Gun Club held its first monthly shoot of the season at Agricultural Park to-day, 16 of the members participating. The club departed from its usual practice with one barrel, and adopted Hurlingham rules—both barrels, 30yds. 12 birds each. The pigeons were a fair lot, and, as a strong wind was blowing, carrying the birds swiftly in a right quartering direction, the shooters were compelled to be quick and to use good judgment. As it was the first shoot of the club under these rules, the score was unexpectedly good, being as follows:

W E Gerber...111111010-10 Rushtaller...1111100111-10
J W Todd...0111111001-9 J Gerber...0110111111-10
Schroth...1011001010-9 O Miller...1111100010-7
H Gerber...1110111111-11 Hamilton...1111000001-7
Kane...10011111010-8 Coffey...1111111110-11
Holz...1000001000-4 W B Miller...1001010001-4
Anker...1110100001-7 Watson...1111111011-11
Kilgus...1010101000-9 Zaver...0101011111-7

H. Gerber, Coffey and Watson shot off their tie on 11 at three pairs of birds each, Gerber killing 2, and Coffey and Watson 4 each. The last two shot off again, and Watson won, killing 5 to his opponent's 3.

SOUTH MANCHESTER, Conn., April 23.—The Manchester Gun Club opened the season to-day with the following scores:

M White...1110111001110111-16
F E Watkins...1110110010101011-14
O Treat...1011111010100001-12
W B Cheney...10001101100110011-12
W C Cheney...111011010001101001-11
J Shewry...111110000000000101-9
Hyde...111010000010001110-9
G Ford...11100100100000101-10

The next meet will be on Tuesday, May 4, and every second Tuesday throughout the summer.—W.

TOPSHAM, Me., April 22.—The annual shoot of the Riverside Club was held to-day, and everybody had a good time, the club being represented by 18 shooters, besides a good number of spectators. The day was perfect, but the average scores were not quite up to the usual point, it being the first shoot of the season. There were two matches shot, the first being the regular match at 20 birds, all single shooting, consisting of 10 blue rocks and 10 clay pigeons, for the club badges, three in number. The second, a match at 25 single clay-birds for 1,000 Cimax shells, donated by Mr. Chas. W. Dimick, of Boston.

MOBILE, Ala., April 20.—The monthly shoot of the teams of the Y. P. G. Club, captained by Messrs. Weems and Pollard, resulted as follows:

Capt Pollard...111111110-9	Capt Weems...000000000-0
Wagner...1100010100-4	Lott...0000000001-3
Shelton...0000100010-2	Vizard...111010111-8
Cowart...0001000001-2	Fountain...110001011-7
Ladd...1000000000-1	Alvarez...0000101000-2
Tunstall...010010000-2	Hill...000001000-2-20

The shoot was for the gold medal and was won by Capt. Pollard.

SAN FRANCISCO, April 15.—There were three clay-pigeon shoots at the Bay View House to-day between Coykendall, Anderson, Dunshie, Hamilton and Fanning. The first was for five birds, \$2.50 entrance money, with single pot, which resulted as follows:

Coykendall...0101-3	Hamilton...101010-3
Anderson...10010-3	Fanning...101010-3
Dunshie...1011-4	

The second, under the same money conditions, with 10 birds, was as follows:

Coykendall...01011110-7	Hamilton...10101111-8
Anderson...010000100-2	Fanning...10011011-7

Then came another shoot with 15 single birds and \$5 entrance fee, with the following result:

John Fanning...011011011011-11	James Fanning...1000110001010-5
Hamilton...01000110101010-7	

JOIN THE NATIONAL GUN ASSOCIATION.—Send 10 cents, for handbook giving all information, to the Secretary, MATT R. FREEMAN, General Manager, F. C. ETHERIDGE, Secretary and Treasurer, Macon, Ga.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc. of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

Mohican Races every Thursday through the season.	
May 1.—Brooklyn C. C. Challenge Cup and Paddling Race.	
May 15.—Brooklyn C. C. Sailing Race.	
May 22.—Knickerbocker C. C. Spring Regatta.	
May 29, 30, 31.—Connecticut Meet, Calla Shasta Grove.	
May 29, 30, 31.—Hudson River Meet, Coddington's Dock, Roundout.	
May 30.—Mohican Cruise, Susquehanna River.	
May 31.—Pittsburgh Regatta.	
June 12.—Brooklyn C. C. Paddling Race.	
July 10.—Brooklyn C. C. Paddling Race.	
Aug. 7.—Brooklyn C. C. Paddling Race.	
Aug. 15-20.—A. C. A. Meet, Grindstone Island.	
Sept. 4.—Brooklyn C. C. Paddling Race.	
Sept. 18.—Brooklyn C. C. Sailing Races.	
Sept. 25.—Brooklyn C. C. Challenge Cup.	

THE A. C. A. MEET.</

B. paddle $\frac{1}{2}$ mile, sail $\frac{1}{2}$ mile, paddle $\frac{1}{2}$ mile, sail $\frac{1}{2}$ mile, paddle $\frac{1}{2}$ mile, sail $\frac{1}{2}$ mile, 3 miles.
 No. 13, 11:00 A. M.—Paddling Class II. (canoe and load must weigh at least 120 pounds), 1 mile.
 No. 14, 11:30 A. M.—Paddling tandem, Classes III. and IV., decked, 1 mile. (Canoes for this race must be decked half their length.)
 No. 15, 2:00 P. M.—Sailing Class B, no limits in rig or ballast, 3 miles.
 No. 16, 2:30 P. M.—Sailing Class A, no limits in rig or ballast, 3 miles.
 No. 17, 3:00 P. M.—Sailing unclassified canoe, no limits in ballast or rig, 3 miles.
 No. 18, 3:30 P. M.—Hurry-scurry race, 100yds. run, 20yds. swim, 20yds. paddle.
 No. 19, 4:00 P. M.—Tournament and gymnastics.

The second day of this programme will be Tuesday, August 21, unless weather prevents or some of Monday's races are postponed, in which case Monday's programme will be finished if possible and the remainder of the day be devoted to special races or sports, and the second day will be Wednesday, Aug. 22. In absence of wind the paddling races will sail at their appointed time. Punctuality will be insisted on, no race will wait for any members. Any event delayed by lack of wind or by reason of the preceding one not having finished, will be postponed to the same hour next day, and the next event started at its appointed time. All A. C. A. rules will be enforced.

The "all-round record" with five prizes will be based upon all events in this programme except Nos. 3, 4, 6, 9, 14, 17, 18, 19—that is, upon 6 paddling, 1 sailing and 1 combined. Every classified canoe (except Class I.) will be eligible alike for 2 paddling, 1 sailing, 2 sailing, and 1 combined. For 20 members may bring and use another canoe besides the one allowed under Rule II. for other events.

The committee recommend as desirable subjects for special prizes under Rule V., long distance races, sailing races for open canoes and paddling race for decked canoes, portage or obstruction races, and sports to afford amusement.

J. B. McMEICHAUGH, Chairman,
 S. T. FAIRBANKS,
 READE W. FAIRBANKS,
 Regatta Committee.

THE CANOE EXHIBITION.

IT has always been the custom among those who are strangers to canoeing to picture the canoeist as a solitary and misanthropical hermit, whose chief delight is to wander off alone, and who cynically scorns the company of his fellow beings. So far from this being the case, however, if he is distinguished for one virtue rather than another, it is for his broad philanthropy, which shows itself so fully in the desire to induce others to share the sport which he prizes so highly. The invention of new and complicated reeling gears, of folding frying pans and multitudinous centerboards; the elaboration of various devices to increase his comfort and to enhance the beauty of his canoe; and the striving for that *ignis fatuus*, the perfect canoe; all these are the passions of the canoeist, but he does not leave them all to his heart's content; the conversion of the bright ones who toil mechanically at the oar or seek pleasure in the deceptive and treacherous catboat. Neither age, sex nor station offer any protection from a canoeist in reach of converts. A man has been known to risk the life of an innocent and elderly father-in-law, and to duck him ignominiously in the vain effort to convert him to a belief in a 25in. canoe, while sweethearts and pretty cousins by scores have fallen victims to the canoe fever. The canoeists of New York have long been foremost in this industry, and the introduction and for many years the keeping alive of American canoeing was due entirely to the New York C. C., and of late the fellow clubs have been no less active. This year will undoubtedly be the greatest that canoeing has ever known, either here or abroad; the prospect of two important series of races has attracted general attention to the sport, and many throughout the country have expressed a desire to know more of it. The many inquiries that have come to canoeists about New York, suggest that a few of the Knickerbocker C. C. (the idea of a general exhibition of canoes and canoe goods of all kinds; the idea was laid before the club and received a general approval, and a meeting of canoeists from the vicinity of New York was called, at which the date and details were arranged, and all was finally settled. To Com. Fowler and the other officers of the Knickerbocker C. C. the inception and successful carrying out of the idea is mainly due, while they have been ably seconded by other canoeists about New York, and as the idea was laid before the Com. Fowler is known not only as a thorough and active canoeist, but as the efficient head of a large and flourishing military school, the Columbia Institute. Located in the center of the city, at the Forty-second street station of the Sixth Avenue elevated railroad, the school occupies a large three story building, the second floor containing class rooms, while the third is a large hall, used as a drill room and gymnasium. Advantage was taken of the Easter holiday to clear away desks and seats and to make the hall available for the exhibition. The time was necessarily short and Saturday only was fixed, but it was afterward decided to keep the exhibition open on Monday April 26 as well. Circulars were sent out requesting exhibits, and they were divided under the following heads, each in charge of one or more specialists: Sailing canoes, C. Bowyer Vaux. Paddling and racing canoes, M. G. Foster, C. Cox. Cruising canoes, K. W. Brown. Canoe and shore tent, arranged for sleeping, J. F. Newman. Canoe and camp cookery, Capt. C. Smith, and Bro. C. V. R. Schuyler. Canoe appliances and inventions, R. P. Martin, F. A. Renton. Regatta and club trophies, R. B. Burchard. Manufacturers and builders exhibits, E. W. Brown. Canoe photography and stereoscopic views, L. W. Seavey. Canoe literature, W. P. Stephens. Canoe costume, A. W. Dumie. Music, vocal and instrumental, R. J. Wilkin. Allotment of space, J. L. Greenleaf. Hall decorations, E. C. Delavan, W. L. Green. Placards and labels, Wm. Whitlock. Boy's first canoe, J. L. Greenleaf. Canoe and shore tent, J. F. Newman. Artillery, J. L. Greenleaf. Unclassified exhibits, E. Fowler. The managing committee were Messrs. Fowler, Stanton and Seavey, K. C. C.

One great difficulty experienced was the lack of time, all the members of the committees being active business men as well as canoeists, and their leisure just now being so occupied with the fitting out of their own boats that little time could be spared for the exhibition. Notwithstanding this drawback, unavoidable at this season, the display was a most interesting one, and a convincing evidence of the prosperous condition of this newest of outdoor sports. Besides the gentlemen directly concerned, canoeists at a distance displayed a great interest, and contributions of flags, photographs and trophies were received from many. Most of the prominent clubs were represented by members who visited New York especially to attend the exhibition, among them the Cleveland, Toronto, Amsterdam, Newburgh, Sing Sing (Shattemue) Bayonne, Newtow, (Jantne), Rochester, Hartford, Springfield, Oswego and Trenton (Green).

The large hall of the Institute, with its ceiling lofty enough to allow large sails to be set, was decorated with flags and banners, both large and small, contributed by many clubs. On the south wall was the most interesting display, several hundred small flags, all won in club and Association races, souvenirs of most exciting contests with sail and paddle. The largest exhibit was that of the victorious Snake, in the place of honor, while next in size and position came the old Dot. The walls were also decorated with paddles, a number of original boating sketches contributed by *Outing*, and a collection of working drawings of canoes and cruising boats. The raised platform at the north end of the room was devoted to photography. Around the three sides were displayed a large number of photographs of canoe scenes, the A. C. A. meets, the various local meets and different cruises, while on tables was a collection of photographic apparatus. This included a camera, a camera, an Anthony's, a very small camera, folding and carried in the pocket, with holders, tripods and other appliances. A special novelty was a vest camera, the case of circular form about 5in. in diameter and 1 1/2in. thick. It is suspended under the vest by a cord around the neck, and the lens and plate adjuster are each in the shape of buttons, so that the apparatus is invisible. The plate is circular and is so arranged that eight pictures, each 1 1/2in. square, may be made on it in succession. In the foreground was a large number of books on canoeing and yachting. The Forest and Stream Publishing Company displayed their series of hand books on canoeing and camping. Messrs. Bretano contributed a number of American and foreign works, and others were received from Roberts Bros., of Boston, and Harper & Bros., New York.

Foremost among the canoes was the Idlewild, exhibited by Mr. H. C. Squires, a new Rushton canoe of the same model as Mr. Gibson's new Vesper, the design of which latter canoe was the Forest and Stream. Much speculation has been indulged in by canoeists as to this new model and her performance. The idea of a flat floor and no ballast finds favor with a large number, who are watching carefully for the trials between this boat and the deeper ones of the Sunbeam and Lassie type. As she lies on the floor the appearance is disappointing and met with little favorable comment from the canoeists present. Both bow and stern below water are very full, the bilge is carried far forward and aft with a hard turn, and the boat looks very large and full, and it may be made for the position, and she may show to better advantage on the water. The deck is handsomely finished, but the appearance of the bottom is marred by the shapes of the planks, which are such as to show the lines of the hull to poor advantage. The rig of this boat, which is owned by Mr. Dunnington, B. C. C., is of the Mohican pattern, 75 and 20ft. She is handsomely fitted on deck with tiller, seat, etc., and

very finely finished in all parts. Near by is a large case of brass work of all kinds for canoes, making by far the most complete assortment yet shown. Among other novelties are several varieties of blocks and brass bands for booms and yards, and a new and ingenious holder for a pennant allowing it to turn freely without fouling. All of these are made by Mr. Rushton from his own designs. On the east side in the same exhibit were shown on the east side of the room, 10 and 20-pound samples of the light-weight canoes for which he is so famous. The first, while light and strong, is fitted only for such work as it would receive at the hands of an expert; but the 20-pound boat of the same size, may be used by any one for gunning, fishing or exploring, and is still so light as to be easily carried on the shoulders. With the canoes were also of some single and double paddles of Mr. Rushton's make. Down stairs were two canoes from the same builder, an open rowing and sailing boat and a Mohican No. 1 canoe, both of the usual fine finish. The former was rigged with one boom and gaff sail.

Next to the Idlewild is Com. Fowler's new Ideal, the Viking, fresh from Everson's shop. This new model is one of the handsomest in appearance that Everson has yet turned out, and with lines full rather than hollow, but very clean cut, she promises to become more popular than any of his previous models. The present boat is shown as the "Married Member's Canoe," and attracts general notice by her sails. These two cruising lateens are of a bright Turkey red, ornamented with a white sea horse. Though novel, the effect is not displeasing for variety, though nothing can exceed the effect of a pure white sail on the water. The canoe is very comfortably equipped with cushions and rugs, a seat being made forward for a lady. For cruising and racing, which form part of her intended use, she is fitted with two brass centerboards.

Such canoes and the two Inertia, exhibited by her owner, Mr. E. W. Brown, K. C. C. She is fitted with her regular suit of cruising lugs, and is heeled at a good angle, with looms a little off, while on the weather deck is seated a member of the Eden Musee C. C., with sheets and tiller in hand. Inside is packed a full equipment of stores, bedding, etc., as used in cruising.

Along the east side of the room are two of the Ontario Company's canoes, a very light and handsome racing paddler, of smooth build, and another of the same size, but of a different design, being lighter and graceful, but the zebra-like appearance, the sides being of inch strips of dark and light wood alternately, is not pleasing to a canoeist. With the two are some very light maple paddles, by the same makers.

The next boat is a large open Canadian canoe, shown bottom up, with Rough's patent centerboard and rudder attached. This is a deep wooden fin, fastened to the bottom by brass straps from each gunwale. The fin is of triangular shape, like the exposed portion of a canoe's keel, and is held in place by a rudder is hung, operated by a wire cord leading to each quarter.

A most curious relic is a dugout about 8ft. long, from the southern coast of California, in appearance much like a big chopping bowl. Mr. G. S. Settle, of Newark, N. J., has on exhibition two pairs of double paddles of very neat shape and excellent finish. On the walls near by are two comic sketches, in colors, of canoe life, by Mr. Peebles, Bayonne C. C., while near the north end is a model and sail plan of Mr. Dehman's sailing boat, mentioned some time since in our columns. This boat is a double euder, 15x17, of shoal draft. The sides are of one board each, flaring out, bateau fashion, while the bottom is rounding, instead of flat, the cross section at every part being a segment of the same circle. The rudder is of the balance pattern, with a small skag as a guard. The centerboard is not shown, but is a new device of Mr. Clapham's. The rig is a sharpie yawl without jib. The actual boat is very light in construction, weighing but 300 lbs.

In the center of the hall is a large showcase containing an exhibit of silverware by the Gorham Co., with some badges and trophies by other makers. The Pittsburgh, Hartford, Rochester and other cups are shown; but the most prominent features of the exhibit are the large cups designed by Mr. Geo. Marcus and made by the Gorham Co. for the New York and Brooklyn canoe clubs, the latter of which we have previously described. The former is in the form of a pickaxe, the leading idea of the design being the life of the American Indian. The latter is not graceful, following closely the squat and bulky form of ancient Indian pottery; but in the originality of its treatment and its departure from the conventional, the effect is very pleasing. Around the top is worked a bent withe of hickory, lashed on with leather thongs in true Indian fashion, while the handle is a branch of a tree. Around the bowl is shown a pine forest, rising sharply above a river, up which a fleet of tiny birches is paddling, while above, on a blacked ground, is the Indian of the New York Canoe Club, holding the Indian Cup. With the cup is a bag of tanned deerskin, ornamented with Indian symbols and totems, in keeping with the main design.

In the most prominent is Mr. P. Martin's new sliding gunter, similar in general arrangement to the old, but much improved in detail. Near it is Mr. Stoddard's new nuzzon, used in 1885, another variety of the gunter. A small working model of Mr. Stoddard's first sail is also shown.

Among the fittings the Radix Company take a leading place with an exhibit of three boards, two for canoes and one of their new and larger boards for sailboats. A finely finished Atwood board is also shown, an improvement on the old one, while in another part of the hall is a section of a canoe with one of Joyner's curious oscillating centerboards, designed to keep a vertical position at all times. The section of canoe shows plainly the method of manufacture followed by Mr. Joyner, the edges of each plank being rebated, made but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. C., shows one of his rudders and clutch tillers while Mr. Ruggles, of Charlotte, N. Y., has a rudder hanging of the well-known Clyde pattern. The Kitiwake shows a compact folding seat for a canoe. Mr. Farnham's folding apron, Mr. Morse's canoe lamp and client, a neat compass and a collection of sheets but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. C., shows one of his rudders and clutch tillers while Mr. Ruggles, of Charlotte, N. Y., has a rudder hanging of the well-known Clyde pattern. The Kitiwake shows a compact folding seat for a canoe. Mr. Farnham's folding apron, Mr. Morse's canoe lamp and client, a neat compass and a collection of sheets but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. C., shows one of his rudders and clutch tillers while Mr. Ruggles, of Charlotte, N. Y., has a rudder hanging of the well-known Clyde pattern. The Kitiwake shows a compact folding seat for a canoe. Mr. Farnham's folding apron, Mr. Morse's canoe lamp and client, a neat compass and a collection of sheets but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. C., shows one of his rudders and clutch tillers while Mr. Ruggles, of Charlotte, N. Y., has a rudder hanging of the well-known Clyde pattern. The Kitiwake shows a compact folding seat for a canoe. Mr. Farnham's folding apron, Mr. Morse's canoe lamp and client, a neat compass and a collection of sheets but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. C., shows one of his rudders and clutch tillers while Mr. Ruggles, of Charlotte, N. Y., has a rudder hanging of the well-known Clyde pattern. The Kitiwake shows a compact folding seat for a canoe. Mr. Farnham's folding apron, Mr. Morse's canoe lamp and client, a neat compass and a collection of sheets but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. C., shows one of his rudders and clutch tillers while Mr. Ruggles, of Charlotte, N. Y., has a rudder hanging of the well-known Clyde pattern. The Kitiwake shows a compact folding seat for a canoe. Mr. Farnham's folding apron, Mr. Morse's canoe lamp and client, a neat compass and a collection of sheets but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. C., shows one of his rudders and clutch tillers while Mr. Ruggles, of Charlotte, N. Y., has a rudder hanging of the well-known Clyde pattern. The Kitiwake shows a compact folding seat for a canoe. Mr. Farnham's folding apron, Mr. Morse's canoe lamp and client, a neat compass and a collection of sheets but a few inches apart and out. The boat seems to be very strong, and the smooth surface is an advantage. Mr. Joyner also exhibits one of his drop rudders with his patent attachment. Mr. Barney, Springfield C. A MOSQUITO RACE AT BOSTON.—On April 24 a race for small boats was sailed off City Point, over a four-mile course to the buoy off the Marine Park pier, round buoy 2 to channel buoy off K street, and around the buoy off the pier, and back to the starting point. The prizes for first class were three, \$5 cash, a pair of rowlocks, and an anchor; for the second, \$5 and an anchor. The times were: First Class—13ft. and not over 15ft. over all.

Name and Owner.	Length.	Corrected
Baby, C. A. Borden.....	13.02	4 51 48
Lizzie, H. McDonough.....	13.08	4 57 55
Tot, E. S. McElroy.....	13.10	4 58 46
Wizard, James Bertram.....	13.06	4 54 12
Lady May, W. J. Tilley.....	13.06	4 55 59
Frolic, E. Lawley.....	14.10	4 59 41
Second class, under 13 feet over all.		
Brunette, W. C. Cherrington.....	12.02	5 01 58
Maggie, W. H. Buckley.....	12.04	4 59 17
Bunt, W. H. Ransom.....	12.11	4 57 37
Etta, R. T. F. Caldwell.....	11.13 1/2	4 55 54

The winners in the first class were the Baby, Wizard and Lady May; in the second class the Etta and Bunt. The judges were Captain William A. Andrews of the dory Nautilus, Charles A. Borden and Joseph Golden.

RIVERSIDE Y. C.—This club, of Jacksonville, Fla., held its annual meeting on April 16, electing the following officers: Commodore, W. S. Wightman; Vice-Commodore, John P. Varnum; Secretary and Treasurer, L. D. Hosmer; Fleet Captain, W. L. Davis; Flag Officer, F. V. Wightman. Executive Committee, J. H. Stead, H. B. Woodward, Geo. L. Drew. The by-laws, sailing rules and constitution will be carefully revised at once, and the club house will be much improved. The next meeting will be on April 30, at 7:30 P. M.

MIRAMICHI Y. C.—A new club with this name was organized on April 12 at Newswale, N. B., with 30 members, the officers being as follows: Commodore, J. C. Miller; Vice-Commodore, J. L. Steward; Rear Commodore, C. J. Butcher; Secretary-Treasurer, F. Kennedy; Trustees, J. C. Miller, James Miller, G. Watt and P. Wheeler; Measurer, T. Crimmon. The burgee is of blue and white, with letters M. Y. C. A club book will soon be issued.

NEWARK Y. C.—The opening sail on May 16 will be to Bay Ridge to inspect the Atlantic. The fleet will leave Newark at 9 A. M., and there will be a scrub race each way. Most of the yachts are ready, all the cabin sloops being painted white this season.

A SHOALSLOOP.—A centerboard yacht 30ft. long, 11ft. 2in. beam and 15in. draft, is now building at Canarsie from designs by her owner, Mr. Samuel Robbins, of New York. She will have both jib and mainsail and cat rigs.

KNICKERBOCKER Y. C.—The yachts are being launched and fitted out rapidly. Last week the Whim and John Demarest were set afloat. A large number of the club fleet have had iron keels added this season.

NEW JERSEY Y. C.—June 14 has been named for the 15th annual regatta of the club. Com. Dilworth has lately added to the fleet the yacht Wayward, late of New Haven, purchased by him from Mr. C. B. Warner.

NEWARK Y. C.—Three of the boats of this club, the Vixen, Emmy C. and Winifred, are ready to race any three yachts of another club of 26 to 28ft., an average of the times of each trio to decide.

CYTHERA.—Mr. Stewart's yawl was spoken on April 4 in lat. 42 north, long. 11 west, by the steamer Roslin Castle. On April 9 she arrived at Funchal, Madeira, after a passage of 19 days from England.

ANOTHER PROPOSED CRUISE.—The New England Y. R. A. are talking of a large cruise from City Point this summer, visiting Marblehead, Rockport, Portsmouth, Newburyport and Isle of Shoals.

THE SALE OF "248."—The large steam yacht, built by Cramp & Sons last year, and known only as No. 248, has been sold to Mr. S. V. Harkness, who will use her on the lakes.

GEN. PAINE'S YACHT.—All is ready for launching, the painting and rigging is completed, and the yacht will be launched about May 6. The name will probably be Mayflower.

THE GOELET CUPS.—Mr. Ozden Goelet has notified the New York Y. C. that the cups offered by him will be ready by July 1. They will be raced for at Newport, as usual.

MUMM'S YARD.—In consequence of ill health, Mr. John Mumm has leased his yard and business to Messrs. Guion & Costigan for five years.

SHONA.—Mr. Sweet's new purchase arrived in Boston last week and is now at Beverly. She will race in Boston waters this year.

NORTH END Y. C.—Boston is to have a new club with this name. It starts with a good fleet of small boats.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

AMATEUR.—Use yacht drill (1/2 doz.) for sails of 17ft. boat, highting it twice.

W. S. C., Jamestown, N. Y.—Write to E. & C. Von Culin, Delaware City, Del.

D. C. G.—See "Canoeing in Kanukia." Mr. R. B. Burchard, A. C. A., has cruised down the St. Lawrence.

J. M. F., Philadelphia.—See files of the FOREST AND STREAM for the past year for articles on gasoline and other stoves.

E. B., Boston.—Where can I get photographs of dogs; prize winners? Is there any one who sells them? Ans. We know of no one who has them for sale.

S. T., Centerville.—1. Does extremely frosty atmosphere affect a rifle for accurate target shooting? 2. I have a Hotchkiss rifle I want to put a graduated peep sight on it, but if I put it on the tang it will be in the way of the bolt. Would it give good satisfaction to place it

back of the grip about where a person usually places the stock against the face? Ans. 1. No. 2. Yes, if suitable to position assumed by you in shooting.

J. D. G. and W. C. R., Fond du Lac, Wis.—We cannot give size of jib from the figures sent. If you will refer to "Small Yachts" you will find the method of calculation fully explained.

T. F. T., New York.—Would you be kind enough to give me the name of one or more of the Fish Commissioners of New Hampshire? Ans. They are: Geo. F. Riddle, Manchester; Luther Hayes, Milton, and E. B. Dodge, Plymouth. The latter is also the superintendent.

F. B. D., Ovid, Mich.—For caulking a light boat use a light caulking iron and wooden mallet. Raw cotton is used for such work in preference to the oakum used on large vessels. It is spun into a thick strand and sold in rolls. The strand is first opened by driving in the iron. The strand of cotton is then driven in firmly, painted over and the seam puttied up.

C. V. B., Albany, N. Y.—1. Can you tell me where there is good trout fishing anywhere near the Adirondacks? 2. What month is the best for trout fishing? Ans. 1. West Canada Creek, Herkimer county, reached by way of Remsen or Prospect, N. & P. R. R., or go to the Filton Chain, via Booneville and the Forge House, or on the north side to Meacham Lake. 2. May and June.

R. H., Vinsted, Conn.—It is always best to rub down paint with pumice stone rather than to scrape it. For the latter purpose a paint burner or torch may be had at the paint store. Alcohol or naphtha is burned giving a hot flame, which must be followed closely by the scraper. Use white lead and linseed oil, mixed with lamp black to a lead color for the priming coat, thinning with a little turpentine.

D. D. P., Hicksville, O.—Can you conveniently give me any information as to the colonization of California quail. Will it probably succeed here or at my home in Northwestern Ohio. I have released four pairs in this vicinity and have three pair left that I am in doubt whether to release here or to take to Ohio. I would prefer to have them in Ohio if they are likely to thrive and to stand the winters there? Ans. They would be quite sure to do well in Tennessee and probably in Ohio, but the experiment should be tried on a large scale, and as much protection as possible afforded the birds for the first season or two.

A. R. G., Centerville, N. Y.—1. Is a stream stocked with trout from the State fisheries, by parties who went to the expense of getting them here, private or public fishing? 2. When does the trout season commence in Sullivan and Ulster counties? 3. What sized sign boards must a farmer put up to prohibit fishing and hunting. Ans. 1. The fishing is as much public as it was before. The owner of land through which a stream runs may forbid fishing on his part of the stream, and if all the owners through whose land it runs combine they can protect the entire stream by forbidding trespassing. 2. May 1. 3. Sign boards must be at least 1ft. square and at least one board to every fifty acres.

\$343,000 was paid last year for claims under the life policies of the Travelers, of Hartford, Conn., and \$1,292,000 to life and accident claimants together.—Adv.

Among the Many Novelties

Introduced by us for the coming season, we wish to call attention to our

Dead Finish, Waterproof, Braided Silk Fly Lines,
FOR SALMON, TROUT AND BLACK BASS.

We have been experimenting for some years in the hope of making a perfect waterproof line. Success crowned our efforts somewhat less than two years ago, but we have not offered the lines for sale till we were certain of their excellence in every particular. These lines will not crack, chip off or become sticky and stiff. They are completely waterproofed, not merely on the surface. They will not become tender in use or by age.

SAMPLES AND PRICES FURNISHED ON APPLICATION.

Also a new style **LANDING NET**, made of waterproof braided linen line, which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

DESIGNED ESPECIALLY FOR

TRAP SHOOTING.

12-GAUGE NOW READY.

Weight 6½ to 7 lbs.

Warranted to throw 300
No. 8 shot in 30-inch circle
at 33 yards.

All Modern Improvements.

Automatic Safety Pistol Grip, Double Bolt, Rubber Butt Plate, Full Choke, Blued Frame, with Twist, Laminated or Damascus Barrels.

The Top Snap is utilized as the lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The Safety Button is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the Finest Single Gun Made. INTERCHANGEABLE RIFLE BARRELS OF ALL CALIBERS furnished for these guns if desired. SEND FOR CIRCULAR.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette*.
Made simply with boiling water or milk. Sold only in half-pound tins by Grocers, labelled thus: JAMES EPPS & CO., Homoeopathic Chemists, London, England.

HANNAFORD Ventilated RUBBER BOOTS.

dealer for them, or send for circular.
HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

GOLD MEDAL, PARIS, 1878.

BAKER'S Breakfast Cocoa.

Warranted absolutely pure
Cocoa, from which the excess of
Oil has been removed. It has three
times the strength of Cocoa mixed
with Starch, Arrowroot or Sugar,
and is therefore far more economical,
costing less than one cent a
cup. It is delicious, nourishing,
strengthening, easily digested, and
admirably adapted for invalids as
well as for persons in health.
Sold by Grocers everywhere.

PERFECTION AT LAST.

THE BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a *perfect* Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

The Spalding Hammered Bait.

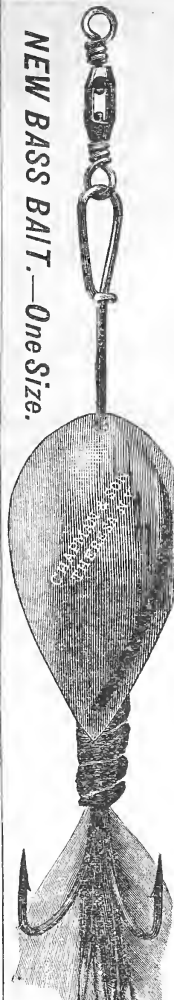

Made in Ten Sizes. Prices in silver plate: Nos. 1, 2, 3, 4, 5 and 6, 50 cts. each; Nos. 7 and 8, 65 cts. each; Nos. 9 and 10, 75 cts. each. Gold Plate, 25 cts. extra.
MESSRS. A. G. SPALDING & BROS., CHICAGO, ILL.:
GENTLEMEN—Agreeably at your request I tried the new "Hammered" Spoon Bait at Gogebic Lake, where, from the scarcity of live bait of any kind, a trolling spoon becomes almost a *sure* non at such times when the "Hammered" Bait is a supply for the fish. It is a happy idea for the fisherman, as all who rise to the fly. The Hammered Bait is a happy idea for the fisherman, as all who rise to the fly. The Hammered Bait is a happy idea for the fisherman, as all who rise to the fly. It is well and carefully made, has good, strong hooks, and well deserves the great popularity it has so soon acquired.
Very truly yours,
J. A. HENSHALL.

The Celebrated "UNION HILL."

First target represents 10 consecutive shots made by Otto Jaeger, June 10, 1885, at Wheeling, W. Va., 200 yards off hand, with some wind, using a No. 6½ Off-Hand, .32-caliber. It counts 94 on Massachusetts Decimal and 117 on Massachusetts Target. The cut is one-half size.

Second target represents 5 consecutive shots made by J. D. Marks, June 24, 1885, at Springfield, Mass., 200 yards, with rest, using a Union Hill, .32-caliber. The entire five shots are inside of a 1½-inch circle. The cut is full size.

This style of Ballard Rifle and the "Off-Hand" are the standard guns for target shooting, carrying off nearly all the prizes. Send for Catalogue: **THE MARLIN FIRE ARMS CO., New Haven, Conn.**

In the Stud—Champ, Verone, smooth St. Bernard, 2 yrs. old, winner 14 prizes. Fee \$50. Young stock for sale. Address with stamp, WM. MONTGOMERY, JR., Bergenfields, N. J.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, MAY 6, 1886.

VOL. XXVI.—No. 15.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications,

ANSWERS TO CORRESPONDENTS.

THE NEW PARK BILL.

IN a bill, reported by Senator Manderson on Friday last, we have an outline of the action recommended by the Senate Committee on Territories with regard to the Park.

This bill (S. 101) was introduced in the Senate Dec. 8, 1885, and was read twice and referred to the Committee on Territories. In its original shape it was imperfect, and we called attention then to some of its faults. It is now reported by Senator Manderson with a number of provisions struck out, and with several important additions. In this form it is recommended to the Committee on Territories for further consideration.

When it is reported in its final shape we shall lay before our readers the full text of the bill, but for the present the following abstract is enough.

Section 1 defines the boundaries of the Park, and authorizes the boundary lines to be surveyed. They are to be as follows: Beginning at a point on the forty-fifth parallel of north latitude, where that parallel is intersected by the western boundary of Wyoming, thence due east to its point of intersection with the meridian of 110° west longitude; thence due south five miles, thence due east to the meridian of 109° 30' west longitude; thence due south along said meridian to the forty-fourth parallel, thence due west to its point of intersection with the west boundary of Wyoming, thence due north along that west boundary to the point of beginning.

Section 2 is wholly new and treats of jurisdiction, providing that the Park shall be under the sole and exclusive jurisdiction of the United States; but that, if any offense be committed in the Park, punishment for which is not provided for by any law of the United States, or by any regulation of the Secretary of the Interior, such offense shall receive the punishment provided by the laws of Wyoming for a like offense in that Territory, and that for the present the Park shall constitute a part of the Third Judicial District of that Territory.

Section 4 sets aside the territory embraced within the Park as a public pleasure ground for the benefit and enjoyment of the people of the United States.

Section 5 authorizes the Secretary of the Interior to make and publish such rules as he may deem necessary for the preservation "of all timber, mineral deposits, natural curi-

osities or wonderful objects within said park, and for the protection of the animals and birds found" in it.

Section 5 prohibits the hunting, killing, wounding or capturing of any animal or bird, except dangerous animals, when it may be necessary to prevent them from destroying life or inflicting injury, and the capture of fish except by means of hook and line. It provides penalties for violations of the act, makes possession of dead bodies or parts thereof *prima facie* evidence of a violation of the act, provides that persons or transportation companies receiving for transportation game or fish which they know or have reason to believe were taken in violation of this, shall be deemed guilty of a misdemeanor.

Section 6 authorizes the Secretary of the Interior to lease small plots of ground for building purposes.

Section 7 authorizes the President to appoint a "Commissioner learned in the law," who shall be the judicial officer of the Park, and shall hear and try cases of violation of the law or of the regulations of the Secretary of the Interior, and gives him power to hold persons charged with the commission of felony. The Superintendent and the Park police are vested with the powers of U. S. marshals, or deputy marshals, and are also authorized to arrest, without process, any person taken in the act of violating the law or the Government regulations.

Section 8 provides for the payment of costs and expenses incurred under this act, makes the violation of the regulations established by the Secretary of the Interior a misdemeanor, and establishes penalties.

Section 9 authorizes the erection of a jail within the Park.

Section 10 authorizes the appointment by the President of a superintendent, and the appointment by the superintendent, subject to the approval of the Secretary of the Interior, of fifteen Park policemen, defines their duties and powers, provides that no growing timber nor hay shall be cut without the written permission of the superintendent, specifying time and place where it may be cut, and the amount.

Section 11 authorizes the appointment by the Secretary of War of an officer of the Corps of Engineers, who shall have charge of the improvements in the Park, and provides that all sums received by the Secretary of the Interior from rents, or from fines and forfeitures for violations of law and regulations, shall be applied to these improvements.

Many of the provisions of this bill are excellent, and it is by far the best and most intelligent attempt at improvement in the government of the Park yet brought forward. It is not without grave faults, but it is a great advance over previous bills. It is so difficult in the present confused state of things in Washington to obtain consideration for any bill in which there is neither money nor politics, that we may think ourselves fortunate if so good a bill as the one recommended shall pass. This bill, we understand, is in some sense a compromise, efforts having been made to conciliate all opposition.

The bill still contains a clause which virtually permits transportation companies to traffic in illegally killed game and fish without punishment. The words in lines 26 and 27 of Section 4, "Knowing or having reasonable cause to believe that such animals, birds or fish were" destroy the whole force of the prohibitive clause, and, as we have before remarked, will prevent the conviction of any one under this act. If the clause read, "Any person or persons, or stage, express or railroad company, receiving for transportation any of the said animals, birds or fish killed or captured in violation of this act, shall be deemed guilty of a misdemeanor," etc., the transportation companies would be forced to know that the game or fish which they took was legally killed, so that if questions were asked they could show themselves free from blame. They would therefore accept no meat about which there was a doubt, and the violators of the law would soon lose their market. We reserve any extended comments on the bill until we see it before the Senate in its final shape.

The enlargement of the Park, the definition of jurisdiction so far as it goes, the prohibition of hunting, the appointment of a Commissioner for the Park, the increase in the number of the police, and the enlargement of their powers of arrest, are all excellent provisions, though in many cases the act fails to satisfy those who are best acquainted with the Park, because it does not go nearly far enough in the direction of protection and improvement. At the same time it must be acknowledged that the recommendations of the friends of the Park have been patiently listened to and in many cases adopted.

It does not seem likely that any very serious alterations will be made in the bill in committee, and we hope before long to see it appear before the Senate for action.

LONG ISLAND STREAMS.

THE famous trout streams of Long Island are threatened with extinction. The bill before the New York Legislature to tap the brooks and sink wells in the counties of Queens and Suffolk threatens, if it becomes a law, to dry up the streams which give value to the surrounding property. We have before referred to the fact that they have taken the fountains which supply Lake Massapequa, one of the most famous trout waters of the island. We now learn that Mr. Pearsall Dorlon, of Hempstead, has begun an action against the city of Brooklyn for \$3,000 for damage done to his property through the draining of a trout pond by the Brooklyn Water Works Company, which has driven a well and established a pumping station near his pond.

There is no doubt that the growing city of Brooklyn needs water, and there is just as little doubt that the trout streams of the south side of Long Island will be but a temporary alleviation of the city's needs, and that, within five years after consuming all the brooks on the south shore, Brooklyn will then invade the north side of the island with its driven wells and pumping stations. This would bridge over the difficulty for perhaps five or ten years, when there would be a cry for more water, just as has been the case in the city of New York, which has absorbed the streams of Westchester county and now is wondering where the next supply will come from. Eventually these cities must be supplied from the Adirondack region at a great cost of labor and time. This work, if begun now, would require eight or ten years to complete, but would furnish an unlimited supply, especially if taken from those streams which flow into Lake Champlain and the St. Lawrence.

The worth of Long Island trout streams can hardly be computed in money. Much of the value placed upon some of the most beautiful lands on the island is based upon the spring brooks which flow through them. Some of these are owned by clubs and others by individuals, who would regard their property as practically ruined if these streams were diverted from their natural courses. If the evil ended there it would be great enough; but the great number of fishermen and oystermen in Great South Bay would find their occupation gone when these streams ceased to flow into the bay. The large oyster beds which give employment to hundreds of men, and have made a name for themselves all over this country and in many parts of Europe, would be things of the past. The Great South Bay itself without the supply of fresh waters which now flow into it, and swell the receding tides which keep its only inlet open, might be closed up, as Shinnecock Bay has been, and become a stagnant pool. After all this ruin has been effected, Brooklyn will then find her increasing population still thirsty and will be sighing for other streams to conquer.

Now is the time, before Long Island is ruined, to consider plans which will furnish a supply of water sufficient for a city of three times the size of Brooklyn. At its present rate of growth that city may reach those dimensions during the lifetime of men now mature.

RIFLE AND TRAP SHOOTING.

FROM here, there and everywhere over this country come indications of a very lively season before the butts and before the trap. Dozens of traps are upon the market and each maker reports a heavy sale and still heavier demand. Flying targets to be hit by the marksmen are put forth in a score of forms, while every little village and large town maintains its coterie of shooters, or better still a few clubs, ready to push this delightful outdoor sport through the medium of rivalry.

In the rifle field the attention paid of late years to the proper arming and drill of the State troops has its natural result in calling the attention of many men to the attractions of ball practice at the target.

The fact is that in the growing American love for field sports, for the reinvigoration which comes to those who get out into the open air and away from the brain-racking turmoil of the shop and office, in all this new life the merits of the shotgun and the rifle has been recognized. They afford a gentlemanly sport, free from many of the associations which make not a few of the open-air pastimes obnoxious to lovers of fair play. The man who takes his rifle for a short or long-range practice gets a delicious breath of fresh air. He may spend an afternoon free from any violent effort, yet with just enough of muscular exercise to send him home with a keen appetite, a bright eye and an assurance of a good night's rest. He knows that his success depends on the care with which he maintains a clear head ready to guide and direct a steady hand. This means care in his

habits in eating and drinking, of working and sleeping. Very soon he finds that he is enjoying better health, that he can despatch business with greater ease and yet find time for an occasional run out to the range. Such time spent is not time lost, and every year more and more of our citizens are making this discovery for themselves and acting upon it, hence the growth of the gun club and the rifle club, until our columns, crowded with the brief returns from many points, tell how many there are already in line for the season's sport.

With the prospect of having no great international rifle match during this year to overshadow all the smaller efforts, the present attention to the art of precision in firearms is all the more noteworthy. It is not in the line of a sudden fever or spasm, fanned up by the efforts of the newspapers, rather it is, as we have pointed out, the due development of the idea that it is good to have sport, and for men of sedentary habits beyond the age for active athletic endeavor, the use of the rifle or the gun completely fills the bill for a rational outdoor pastime. Nor is it a mere relaxation for the body. There is a wonderful interest readily excited in a thinking mind in studying out the cause and effect, the effort and result in all matters of marksmanship. A man may grow in skill, and this growth and improvement may safely be assured to him who will exercise care and thought in all his efforts. Every one may not become a leader in a certain line of sport. There is a natural aptitude or physical formation which marks certain ones as champions. Not so in shooting. With good weapons, proper practice, compelling success to spring from failure, there is no reason why any man should not rise into the front rank. If he does not it is generally because he will not.

A CENTURY OF EXTERMINATION.

IT seems quite probable that this Nineteenth century may be unpleasantly memorable in centuries to come as that in which many species of animate and inanimate nature became extinct. It has witnessed the extinction of the great auk, so utterly swept off the face of the earth that the skin, or even the egg, of one is a small fortune to the possessor, and it is almost as certain as death that in the less than a decade and a half that remain of it, the last wild bison will have disappeared. Reduced from the hundreds of thousands of twenty years ago to the single thousand or so of to-day, it needs not a third of the time to compass their complete annihilation. It is not improbable that the elk and the antelope will be overtaken by almost as swift a fate, and have passed away before A. D. 1900. The skin hunters, and, impelled by quite as ignoble and a more savage impulse, the game butchers misnamed sportsmen, are making almost as speedy way with them as they have with the buffalo.

In the untamable wilderness of the north, the moose and caribou may endure for many years to come, but this hope can hardly be entertained for the common deer, hedged as they are within their narrowing ranges by civilization, and mercilessly hunted by all methods in all seasons. They may outlast the century, but they will have become woefully scarce at the close of it, even in such regions as the Adirondacks, that seem to have been set apart by nature especially for the preservation of wild life, unless some better and more unselfish feeling takes hold of the people who should be foremost in protecting them.

The wild turkey is passing away, and it is a question of but few years when he shall have departed forever. In some localities the next noblest of our game birds, the ruffed grouse, has become almost a thing of the past, and in some years is everywhere so scarce that there are sad forebodings of his complete disappearance from the rugged hills of which he seems as much a belonging as the lichened rocks, the arbutus and the wind-swept evergreens. Out of all New England but one little island, and out of all the Eastern States, the besom of destruction has swept his kinsman, the pinnated grouse.

The woodcock is being cultivated and improved and murdered out of existence with clearing and draining and summer shooting, and unseasonable shooting is doing the same for many kinds of waterfowl. In the Eastern States a wild pigeon is a rare sight now, and has been for years; the netters and slaughterers have done their work too thoroughly.

And now gentle woman is making an end of the song birds that she may trick her headgear in barbaric and truly savage fashion. The brighter plumaged small birds are becoming noticeably scarce even in those parts of the country that the milliners' collector and the pot-naturalist have not yet invaded, and such as the scarlet tanager, never anywhere numerous, are like to be soon "collected" out of living existence. If they are to be saved, it is by no dallying, nor slow awakening of popular feeling in their behalf.

There will be pine trees, no doubt, for centuries to come, but who that live twenty years hence will see one of their grand monarchs of the woods towering above all other forest growth, or see any ancient tree, however storied or precious for its age and beauty and majesty and mystery of long past years, if it is worth the cutting for timber or fuel?

An old man may be glad that his eyes are not to behold the coming desolation, but he must be sad when he thinks of the poor inheritance of his children.

THE DOG SHOW SEASON is drawing to a close. It has been a very successful one.

The Sportsman Tourist.

A NIGHT AMONG THE KEYS.

IT WAS early, very early in the morning, when the forward hands, acting as cook for the time, turned out, and, in bare feet and with no unnecessary noise, proceeded to make a fire in the sand-box on the lee quarter of the sharpie, and brew a pot of strong coffee. For Captain Tarpon, after the manner of those who have lived long in the tropics, winds himself up for each day's run by a small cup of black coffee, taken the first thing in the morning. Lacking this, he is apt to get in a snarl and run down before night; and the cook, being aware of this, had a hand full of dry wood prepared over night and went about the deck silently until the coffee was ready, hot and black. Then he went below, where the captain was sleeping soundly, and sang out "coffee-e." At the word Captain T. opens his eyes, stares around vaguely, and finally, getting his bearings, reaches for the coffee and the tobacco bag with brown sugar in it and a tin spoon sticking out of it. Swallowing his coffee at a temperature that would skin an ordinary mouth, he follows the cook on deck, casts an eye to windward, to leeward and overhead, gets a pull on the dandy sheet, and hoists mainsail and jib; and, by the time the cook has swallowed his coffee, is walking the sharpie up to her anchor. The tide is full, the light breeze fair, and the upper rim of the rising sun is fast beginning to gleam through the orange groves and turkey oaks that adorn the little town of Dunedin as the cook lays coffee-pot and cups aside to take up the role of forward hands or crew. The anchor is speared and the captain performs the unsailorlike operation of shoving her nose off with a setting pole that the jib might fill, while the crew takes the wheel (represented by a crooked live oak stick), and the sharpie begins to go as she looks, straight toward the tall tripod that marks the entrance to Big Pass, five miles distant.

There is no need to follow the tortuous channel with its puzzling array of tripods, red boards and black crosses, which often fog even old coasters, for there is a rise of four feet on the shoals, and the sharpie only draws sixteen inches with her centerboard up. We can give her two feet of board safely, to hang on by. Very pleasant summer sailing it is on these inner waters, protected on one side by a line of keys and on the other by the main land. Not adventurous. No exciting thrashes to windward. There is danger—of getting stuck on the mud flats—and a light, serviceable setting pole becomes an indispensable nautical instrument when sailing among the Florida keys. From the North Anclote Key to Punta Rassa it is nearly all inside work, and the less water a cruiser draws the better for the comfort of the crew. Anything of the cutter type would be apt to spend half her time beam-ended on the flats. About the best cruiser I know on this coast is a yacht owned at Manatee. She is 19 feet long and has 10 feet beam, works well to windward and is very fast.

An hour of smooth sailing took the sharpie past the tripod at the entrance of the Pass. Fifteen minutes more and she swung to her anchor at the head of the Pass, with her stern line fast to the last mangrove at the outer end of the Pass, where there was a broad, free outlook over the crisp salt waves of the Gulf and a clean white beach within stepping distance of her starboard gunwale. The tide was flowing through from seaward, and large schools of mullet were swarming in to feed on the flats, carrying a visible wave ahead of them as they came, and constantly leaping out of water to escape the redfish and tarpon that prey on them night and day unceasingly. And these, too, have their turns at aerial gymnastics when the sharks, that attend on every school of mullet, make an indiscriminate dash at the whole array. The leap that a tarpon will make with a shark after him is almost marvelous; and I think he generally gets away, leaving his enemy to take it out of redfish and mullet.

As the intention was to spend an entire day and night at the Pass, stores were landed, and the captain volunteered to get breakfast while the crew took a plunge in the bright, clear water that was bubbling past the beach. "Don't go out in deep water, and keep an eye to windward," said the captain. "These passes are the hunting grounds of sharks." The crew "shucked" himself and plunged under the counter of the sharpie, came up, shook the water out of his eyes, and struck out for the beach at his best speed and with much splashing withal. For he had seen the black, sickle shaped fin of a man-eater coming his way swiftly, and he is a man who has a high respect for his legs, depends a good deal on them, in fact; so he landed rather hastily, and as he turned to look, there were the ugly jaws and cruel eyes of a shark within a yard of the beach. The crew muttered "dammm!"

"But nothing else; the time for words was o'er."

Provision boxes, blankets, guns and canoes were snugly berthed in the shade of leafy mangroves, and the captain had the breakfast ready by 8 A. M. There was nothing specially notable about the breakfast, unless it may be the appetites with which it was eaten. Bacon, eggs, hardtack, butter, potatoes and coffee. But in outing there should be fish or game at each meal, as the crew ventured to remark. He also mentioned the fact that he had good fishing tackle along, and intended to launch the Bucktail after breakfast for an hour's trolling up and down the channel. The captain volunteered some advice. "You can try it if you like, but, if I were you, I wouldn't. You can hook a redfish, no doubt, and he is as likely to weigh thirty to forty pounds as less. Then what becomes of your tackle? And if you hook a smaller one that you can handle, the sharks will mitten on to him as soon as they see him in trouble, and way goes the whole business. Wait till the tide goes out and you will see the flats speckled with beach birds, snipe, plover, curlew and others. Working the Rushton as you do with the one-handed paddle and sitting flat on the keelson, I should think you might sly up to a flock of birds and rake enough at one pop to supply the camp all day. Meantime we can take in some surf bathing and pick up all the shells we want on the outer beach."

The proposition seemed so reasonable that it was assented to at once; and dishes were quickly cleared, stowed away and a dense smudge started to windward of the camp to drive the key mosquitoes, which were getting bad, and the party started for the head of the Pass.

On rounding the point where the channel begins a sight met the eyes of the crew that made him clutch his gun nervously and long for the power to make himself invisible. For on a long, low sand spot that ran off from the shore diagonally, there was such an aggregation of shore birds as one seldom sees. There was a fine and varied assortment. Snipe, plover and curlew, brown and white sickle bills,

sheerwater, willet, etc., all flanked by a solemn-looking line of pelicans. But there was nothing whatever to blind the approach of the gunner, and a man—even a small man—looms up so ridiculously large on a background of white sand. The crew dropped flat and spread himself thin as three shilling molasses, but in vain. They took flight while he was far out of shot and left the shore birdless. A couple of hours were spent very pleasantly gathering shells and splashing in the surf and then back to camp. The tide was already running out strongly, and wherever the flats were bare the birds were gathering rapidly. They came from all quarters and seemed quite tame, not having been fired at probably, though one shot would be pretty certain to chey the whole gathering and clear the flats of birds for half a mile in every direction, not to return until next tide. Under such circumstances it seems a pity to shoot, unless the camp be a trifle short on meat.

There was an extensive flat on the opposite side of the channel that seemed to be a favorite feeding ground for willet and plover, and when the tide was low and the birds had gathered in hundreds at least, the Rushton was launched and the crew began to work her slowly and silently over the flats. Sitting low and using only the small one-handed paddle he was able to get within thirty yards without scaring a bird. Then the paddle was left overboard to tow by its bit of fish line while the gun came slowly to its place, and then there was a roar that sent every bird out of sight in about one minute, all, save five unfortunates that got left on the sand. These were fat and tender, and they were sufficient for present use. The crew paddled over to camp, lamenting that only willet and plover were to be had, while on a distant flat there was a grand flock of roseate spoonbills, looking like a company of soldiers in pink uniform. They are the finest shore birds on the coast, but wary and difficult to approach. They are called pink curlew on the gulf coast.

The dinner was a success; and then came the question of how best to fill the time until evening. It may be well to explain that the key, at the south end of which the sharpie was anchored, is about fifteen miles long, and bears the euphonious name of Hog Island. The island is nowhere more than a mile in width, and at the middle narrows to a few yards, with an easy carry across from the bay to the open coast. It is a favorite resort for sailing parties from Anclote and Tarpon Springs, who usually land at the carry, and spend the day picnicking and gathering shells on the outer coast. Like most of the Florida keys it is largely covered with mangrove thickets, but near the south end the land is higher, and here there is a strong growth of live oak and pine, grapevines and cabbage palmetto. This is the pleasantest part of the island, but the distance being rather too great for a day's outing, parties usually land at the carry, six miles above the Pass. To the northward of Hog Island there is open water for five miles, and a strong westerly wind sweeping in from the gulf makes it rough on the bay for small boats or canoes. North of this open space lie the Anclote Keys, the largest of which is six miles in length, with a high, pine-crowned rise and a well of good water. The surf bathing here is excellent, but every party that goes out to the keys for an outing seems to have "shells" on the brain, and the beach at Anclote Keys is not a good place for gathering shells.

Both at Hog Island and Anclote may be seen the charred remains of a very small settlement. A quarter of an acre of rough clearing, blackened stumps, half-burned logs, etc., denote that somebody has had the temerity to brave the key mosquito in an attempt to live on the keys. You wonder at this, until you are told significantly that there may be worse things than black mosquitoes, that the Southern Confederacy in its last years enforced the conscription without mercy or conscience, and that these keys made the very best of hiding places. Here the refugee could smoke the pipe of safety as he calmly watched the searching party row out from the mainland. When they came too near for fun he had only to walk off to a hiding place where a score of men could not find him in a month. But they could and did find his camp, and burned it, usually. Sometimes, not often, they caught him, and it was a hanging matter when they did. If the Confederate service was worse than a life on the keys of the gulf coast it must have been bad enough, that is, in mosquito time.

July and August are the mosquito months, they will tell you. But the black mosquito is omnipresent and ubiquitous. He will come buzzing around your head in a warm camp on nights when the thermometer stands at 28°, and you need not take the trouble to put up mosquito bars. He will go through the cloth like a flea, and he always gets to business on the instant of his arrival. He is poisonous, virulent, persistent, and oh, so numerous. He renders the Florida keys uninhabitable, which, but for him, would be most delightful summer resorts. In short, the black, or key mosquito, is the demon of the mosquito kingdom.

The cook did not know this, though he thought he knew all about mosquitoes. He had fought them in Michigan, in Jersey, and even in the Amazon Valley, and had always pulled through in pretty good shape with the aid of punkie dope and nets. Was it likely he was going to be beaten on a shallow, skiffy coast like this? And so, setting aside wider and wider knowledge, he insisted that the sharpie should anchor in the channel, some 300 yards from the nearest key, where one could see the sun set goldenly, gloriously, over the tumbling breakers of the outer reef, and watch the immense schools of fish that come in through the pass with each incoming tide.

"We will anchor just where you say," said the skipper. "But I think you will pine for wider water."

The sharpie dropped quietly down the channel, and was anchored just as the cook desired. And the sunset was a glorious one; and the fish came on in ponderous, dense schools, so heavy that speed seemed impossible, and escape from their numerous foes a helpless attempt.

Also, as darkness came down on the face of the waters, it brought such clouds of black, active little mosquitoes as that misguided cook had never before seen. He tried a smudge, but the vessel was short of the proper material for smudging, and the insects did not mind it in the least. Then he got out an open sack of mosquito netting rigged with a shir string to close around the crown of the hat, while the lower end was to be tucked snugly under the coat collar. And in five minutes the little demons were plentier inside the netting than out. Then he tried the fly medicine, composed of tar, castor oil and pennyroyal. This he considered unfailing, and he gave himself a most liberal coating on every inch of exposed skin. The mixture was sticky, and in a few minutes his face and hands were black with the countless thousands that got mired therein; and still they came, thicker and faster. They filled ears, eyes and nostrils; they got in their irritating work in spite of any fly medicine, and they

made life a burden grievous to bear. Lastly, that unhappy cook tried swathing himself head and ears in his blanket. This was more nearly effective than anything else, but when the blanket was drawn snugly enough to keep out the insects breathing became very difficult, and at the least opening for air they swarmed in with fresh vigor.

The cook wilted. "Captain," he said, "I think I am beaten."

And the skipper responded, "I told you so," a phrase that has comforted the afflicted since the days of Job.

All night that miserable cook sat on the port quarter of the sharpie, swabbing himself with strong brine and smoking strong tobacco. His only consolation was in watching the countless schools of fish that were every minute leaping and slapping about the vessel; and this soon became monotonous; it was the same thing over and over again; first, a slowly advancing, phosphorescent wave, suddenly breaking into thousands of glinting, shining white sparkles as the reddish charged the mullet, the tarpon made a dash at both, and the sharks wound up the confusion by dashing at the whole on general principles; then silence.

"And this," mused the cook, "is going on this very hour all along the gulf coast, and has been going on daily for God knows how many centuries. And yet, the mullets kept their numbers good until the arch destroyer—man, the white man—entered the lists with modern appliances and inventions for scooping the luckless fish by millions. Already the oldest and most observant of the old fishermen along the coast will testify that the supply of mullet has diminished more than one-half, and there is no more need of the law against using the mullet as manure. The difficulty at present is to get sufficient for the food supply; and the coast fisheries often fail in that. And like the salmon and brook trout of the East, or even the mackerel and lobster, the mullet must go."

"It is not that the strong devour the weak, or the big fish eat the little ones; that is Nature's law of compensations, and her balances always hang level. The savage man lives for the most part on fish and game, but Nature counts him in as a leading factor, and the woodfolk and water kelpies keep their numbers good for long centuries—until civilized men come to the front, and then? They vanish like the mists of the morning, in spite of all laws for their preservation. It is true that from the days of Pharaoh to the present time the strong have devoured the weak,—and—dammit," he interjected, as a black cloud of mosquitoes fresh from the nearest key swept into his face, "the weak have had their innings about as often. But lice and frogs are respectable compared with key mosquitoes. I wonder is the afterguard really asleep, or only shamming?"

For the skipper had swathed himself tightly from crown to heels in that wonderful blanket with the blue check and was stretched to his full length on the after-house, snoring peacefully. Lying on his back, with his feet elevated perpendicularly, he looked in the dim starlight like an Indian mound, with a pair of headstones at the wrong end of it. "When he is sufficiently asphyxiated," muttered the cook, "I'll roll him overboard." But he did not asphyxiate. He had served time on a North Sea whaler and had studied the mysteries of suffocation in Esquimaux igloos; wherefore, after sleeping for more than an hour he was able to emerge in a fresh condition, considering the weather, and to take a smoke, a cooling wash in the sea water, and another nap. This he repeated at least three times before a faint rosy glow in the east gave "hint that the sun would shortly come that way." Then he arose like a giant refreshed, folded the marvellous blanket, and prepared to get the sharpie under way, while the cook started a fire in the sand-box and brewed a pot of strong, black coffee.

It is five miles from the head of Big Pass to the anchorage off the bluffs of Clearwater Harbor, and with a light sea breeze the sharpie glided over the smooth bay like a white-winged ghost, and turned to look at her anchor with the ease and grace of a—wild goose.

Then the cook paddled ashore in the light canoe, intent on getting even. Skirmishing along the bluff among the live oaks he soon gathered a supply of dry punk, and came back prepared to rout the enemy by final and effective smudging. Something like a peck of dry, pulverized mulch was built into a pyramid on the biggest frying-pan, moistened with sea water, set on fire and taken below, chock forward to the eyes. Below decks the air was turgid with the little black demons, and there was an incessant metallic, low hum, like the sighing of a harp string. But it did not last. Never since the first decked vessel was launched was the hold of a ship more thoroughly filled with a dense volume of smoke than was the cabin of the sharpie on that morning. The key mosquito can stand more smudging than any other winged insect; but there is a point beyond endurance even for him. Slowly, in a black, buzzing cloud the enemy rose through the fore hatch or fell back *en masse* through the companion way. He hung like a dark mist on the quarter of the vessel for awhile; but it came too thick, and with heartfelt reluctance he let go and drifted landward.

The cook took heart of grace to get up a good breakfast, and willingly fell in with the proposition of a final run ashore at Clearwater; for there were some old coasters whom he wished to interview, and the skipper had kindly agreed to look them up for an introduction—the mode of which, as it struck the cook, was, to say the least, a trifle unique. It was about like this: "Cap'n Topliff, let me make you acquainted with my friend 'Nessmuk,' who is down here for a cruise in the lightest canoe ever built of cedar. He and I represent the two extremes—the Head and the Tail—of American canoeing."

"H'm-m," mused the cook, "He and I, the Head and the Tail."

"Very good; but it must be 'very self denyin' o' you,' this constant allusion to yourself as 'The Tail,' my dear captain."

Clearwater has natural advantages which render it very popular as a winter resort, not only for Northerners, but for Southern people as well, who come there from malarial districts to recuperate. It is high, dry, healthy, and has the unusual advantage, for a gulf coast town, of being easily accessible by water. It is handy to some of the finest keys, and also to good shooting for beach birds. But the hunting for deer, turkey and even quail is poor. There are two good hotels and—high prices.

A well-known Boston yachtsman sums up the advantages of Clearwater Harbor about like this: "I like Clearwater because it has the finest outlook of any town on the coast; there is capital sailing, either inside the keys or on the open gulf, and it is a place you can always get away from."

Late in the day the skipper and cook met on board the sharpie and prepared to stand up the coast with the flood tide. The former had visited all his Clearwater acquaint-

ances; the latter had buttonholed every old coaster, wrecker and sponger at all available, and had listened to some strange yarns; what is more, he had believed them. As a rule, the old coaster is the most prosaic, matter-of-fact, unimaginative being you can meet on the outskirts of civilization. Mud flats, mangrove swamps and saw-grass marshes are not conducive of romance. It takes a mountain man to develop a grand lie. The ghost of Munchausen dwells in the Rockies.

As the sharpie glided quietly along the coast while the sun was making a very creditable exit behind the tumbling breakers beyond the keys, the skipper asked with a grin: "And where shall we anchor to-night?" And the cook answered, sadly: "Anywhere, anywhere—off from the keys."

TARPON SPRINGS, Fla., Aug. 25, 1885-April 10, 1886.

Natural History.

THE BIRD AND MAIDEN.

[Inscribed to the AUDUBON SOCIETY.]

SWEETLY in the quietude
Of a leafy solitude,
In the after glow of day,
Like an angelus of old time,
Echoed clear a rippling rhyme
From a song bird on a spray.

And a maiden came, demurely,
To the woody way securely,
As in cloister walks the nun,
And she heard with no evadence
Every trill and every cadence,
'Mid the shadows falling dun.

Plaintive grew the wilding note
From the pretty singer's throat,
Pensive grew the maiden's mien—
Now she paused with look agast,
As the startled bird flew past
And no more was heard or seen.

From her head a branch had riven,
And a vengeful toss had given,
Hat on which a bird was placed:
Bird like that whose vesper song
Lured her feet thus far along—
Stood the maiden as disgraced.

For she rock'd the cruel fashion,
That with her had grown a passion,
Thus to wear the sweet birds slain,
And by contrite pangs reproved,
Tenderly the bird removed
From the hat where it had lain.

Then a grave she deftly made it,
And within she gently laid it,
In the silent sylvan shade.
And returning thence she pondered
Of the lives her sex had squandered,
Of the desolation made!

Prithce, women, look and listen
Where the dew-sprent daisies glisten,
Where the woodland shadows fall!
Miss ye not the flash of wing,
Miss ye not the gladsome ring
Of the birds' entrancing call?

Plitful and plaintive note
Ye may hear from hermit throat—
'Tis the requiem for the lost!
O forsake thy cruel quest,
Spare the birds and guard the nest,
Or ye cannot count the cost.

O. W. R.

THE AUDUBON SOCIETY.

ALTHOUGH the movement set on foot by this Society for the protection of our birds is universally approved as a whole, every clause of our pledges is objected to in turn by the offenders against that particular clause. The boys who find their recreation in bird nesting, and who flatter themselves that making collections of eggs is a scientific pursuit, approve warmly of pledges one and three, but suggest that bird nesting for scientific purposes should be exempted. Another body of our supporters suggest that pledge one should exempt all noxious birds, by which is generally understood hawks, vultures, owls, crows, jays, etc., while many ladies are not without a protest against what they consider the too arbitrary provisions of the third pledge. Some of them are content with claiming exemption in respect of the feathers already in use, a claim with which one can sympathize readily in all cases in which discarding their feathers involves an expenditure of importance to the persons concerned; but others go further, and argue that although it is a shame to sacrifice ten million birds annually to meet the demands of fashion, it were a sin and a shame, now that a year's stock of skins has been accumulated, that the ten million lives needlessly sacrificed should be sacrificed in vain. These last plead of course that existing stocks should be utilized, and further slaughter put a stop to by penal legislation. To the reply that penal legislation will be ineffectual, as long as the demand is continuous, they turn a deaf ear. They understand reason of course—what American woman does not?—but they will not listen to it.

The AUDUBON SOCIETY has set itself a great task, but it is evident that it can achieve nothing if it yield to every plea for exemption. It is not a body of unreasoning sentimentalists; the movement was inaugurated by scientific men on purely economic grounds. They see evil, very serious evil, threatening to amount to a national calamity in the annual destruction of from ten to twenty millions of birds to gratify the passing vagaries of the generation. They have not taken up the question as to whether there is anything shocking, cruel, or revolting in the needless sacrifice of this enormous measure of bird life. That is a point for the consideration of the moralist, and it is a point well worthy of consideration in the training of children, whether they can be made participants in a needless sacrifice of life without blunting their finer sensibilities. But setting this aside, it is evident that this destruction expanded to meet an almost universal demand, has already been carried far beyond the recuperative powers of nature to replace. In our own country the concurrent testimony of old residents all over the land is, that all the once familiar species of birds are disappearing. The demand exceeds the source of supply, a condition which cannot fail to lead to the almost total extinction

of our birds, with all that is involved in so serious a disturbance of the balance of life. It is not merely that ten millions of birds will eat billions of insects in a year. That is easily calculated. The unknown quantity, the problem for which the present fashion is preparing a practical solution, is the extent to which insects, now comparatively rare and unnoticed, would multiply and ravage the land if the birds which prey on them were utterly or nearly annihilated. To arrest this destruction of our birds is the object of the AUDUBON SOCIETY, which calls on all who have hitherto been thoughtlessly contributing to bring about a condition of things, the evils of which are inestimable:—to pause before it is too late. The greatest drain upon our birds is for feather millinery. Excepting only the ostrich feather for which no artificial substitute could be provided, and the wearing of which is encouraged by the AUDUBON SOCIETY, as tending to support an important industry, and to perpetuate these birds, which would soon be extinct if they were not domesticated, there is no other class of plumage indispensable to millinery. Good artistic effects can be produced by choice varieties of feathers, but equally as good effects can be produced with the products of the loom and other artificial substances, and the first important consideration is to awaken popular sentiment to the desirability of a change of fashion before the nation shall be visited with a just retribution for reckless disturbance of the economic laws of nature.

To the egg collectors for scientific purposes we say: Do your part to arrest the threatened wholesale destruction instead of aggravating it, that your boys after you may be able to study ornithology from living specimens, and not have to read of the now familiar song birds of the grove as recently extinct species.

The destroyers of noxious birds, as they choose to style all predatory birds, stand on somewhat different ground from the egg collectors and the plumage wearers. They take the stand that noxious birds are of no value in the economy of Nature, but are destructive of the species we are mainly desirous of preserving. To a very limited extent this is true; but while the evil these birds perpetrate is readily appreciable, the advantages they confer on man are not at all patent to the casual observer. That shrewd observer Eliza Slade says he knows no American bird that is not more beneficial than prejudicial to the farmer, and such would be the general verdict if every one observed as carefully and dispassionately as he. All these so-called noxious birds prey to a certain extent on small reptiles; but they also prey to a very considerable extent on reptiles, mice, and the larger insects, which but for them would increase madly and perpetrate untold havoc on the farmers' crops. To the destroyers of predatory birds we say: Join the Audubon movement and aid in checking the present wholesale destruction, and stay your hands from the attempted extermination of your pet aversions until the old conditions are restored, after which the AUDUBON SOCIETY will gladly investigate all charges against hawks, crows or jays, and give an unbiased verdict according to conscience.

If the Audubon movement encounters passing difficulties, these are liberally compensated for by the daily evidences we receive of a general readiness to make sacrifices to principle. The two letters we publish to-day, one from an intelligent schoolboy, the other from a simple New England maiden, indicate traits of character which the nation may well be proud of. As long as such types of humanity shall be common in the land, there is little fear but that the nation will pass triumphantly through all the difficulties that beset the unparalleled development that awaits it. That such types are common, the success of the Audubon movement bears ample testimony. We are not simply collecting in one fold all the friends of the movement, but are making converts to it on a large scale among those with whom conversion means in all cases a measure of self-denial.

One secretary writes: "There is no difficulty in getting any required number of pledges signed, but I make members only of those who have been persistently violating the pledges." Another secretary contributes, among others, a red Indian as captive of her bow and spear, and although her little daughter attempted to discount the conquest by remarking that it was a tame Indian, there is food for reflection in his having become a member of the AUDUBON SOCIETY. On the same day we enrolled an actress of distinction on the Boston boards on our list of members, and the movement is advancing in an ever accelerating ratio. Our confidence in the ultimate results lies in the fact that wherever we secure an energetic and influential secretary, success follows in the ratio of energy displayed, and although a great many ladies are bargaining for the privilege of wearing out the feathers on hand, we believe that the fashion has received a blow from which it will not again rally.

Editor Forest and Stream:

I desire to be secretary in the village of Elmwood if no one else has applied for that position. As soon as I have finished this letter I will burn up all the feathers I have.

BERTHA PAINE.

P. S.—My mother and I have stripped our hats and bonnets of feathers of every kind and burned them. B. P.

ELMWOOD, Mass., April 13.

Editor Forest and Stream:

Having seen so much in the newspapers this last few months about the AUDUBON SOCIETY and the cause for which they are working, I resolved to give up collecting birds and their eggs. So, after consulting some of my companions, we resolved to try and become members of your Society and to aid in trying to protect our birds. So please send me circulars of information and about one dozen pledge forms.

LOUIS J. TOWNSEND.

BLOOMSBURG, Pa., April 26.

A meeting of the Sorosis was held on Monday last at Delmonico's. The chairman, Mrs. S. E. Youmans, introduced the question for discussion which read as follows:

Resolved, That the destruction of the native birds, for which women are largely responsible, is an injury to the welfare and beauty of our country.

A report of the meeting states: The first paper was by H. H. Miller (Olive Thorne), "June with the Birds," which was an earnest protest against the sacrifice of bird life. The next paper was "A Birdless World," by Hester M. Poole. Mrs. Poole offered the following resolutions:

Whereas, The destruction of our native birds, largely for purposes of adornment, has reached an extent calculated to alarm the lover of nature and the agriculturist, be it

Resolved, That the undersigned members of Sorosis and their friends pledge themselves not to use the plumage of native birds in any manner whatever;

Resolved, That we forward our names to the AUDUBON

SOCIETY to be enrolled among the members of that society. This bird-killing question was agitated in Sorosis two months ago, and many availed themselves of the opportunity of signing these resolutions. A letter was read from Miss White, an officer of the AUDUBON SOCIETY, in which she said if no more birds were killed in this country it would take four generations to replace the birds that had been destroyed in the last four years. The ladies condemned the English sparrows as foreign intruders and a nuisance.

A TAME SQUIRREL.

"KELPIE," who writes of pet squirrels, brings to my mind the hours of real enjoyment I have had with the king of all pets, a tame gray squirrel. When a boy, my brother and I caught one about half grown, and after a few weeks' confinement we allowed him to come out of his cage and play in the kitchen, first making sure that all doors and windows were made fast. It was not long before he became quite tame, and would allow us to handle him without showing any resentment. As winter approached he discarded his cage altogether, and it was amusing to see him demolish old newspapers to make himself a nest in a large kettle which was kept under the sink in a back room. Boy like, I imagined he would sleep cold there, so after much coaxing my mother consented that I might take him to bed with me, and from early winter till the warm days of April I did not retire for one night without my Curly nestled by my side, warmly tucked under the clothes. If by chance his inclination led him to take a run about the farm house chamber, he never forgot which side of the bed I lay on, and always came creeping under the clothes and remained till I was dressed, and then would perch on my shoulder for me to take him down stairs.

Then the music would commence. First the dog and cat had to be looked after, and I doubt if ever any poor dumb animals lived in more mortal terror than did that dog and cat. Many were the times I have taken the part of poor Tabby as Curly would be running her in the back room, over the sink, around the big arch and oven, over the big cupboard, till the poor cat would be nearly winded. If, perchance, poor Major so far forgot himself as to go to sleep by the open fire, his dreams were always haunted by the spirit of a wicked squirrel, and he would always awake with a yelp, and the shadow of a tail as it flitted under the table told the cause of his troubled dreams. If we had company Curly did not need any introduction. He would take his stand of observation, and after a thorough inspection his first thought would be to show them what he could do. Talk of the spoiled child of the family, that squirrel was master of that house and yet as gentle as a kitten. No animal lives, I believe, so playful and that shows so much cunning.

Pumpkin seeds were his weakness. If I wanted him to go to the barn with me, a few seeds closed in my hand furnished an attraction which he could not resist. The old ink peddler who was showing his samples on the kitchen table was surprised to hear a crash and to find while his back was turned that his squirrelship had made love to the choicest sample, and only failed of capturing it by its being too heavy for him to carry.

Of all my pets, of which I have had many, none will ever take the place of that squirrel. As the warm days came, and the snow disappeared, with windows and doors thrown open, he would get lonesome, and would try the wood pile, then the fences, always being careful to see that the coast was clear for a shelter in the house, should danger approach, but he gradually went further till he would be gone an hour, then a half day, then all night, at last he was gone a week, and when he returned he showed that the natural instincts of his animal nature was fast developing and it seemed too cruel to confine him again, so we let him go, and it was not until late in September that he came back, perhaps to take up his abode with us again. But the mischievous curiosity of a tame crow was more than he could stand and he disappeared again only to be seen thereafter occasionally in the woods. MILL.

EELS IN WATER PIPES.—*Editor Forest and Stream:* While looking on at the flowing of a street hydrant, corner Broadway and Walker street, I was much amused by seeing an eel over two feet long make its appearance, and squirm up Broadway in the company of cabs, trucks, etc. It was finally captured by a laborer, who carried it off in triumph. Has this fish attained its growth in our water pipes? If so, how could it manage to exist on our clear, clean Croton?—ERNEST F. THOMAS. [Eels have been known to live in water pipes for a long time and to have grown while there. They love to hide and can find food in the dark.—ED.]

TAME RUFFED GROUSE.—*Morris, Ill., May 1.*—I saw a pheasant or ruffed grouse on the 25th of last month at the farm house of S. Hage, in our township, that has been a frequent visitor in the door yard for the last three years. The bird has become so tame by kind usage that it will take food from the hand and jump up on the lap of a person without any apparent fear. It is not so familiar with a stranger, however. It is without doubt a female, for the black feathers on the neck are wanting. In the hot season and when its food is plenty it absents itself for months at a time.—M. H. CRYDER.

SPRING NOTES.—*Fairhaven, Vt., April 5.*—The season here is very far advanced, being fully three weeks earlier than last year. Robins made their first appearance on the 16th of March, about dusk. Crows, ravens, bluebirds and blackbirds are all here, making the barren woods and marsh ring with their notes. Ducks and geese have been going north for over two weeks. Only one duck was shot that I know of and that was a fish duck and had a young sucker over seven inches long in his throat.—NED.

IT IS A LIBERAL EDUCATION.—While I had a lame back I availed myself of my enforced idleness to faithfully read the back numbers of *FOREST AND STREAM* since Sept. Sometimes they accumulate as in this instance, but sooner or later I read them from cover to cover. I am more and more impressed with the value of this paper, which I have taken since its first issue. It contains a world of information for the scientist and the layman; its character is of the highest order, making it, aside from being the best paper for the American sportsman that is published on the globe, an excellent family paper, as an educator of the young. In fact, if one reads it faithfully and understandingly, he or she will receive a liberal education. "Yo" and Nanny are particularly happy in their present series, but one cannot discriminate where all are so good.—C.

Game Bag and Gun.

THE TRAJECTORY TEST.

THE full report of the *FOREST AND STREAM*'s trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

IN THE WILDS OF ARKANSAS.

[Extracts from a letter written by a sportsman to a sportsman and here printed for other sportsmen.]

ON Thanksgiving Day, Nov. 26, a party of sixteen, including two cooks, boarded the 4 o'clock west-bound train at Elkhart, Ind., bound for Brinkly, Ark. There were two cut-in-two boats, six tents, boxes and barrels of provisions, guns and dogs. And such a lay-out of dogs one does not see a second time in a lifetime! Three setters in which setter blood predominated, though mine showed unmistakable signs that some of his ancestors had been badly frightened by a pointer; a half-bred spaniel bitch, a French dog of unnameable breed, two hounds, and a "flee." We arrived in Weiner, Poinsett county, Ark., on the 28th, in time for breakfast. I had been told at Cairo by the agent of the Texas & St. Louis Railroad that the fire had traveled over hundreds of miles of prairie and forest, including the territory about Weiner; also that a deputy sheriff had been collecting \$12.30 from every man who landed there with a gun, as a license fee for non-resident shooters.

On arrival I immediately interviewed the constable, who was at the same time the station agent and postmaster, in regard to the license; looked over the law in his book where the page showed unmistakably that he had showed it to several before. He said he could see no way to avoid paying the fee.

I hired a mule team and lumber wagon, drove fourteen miles across country to Harrisburg, where I met the sheriff, who, in Arkansas, is the collector. He appeared to be a pretty good sort of fellow, listened to my arguments on points of law, then gave me a written statement over his official signature, that in his opinion only those who followed shooting, etc., for profit, and not those who came in for a few days' sport should be made to pay a license fee. We were never molested. When I got back that night I wrote a long letter explaining the matter to the General Passenger Agent at Texarkana, and simply suggested that should the railroad company see fit to discharge their agent at Weiner, Mr. George Phillips—a native—would fill the bill. When we came away Mr. Phillips was the station agent.

Sunday we went into two camps about a half mile apart. Quail were to be found in fair numbers, but the deer people who reside on the edge of the prairie had put out strychnia (a native called it "strike 9") to poison wolves, and as it was put where the quail were, our dogs were in danger of getting it, and so we decided to move camp. K. and C. went to find ducks, as there was no water, consequently no ducks, where we were, while Tom and I, taking blankets and provisions, shouldered our guns and made a break eight miles into the woods, where deer and turkeys were said to be very plenty. We started after dinner following the "blazes" and along toward night arrived at a clearing of perhaps forty acres; there dwelt in primitive style Mr. M. S. Cox, formerly a captain in the Confederate army, an Alabamian, and jolly good fellow to boot. Adjoining him was Philip Hanes and his sixteen-year-old son, who had come from Ohio a year before on a hunt, found good land cheap and had never been back. The two lived in a crude log hut, doing their own work, for the mother was dead. Hanes turned out to be a whole-souled man—one who can be relied on, and the best woodsman I have ever met. He can call a sitting turkey off his nest, while the gobblers blush with envy at his beautiful notes, especially when he slaps the ground with his old hat, imitating the noise made by them while fighting. He carries a .45-75 Winchester and doesn't need a rest to shoot it, in fact he is old "Deer Slayer" himself.

About this time you are saying, "Why in thunder don't he get down to hunting?" Well, hold on, I cannot put the top rails on the fence first.

That night H. steered Tom and me to a place where deer sometimes passed, but they didn't pass then. On our way back to H.'s, Tom, who was a few rods to my right, called out, "Come here, Doc, quick, and see what I have found." Sure enough, he had found—C., on a stub ten feet from the ground, where he too was looking for deer, and K. was near at hand. They had started for the St. Francis region, but hearing from a reliable source that there were no ducks there, and that we had gone where game was plenty, concluded to join us. They stopped with Cox, while Tom and I spread our blankets in Hanes's bunk on a pile of millet straw, and slept the sleep of tired hunters.

Early the next morning, after a brief breakfast, we followed H. three miles N.E., where he perched me on a bent hickory, ten feet from the ground, and Tom about forty rods away, while he, bidding us keep still and look out sharp for deer, loped off into the slough (slew in the vernacular) just to see if there were any turkeys about. Standing on a log in mid air with nothing more exciting than expectation is not calculated to unstring one's nerves very much, and so when, after a half hour's waiting, I heard H.'s Winchester crack, I was all eyes and ears. Soon I saw four big turkeys flying toward me, but they turned off and lit within rifle range, too far away for my open bore shotgun. While I was debating whether to get off my roost and attack the turkeys on their's, Hanes's gun spoke again and another bird came toward me. Hastily changing shells in my right barrel, 5s for solid ball, I caught her away above the tree tops. Not a fatal shot I feared, for she lit on the first limb in her way, and whether her teetering motion meant fall or fly I didn't wait to inquire, but sent a charge of buck shot which was enough to settle the question, for she fell, not with a "dull, sickening thud," but ker-plump! Hastily loading again, I was just in time for another that flew almost directly over head, but at great height, so that the 5s did not do her up very bad, as she jumped for a run as soon as she struck the ground, about eighty yards away. Again the buckshot went on their mission, and another turkey would pluck no more grasshoppers from the "sweet potato vine." And still those four sat in the tree unmindful of the holocaust of death around them. Sliding carefully down from my perch, I made my way toward them as carefully as possible; but about then they got word to go on an important business trip across the "slew," and they still live, I presume. I picked up my birds and put them at the root of the hickory and resumed my elevated perch, when Hanes

appeared with two nice birds, one a gobbler. He was somewhat surprised at seeing the fruits of my firing, but not as much as was Tom, who came up then and wanted to know what we were wasting ammunition on. He hadn't seen anything to shoot at but squirrels. Then H. took us into the slough, where K. and Charley Cox joined us, the latter with a fine gobbler he had shot only a few minutes before. H. placed us in ambush and began "yawping." Yawp answered. Bang! bang! from K.'s gun, and we were all on hand to witness the death of two more, and K. said: "There they are. Killed one with each barrel. Would have killed another if I'd had another barrel. Take 'em if you want 'em, Tom. I've no use for them." But "alle samee," he was ready to lie low again while H. called. This time the bird came shyly toward me, and as he presented his breast, I gave him a charge of five's at forty yards, and such a flopping and pounding as he made! A good twenty-pounder with an elegant beard—a noble bird! This ended the hunt for the turkeys, and no more game came to bag that day. But how tired and hungry we were when we got back to camp! I had dined on three little crackers and a few persimmons, and when Hanes said supper was ready, Tom, K., and I were not long in responding.

Now about that supper in the log hut. Our friends say that hunger had so sharpened our appetites that anything would have relished—allowed. But I leave it to you to decide if we did not have a good meal. H. skinned the turkeys, cut out their breasts, sliced them across the grain like steak, rolled them in flour and fried them in butter. I baked buckwheat cakes (Hecker's self-raising flour) and Tom made coffee. A can of nice peaches furnished dessert. There! What matters it now that we had no snowy linen spread upon the rough boards that formed our table? That our chairs were made from "shakes" and our coffee cups and plates were tin? What mattered it then? I have eaten a Christmas dinner at the finest hotel in London, I have dined at your famous Palmer House, I have eaten old-fashioned New England dinners at home—down East; but I had never eaten such a meal before. Even now my mouth waters for the savory viands.

The next day we sent Charley Cox down to our camp, carrying three turkeys to the boys with word to get a team and join us, which they did the next day. Two tents, twelve feet apart, facing each other, a fly stretched overhead between them and a smaller tent just to west of the fly, formed kitchen, bedroom and hall. Just east of the fly was an enormous white oak stump, against which we built our camp fire. Fuel was abundant and dry, so we did not lack for a cheering fire. Near by was a shed partly filled with corn fodder, on which lay our dogs, a good well of water near by was a valuable adjunct to our happiness, and when the shades of evening came and supper was over we would light our pipes and tell yarns around the camp-fire, or indulge in a friendly seven-up till time to retire. For beds we had laid poles on the ground, on these put thin shakes left by the lumbermen, over these cornstalks, then millet straw and topped off with straw ticks and woolen blankets. Not a bad bed, especially to a fellow who had tramped all day.

From this time we gave most of our attention to deer which were very plenty. Our shotguns were not just what we needed for them, but we managed to get in one or more nearly every day, while a big wolf and a couple of wildcats came to hand for variety. The tanned and mounted skins of the two cats now adorn the floor of our parlor for rugs and call out many questions regarding the trip. The day the wolf was killed, C. and I were still hunting for deer. C. whispered to me that there was a fawn ahead a hundred yards or so, as he had seen it run, but had been unable to get in a shot owing to the thick black-spice brush. He suggested that we should separate a few rods and keeping a sharp lookout would probably get a shot. So, moving noiselessly along we watched. Soon C.'s rifle cracked and with a "Come on Doc, I've got her," he shouldered his gun and started forward. Next I heard him say "No I haven't either. There she goes now." But he couldn't get in his work then as the spice was too thick. Where she fell was a big puddle of blood, and at every jump the blood had spurted. We had not over twenty rods to go before we found her—not a fawn, but a big she wolf, too weak to run but sandy enough to show an elegant set of teeth. C. kept her attention to the front with a stick while I slipped around and knocked her in the head with my hatchet. We "toted" her to the nearest smoke, a hickory log on fire, and hung her up, then blazed a line due south a half mile to a wagon trail, so that we could find her again, then resumed our tramp.

When night came we had covered twenty-four miles, the natives said, as we had been a mile beyond Prince's Camp, in Craighead county. We saw only one deer, a few turkeys, and lots of signs, but did not raise hair or feathers again. Each one had some particular experience of his own to narrate, and to this day when a group of the boys get together the stories are told over, jokes cracked, and all agree that it was the jolliest experience of our lives.

You may have noticed in the papers last fall a little article saying that millions of squirrels were crossing the Mississippi River near Memphis, going west. Well, I think we got right among them, though natives say they were no thicker than usual. People here will scarcely credit the stories we tell about them. Any pleasant day four men who will try can kill a barrel full of them—all grays. Beaver and otter are there quite plenty. Bears there were none.

At the other camp, eight miles from us, quail shooting was quite good. We missed the ducks, as we all enjoy shooting them very much. As the season was an exceptional one we shall expect them next year in their usual numbers. Already the boys are calculating for next fall. Eby, an old Canadian Dutchman (70 years), is after a Winchester; going to practice all summer. K. is going to try a rifle, while I am going to fix good sights on my shotgun, believing that I can make good work with it shooting a solid ball, 12-gauge, and the "Kay" buckshot cartridges seem to work fine in it. If I cannot satisfy myself with it, shall get a rifle, for I want deer shooting. There is a charm about it that outweighs all other kinds of sport. I know that quail shooting over a fine-working dog is the true sportsman's delight; I know just how it is to tumble the incoming mallard, the swift-winged teal and the bluebill, but—I want some deer shooting.

When, finally, we broke camp, loaded our tents, boxes of venison and equipage into a wagon drawn by a yoke of oxen, and started for home, it was like leaving home. Not one, even the cook, but would have been pleased to stay. O, that grand, glorious forest! But there were interests at home demanding our supervision, dear ones awaiting our return, and we had to go. A half-dozen settlers were on hand to bid us good-bye and urge us to return. They were truly

sorry to see as go, for we had dwelt in harmony. Cox was almost inconsolable. A dozen letters from there since our return have proved their sincerity. K. sent the little girls flannel dresses. I added a big package of picture cards. Edgerly a suitable remembrance for Cap. Turner, and we feel sure of a hearty greeting when we visit their clearing again. Several invite us to come right into their cabins, and it is doubtful if we take tents again. I met Mr. J. O. Pelton at Calio on our down trip who was on his way to Reelfoot Lake, Tennessee. He would have joined us had he not made arrangements that prohibited. He wrote me in January, giving a very fine description of the place. He is still there. Quail and ducks are very plenty, and good board can be had at the hotel for \$16 per month. F.

A FIRST OUTING.

IT is on the 14th of August, the eve of the opening of the duck shooting, that we hurry our traps into the canoes, and after putting our dogs on board, embark ourselves.

How long and expectantly through the dark winter evenings we had dreamed over the open grate fire of the delights of that day? How anxiously had we wondered how the new guns would shoot, how the young dogs would work, how the new canoe would "run" with a load, and how the new tent would suit? And at last the longed-for time had come and we were off.

It was a stormy evening, and not without misgivings for our safety did we cast off from the boat house floats, and dip our paddles for the start. The boat house bay, sheltered by high bluffs, was calm enough; but on passing out into the stream, we saw that it would be "touch and go" on the trip down.

For the first three miles the wind was almost right ahead, and only by working with might and main, could we induce our craft to make way against it. But the river taking a turn brought the wind nearly astern, and hoisting our balanced lug we flew before the breeze. A few minutes brought us to the end of the island which had been partly sheltering us, and on getting into clear water below, the wind lulled for a moment, but only for a moment. In the distance we saw the waves flattened by a squall, and the water turning black as night. Hale, seeing the danger in time, hurriedly let go the halliards, stowing the sail just as the squall struck us. Over! over! went the canoe, and for a moment we thought our last moments had come; but luckily the squall blew past as suddenly as it had come, leaving us none the worse, with the exception of badly demoralized rigging and a shock to the nervous system.

For several miles we trusted solely to "elbow grease" for motive power, still feeling rather shy of the sail; but as the wind moderated we again hoisted it and scudded along at a great pace, "speeding" a little with the paddles. In two hours we reached the first opening of the L— Islands, our destined shooting ground, turned in, and paddled down the "channels" to "the old camp ground."

How lovely was the scene! The setting sun east a golden light over the thickly wooded islands, among which we swiftly glided, enjoying an ever varying picture. The Laurentian Mountains to the north, tinged with blue, forming a majestic background. Verily it was worth coming far to see.

Impressed with the quiet loveliness of the evening, we took in our paddles and drifted with the stream, dreading, almost, to profane its beauty by disturbing the stillness of the surroundings. But camp had to be made before dark, so, after a drift of a quarter of an hour, we again take up our paddles and set earnestly to work, endeavoring to make up for lost time. At length we reach the last turning, after rounding which we will be in sight of the camp ground. Horror of horrors! What do we see? Two canoes drawn up on our landing, two tents pitched on our ground, with the smoke of a camp fire lazily creeping through the tops of the tall trees. Blankly we gaze at each other. It is the only good camp ground on the islands, and all campers know how disagreeable it is camping near strangers; but as we approach the landing we recognize a familiar figure, and inwardly muttering that things do not look as gloomy as before, we ran the canoe ashore, jumped out, and in a moment were shaking hands with Tyler, in whose company we had often shot. He introduced us to his friends, and they good-naturedly helped us to land our cargo, and carry it up to the contemplated site for our tent.

In ten minutes everything was snug. The tent up, traps in, fire lighted and supper cooking. The dogs were rushing about, crazy with delight. It was their first trip, and everything was new and strange to them. They are Clumber spaniels, Johnny and Drake. That the trip now being described may not be their last, as well as first, by very many in the same company, is the earnest wish of their masters.

An enormous meal disposed of, we feel at peace with all mankind as we lie by the camp-fire watching the stars as they come out; but the dogs growl and we hear footsteps approaching from the other camp. Our friends come over to pay us a visit, so we make them welcome, and soon are all lying around the fire chatting. As a matter of course, yarns are swapped, and many and marvellous are the tales conjured up by the firelight. A most readable and wonderful addition would they make to the Camp-Fire Flickerings of FOREST AND STREAM, and oft is the heading, "That reminds me," of that interesting column repeated as each succeeding tale wakes another still more strange, no one liking to be beaten at story-telling.

There we sit till the hours wane from large to small and from small to large. Our guests do not move, and in common courtesy we cannot tell them to begone; but at last that point beyond which forbearance "ceases to be a virtue" is reached, and we mildly suggest that, as it will be time to start for the shooting grounds in an hour, it would be advisable to snatch a wink of sleep; so, to our relief, they take the hint and go, and we hurriedly tumble into our blankets and in a moment are sound asleep.

In an hour I woke and striking a match, looked at my watch and saw it was time to be stirring, so shook Hale and told him to get up. Hurriedly dressing and taking a handful of biscuit to eat by the way, we shouldered our guns and "heeling" the dogs, went over to the other camp to waken them. We then walked on through the woods to a marsh at the back of the camp. Each taking a side, we made the dogs work between us among the rushes to put up the lurking ducks from their hiding places. They worked to perfection, as if they had been at it for years, and our delight at their prowess knew no bounds.

Hello! what's that? Johnny has caught a scent and soon puts up a duck, which is promptly dropped. The dogs show unsteadiness here, as what dogs out for the first time will not; but soon they steady down and set to work again. The

wading is very heavy and the water comes alarmingly near the tops of my wading boots. At last I step into a hole and go in up to my arm pits, wetting all the cartridges in my vest. What is to be done? They are paper shells and sure to be spoilt. But remembering that it's "no use crying over spilt milk," I try to put on a cheerful face and trudge along, no longer caring how deep the water is.

The mist is so thick over the marsh that I cannot see two yards ahead, and in vain try to sight several ducks whose quacks I hear as the dogs put them up. Suddenly I see two flashes at the other side, and Hale's hammerless speaks twice and he whistles for the dog to retrieve two ducks which he has shot. The mist seems now to be doubly dense, and though the ducks are flying about in numbers, we cannot see to shoot at them. At last a flock alights in the pond in front of me, first I snap one hammer, then the other, but with no result. I try two more cartridges, but it is "no go." The flock, tired of waiting, I presume, continues its flight, leaving, as I supposed, one of the number. Quickly slipping in two new cartridges I aim with deadly intent. This time the cartridge did explode and I have the satisfaction of blowing to pieces a stump, which in the uncertain light I had mistaken for a duck.

Remarks, more vigorous than complimentary, are hurled at me from Hale's side of the marsh, and I pocket my mortification, vowing vengeance on ducks in general, always supposing the cartridges to be "so disposed." After several disappointments from misfires, and after slaughtering but one more duck, which fell to Hale's fire, we take our way down the marsh again, the dogs working as before, I helping them, being as wet as mortal man can be. Soon the dogs put up a bird, "snap" goes the first, but "bang" says the left, and over topples the duck. Further on another flash, and another disappointment. Poor Hale is in great distress, as all the birds seem to get up near me, and I am unable to shoot them.

It is now growing late, so we return to quarters. We find the other camp tenantless, its occupants being still absent. Before getting breakfast ready, I cannot resist working a marsh to the left of the camp, in the midst of the thick woods, so call the dogs and go to it.

The dogs immediately begin working with a will, and soon put up a duck from a pool at long range. I pull on him, but both cartridges miss fire, and he goes off unharmed. I now notice that the dogs are working very excitedly, and run back into the woods; the cause of their anxiety, a fine black duck, comes flying out. Snap! goes the right barrel, but the left does its duty, and over topples duckey among some thick bushes, from which Johnny dislodges him. He was a huge fellow, and I felt proportionately elated.

The puppies now strike another scent and again follow it into the woods, I unwisely following them. Soon I see them "roading up" a duck which is hurrying to the pond. I run as fast as I can to get a shot, but am only in time to see it fly off, out of shot. I had hardly ceased anathematizing the bird, when a huge blue heron sailed majestically over my head. I pull on him and he drops into the water, when the dogs retrieve him. Blue herons are so destructive to fish that we kill them whenever we have an opportunity.

I now work down the other side of the marsh, but without success, so leave it and go back to the canoe. Seeing Tyler and his chum across the channel, I paddle over to swap yarns. They had had bad luck, only having bagged one duck. I succeeded in wheedling half a dozen cartridges out of Tyler. Just as he handed them to me I heard Hale from the camp point shout, "Mark, duck," so slip in a cartridge as I see a duck flying past. Snapping the breech, I cut loose at very long range, and have the gratification of seeing him drop into the water with a broken wing. He dives immediately, so I take the canoe and paddle after him. When he comes up I fire again, fairly burying him with shot, but he seems to bear a charmed life, for down he goes again. He leads me a dance for a quarter of an hour, when I lose patience from the effects of wet and hunger combined, and paddle back to camp. A huge meal is soon disposed of, and I take off my wet things and have a lay off. After a rest of an hour we again dress and start out in search of birds, this time in the canoe. On pushing off from the landing Hale saw a duck in the water where I had shot the one before breakfast. We paddled up, and a dose from the Greener put an end to its career. It was the one I had wounded. We paddled about for two hours without getting a shot, and then returned to camp. On landing I took the dogs back into a cover where cock are often shot. For some time they bustle about without getting a scent, but at last I saw from their excitement that they had found something. The "something" in the shape of a fine cock was soon flushed and "grassed" with the first barrel. This good fortune added new vigor to our energies, both canine and human, and we worked all the covers but without putting up any more birds.

I then went back to camp and found Hale lying in the tent feeling very seedy. The great heat had affected him. Thinking it best to leave him alone, I took the dogs back to the marsh which we had worked in the morning. Again they got on a scent which they followed into the woods, and again, stupidly, I went after them with the same result, the duck escaping unscathed.

A little further up the marsh the Clumbers put up a snipe, which was bagged. A few steps more and another is flushed and missed with the right, but floored with the left. Soon they spring another, which is beautifully missed with both barrels. On reaching the head of the marsh I hide with the dogs in the bushes.

Ten minutes, a quarter of an hour pass, but nothing comes. At last, whirr! and a blue-winged teal alights in the pond. When I am alone I always take pot shots, and on returning to camp tell long stories about the length and difficulty of the shot, etc.; so, when the teal settles I take careful aim, and—snap! The treacherous cartridge misses fire. The duck, alarmed, flies off, but not in time to escape the contents of the left, and he comes down with both wings broken. After an exciting chase Johnny catches him, and he is bagged.

I now return to camp and find poor Hale very ill. We hold a council of war and decide upon returning home; so I begin to pack up while he lies in the shade of the trees, Caruthers, one of our friends of the previous night, assisting me. At last the canoe is loaded, and, after making Hale comfortable in the how, we say adieu to our friends and push off.

It was heavy work for one man paddling the loaded canoe—she is an eighteen-foot Peterboro yclept Mud Turtle—against the swift current. After going a couple of miles H. felt better, and insisted on paddling; needless to say I was not sorry, as I was getting a wee bit tired after my exertions.

We had sixteen miles to paddle against a current, which in many places runs like a mill race, and in all parts is very

swift. We had paddled down the previous evening, as has been related, in two hours and a quarter, had sat up till half past two the past night, had had one hour's sleep, and then gone out for the hardest kind of shooting, i. e., marsh wading, and had been at it till four that afternoon, so it will be seen that we would have done a good deal in thirty hours by the time we reached home.

After going eight miles or more we landed, had a snack, and laid off for an hour, when we re-embarked and continued our journey. It was a lovely evening. The broad river, two miles wide in parts, was smooth as glass, and the white habitan cottages on the north shore, with their background of blue mountains, formed a picturesque scene.

Paddling steadily, we reached the boat house at 9 o'clock, and two weary sportsmen and two not less weary dogs, trudged home through the deepening twilight and hurried to their "downies" with as little loss of time as possible.

F. M.

OTTAWA, Canada.

FIELD NOTES FROM GEORGIA.

Editor Forest and Stream:

Believing that sporting items from away down south in "Dixie Land" might be interesting to some of your Northern readers, I have, in the language of the Georgia Crackers, concluded to "drop you these few lines" in relation thereto. The hunting season for all game, with all true sportsmen, closed here April 1. Only a few Northern sportsmen visited this immediate section during the season, and they were well pleased with the sport, the climate and our people. We had large quantities of quail and doves, and while a quantity were killed, there are many now mating here. We had a good many snipe and woodcock, which were not hunted at all, our dogs not being trained for them. Your correspondent could in the early spring hear the bating of snipe and woodcock any night from the piazza of his dwelling, and saw several woodcock that had killed themselves in flight against the telegraph wires near the house. We had only a moderate quantity of ducks in the streams here during the past season, and consequently only a few were killed. When we do have ducks, and especially in the Ogeechee and Savannah rivers, it is our finest shooting, and they are hunted in this way: The Central Railroad of Georgia runs up the valley of the Ogeechee River and near the river for a number of miles, and sportsmen send their small canoes up on the cars and float down the crooked, narrow and swift flowing stream and shoot the ducks on the wing as they rise from the water.

Two of our local sportsmen, Col. Dick Berrien and Col. Bunnie Bell, of Miller, Ga., took a shooting trip of this kind down the Ogeechee from Miller, Ga., to this place during the cold spell of weather in January last; they killed fifteen ducks and one otter that they got, and say that they killed thirty-five ducks that they could not get owing to the thickness of the ice near the banks of the river, a very unusual thing in this climate; the time consumed in this hunt was one day and the distance floated down the river about 45 miles.

The Savannah River is accessible in the same way by steamers. We have a few deer and wild turkeys in the river swamps. We have one gun club in the county, the Scriven County Gun Club, Col. N. P. Wade, Sylvania, Ga., President; its membership is small, but is made up of gentlemen. Your correspondent was never at any of their practices, but is informed that the members shoot well. We also have many sportsmen who are devotees of the chase and have many packs of the finest foxhounds in the State, and Reynard is run to the death when once they get straight after him; running wildcat in the jungles of the swamps is also a favorite sport.

Fishing in the Ogeechee River with nets for white shad, suckers and a fish called here red horse is the only sport at present. The river is well stocked with the following named fish: Rockfish, trout, jack, grindel, blue bream, red-breasted perch, speckle perch and catfish. The season for pitching (I believe you Northern sportsmen call it casting) for trout, red-breasted perch and blue bream opens here about the 1st of May, and we have very fine sport indeed. These are game fish and the finest table fish in the world, except possibly the rockfish. We catch trout by bobbing, as we call trolling—a metallic bait with a short line on the end of a stiff fishing cane. We do not use a wooden fish-pole, as you do in the North. We use either a Bermuda cane or a large cane cut from the canebrakes in the Savannah River swamp. We capture the rockfish, the king of all fresh-water fish, either by fishing with a large live perch as a bait or by spearing them in the early fall, when the rivers are low. They can be seen plainly with a light at night, and many of them weigh as much as 40 pounds.

The fame of our rivers for fish, the accessibility and nearness to the railroad stations, telegraph and mail facilities and means of obtaining ice, sends us in the summer many disciples of Izaak Walton from our Southern cities. And many no doubt would come from the North were they not driven off by the scarecrow of grown people, imaginary malaria. We have no malaria here; we have the brightest skies, the fairest women and the bravest and most generous of men, and our laws and customs are the freest of any place on the planet. Life, liberty and property are protected and respected, and any white person, be he bent on sport with rod and gun, or pleasure, or business, can pass at will through and over our lands and highways with every assurance of security from violence or insult.

We wish our Northern friends to visit us on sport, pleasure or business; they will be kindly and cordially received and we will, if we can, sell them land and make them permanent fixtures, anyway for the winter months. We have cheap lands, a generous soil, and the mildest and pleasantest of climates, and we invite you to come to Georgia and buy land and go to truck farming and grow watermelons for the Northern markets. A watermelon crop we believe to be more profitable than an orange crop and much safer from injury by frosts and cold.

HENRY C. KITTLES.

ROCKY FORD, Ga., April 12.

HOW SHALL I LOAD.—Rome, N. Y., April 29.—Through your columns I would like to have the opinions of different sportsmen on the subject of wadding powder in shot shells, and to be definite I will put the question thus: Which will give the best penetration and pattern with least recoil, a shell loaded with 3 drams powder and 1 of shot, with 2 pink-edge wads on powder and 1 card board on shot, or a shell with same amount of powder and shot, wadded with one ½ felt wad on powder and 1 card board on shot? Colt and Parker advise 2 pink edge on powder and 1 on shot, while the best English gunmakers use one ½ felt and 1 card board on each side of it and a card board on shot.—C. C. G.

ALONG THE TENNESSEE.

"CANO arma virumque," arms, men and dogs. The men were John Jones (his real name) and the writer. The arms were a twelve-bore Remington for Jones and a ten-bore E. James & Co. for the writer. The dogs were Jones' Nel and her pup Jennie, and T. J. Latner's Nel, distinguished as big Nel and little Nel, Latner's being little Nel—all good lively Irish setters, but their lineage is almost as little known as that of Melchizedek. Chattanooga was our starting point, and a boat twenty-five feet long and six feet wide, with a cabin six by fifteen was our means of conveyance. A large step stove with its accompaniments, ample bedding, provisions, ammunition etc., being stored within, we set sail (without sails) on Dec. 20, down the river.

Next day we hunted on Rankin's farm opposite Shellmound, and had royal sport shooting birds over level stubble and sedge grass. The first covey was found by Jones' Nel and he scored a double. The writer fired once and missed. Bagging his birds, Jones motioned on and in a minute she was on a dead point again. The writer scored a second miss as the second bird went off. Having shot prairie chickens in Kansas, sage hens and blue grouse in Oregon, how strange it seemed that a little quail should unnerve me. Subsequent shots were more effectual, and from 10 A. M. until 4 P. M. we bagged thirty-six quail, Jones having twenty-two and the writer only fourteen. We had three days' fine shooting at that place (Mr. Rankin having kindly allowed us to hunt his place), and averaged about thirty-five birds per day without much fatigue.

Our next point was four miles below Bridgeport, Ala., and there we had royal sport for three days, shooting over large level fields of sedge grass. If any of your readers have never hunted over sedge grass, allow me to suggest to them to make a trial hunt of the kind, and they will not regret it, if they hunt where birds are moderately plentiful. This kind of shooting, however, must be done when the weather is dry and cold.

We stopped two days at Caldwell's Ferry, about forty miles below Bridgeport, where we carried a light canoe to a lake about a quarter of a mile from the river. Up to this time duck killing had only been occasional, here they were in flocks of a hundred or more. We explored the lake pretty thoroughly and found it covered with heavy timber, except an area of deep water about one hundred yards wide and six hundred yards long. Half an hour before sunset the writer took position in the forks of an ash tree, and Jones in the canoe went about four hundred yards away. In a few minutes the ducks were flying over very high, and only about three were killed before sunset, after which they commenced whizzing by, in small groups at first, but later in bunches of thirty to fifty. For fifteen minutes the woods resounded with the terrific roar of 4 drams of ducking powder giving deadly momentum to 1½ ounces No. 4 chilled shot. I held up when darkness came on, and Jones arriving just then wanted to know "how many Indians were there," "which side whipped," and so on. Paddling around we found sixteen dead ducks and divers others fluttering around on the water, but the night being very cold and dark, we left at once. Returning next morning, we found four more dead and the remains of some that the coons or other animals had eaten. Two more evenings of such noise and firing induced them to seek more quiet resting places. Jones had killed six from the boat, and the writer had used twenty-eight shells, killing all but three on the wing, and all singly. Quail were plentiful in the bottoms, but generally crossed water when flushed, therefore our bags of quail here were small. Our next halt was at Buck Island, where Jones killed a turkey and ran himself out of breath after one that he had winged. Here we killed a large swamp rabbit that weighed seven pounds and a few ducks, and pulled out again for Guntersville, where the thermometer showed eight below zero, but our cabin and stove were equal to the occasion, and we did not suffer. The water having frozen when the river was high and then receded, left acres of ice upheld by saplings and small trees. Under this ice ducks would go out to feed in large flocks, and around Henry's Island, while the weather was so cold, we had fine sport for several days. From Guntersville we went to within four miles of Decatur, and found birds very plentiful. Here we killed sixteen woodcock, the first, except one, on our trip. Only two that we saw got away. This was the end of our journey, and we stopped hunting there.

We learned some things worth knowing on the trip: First, our cabin was about eight feet high, seven would have been better for width of boat; second, always have a steering oar, whether used or not; third, do not be very strict with a timid, untrained young dog; fourth, dogs stand hard service better on corn bread diet than on wheat bread; fifth, if your gun is an E. James & Co. ten-bore, four drams Orange ducking powder is better than less, and one and an eighth ounces of shot is better than one and a quarter ounces; sixth, do not think to kill three-fourths of the ducks you shoot at in group forty to fifty yards off; seventh, always feel more confident of killing a duck on the wing forty yards away than on the water the same distance; eighth, do not expect to have all the sport we had without some troubles, little hurts, feet wet, ravenous appetites, crippled game escaping, etc., etc.; but these the true sportsman expects and prepares himself for them.

FIFTH WARD.

HARD TO KILL.—Tallahassee, Fla.—A short time ago, while driving through the pine woods near this place, I discovered two red foxes that had been driven from their home by a fire which was raging through the woods. It was the work of an instant to slip a couple of shells in the No. 10. One was loaded with 12 small buckshot, and the other with 1 ounce of No. 8. Reynard stood about 30 yards distant watching the process of loading with the utmost composure. At the report of the gun and on receiving the contents, he tore through the woods at fearful pace apparently unhurt. After running 300 yards he sprang several feet in the air and fell dead. On examination, it was proven that the humerus of the right front and the femur of the left hind leg was shot entirely off, and two more shots had passed entirely through his body. His mate, after receiving the charge of shot, went like a flash, and as a friend remarked at the time, is probably going yet. It seems wonderful that any animal should be able to run such a distance after being so badly shot.—H. A. KLINE.

A REMINISCENCE.—Ashtabula, O.—*Editor Forest and Stream:* I find many things that are useful in your valuable paper. I try them when I have an opportunity and retain those of value, discarding the rest. The shotgun has long been my solace and joy. Having learned to shoot on the wing when but few shots of the kind were in the country, I have followed it more or less for years, and could tell of many a bag of "Bob Whites" which would make lovers of

the gun and dog eager to imitate, and when the first fall of snow comes and whitens the ground, I would with some chosen few lie off to the mountains and in our snug cabin that we had built in the fall away from the haunts of men and the trouble and turmoil of the busy mart, seclude ourselves, and each night bring to camp the trophies of the chase, and after supper with pipes aglow would hunt the forest over again. There is music in the deep and silent forest which none but they who love it know. There is but little game where my lines of life have now been cast. The quail have all disappeared before the murderous pot-hunters, a few squirrels in the interior of the county, very few ducks and an occasional grouse, and to get trout we go to the tributaries of the Alleghany River, where they are fairly plenty yet, by going back from the haunts of civilization. We will soon have fair fishing here at the harbor and out in the lake, and next month black bass will be on hand. I look for the return of snipe every day if the weather holds, and then I will see what virtue there is in powder and shot. It will soon be time to overhaul my tent and traps to see if they are in order for the summer camping.—G.

NORWICH ROD AND GUN CLUB.—Norwich, Conn., April 29.—*Editor Forest and Stream:* The Norwich Rod and Gun Club was organized March 18 under very favorable circumstances. Its object is the protection of fish and game and rifle and gun practice. The following officers were elected: J. D. T. Blackstone, President; Archibald Mitchell, Vice-President; Z. R. Robbins, Treasurer; A. M. Cutler, Secretary; L. B. Aling, Jas. H. Arnold, Frank E. Patterson, Directors; Frank T. Brown, Attorney. The club started with 75 members and has now 125. They have secured ample grounds, conveniently located. Thursday is the club day, and as they have the most approved traps for ball and clay-pigeon shooting, as well as rifle ranges of 100, 300 and 500 yards, they are prepared to extend a cordial invitation to the members of other clubs to join them in shooting on any Thursday during the season. They also ask the co-operation of other similar organizations in the enforcement of the game laws, the protection of game and fish being the main object of the club.—J. D. T. BLACKSTONE.

Sea and River Fishing.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—X.

WE went to bed early that night to escape the mosquitoes, the pests having taken advantage of a break in the rain to come in from all directions in swarms and clouds until, as Dick M. once remarked on Black Lake about the "croppies," (punkies) "there was no such consistency as livin' with 'em." The girls, however, were better prepared to resist the attacks of the blood suckers than were the rest of us, and for the benefit of any sister of the craft who may take a notion to go to the North Woods, I may here write how we circumvented the "varmints."

Our girls were each provided with a piece of headgear in shape of a straw hat with a good wide brim to it, as every woman should be in a summer camp. From among the calamities was fished out a strip of mosquito netting which was cut into squares of about two and a half feet. One of these squares hung over the hat and the loose folds drawn in comfortably tight about the throat with a piece of cord or fish line completes the circumvention and the festive skeeter is barred out, much to the placement of the wearer of the hat and the disgust of the skeeter. This contrivance will be a source of much comfort also to the opposite gender, always provided they don't smoke or "chaw tobacco," and will allow about the same time to elapse between drinks as did the two governors of the Carolinas—a good while. The device is not new perhaps nor patentable, and all are welcome to use it without fear of a suit for infringement, and I venture they will say it beats "smears" and "fly unguents" out of sight. It may be noted, however, that its usefulness would depart before fishing three rods through the "bresh" along the banks of an average trout stream.

The morning dawned cloudy and windy and cold, with some more rain, a fact which moved Hyperbolic Jones to remark, as he cast a weathery look up and down the mist-covered lake, "Reminds me o' California; guess the rainy season has set in fur a fact." This promised another lazy, sleepy day in the tent for the girls and another day of persistent pegging at the cribbage board on the part of Muller and old Danny, the score having closed the evening before with Dan enough games ahead to make him "sassy." Breakfast over, a fresh fire was started in front of the big tent and business resumed at the old stand: the girls laughing and chatting or reading a book or magazine brought along especially for rainy days, while Dan and Muller began where they had left off, with a freshly sharpened pencil to keep the score.

Jim hid himself in a big rubber coat and wandered aimlessly off up toward the woods, as Ben guessed it, "to hev a little cussin' match on his own hook on account o' the wether, an' he wanted to git out o' earshot o' the gals so he wouldn't disturb the meetin'," but more likely he wanted to console himself with a surreptitious smoke, out of the range of Mother Jim's gentle eye. He came back after a while and balanced himself on a camp stool to watch the game, but tiring of this soon he stretched out on a blanket and relapsed into one of his periodical spells of reticence to ponder no doubt on the sweets of matrimony as a salve to the smarts and snubs incident to the engineering of a "weakly newspaper" largely devoted to the interests of "the party"—and Jim.

The morning dragged on to near 10 o'clock, and still raining; the philosopher of the kitchen whistled cheerily under the big fly, despite the weather, as he industriously burnished up the silverware (f) or scoured the knives and forks by jabbing them repeatedly into the sandy soil, and Ben and I stood around the fire, swapping sides now and then to keep out of the smoke, hatching a scheme to fool the other big trout in the pool above the school house, after giving him a day or two in which to get over his scare.

"Kit, ain't it about time for our morning lunch?" came from the back part of the tent in Bob's mellow tones, and directly the twins came out under the shelter of one rubber poncho and tripped over to the kitchen to wheedle the philosopher into building them a ham sandwich, or teasing him till he disclosed the last hiding place of the maple sugar. Then little Top came out and scudded across with shawl over head, and then Miss Annie, and last Fanny and Mother Jim seemed to realize that it had been a good while between meals, and soon they had the philosopher surrounded and he was fain to surrender and open up his store of "cold wittles" and impart the "combination" that led to the sugar

During the "rainy season" when the girls could not fish, this performance took place with frequent regularity, twice a day or oftener, besides the three square meals, and the keeper of the fryin' pans was kept busy hustling around to meet the oft recurring demand for "lunch." But Al was good-natured and obliging, and with all the trouble the torment put him to he was always ready to open his department and wait on them with cheerfulness.

"Tell ye what, Hickory," said Ben, and then he stooped and pulled a burning splinter of wood from the fire, with which he proceeded leisurely to light his pipe, blinking solemnly at each puff as though weighing in his mind something of great import; "tell ye what, ef them gals keep on destroyin' grub like they hev in the last few days, you an' me'll hev to take a couple o' boats an' go down to old Cooterey's (Couturier's) after some more provender, or git him to move his grocery up here where it'll be a leetle more handier. When one o' em hollers lunch the rest 'pears to git hungry in less'n a second, and they make a raid on the sutler. But, bless their hearts"—here another raid was made on the fire for a burning brand, as the brier root had gone out while he was talking—"it does me good to see the Joneses a-livin' so high, fur they never was used to the very best o' everything nobow," and the twinkle in his old eyes proclaimed that all the solemn blinkings and deliberate puffings at the "source o' comfort" were only premonitory symptoms of a mild attack of "the Jones family," these attacks, however, always taking a new form.

The girls were having a merry time over their lunch under the big fly; Jim had struck a balance between matrimony and politics and gone to sleep; "it's a go," came from the seat of war at the crib board in Muller's baritone, and Hyperbolic and the skipper stood around the fire in the rain, with watery eyes, changing places frequently, that neither might get more than a rightful share of the suffocating smoke that pursued us no matter on whichever side of the fire we might come to a temporary anchor.

The chatter (or chi-r-r-r, as brother "Bigosh" writes it) of a kingfisher bowing to us from his perch on a limb of one of the birches hanging over the water a few yards above the camp, seemed to start Ben on a new trail, and as he dodged a puff of smoke from the fire he opened on it with "Hickory, 'pears that you an' me haint got sense enough to go in out o' the wet, an' as it looks like we're about the only two old loons in the camp that's tough enough to shed rain, I move we go a fishin'." As a sensible motion of this kind was never lost in a camp of the Kingfishers for want of a second it was at once before the house and carried unanimously, and there was no need to resort to the "Cincinnati method" of counting votes, as there was only two to count. While Ben bailed out one of the boats I got the rods and a bucket of frogs, hastily collected a few scraps of cold comfort from the provender box for a lunch, and we were off up the lake before the Joneses were fairly aware of what we were about. As we pulled away from shore we heard Bob say, "there they go again, two of the biggest old fish cranks in Michigan," and Ben in his dry way, as he reached for the frog bucket, "stonishin' how near the truth that gal kin come once in a while when she's away from home."

We took a short cut across Horton's Bay, and when just off the point where a patch of big "bush weeds" grew up from the bottom, where the old mossback told us he lost his spoon, line and float, Ben said quietly, "Whoa, Hickory, stop 'er," as a sudden jerk took two or three yards of line off his reel, "there's a fish back there that's never heerd o' me, or he wouldn't be so brash in tamperin' with that frog. Look out there ole fellow"—to the fish, as Ben stood up and the boat came to a stop—"when I tech ye up with ole 'quintessence' here [a name he had given his rod] ye'll think yer jaw's come unsundered."

The line had stopped running and Ben said, "PICKEREL, I reckon; an' as ole brother King used to say, he's jest a layin' there a 'demasticatin' that frog to git the taste o' sunfish out o' his mouth."

As I pulled the boat out in the lake two or three lengths, an advisable move always when a fish is struck near a belt of weeds or grass, Ben let the line run free till the fish started again when he brought "ole quintessence" around with a sweep that must have loosened all the joints in the fish's frame, and the fun began.

He came to the surface with a great swirl and started straight down the lake toward camp, but Ben's dander was up, and jamming his hat down on the back of his head that the wind might not get a lift on it, he set to work in dead earnest to hold him up, at the same time proffering the advice, "You'd better wait a while ole boss, fur the Joneses aint a lookin' fur company jest now."

A stroke or two of the oars sent the boat further out, and with a pull that caused "quintessence" to take the shape of a new moon, the fish was pulled up and swung around away from the big weeds and "muskrat grass," heading in our direction at a pace that took the liveliest kind of turning to keep the line tight enough to be sure he was still on the hook.

When near the boat the sight of Ben seemed to bewilder him and instead of going under it, as Dick M. says "they almost always invariably do," he sheered off and went for the grass inshore and quintessence was again called on to avert a catastrophe. And the rod was equal to the emergency—a sprout of Japanese cane nine feet long, tough as a splinter of swamp hickory, jointed in two piece and weighing about nine ounces; the best of all rods, as I believe, for honest reliable work on bass, pickerel and maskalounge that was ever fashioned. I have one of the same material under my eyes as I write this, weighing but five ounces, that I would not hesitate a moment to risk in a clear, square fight ("bitin' an' goug'n' barred") with a forty pound maskalounge, and be reasonably sure of coming out on top. But there are rods and rods, the plant wad to flip the feathered sham when trout are sought; the twenty-foot cane pole, beloved of the pensive catfish slinger; the native rod, the sapling of ungraspable butt, the dude rod, the Henshall rod and a score of others—and every angler to his own notion.

As the fish went by we caught a glimpse of him, but he was swimming so deep and the water was so rough that we could not make out whether it was a pickerel or maskalounge but sure it was not a bass.

"Like as not it's the same feller that walked off with the ole mossback's whole outfit the other day, an' he's swallered the float jest to keep frum towin' it around," said Ben, as he straddled the after thwart and balanced himself for the coming struggle.

When a strong fish makes a rush for a bank of weeds a cool head at the butt end of the rod is better than main strength, and as the tip of old quintessence came down alarmingly near under the unusual strain, Ben said quietly, "Yank the boat up the lake a piece, Hickory; so's I kin git a

kind of a side winder on him, an' I'll astonish him so he'll forgit all about that patch o' muskrat grass he's a steerin' fur," and as the boat was yanked in the desired direction the side winder changed his course up the lake, and under a stubborn pull he was gradually worked up to within reach of the gaff.

"Ef it aint a durned snake" (one of several names for pickerel), said Ben in disgust, "but it's good enough for the Joneses, spechally when they're about out o' meat," and as he was led a little nearer a well directed stroke of the gaff lifted him in the boat, and a scientific whack with the "pickerel club," administered by Ben with a precision acquired by much practice, put an end to his 'proclivities fur sunfish,' as he put it. It was a handsomely marked fish of near seven pounds, but a trifle lacking in game qualities, and Ben did not feel much glorified over the capture.

Fifty yards further along the grass belt he astonished another smaller one by "unjintin' his jaw," and as he smote his head with the club he remarked gravely, "More brain food for the Joneses," and as the hook was released with a dextrous twitch, "We kin stan' a heap of it."

"Curious," he went on, as he passed his hook carefully through the jaws of a fresh live frog, threw it overboard, and let fifty or sixty feet of line run off the reel, "that some people hev an idee that catin' plenty o' fish makes brains fur 'em. Now my notion is that sich people as them don't hev much more brains to start with than a mud turkie, an' the more fish they eat the less they know. I rasscled with a fish diet myself a good many years ago till the scales begun to sprout out on me an' then I let up on it fur fear I'd turn into a suckermoojen, but I've bin eatin' more or less o' 'em ever sence, an' I don't see that I'm a durned bit smarter'n I was before I cornered the fish market. I eat fish now 'cause I like 'em, but I don't take any stock in 'em as brain food. An' besides," here he turned the click on his reel, laid the rod carefully down with the tip pointing over the stern, and after some difficulty in lighting the brier root, repeated, "an' besides, there's plenty o' grub that's more susteinin' than fish, sich as beans an' corned beef, an' taters an' side meat, et settery; an' speakin' o' plain vittels—that was a daisy batch o' corn bread Al baked fur us this mornin'."

After a long pause, during which he puffed meditatively at his "source o' comfort" and gazed abstractedly at the belt of bulrushes along which we were passing, he faced around with, "Whenever I eat corn bread it reminds me of a 'coincidence'—as blessed old Dick M. would say—that happened to me once away down in Texas, an' ef ye don't mind hearin' it, an' I'll tell ye spell ye awhile at the oars, I'll tell ye about it jest to kill time till we find a more fishy lookin' streak o' water than it is along here."

CINCINNATI, Ohio.

THE TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

I have been much interested in reading the letters lately published in your valuable paper regarding the large trout of Sunapee Lake, N. H., and, while I do not pretend to explain the large size or variety, would beg to say a few words in the matter. The town of New London, lying on one side of Sunapee Lake, was my birthplace and my home for some twenty-five years. I was for a time engaged in a country store at George's Mills, and quite well acquainted with many people living at Wendell Harbor, both places being at the upper end of the lake; was also acquainted with some of the people living along the lake shore, and I can well remember of hearing from parties at these places about the large trout then being taken from the lake.

The time to which I refer was now some thirty years ago. I think at that time and down the lake from George's Mills trout were taken of weight from six to ten pounds. It is quite clear to my mind that very large trout have always lived in Sunapee and also in very many of the smaller lakes, or ponds, as we used to call them in those days. A case in point. In New London and within a quarter of a mile of my home was a most beautiful sheet of water, called, and rightly, Pleasant Pond. It is about two miles long and about one mile wide. At the upper end three small brooks came down through the hills and entered the pond. These streams were at certain seasons quite well supplied with brook trout, some of very good size. We used to see sometimes up the largest of these brooks in the fall of the year some very large trout, and were told by the older people that there were in the pond and had always been, trout of immense size.

One July day while crossing the pond with a friend, the water being smooth as glass, we had got about half the way across and were resting, our attention was called to the swallows after the flies on the water, and by seeing one of the birds caught by something and taken below. I can remember that we then thought it must be a big trout that had caught the bird, and we then decided that we would before the ice broke up next spring try for trout in deep water with live bait. I well remember the day in March following, it being the day of the annual spring election. My chum and myself, instead of going to "town meeting" with all the rest, started to try for our trout. Having arrived at what we thought about the right place, we cut a hole to determine the depth of water; found it about twenty feet; put on a good lively minnow and fixed line to bush set in the ice, letting down about fifteen feet of line. We then proceeded to cut holes and set some four more lines, when on looking at the first one I saw the bush was down, and it being a warm, still day I concluded we had better see what was the matter. I went to the hole, and looking down saw the line hanging straight and no motion. Taking hold of it I found there was a heavy weight on it, drew it up carefully, and into the hole came the head of a big trout; reached down and got hold with both hands and threw him out, then threw my cap and shouted loud and long. My companion coming up we held a grand war dance around our captive, and decided to leave the lines set and go up town to show and brag about our fish, and it was something to brag about, as he weighed 54 pounds, good honest weight, and was in every way a most splendid fish. It had so completely played itself out before I got to the line that there was not a motion made until after I had him out on the ice, and then but very little.

We left our lines until the next day, and on cutting them out took off one trout of about 2 pounds and a chub of 14 pounds weight. I have it from those still living near the same pond that almost every season they get some trout of very large size. Now without having anything to say about the particular species of the Sunapee Lake trout under discussion, I do not doubt but that very large trout have always existed, not only in Sunapee, but in very many of the much smaller lakes and ponds in New Hampshire, and that at the proper time, with all conditions favorable, these same large 6 to 10 pound trout could have been taken in Sunapee for the last seventy years or more.

WATERTOWN, Wis.

S. S. WOODARD.

THE OPENING OF THE TROUT SEASON.

NOT within thirty years has the ice left the Adirondack lakes as early as it has this spring. Gen. R. U. Sherman reported the ice off the Bisby Chain nearly a month ago. Mr. F. A. Walters, superintendent of the Adirondack hatchery of the N. Y. Fish Commission, reports that the oldest inhabitants do not remember an earlier season. Mr. A. R. Fuller reports Meacham Lake clear of ice and fishing begun on May 1. All this may mean a longer season for good fishing, which usually begins in the Adirondacks from May 15 to June 1.

From Maine we learn from Major Lovejoy, of the hotel at Bethel, that the ice is out of Umbagog Lakes and Richardson Narrows, and will be out of the South Arm before the 10th, and that fishermen are going to Middle Dam by way of Bethel and Upton, while the steamer will move by the 4th.

Now that New York State has two opening days, one for Long Island and one for the rest of the State, there has been no customary display in the markets. The dealers all had some fish and Mr. Blackford had a few flowers and trimmings, but nothing like what he has treated the public to in previous years, when he has given up his whole business to show trout from all parts of the country and even from Europe. He had a lot of sixty live trout from a private pond on Long Island, twelve of which averaged two pounds each. At Washington Market, Messrs. Knoll & Prichard had an exhibit of trout and some paintings of fish by A. Wyderfeld. At midnight before Saturday there were 10,000 pounds of trout coming into the city by express. They were mainly from the preserves of Long Island and Rhode Island, with a few frozen Canadian fish.

The dealers in fishing tackle are very busy fitting out anglers for the woods and in filling orders for country customers, and all things point to a large catch of trout this season.

FISHING AT NIPISSING.

"C. H., Birmingham, Conn., writes for information about fishing in vicinity of Pembroke, Ont. We were up that way last August on a fishing trip, and while we did not try the fishing there, to judge from our experience further up the line of the Canadian Pacific Railway, we have no doubt that the fishing a little back from Pembroke is good. The Ottawa River is several miles wide there, and is called Allumette Lake. Pembroke are quite a lumber depot, and a place of considerable business. There are about 3,000 inhabitants, and this is about the last place that contains a bank (and postal money order office) on the C. P. line till you get to Winnipeg.

We went directly to North Bay, on Lake Nipissing, and put in part of one day fishing there. Not very successful, however, but we "sampled" the pike, bass and "pickerel," the latter being in reality pike-perch. There seem to be none of our common pickerel there, and pike-perch take that name in that locality. Nipissing is a large lake, forty to fifty miles long and fifteen to twenty wide. There is good fishing in this lake in the right season, but a guide to the best places is necessary. North Bay has five or six hundred people and is growing. The stores there are very good and campers can get almost everything requisite, and at reasonable prices. From North Bay we went back four and one-half miles to Trout Lake, where we went into camp. Trout Lake is one of the loveliest lakes I was ever on. It is twelve miles long, with very irregular shores, making innumerable bays and coves. The water is clear and deep, and there are many islands of all shapes and sizes. We engaged Dick Jessup, the only settler living on the lake, as guide, and went down the lake seven miles and camped on what is called "Big Camp Island." We came for good fishing and we found it. And why shouldn't it be good? It is the natural home of bass, trout, maskalonge, etc., and it has never been netted or fished to any extent.

We were in just the right time for black bass, and in trolling we could catch all we had a mind to. We were sure of a strike every few moments, and as one or two fish were all we could eat in a day, we called the rest "lucky dogs," and after weighing them, threw them back for some one else to catch. After a few days we did most of our trolling with a small spoon, fine silk line and fly-rod, and though more would get away, the sport was much better. With large tackle the bass would run from two to five and six pounds, and plenty of them.

Maskalonge are there, but in August you only get a stray one now and then. We caught eight, the largest fifteen pounds (forty-two inches long), the others between five and fourteen pounds. I caught two or three small maskalonge, five and six pounds, on a fly-rod (with small spoon), and it was great sport with such light tackle. We also caught pike, plenty of pickerel (pike-perch), the latter were the most plenty next to the bass.

Lake trout were plenty, but were in deep water while we were there. The largest we caught weighed ten pounds. Dick called them "salmon," and they are a beautiful fish and good eating. Brook trout were plenty in the smaller streams, but were small and darker colored than those here. We caught a number of what they call "ling," a new fish to me. They look to be a cross between a catfish and lamprey eel, a very repulsive-looking creature. These we did not eat. We enjoyed fishing for bass with a fly and live bait in a rocky river. Bass took the fly there better than anywhere else. I hooked a large size green frog through one of his hind legs and tossed him into a deep pool in this river; he sat there serenely a moment, and as I glanced away there was a rush and a swirl, the frog was gone and I had a large fish hooked. Notwithstanding I handled him with the utmost care I did not save him, for he bit the wire gimp off above the hook and was gone. I do not know what kind of fish it was as I did not see it, but it was a large one.

As for hunting, it is good in the fall; the law is off Oct. 15, I believe. Deer and moose are quite plenty. We saw places where the tracks were as thick as in a barnyard; also saw tracks and signs of bears. A few weeks before we were there some Indians were encamped on a little island near our camp, and they got two moose and three deer, probably by floating, as we saw the remains of their jack as well as the hoofs and bones of the moose and deer. They smoked the meat and "portaged" it out. We think any one going to that locality would find it a very enjoyable trip. They will find the Canadian Pacific people pleasant gentlemen, willing to give any information and to do all they can to make their journey pleasant. One of the most weighty reasons for our going to Nipissing, which is directly north of the celebrated Muskoka region, was the fact that you can reach there from New York city or almost any point in New England by losing but one business day; for instance, leave New York

city on Montreal train after business hours (4:30 P. M.) on a Saturday and arrive at Montreal about 9 Sunday morning. Leave Montreal Sunday morning about 9 and train reaches North Bay late that night and you can go into camp Tuesday. At North Bay stop at Snyder's hotel, which is the best. Do not expect too much of a town but two years old, but you will find the people jovial and pleasant. This region was all a wilderness about two years ago, and settlers are not very thick yet. R. B. Jessup, of Trout Lake (his post office is North Bay), has boats and canoes, tent blankets, etc., and could probably be engaged as guide.

B. AND H.

TARPON FISHING WITH ROD AND REEL.

Editor Forest and Stream:

The tarpon, or silver king as it is commonly called, may justly be described as a tropical fish, though found in a semi-tropical climate and waters. In substantiation of this proposition, I may state the fact, which came under my own observation, that the cold snap of last January which did so much damage throughout the South to the fruit, also killed or was the immediate cause of the death of thousands of these fish. I did not visit the scene of this devastation until about March following; but at that time I counted hundreds of the carcasses of this fish upon nearly every beach I visited, stripped of their flesh by the buzzards, hawks, coons and other animals and birds that seek the shores for their food. The tarpon are found in nearly all the waters of Southern and Southwestern Florida and the keys and waters of the Gulf of Mexico, are found in the more southerly portions thereof, where the waters are warmest, early in the spring or throughout the winter, and migrate into the more interior waters as the warm weather approaches, and in summer swarming in all the rivers and bayous of the Gulf and Florida coast.

This fish is said to grow to a very large size, though my own experience did not carry out the fables told of them as to size and weight. I had the experience of capturing some eight and of seeing nearly as many more captured by others, and of seeing and estimating for myself some ten or twelve others which I hooked but did not capture; and as a result of this observation I am led to the belief that from six to seven feet is about their maximum length and that about 150 pounds would be their maximum weight, both of which should, and probably would, be quite satisfactory to any of our expert striped-bass anglers if they could but see, as I have seen, and feel, as I have felt, them hooked on the ordinary tackle of our striped-bass fishermen.

The tarpon, though cautious and wary, is not timid, and with ordinary care can easily be induced to take the bait; and any one at all familiar with what is necessary in capturing the striped bass of our Eastern waters, can readily hook as many as he can safely take care of, provided he hooks them well, and by his skill prevents them from getting away. The object of my trip to Florida was to demonstrate if these fish could be captured with the ordinary tackle used by our Eastern club fishermen in their pursuit of the striped bass, and to see if patience, skill and perseverance could be made successful as against weight, activity, power and endurance. This I have successfully accomplished, for, while I have taken some eight of these monsters, I have used nothing but my striped-bass tackle, which is of the lightest kind used by any of the bass fishermen, consisting of Nos. 9 and 12 bass lines, the ordinary full-size bass reels, a light-six-foot split bamboo rod weighing fourteen ounces, and 10-0 knobby hook, increased one size for convenience, simply to accommodate an increased size bait.

The mullet used for bait are much larger than our menhaden, and are used in exactly the same way, and I made a success of chumming as in striped bass fishing, and the only drawback that I found in the capture of tarpon was in a proper and suitable snell to stand the action of their iron and shear-like jaws. Close examination shows the head of this fish to be a curiosity. The mouth, when closed, resembles the eagle's beak reversed, and one would be led to suppose that it was very small, as compared to the size of the fish; but it possesses a sort of folding power, and when fully opened it presents a monstrous cavity, quite sufficient to take in a man's head. The gills are of immense size and capable of great distention, and when the fish leaps from the water, as it always does on being hooked, it presents a spectacle at once grand and imposing, and the continuation of those efforts during the time he has the power to make them, render this fish and its capture at once an awe and delight. He leaps from the water when hooked, and with mouth open and gills distended shakes himself as I have never before seen any living object do, to rid himself of the hook, and in a majority of cases, sooner or later succeeds.

I have had them, as I supposed, securely hooked, and, after half an hour's tussle, when I thought them nearly captured, have had them make a rush and take line enough from me to get sufficient headway to leap from the water and by one of those tremendous shakes throw line, bait and hook ten feet in the air and then gracefully move away. In some cases I have had them leap from the water, from one to six feet clear, thirteen times before they lost power to do so, after which many attempts to leap would end in their getting only part way out of the water.

The brilliancy of the spectacle of this fish, with a head completely covered with a coat of the most brilliant pearl, and the sides from the gill down covered with frosty silver, leaping six feet out of the water, far enough to allow the turning of a complete somersault, and repeating this momentarily, must be seen to be appreciated, for it cannot be accurately or effectively described—it is awe-inspiring and sublime. The notion which is entertained by some English sporting journals, that to capture fish of more than two and a half pounds' weight to the pound of tensile strength of line, has in this experience been entirely exploded; for in my captures a fish weighing 125 pounds has been captured by a line having a tensile strength of less than twenty-five pounds; this is five to one instead of two and one-half to one.

Punta Rassa, Fla., and the adjacent waters of the coast of West Florida, were the field of my operations, though other waters of the Gulf abound with these fish. To reach the waters of this beautiful giant of the deep is not difficult, and the accommodations, though in most places plain, are comfortable, and where I had the good fortune to go I found the attendance good. The fishing is done from boats, and in not very deep water.

The flesh of the tarpon is good to eat, and I am informed that in some cases the beautiful scales are manufactured into very handsome and pleasing jewelry ornaments. A preserved specimen of the largest of my captures can be seen at Edward vom Hofe's, 97 Fulton street, New York.

BILLY BOWLEGGs,

PUNTA RASSA, Fla., April 12.

MAINE TROUT SEASON.

THE ice is out of the Maine lakes, and the trout season of 1886 is fairly started. The ice left the Umbagog, the lowest of the Androscoggin, April 30. Moosehead was clear May 2, so that the first steamer ran up to Kineo on that day. Monday evening brought the news by wire that Richardson Lake had just cleared, and that the boats were running. The other Androscoggin lakes cleared about the same time, eight or ten days earlier than last year. So the suggestions in the FOREST AND STREAM that the ice would break up early have been correct, and hereafter we shall all put more confidence in the opinion of experienced guides. The season opens auspiciously, and with the usual desire among trout fishermen to be first on the ground. But cold weather early in the week has rather dampened the spirits of some of the early birds from Boston, and they will wait a few days longer. Still the trains out of the city have carried a number of rod and line sportsmen, but cold fingers and damp and leafless woods will be their reward.

The desire is strong to go early, but the season is too immature by far. The purpose is to take big trout, almost always by trolling, for there is seldom any fly-fishing in Maine till the temperature of the water begins to change. In the taking of large trout the record goes to show that it has not been done by those who rush off before the snow water is done. In my memory the trout above six pounds have nearly all been taken as late as Decoration day or thereabouts. The celebrated Whittier 9½ pound trout was taken somewhere about the middle of June. Mr. Harrison Gardner took his 8-pound trout May 30. Mr. R. A. Tuttle has taken several large ones about that date. As soon as the ice goes out a multitude of small trout may be had at the mouth of the streams, but for large trout and certainly for bodily comfort, I should go later. To those not familiar with the Maine woods, or to those who have only been there in mid-summer or autumn, it may not be amiss to say that winter lingers long in the lap of spring in that State. Snow may be found in abundance in the woods till the middle, and sometimes the last of May. I have seen deep drifts there as late as the middle of June even. But the trees usually begin to be in leaf in the lake regions by the last of May.

SPECIAL.

FISH SLAUGHTER IN VERMONT.

THE disciples of the rod and line in this section are rejoicing over the appointment of Charles H. Lotrass, of the Champlain Rod and Gun Association, as fish warden for this State. He is a thorough business man and turns upon the law breakers when they least expect it. He also has been warden in New York State for over a year, so now he can work on both sides of Lake Champlain. During the past season he took over sixty nets and seines from those waters, most of which run in the marshy breeding grounds at the head of the lake. It is hoped and expected that he will give no little attention to Lake Bomoseene, which is a beautiful little sheet of water eight miles long and nearly two wide in the widest part. About two miles of the upper part of this lake is a large marsh of over two hundred acres, making a splendid breeding bed for pickerel and the large-mouth black bass, which were quite numerous in the lake a few years ago. For a number of years it has been the practice of a party who live there to set a large net in the channel, while they were running to and from this bed, and most of those which managed to get by the net without being caught, met their death by the cruel spear when they were on the spawning beds. In the spring I have seen four boats at a time rigged with jacks being silently pushed by a man in the stern, while the other stood in the bow with spear in hand watching for bass. (I say bass, as they are more likely to find them, as they are not so cunning in concealing themselves as the pickerel.)

I have also seen exposed for sale in our village no less than fifty of these fine bass at one time, all of which bore the marks of the spear. The bass usually captured in this way are females, and every one so killed lessened the number of bass by hundreds. It is thought that over 500 were taken by this party last spring. If there were not a number of other small marshes in the lake the bass would be entirely annihilated in a short time, and it is earnestly hoped that our new warden will bring this business of spearing and netting to a stop at once, and in a couple of years we will again enjoy good fishing with the rod and line.

The fishing through the ice has been unusually good this winter, it has been so mild. But the men who do this are mainly another lot of pot-fishers who catch the fish for market, and over one ton have been caught and sold this spring, some of the finest ones going to your city. A great many have been very large, the largest of which I had any knowledge weighed 23½, others weighed respectively 22, 19½, 18½, 16½, 15, 14½, and a good many from 8 to 13, while those from 4 to 8 were more than three hundred. NED.

FISHING IN THE POTOMAC.—Washington, D. C., April 22.—From observation and reports received, I am able to state that better bass fishing was never had in the Potomac than sportsmen are having now. Strings of from five to fifty are now brought in from Little Falls and Great Falls and other points, while further up, at Point of Rocks, Harper's Ferry, Sir John's Run and other well-known places, the catches have been something remarkable, both for number and size. A letter just received from the south branch of the Potomac states the bass never were more numerous, that bait is very scarce there in consequence, and that anglers must come well prepared in this respect. Small catfish seem to be the most taking, but chubs, smelt, canal minnows and other small fry are used with success. Have not heard of any fly-fishing. The catch of Potomac shad is very large and the fish are unusually fine. Herring are also reported as good as usual in size and quality. Striped bass are running up, and sportsmen are taking them at various favorable points with excellent luck.—BURNETT.

SALMON ANGLING IN MAINE.—A Maine paper says: "A few days ago Mr. Henry A. Wing caught a fine salmon in the Mattawamkeag River. The fish was taken with a small rod, and is the first of the kind which has been caught here in a long while. Salmon are moving up the river in large numbers, and the prospect is that many will be taken with rod and line. The people feel much gratified to think the rivers are once more becoming populated with the 'king of fish.'" We also learn from good authority that a twenty-four pound salmon was taken with a rod in the Penobscot below the water works dam of Bangor, last week, by Mr. Fred Ayer. Beside the fish taken by Mr. Ayer, we learn that two more were taken on Friday last, three on Saturday, and one took the hook but was lost.

FISHING IN FLORIDA.—Cedar Keys, Fla., April 11.—*Editor Forest and Stream:* I have been here for some time with a friend from Canada, and we have kept the hotel in fish ever since we came. We have had lots of fun catching sheepshead. I suppose they took this name from having a mouth like a sheep. On April 11 three of us took a sail out to Snake Keys, an island five miles from Cedar Keys. We sailed a mile further in the Gulf, and I noticed trout about us. As there was a piece of mullet in the bottom of the boat and I always carry my line in my pocket, I thought I would try a cast. Well, I made a cast of fifty feet out, and the bait had only struck the water when something took my bait. I let the fish have some more line and then checked him, and had fine sport pulling him in. It was a trout of about 3½ pounds, a beauty. My friend could not stand the temptation, so he felt for his line and found he had one in his pocket; but he lost a number of fish, as his line was not heavy enough and would break every now and then. For two hours we had lots of sport, but then had to take up anchor and start for Cedar Keys, as there was a storm coming up. We hated to leave, as they were still biting freely. The wind blew very hard and the Gulf got very rough and ugly; but we had only one thing to do, and that was to keep on, for the longer we stayed out the more likely we were to be swamped. We had to keep bailing all the time. We got in safe and carried our fish to the hotel and took the house by surprise, showing sixty-seven trout and one bluefish. They weighed 137½ pounds. That was the best sport in fishing I ever had.—H. A. B.

COIL LEAD OR SHOT.—Ashtabula, O.—*Editor Forest and Stream:* Living as I do among the fastness of the everlasting mountains of the Alleghanies, where their evergreen tops pierce the blue vault above, where the bounding deer roam at will, and where in the deep valleys the pure mountain streams rush headlong on their way to the mighty river, it has been my solace and joy to spend many weeks in decoying to my line the speckled trout, which it is the delight of all lovers of sport to lure to their hand. I see in the issue of March 18 some one advocates coil lead instead of shot for sinkers. I cannot understand why an idea so long abandoned should be again brought forward. I used it for years, until I tried the shot, since then I have never returned to that primitive mode of sinkers. My reasons for not liking it are many. It is not decided enough in its action when eating my hook. When trying to place the line at a given point the lead is so distributed that the wind will take it from the place intended, whereas the shot has less surface for the wind to act upon, and therefore your cast is more perfect. I used to find the coil lead an abomination and a nuisance, it was constantly getting off from my line, or becoming foul, and when on the line it made a stiff and unpliant spot where I wanted the most elasticity. I always put the shot above the loop on the line, which leaves to the leader and hook, with a gut, a free action, while the line is held at will by the shot. In swift running streams I seldom use a sinker, I think the fly has more of its natural appearance than when held under water, the current being sufficient for all purposes.—G.

FISHING FOR LAND-LOCKED SALMON.—Bucksport, Me., April 27.—*Editor Forest and Stream:* The question, what is the best fly and bait for land-locked salmon, also season and time of day? may be answered thus: For a fly the silver doctor is the greatest favorite. The butcher is another that some have found successful; also an unnamed fly of private make, with a yellow body and a gray mallard wing, and another called Montreal, but not the original Montreal—nearer a golden pheasant. There is a great variety of opinion as to bait. Fly-fishermen do not like to talk about bait, though the fact is the most of the fish taken at Grand Lake Stream and all those now taken at Sebago are victims of bait. The natives at Grand Lake use a piece of pork rind. Some use a shining and tough piece cut from any fish. If smelts run in the stream where land-locked salmon are expected, a small smelt or piece of a large one is recommended. The season of fishing is from the breaking up of the ice till some time late in June. The April and May fishing is mainly trolling with fly or bait, mostly the latter. Whipping is not very successful until after the cherry is in bloom and the black flies bite vigorously, at Grand Lake Stream after the 1st of June generally, say from June 5 to 20. There is some fishing in September, which is best in case of high water in the streams, but this rarely compares well with the May and June fishing. As to time of day, early morning and late afternoon are best. Some find the silver doctor best in the morning and a gray miller in the evening.—C. G. A.

THE LARGEST TARPON.—Mr. W. H. Wood, who took the first tarpon with rod and reel one year ago, has been at it again. He has recently sent one of these fish to New York which measured 6 feet 5 inches and weighed 140 pounds, and the mounted skin is now in the window of Thomas J. Conroy, 65 Fulton street, where it attracts crowds. This, largest of all game fishes, was taken a few miles from Key West, Fla., on 900 feet of 15-thread linen line, an O'Shaughnessy knobbed 10-0 hook, a 3-foot link chain, a 5-foot bamboo rod and a "Silver King" reel. The great strength of the fish compelled Mr. Wood to lift his anchor and let the boat follow the fish. A similar rod, reel and line are in the window at Conroy's.

CENTRAL NEW YORK.—Syracuse, May 3.—Last week Game Protector Lindsay pulled twenty-two trap nets out of Oneida Lake in twenty-four hours, a good day's work. Mr. Henry Loftie caught twenty-two brook trout on the opening day which weighed five pounds. He says he lost one that would have weighed two pounds, but does not understand why the boys grin when he states this fact.—SALINE.

Fishculture.

THE NEW YORK FISH COMMISSION.

WE have the following figures of the work done at the three hatcheries in the State for the past season, up to May 1. At Caledonia they are still taking eggs of the rainbow trout, and at Cold Spring Harbor some other hatching work is in progress, but not reported. At the Adirondack hatchery, at Lake Brandon, the figures include eggs placed in the streams after the breaking of the dam, which ended operations in the building:

CALEDONIA STATION.
(In charge of Monroe A. Green.)
Egg Shipments.

Warren County.—Schroon Lake hatching house, 250,000

salmon trout, 100,000 whitefish, 150,000 California mountain and rainbow trout.

Dutchess County.—Wagner's and other brooks, 25,000 brook trout; New Hamburg, 1,500 brown and 25,000 California trout. New York County.—To E. G. Blackford, to be sent to Germany, 20,000 rainbow trout; to be sent to France, 10,000 rainbow trout.

Essex County.—Adirondack hatchery, 875,000 salmon trout and 75,000 California mountain trout, for Adirondack Club at Newcomb.

Fry.

Allegheny County.—Canada Creek and tributaries, 20,000 brook trout.

Cayuga County.—Salmon Creek tributaries and North Brook, 25,000 brook trout.

Chenango County.—Willie Brook and tributaries, Fly Creek, Blue Brook, 44,000 brook trout.

Cattaraugus County.—Conewango Creek and tributaries, Trout and Hooper brooks, Sam and Ischua creeks, 65,000 brook trout.

Chautauqua County.—Cold, Crooked and Dyton brooks, Will Creek, 21,000 brook trout.

Columbia County.—Roosman, Link, Harlemlville, Crayville, Groat, New Suydam, Ecclestyne Spring, Indian and Pulven brooks, Steinvile Creek, 83,000 brook trout.

Delaware County.—Trout, Peeks, Platner, Steel, Bennett, Bradley, Loby, Griswold, Baker, Bogart, Baxter, Fish's, Tyler's, Cadosia, Chase's, Beers, Marion, Theirl, East, West, Fall Mill, Elk, Glenbury brooks, Little Delaware, Willis and Hyer creeks, 200,000 brook trout.

Dutchess County.—Shunpike, Deep Hollow, Shekonoko, Amenia, Sherman, Stone Church, Edmond, Belding, Wells brooks, Lansmankill Creek, Washart Lake, 110,000 brook trout, 12,000 salmon trout.

Fulton County.—Bennetts, Connors, Blackart, Parson and Lofton creeks, 30,000 brook trout.

Franklin County.—Ragged Lake, 75,000 salmon trout.

Genesee County.—Oatka Creek, 15,000 brown trout.

Green County.—Plattkill and other streams, 28,000 brook trout.

Herkimer County.—Fulmer, Willard, Flat, Chatman, West Canada, East Canada, Beaver, Cold, Limekill, Little and Big Sprite creeks and brooks; Fulton Chain of Lakes, Little and Big Moose Lake, Moss Lake, Canachagala and Bug lakes, 8,000 brown, 127,000 brook, 105,000 salmon trout, 14,000 hybrids (half brook, half salmon).

Hamilton County.—Spring Creek tributaries in Fulton Chain of Lakes, 50,000 salmon trout and 50,000 brook trout.

Jefferson County.—Centenary and Cold brooks, Sandy and Felt Mill creeks and tributaries, 36,000 brook trout.

Livingston County.—Hemlock Lake, Mill and Spring creeks, 205,000 salmon trout, 50,000 whitefish, 6,000 brook and 16,000 brown trout.

Monroe County.—Lake Ontario (at Charlotte), Tennis, Hoffman, Spring and Oatka creeks, 350,000 whitefish, 10,000 brook and 50,000 brown trout.

Onondaga County.—Onondaga Creek, Bishop, General Patrick, Don, Lowers, Hartup, Putnam and Edward's brooks, 35,000 brook trout.

Otsego County.—South Columbia Brook and Clark's creeks, 25,000 brook trout.

Oneida County.—White Sugar, Gntf, Mill (and tributaries to Black River), Sauquoit, Cummings, Christie and Langworthy creeks, Baker and Read brooks, Jock's and South lakes, Unadilla River (west branch), 125,000 brook trout, 60,000 salmon trout, 6,000 hybrids (half brook, half salmon).

Orange County.—Thompson Ridge, 30,000 brook trout.

Ontario County.—Canandaigua Lake, Irondequoit Creek, 381,000 salmon and 15,000 brook trout.

Steuben County.—Tributaries to Cohocton River, 10,000 brook trout.

Sullivan County.—Beaverkill River and tributaries, Little Beaverkill Creek and tributaries, Neversink River and tributaries, Delaware River tributaries, East and West Mongaup, Black Joe, Conklin, Simpson, Narvoo, Benson's, Brown, Russell's, Horton, Appley's, Bennett's, Willowcasac, Sprague, Benson Meadow, Little Beamville, Salsbury, Patsy, Sawmill, Spring and Lawrence brooks and creeks, 285,000 brook trout, 7,000 salmon trout.

Suffolk County.—Cold Spring hatchery, 110,000 brook trout. St. Lawrence County.—Jordan Lake, 25,000 hybrids (¼ brook, ¾ salmon trout).

Tioga County.—Owego Creek and tributaries, 25,000 brook trout.

Tompkins County.—Six-Mile, Willow and Enfield creeks, 24,000 brook trout, 6,000 brown trout.

Ulster County.—Dry Brook and tributaries, Furlow Lake and tributaries, Wawarsing Creek, 115,000 brook trout.

Wyoming County.—Tonawanda Creek (east stream), East Coy Creek, 84,000 trout.

Washington County.—Blair's Brook and White Creek, 30,000 brook trout.

Warren County.—Lake George, 950,000 salmon trout.

Yates County.—Keuka Lake, 520,000 salmon trout.

Recapitulation.

Brook trout.....	1,682,000
Lake or salmon trout.....	3,490,000
Whitefish.....	530,000
Rainbow trout.....	280,000
Brown trout.....	96,500
Hybrids.....	45,000

Total.....6,132,500

COLD SPRING HARBOR STATION.

(In care of Fred Mather.)

State Work.

Brook trout hatched at station, 130,000; fry received from Caledonia, 110,000.

Brown trout, 65,000 hatched from eggs received from Germany and taken at the station; 8,000 distributed to Clenden Brook, Warren county, to date.

Hybrids, 300 from male sailbling and female brook trout received from E. B. Hodge, Commissioner of New Hampshire.

Tomocods, 2,872,000 hatched and planted in Cold Spring Harbor.

Smelts, 2,100,000 hatched and planted in the harbor.

U. S. Work.

Whitefish, 1,000,000 hatched and planted in Great Pond, near Riverhead and in Lake Ropkonkoma.

Penobscot salmon, 500,000 hatched and planted in tributaries of the Hudson, the Oswego and Salmon rivers.

Landlocked salmon, 84,000 hatched for Lake Brandon, or as previously called Little Clear Pond in the Saranac region. Lake trout, 150,000; 100,000 distributed and remainder kept for future distribution.

Shad, 850,000 shad fry now in process of hatching from 1,250,000 eggs sent from the Central hatching station, Washington, to be planted as may be directed by Mr. Blackford.

Recapitulation.

Brook trout.....	240,000
Brown trout.....	65,000
Hybrids.....	300
Tomocods.....	2,872,000
Smelts.....	2,100,000
Whitefish.....	1,000,000
Penobscot salmon.....	500,000
Land-locked salmon.....	34,000
Lake trout.....	150,000
Shad.....	850,000

Total.....7,811,300

ADIRONDACK HATCHERY.
(In charge of F. A. Walters.)

Placed in streams, frost fish eggs.....	500,000
Placed in streams, brook trout eggs.....	40,000
Placed in streams, lake trout eggs.....	250,000
Planted in lake, lake trout fry.....	80,000
Total.....	870,000
This makes the grand total as follows:	
Caledonia, all kinds.....	6,132,500
Cold Spring Harbor, all kinds.....	7,811,300
Adirondack, all kinds.....	870,000
Total.....	14,813,800

HATCHING SHAD.—The United States Fish Commission's steamer Lookout arrived in the Delaware River off Gloucester City on May 1, to commence the work of artificially hatching shad and stocking the stream with them. The Fish Hawk, a larger steamer, commanded by Lieut. Piefmeyer, of the Navy, which did the work last year, will arrive in a few days to relieve the Lookout, and will remain upriver until after the close of the season. It is proposed to place fifty million young shad in the river from these vessels. The Lookout already has one million eggs in the incubators, and the first spawn will be liberated in about four days. The eggs are obtained from the largest and finest female shad just as they are drawn from the water in the big seine net at Thompson & Guy's fishery. The Government officials have the first pick and pay a stipulated price for each fish used. The hatching process consists in placing the eggs in jars containing water heated above the normal temperature of the river, and keeping them constantly in motion. In from four to seven days the young shad break through the eggs and are placed in the river to start on their perilous journey to the sea.—*Philadelphia Times.*

The Kennel.

FIXTURES. FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.
Nov. 22.—Eight annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.
May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.
May 25, 26 and 27.—First Dog Show of the Ninth Regiment, Wilkes-Barre, Pa. W. H. Truck, Secretary, Wilkes-Barre, Pa.
July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **3616**.

THE CLEVELAND DOG SHOW.

THE third dog show of the Cleveland Bench Show Association was held at Cleveland, O., last week. Previous shows at Cleveland have proved very satisfactory to the exhibitors as well as the association, and we are pleased to note that this show will compare favorably in this respect with any that has been held. The Tabernacle, in which the show was held, is of good size and well ventilated, but is badly lighted. The benches were well arranged, and the management was first-class, except that there were not attendants to do the necessary work in its proper time. The dogs were well cared for, and the exhibitors warmly praised the management for the care taken of their interests and for the efficient and cordial manner in which their wants were attended to. There were 365 entries, with 30 absentees. The quality in most of the classes was good, the English setters being remarkably fine. One of the local papers solemnly announced that "taking all things into consideration there is not a poor dog in the show." We have no knowledge of where the reporter draws the line, but presume that it is at the "yaller dog," as the judge failed to find a worthy recipient of the special offered for this kind. There were quite a number of dogs that made their first appearance in public. Some of them made the knowing ones open their eyes, and we have no doubt that this operation will be repeated if these dogs put in an appearance at future shows, no matter how hot the company.

Judging did not commence until 2 o'clock on Tuesday, and was not completed until late on Thursday. The management thought that the public would like to see the dogs judged, and this was the reason for the delay. We can assure them, however, that this is a mistaken idea. We have taken great pains to obtain information upon this point, and are certain that a very large majority of the public who visit dog shows are far more anxious to see the "best of its breed" than to witness the process of selection. It is also true that, until the cards are put up, the display of dogs to most of the visitors means nothing, but when the animals are graded according to their merit, the man who knows nothing about the characteristics of the different breeds can compare the blue with the red, and so on through the class, with opportunity at least to learn something. Then again the exhibitor, or at all events, the lucky one, is anxious for an early display of the prize he has won, as he takes a pardonable pride in the success of his favorite and the consequent words of praise bestowed upon it by the visitor. The weather, except a few showers on the last day, was all that could be wished, and the show was visited by a larger number than has attended any of the previous shows held here. The judges of the different classes were Mr. B. F. Wilson, Pittsburgh, Pa., English setters; Major J. M. Taylor, Cleveland, O., Irish and black and tan setters; Mr. John Davidson, Monroe, Mich., pointers; Mr. J. H. Naylor, Chicago, Ill., all other classes.

Only two protests were made. Mr. Seitzer very foolishly protested Keswick II. on account of late arrival. The rule requiring entries to be present the morning of the first day is a very necessary one, but in case of unavoidable delay it has been the custom to waive its provisions, and as Keswick arrived before the class was judged, the committee very properly refused to sustain the protest. Messrs. Whitehead and Wright protested the Irish setter puppy Frank as being over age, but it was proven to the satisfaction of the committee that he was eligible, and the protest was not sustained.

ENGLISH SETTERS.—(MR. WILSON).

There were many very fine animals in the English setter classes, and several of them are good enough for any company. The judge did not handle them at all well. He let no bad ones into the money, but some of the best were entirely overlooked, and others were rated below their merits. We are sorry to

have to disagree with the decisions of Mr. Wilson, as we know him to be a conscientious, painstaking judge. Outside indications are not always reliable in assisting one to form a correct idea of the worth of an animal, and we are confident that had the judge made a more careful examination and comparison of the dogs, he would have arrived at different conclusions in some instances at least. In the champion dog class, Paul Gladstone, the only entry, was absent. In the bitch class the beautiful Queen Alice won over her only competitor, Liddersdale. Juno A., also entered in this class, was absent. The open dog class was the best we have seen this year. Mandan, the winner, is a stylish looking dog, of beautiful color; he is a trifle coarse in head; having rather a wide, short skull; he is also faulty in thighs, and might be better in feet; he was shown too thin. Scottish Chief, placed second, was much the best in the class. He is a trifle narrow in head and might be better in thighs, but otherwise he is about as good as the best. Pendragon, winner of third, is a well-formed dog of good size, with a fair head, good body, legs and feet. Brandon, vhc., has a good body and capital legs and feet; he is much too thick and short in head, lacks quality and is very bad in tail. Blue Hope, also vhc., is just a fair dog without much quality. Tasso, he, is a fine upstanding dog, with capital shoulders, body, legs and feet, and a beautiful tail. He is a bit wide and short in skull, and a trifle out at elbows; his neck is also a little too short. Dash and Count, both hc., were lucky. Knight of Snowden, unnoticed, was looking much better than at Newark. Craig, also unnoticed, is of the same type as Knight of Snowden and nearly as good; he has a good head, is well put together, with capital legs and feet. Scottish Chief should have been first, Knight of Snowden second, with not much to choose between Pendragon, Mandan and Craig for third. Tasso and Blue Hope were near enough to these to merit vhc., Brandon was worth hc., and Count a single letter. The bitches were better even than the dogs, and we are sorry to add that they fared worse. Lillian, the winner, is a well-known field trial performer. She has a beautiful head and neck, fair body and loin, with capital legs and feet, and shows much quality. She lacks in chest, is too straight in stifle and is off in tail. Vixen III. was placed second. She is too plain in head and lacking in quality for the place in such company. Third went to Jeanette, a nice bitch not well shown. Swan, vhc., is a good all around bitch with a good flat coat; her head would be improved with more stop. Bess M., Fannie M., vhc., and Akron Girl, hc., are all well made, but coarse and lacking in quality. Jealousy, vhc., is just a fair specimen. Rosey, also vhc., is a fair bitch, with a good head. She is a trifle light in chest and long in back, and has open feet. Daisy, hc., we failed to find. Novlette was the best bitch in the class. How the judge could overlook her many good points and evident quality we cannot comprehend. Heather Bell, Abbess and Helen Douglas, also unnoticed, are much the same type as Novlette, and very close to her in merit. Novlette has recently arrived from England, and is a first-prize winner at the Crystal Palace, Darlington and other shows. She was shown too fat, but was in good enough form to win. Either the English judges and many of our best known breeders are wrong or Mr. Wilson is wrong. The class should have been led by Novlette, with Heather Belle second and Abbess third. Helen Douglas, Lillian, Swan, Vixen III. and Jeanette were all worth the three letters. Bess M., Fannie M., Jealousy and Rosey should have been content with two letters each. At the head of the hc. division we should place R. B. Morgan's Addie M., unnoticed. She is a strong, good bitch, well made and with capital legs and feet. J. King's Daisy, also unnoticed, deserved a c. There were sixteen entries in the dog puppy class. The secretary had stated that where more than ten were entered in a puppy class the class would be divided. This of course only applies to classes where dogs and bitches compete; but through mistake this class was run in two sections, divided in the order in which the entries were received. Prince Royal H., winner of second in the second division, was much the best in the two classes. Doc C., hc., in the first division, came next. Dnde has a good head, but is shallow in chest and out at elbow. Blue Prince is a fair specimen only, with a weak head, short neck and straight stifle. Grouse is also a fair puppy, with a weak head. Sport, unnoticed, deserved mention for his good body, excellent legs and feet. In the bitch class, Nantahala, placed first, is faulty in head and ears, and round in barrel; second was her place. Second went to Sparkle, a coarse bitch, out elbow and not straight in forelegs; she was worth hc. Dart Gladstone, vhc., was the best of the lot; she has no very serious faults. Lady and Blink Bonny, both vhc., deserved their cards, as did Jealousy, hc.; she was very close to them. Nellie and Nettie, both unnoticed, showed more quality than anything in the class, and should have had one or two letters each.

IRISH SETTERS.—(MAJOR TAYLOR).

The Irish setters, as a whole, were the poorest lot that we have seen at any show this year. In the champion dog class, Echo, Jr., had an easy win over Brush. Zella Glenduff, looking well, had a walk over in the bitch class. There were only five shown in the open dog class. They were properly placed. Mickey C., placed third, except for a broken foot, was the best of the lot. In the bitch class, first went to Laura B., a very nice big bitch with plenty of bone. She is very well made, but a little too much of English type. Cora, winner of second, is a very promising puppy, but not good enough to beat Lorna, placed third. Noreen IV., vhc., was looking well, and deserved the place. Clara Belle, also vhc., received all she deserved. She has a short head and is too heavy in body. Her good coat and color gave her the place. Nellie C. is a fair little bitch shown out of coat and feather. The dog puppies were nothing extra. Frank, the best one, is just a fair puppy, with too much white on chest. In the bitch class, first went to Cora, winner of second in the open class. There was nothing else in the class that we fancied.

BLACK AND TAN SETTERS.—(MAJOR TAYLOR).

There were no entries in the black and tan setter champion classes, and but two in the open dog class. Both of these were winners of first and second here two years ago. They have fallen off from their form then, and the judge withheld first and placed them second and third, their relative position two years ago. Dash, placed second, has grown coarse and wide in front, and is out at elbow. Mr. Brown was much too fat. He has grown throaty and wide, and shows age. In the bitch class, first went to Lottie, a very nice bitch, with rather a plain head and poor tail, but otherwise very good. Second went to Jess II., a fine big bitch with a fair head, and of good coat and color. She is not quite straight on her forelegs. Duchess C. has an Irish head, and is of Irish type. Bell, unnoticed, deserved the two letters. She is a fair light weight, with too much tan on head. First was withheld in the puppy class, and second given to Dash. We failed to find him in his stall. He should be much better than the remainder of the class to be worth the place.

POINTERS.—(MR. DAVIDSON).

There were forty-two pointers entered and all were shown except five of the Graphic Kennels and Jetsam, the Pittsburgh winner. Taken as a whole, the quality was above the average. Robert le Diable was entered in the champion class over 55 pounds, but was not for competition. He has improved since we last saw him. In the corresponding bitch class Lady Croxteth, looking well, was alone. In open dogs first and second went to Pap Smizer and Kingshot, litter brothers. They are very well made with good legs and feet, both are a trifle weak in head. Sweep, vhc., we failed to find in his stall. Young Meteor, hc., is rather a nice puppy, but too wide in front. Planet, c., was in bad condition. He appears to be a good dog. His worst fault is his open feet. In the bitch class first went to Romp, sister to Lady Croxteth, but a year younger.

She is nearly as good as Lady. Second went to Lass, well known. She was much too fat. Diana, vhc., is quite a fair bitch, except that she is too snipy and a bit straight in stifle. There was one entry in each of the small champion classes and both were absent. In the open dog class first went to Tippecanoe, a taking looking dog with fair head, neck and chest, good loin, quarters, tail, legs and feet. His ears are up a bit high and he is a trifle wide in front. He might be better in shoulders. Second went to Rumpy, a well put together dog of considerable quality. He has a fair head that would be improved with more stop. Don and Doncaster, both vhc., deserved their cards. Le Roy, hc., is a taking looking dog with good neck, shoulders, chest and tail. He is weak in head and light in bone. Bull's Eye, also hc., is a fair dog, a bit leggy. Spot, unnoticed, deserved a card for his good body, capital legs and feet. In the bitch class first went to Keswick II., winner of second at Pittsburgh. She is quite a nice bitch. Her worst faults are a flat skull, not depth enough in chest, and a bad gait behind. Lillie Bang, winner of second, is a niceish lemon and white; she deserved the place. Fan, vhc., looks like a good one, but she was too fat to show. Daisy Donald, hc., was nursing a litter and not in form. The dog puppies were a poor class. Young Meteor, the winner, was much the best. He was hc., in the open large class. The others were not very promising. The bitches were better, although we noticed nothing likely to win in the future in good company.

SPANIELS.—(MR. NAYLOR).

There were seven Irish water spaniels shown. Count Bendigo was alone in the champion class. He was looking well. In the open dog class first went to Patsy O'Connor, a rangy, workmanlike-looking dog, with good head, ears, topknot, legs and feet; his tail has been hurt, which will account for its bad carriage. He also has a large white spot on chest. Second went to Champion, of good shape and a nice head; he was off in coat. Ononoo, vhc., is well known. O'Duff, hc., is fairly well formed, but is too leggy and shallow and was short in coat. In the bitch class first went to Little Sioux, a nice bitch with a good head. She is a trifle short in body and was off in coat. Gypsy, winner of second, is well formed. She has a mustache and considerable feather on her tail; her coat was also ragged. There were no entries in the champion field spaniel class. In the open class first went to Hornell Mikado, one of the handsomest black and whites that we have seen. He is fair all round, except that his tail is carried too high. This was his first appearance. He is to be at New York to take the measure of the cracks. Second went to Peerless Gloss, a very nice dog of cocker type. Rocco, c., has a good head, coat, legs and feet, but is too short in body. Bob S., unnoticed, is of fair type and deserved a notice. The two others show a water spaniel cross. Black Beau, Jr., and Hornell Dan were absent. The latter is a capital dog. He gnawed a hole in his thigh the first day and was not shown. Hornell Silk, looking better than at Newark, was alone in the champion cocker class. In the open class for other than black first went to Vic. She is faulty in head and ears and too short in body. Hornell Belle II., winner of second, has a grand body and a beautiful coat. She is a trifle faulty in head and has chorea; but for the latter we would place her first. Hornell Nance, vhc., is faulty in head, but has a good body and the best of legs and feet. The two others were not worthy notice. Kino, winner at Pittsburgh, was first in the class for blacks. He is a nice little dog, a trifle too short in body and stands too wide in front. Hornell Jock, winner of second, is a little faulty in head and ears, but is good in body. Hornell Dinah is a bit light in bone, and was not in good condition. Ruby, hc., is good in body, but stands a little too high. Roy, c., is weak in head and light in bone. Mikado, winner in the open class for field spaniels, also won first in the puppy class. But one other was shown. He was a mongrel and second was very properly withheld. These classes were well judged.

FOXHOUNDS.—(MR. NAYLOR).

In the champion foxhound class Roxey II. was alone. In the open class Ranger was first, and Abe, a handsome black and tan with white feet, was placed second; he is too leggy and is rather shallow. We preferred Leader, vhc., for the place, he is better all round, except in beauty. The others were a workmanlike looking lot. There was no uniformity of type in the class, and not one that approaches the type called for by the standard.

BEAGLES.—(MR. NAYLOR).

There were nineteen entries in the beagle classes, with only one absentee. In the champion class Bunneman, looking well, beat Mischief. The open dog class brought out a capital hound in Rackett; he was bred by Gen. Rowett, and has a grand head and an immense chest; he seemed to be slack behind, which is perhaps owing to his thin condition; when in good form he will undoubtedly be a hard one to beat. Driver, placed second, is a workmanlike looking dog, but not of so good type as Bob, vhc. Bob is a bit leggy, and might be better in muzzle, otherwise he is good. Banker, also vhc., is rather coarse. Boxer, c., might be improved in coat, brush and muzzle; in other respects he is quite good. The bitch class also brought out a new comer in Dot, the winner. She is an excellent bitch. Her worst fault is a trifle too much length of body. Piney, placed second, is a serviceable looking bitch, also a little too long in body and out at elbow, and is light in eye. Minnie, vhc., is very pretty. She is weak in muzzle, and might be better in brush. Queen Bird, hc., is well made, with a good body. She lacks in muzzle and ears. Millie, also hc., is an excellent bitch. She is somewhat snipy and a bit out at elbow. Maida, c., is a little long cast, and a trifle out at elbow. She also lacks in coat. Stella, also c., lacks quality. In the under 12 inch dog class, Marchboy II. was alone, the other entry being transferred to the large class. Marchboy should have been entered in the champion class, as he has won three firsts. He has lost flesh during the campaign, and this magnifies his worst fault, lack of substance. There were but two shown in the bitch class. Fairy, placed first, we did not like so well for the place as Magnet. The latter is bad in forelegs and feet, but better than Fairy in all other points. Maida II. was the only puppy shown. If she gets a good coat and brush with age she will do to show again. Both of the packs shown were very good. The one placed first contained four first winners. The classes were well handled.

DACHSHUNDE.—(MR. NAYLOR).

This was an excellent class, the most "sorty" lot we have yet seen together. We thought them properly placed.

FOX-TERRIERS.—(MR. NAYLOR).

Only four fox-terriers were shown. Stableford Joe, looking better than we have seen him, was alone in the open dog class, and his kennel mate Lyra, also looking well, won in the bitch class. Busy, her only competitor, winning second. The latter has a fair head and good legs and feet; she is not clean enough before the eyes and stands too wide in front. First was withheld in the puppy class, and no fault could have been found had the second, given to Lert, been withheld also.

GREYHOUNDS.—(MR. NAYLOR).

With the exception of first and second there was nothing worthy notice. Belle, the winner, is quite a nice bitch, with a fair head, good neck, chest and loins, and shows quality; she is too straight behind and her feet might be improved. Major, second, is well known.

DEERHOUNDS.—(MR. NAYLOR).

There were only two deerhounds shown. Fly, placed first, is just a fair specimen. Garfield, given second, looks the better of the two, but his ugly disposition prevented examination, and he was properly placed in the rear.

MASTIFFS.—(MR. NAYLOR).

The only entries in the champion classes, Homer and Rosalind, were absent. The open dog class brought out a very fair

dog in baby. He was much the best in the class. He is too long in head and light in bone and might be better in feet. He has a good body, which would be greatly improved with more flesh. He is evidently well bred, although unfortunately his pedigree is missing. Caesar II., placed second, we do not like. Captain, vhc., is a very dark brindle, almost black; he is of fair type and immense bulk. Prince, hc., should have been second. He is not first-class, but much above the average, and the best red we have seen for a long time; he is rather light and leggy, and could be improved in head. In the bitch class Bal-Gal and Ilford Cambria had a very close thing of it. Bal-Gal's good condition pulled her through, but she did not have much to spare. Ilford Cambria is litter sister to the well-known Ilford Caution. She has a fair head and is well-formed. She was not shown in good condition, being much too thin. There was only one puppy worth notice, Ashmont Tiger, a nice brindle, much like his sire Ilford Cromwell. He is not quite deep enough in muzzle and has a ring tail. He is rather timid and did not like to go into the ring, whereupon Mr. Fellows, of spaniel fame, who had become somewhat acquainted with him, took him in charge and showed him nicely. When the ribbon was handed him, Mr. Fellows very blandly remarked to the judge, "If you are as good a judge of spaniels as you are of mastiffs, I am all right." It is perhaps unnecessary to add that he retired amid the plaudits of the audience.

ST. BERNARDS—(MR. NAYLOR).

There were eighteen St. Bernards entered and all were present. First Choice, looking well, was alone in the champion rough-coated class. There were no entries in the bitch class. In the open dog class, Rene won first. He was in good condition. Humbolt, placed second, is a fair dog, a trifle long in muzzle and a bit large in ear; he also has an open coat. Julien, vhc., is also a fair dog of good size, with more than an average head, and is well marked. His expression is not just right, and he is a little weak behind. His bad condition undoubtedly lost him second place. Jumbo, hc., is a big, coarse, eight-months' puppy, with a small head and snipy muzzle. He may improve with age. In the bitch class there were only two—litter sisters. Norma, placed first, is a fair specimen, lacking in bone and short of coat. Jumbo, hc. in the open class, was the best of a poor lot of puppies. There were no entries in the smooth-coated champion classes. In the open dog class Montreux was alone. He is a good dog, with badly carried ears and tail. There was only one bitch entered; not a good specimen. The puppies were no better than the rough-coats, and we noticed nothing that promises to be first-class.

NEWFOUNDLANDS—(MR. NAYLOR).

Mr. Naylor very properly reversed the decision at Pittsburgh and placed Bruno over King Leo, giving them first and second. Lear, vhc., we thought just about as good as King Leo; he is a young dog with good head and coat, and promises to be as good as his sire, Bruno, when mature. Carlo, the winner at Hartford, was also vhc. Aside from these there was nothing else in the class worth mention.

COLLIES—(MR. NAYLOR).

There were only nine collies entered and one was absent. Ben Nevis, looking well, was alone in the champion class. Why he was allowed to compete after having been disqualified by the New England Kennel Club we cannot understand. Such violation of one of the most important rules of the American Kennel Club cannot be overlooked. In the open dog class, Clifton Hero won first. He is a nice dog with a beautiful head and ear, good body, legs and feet, a fair amount of bone and a beautiful, well-carried brush. He is too soft in coat, a trifle overshot and has dew claws. He beat Ben Nevis for the special. We cannot agree with this decision, as Ben is better than him in everything except head and should have won easily. Second went to Yarrow, the winner here two years ago. He is still a good dog but has grown coarse in head. In the bitch class, Beauty, the winner, is a well-formed animal with a good head, disfigured by badly-carried ears. She has but just arrived in this country and was in horrible condition. Juic, her only competitor, received all she deserved. The puppies were nothing extra.

BULLDOGS—(MR. NAYLOR).

Only two bulldogs were shown. King, in the dog class, won at Boston and Hartford. We overheard one critic severely rate the judge for awarding King a prize, as he is undershot. Nana, in the bitch class, owing to her long face, could get no higher than second.

TERRIERS—(MR. NAYLOR).

There were thirteen entered as bull-terriers, and all of them were on hand for the fray. Yankee, placed first in the large class, is a big, coarse dog with a "Dudley nose," heavy head and coarse tail. He should have exchanged places with Maud Lee, placed second; she is quite a nice bitch, a trifle heavy in head. Of the others, in both classes, the less said the better, as, judging from their looks, it would take but little to start a fight. Mr. Naylor, the judge, placed on exhibition a capital lot of Scotch terriers, among them was Niel Gow, a varmint-looking one as we have seen in many a day. This was his first appearance. When he is shown for competition it will take a wonder to beat him. The two that were shown for competition did not receive notice. There was only one black and tan shown, a good terrier, fairly well marked. Three of the five entries in the Dandies were owned by the judge, and not for competition. Bobbie Burns, the winner, is a nice Dandie, not quite round enough in body. Elsa, placed second, beats him in this respect, but is a bit too short. Erin, looking better than we have ever seen her, was alone in the Irish class. Flora II. was absent in the Skye class, and the others were transferred to the Yorkshire class and given another chance. We thought the judge very liberal in this as well as in his distribution of cards, as there was only one decent Yorkshire shown. There were two fair toys, Midget, a pretty black and tan, receiving first. There were no toy spaniels shown. The two Italian greyhounds were much too large. In the class for poodles first went to a fair white, with good curl. Second was given to Curly, by name, but not by nature.

PUGS—(MR. NAYLOR).

Dan O'Shea helped out the entries in the pug-classes with a couple of foxhounds and a beagle, but they were transferred to their proper classes, leaving twelve to face the judge. Joe, looking well and fat, was alone in the champion dog class. In the bitch class the Mohawk Kennel entered Bo-Peep, but she was not in condition, and with the consent of the managers Judy was substituted. Toby, a big dog, lacking in wrinkle, mask and trace, was the only entry in the dog class. In the bitch class, first went to Peggie, a fairly well shaped bitch; she might be better in wrinkle, mask and trace. Second went to Toby, a nice puppy with capital wrinkle. Tiny, hc., received all she deserved; she is long in body and faulty in markings. Toby, winner of second, won first in the puppy class. Rubie F., a cobby, promising puppy, was entitled to her reserve card. Chiquita, vhc., is also well formed, but has bad ears and lacks trace. Tony May, hc., has a nice body and fair wrinkle and mask, but has a wild looking eye and badly carried ears.

MISCELLANEOUS—(MR. NAYLOR).

In the miscellaneous class first went to the well-known bobtail sheepdog Sir Lucifer. Second and third to a pair of promising young basset hounds. Vhc. and hc. also went to Teaser and Lill, a pair of the same breed, a little shorter in body than the others. The dog has some characteristics of the dachshund. Si, entered as a Siberian bloodhound, should not have been noticed; he is a mongrel with some St. Bernard blood in his veins.

GERMAN MASTIFFS OR GREAT DANES—(MR. NAYLOR).

Six good animals were shown in this class. Cesar, placed first in the dog class, is an immense brindle, one of the best we

have seen. He is a trifle straight behind, which is his worst fault. He would show better with more flesh. Second went to Nero, an uncropped blue, but little behind the winner in merit. General, vhc., was transferred from the miscellaneous class where he was entered as a Russian bloodhound. He is a fair specimen, a bit wide in front and weak in muzzle. Columbus, c., would have been better placed but for his deformed forelegs, caused by being broken. Pluto was absent. In the bitch class Flora was absent and Lady Gray, a very nice blue, was alone. Barring a weak muzzle she is a very nice specimen. Below is a full list of

AWARDS.

ENGLISH SETTERS.—CHAMPION—Dog: Absent. Bitch: Pittsburgh Kennel Club's Queen Alice. OPEN—Dogs: 1st, R. B. Moran's Maud; 2d, John Davidson's Scottish Chief; 3d, Reserve Kennel's Pen-dragon. Very high com., J. Denny's Brandon, F. Milham's Blue Hope. High com., J. Cockrell's Tasso, C. W. Fromm's Dash and North, M. Martin's Count. BITCHES: 1st, H. & D. Bryson's Lillian; 2d, Mrs. E. C. Franklin's Vixen; 3d, J. Donoghue's Jeanette. Very high com., J. Davidson's Swan; R. B. Morgan's Bess M. and Fannie Morgan's Akron. PUPPIES—Dogs: 1st, F. Morgan's Jealousy, and D. O'Shea's Rosey. High com., R. B. Morgan's Akron; 2d, J. A. Spence and L. Coughlin's Daisy. Bitch: 1st, A. Sander's Duke; 2d, T. G. Davey's Grouse. Very high com., A. high com., S. B. Conklin's Dash C. and Doc C. Two classes were made of the dog puppies. In the second class—Dogs: 1st, Pittsburgh Kennel Club's Blue Prince; 2d, R. T. Kennedy's Prince Royal. Very high com., C. E. White's Earl of Britton. BITCHES: 1st, J. Denny's Nantahala; 2d, Pittsburgh Kennel Club's Sparle. Very high com., G. Volker's Lady F. Wolfender's Blink Bonney, and T. Donoghue's Dart Gladstone. High com., F. Milham's Jealousy.

IRISH SETTERS.—CHAMPION—Dog: Dr. Wm. Jarvis's Elcho, Jr. Bitch: H. E. Chubb's Zella Glenduff. OPEN—Dogs: 1st, R. C. Van Horn's Patsy; 2d, C. Hanitch's Dash; 3d, H. E. Chubb's Mickey C. B. 2d, J. A. Spence and L. Coughlin's Daisy. Bitch: 1st, J. M. Leekley's Laura B.; 2d, J. A. Spence and L. Coughlin's Daisy. Very high com., W. H. Wright's Nellie. PUPPIES—Dogs: 1st, W. C. Schneider's Frank; 2d, H. F. Conley's Bush. High com., S. T. Oswald's Pat and W. B. Wright's Concord. BITCHES: 1st, J. A. J. Sprague's Ora; 2d, very high com., G. Randerson's Cleveland Belle and Little Daisy. High com., Mrs. T. R. Whitehead's Kitten. Com., C. E. Wilbur's Gipsy.

BLACK AND TAN SETTERS.—Dogs: 1st, withheld; 2d, R. R. Rhodes's Dash; 3d, Miss L. Walton's Mr. Brown. BITCHES: 1st, F. W. J. Ball's Lottie; 2d, E. Davis's Jess II.; 3d, withheld. Com., Mrs. G. Griffin's Dandies. PUPPIES: 1st, withheld; 2d, E. Clobitz's Dash. Com., R. W. Wehrle's Lang and C. E. Grover's Peter.

POINTERS.—LARGE—CHAMPION—Dog: Absent. Bitch: B. F. Seitter's Lady Croxteth. OPEN—Dogs: 1st and 2d, Whealen and Sander's Patsy and Kingsholm. Very high com., Pittsburgh Kennel Club's Sweep. High com., C. T. Engel's Young Duke. Bitch: 1st, B. F. Seitter's Planet. BITCHES: 1st and 2d, Istodone Kennels' Romp and Lass. Very high com., Whealen and Sander's Diana. SMALL—Dogs: 1st, W. C. Best non winner in miscellaneous class, Teaser. Largest kennel from Canada, D. O'Shea. Largest number in best show condition, B. F. Lewis.

NEW YORK DOG SHOW.

THE tenth annual show of the Westminster Kennel Club opened on Tuesday last. The number of entries was a great improvement on that of last year, there being over a thousand dogs entered in the catalogue.

The judges announced were as follows: Pointers, Mr. J. M. Tracy, Greenwich, Conn.; English setters, Mr. B. F. Wilson, Pittsburgh, Pa.; Irish setters, black and tan setters, Mr. H. Clay Glover, New York; mastiffs, St. Bernards, English bloodhounds, Newfoundlands, deerhounds, greyhounds, Great Danes, spaniels, bulldogs, bull-terriers, and all other terriers except fox-terriers and pugs, Mr. J. F. Kirk, Toronto; collies, beagles, dachshunds, basset hounds, Dr. Downey, Newmarket, Md.; fox-terriers, Mr. W. Rutherford, New York; foxhounds, A. Belmont Purdy, Hempstead, L. I.; Chesapeake Bay dogs, Isaac Townsend, New York; poodles, John G. Hecksher, New York; miscellaneous classes, J. F. Kirk and W. W. Tucker.

Some changes were made from this list. Mr. Wilson telegraphed that he was detained by illness, and his place was taken by Mr. Donner for all English setters except champion dogs, in which Rockingham, Foreman and Plantagenet met. Mr. Donner had already once judged these animals, and by consent of all hands Mr. John S. Wise took the class for judgment. Dr. Perry, of Boston, judged mastiffs, and Mr. W. W. Tucker, St. Bernards. Foxhounds were judged by Mr. Bache Cunard. No Chesapeake Bay dogs were present.

The arrangements at the show were of course good. There is no place for a dog show like the Madison Square Garden. The weather for the first two days has been most propitious, and the attendance is fair. Considerable dissatisfaction was expressed at some of the decisions. We reserve our extended comments on the dogs until next week, and give now only a full list of the

AWARDS.

MASTIFFS.—CHAMPION—Dog: Winlaw Kennels' Homer. Bitch: Winlaw Kennels' Prussian Princess. OPEN—Dogs: 1st, R. J. Aston's Baby; 2d, J. L. Winchell's Boss; 3d, E. H. Moore's Ilford Caution. Very high com., E. Morgan's Vulcan. High com., R. H. Derby's Pharaoh and Shaw & Bates's Dictator. Com., Winlaw Kennels' Hector. C. F. Fairleigh's Bismarck and E. R. Coleman's Jag. BITCHES: 1st, C. F. Fairleigh's Bismarck; 2d, R. J. Aston's Ilford Caution; 3d, Scarsdale Mastiff Kennels' Regina. Reserve, Shaw & Bates's Hilda V. Very high com., Winlaw Kennels' Queen II. High com., J. L. Winchell's Bess and J. Oakley's Wana. Com., F. Ulenhant's Venice and Helen M. Cowley's Lorna. PUPPIES—Dogs: 1st, Scarsdale Mastiff Kennels' Sir Roderick; 2d, A. Whitman's Ajax. BITCHES: 1st and 2d, Scarsdale Mastiff Kennels' Lady Florence and Regina II.

Obo, Jr.-Belle whelps. Black cocker spaniels, whelped Jan. 20, 1886, by Andrew Laidlaw, Woodstock, Ont., a bitch to C. V. V. Sewell, Tarrytown, N. Y.; a dog to E. McGinnis, New York, and a dog to W. E. Phillips, Newark, N. J.
Bessie Obo whelp. Black cocker spaniel dog, whelped March 30, 1886, by Lynn Boarding and Breeding Kennels, Lynn, Mass., to C. H. Dole, same place.

PRESENTATIONS.

Boy. Black and tan Gordon setter dog, whelped Aug. 10, 1884 (A. K. R. 2576), by Evan T. Sprague, New York, to Chas. Bassini, Newark, N. J.

Rifle and Trap Shooting.

THE NATIONAL RIFLE CLUB.

Editor Forest and Stream:
I read in your April 15 number a card from Mr. W. V. Lowe, who states that the National Rifle Club will hold a meeting at Vernon, Vermont, on the 26th and 27th of May, 1886.
I am pleased to hear that the old club is still alive and will do some shooting. As Mr. Lowe states I believe it to be the oldest organization of its kind in this country, if not in the world. I have known of its existence for the last quarter of a century. Most if not all of its original founders have passed away and their places are filled by others.
I also note he states that a number of crack experts who shoot with breechloading rifles are to be present and compete in the shooting. As the shooting of various members of the club with muzzleloaders has always been regarded as the highest attainable point of excellence for extreme accuracy up to and at the distance at which they shoot, I, of course, it will be interesting to learn whether the improved modern breechloading rifle has been improved sufficiently to beat or even equal the old time gun.
Mr. Lowe states that muzzleloaders are used by the members of the club exclusively, that is no doubt correct at the present time, still, I have known breechloaders to be used in the past, at the matches of the National Club, and also of the New York State Rifle Club, an organization similar to it. I have, however, never known or heard of a breechloader winning first place but once in thirty years.
As the shooting is open to the world, i. e., to any one who pays the entrance fee and conforms to the rules, it is hoped that all shooters who have faith in their pet guns will come forward to take a hand. "From time to time I read articles and letters in the pages of the FOREST AND STREAM, from which I am forced to the conclusion that the writers thereof never saw a really first class M. I. rifle shot."
I would advise all such to attend the coming shoot, as in all probability, if the weather is at all favorable, they will see some shooting done that will be hard to excel with any kind of gun. I am also pleased to see an increasing tendency toward string measurement, as without question it is the only correct way to test the shooting power of either the rifle or the shooter. "In the recent past a Creedmoor target as large as a small barn was thought good enough; then it was reduced, then reduced again, and for the past year the country has been agitated about targets that would suit all kinds of shooting."
It will never be found, as far as accurate close work is concerned, that string measure is adopted. Again, not long since, it was thought by some discreditable to shoot from a rest. I have even heard some shooters claim that better shooting could be done off-hand than could possibly be done from a rest. I would be pleased to shoot against some of these gentlemen myself under such conditions. G. J. ROMER.
PEERSKILL, N. Y.

Editor Forest and Stream:
I have read with considerable interest the various articles that have appeared from time to time advocating the respective advantages as to trajectory and accuracy of muzzleloaders and breechloaders. Some of your correspondents are apparently basing their claims of the superiority of the muzzleloader on a statement of facts and figures to my idea are not very highly creditable to any kind of a rifle. Mr. Merrill, in your issue of the 8th inst., for instance, tells us that with his muzzleloader and a rest at a distance of 32 rods or 176 yards, he killed four turkeys out of twenty shots, and from this wonderful performance he argues that he would soon have won all the balance of the turkeys. It has been a long time since I was at a turkey shoot, but at the last one, if my recollection serves me rightly, turkeys were put up at 40 rods and 200 yds., for off-hand shooting, and I collected that one man killed two out of five shots, or just double Mr. Merrill's performance at nearly three times the distance, and did it with a Sharps breechloader, too. While in Utah a few years since, I had a common military Sharps hammerless .45-70, costing, I believe, \$18, with which I have frequently put 6, 7, 8, and in one instance 14 consecutive shots in an Sn. bullseye at 200 yds. off-hand.
I think it quite possible that a muzzleloading hand-made rifle, carefully rifled by hand, and if not found satisfactory, re-rifled, loading with patent muzzle and carefully patched bullet will, at a distance of say 50 yds. and at a small target, shoot with more accuracy than most of the factory-made breechloading rifles; but that at this or any greater distance, they will shoot with any more killing accuracy at living game I do not believe. I know that I have owned several of the latter class that would bring the game every time at a reasonable distance when held right.

N. Y. STATE PRACTICE.

ADJ-GEN. JOSIAH PORTER has issued the orders for the season's practice by the militia of the State of New York. The experience of previous years has been utilized in the preparation of the scheme of practice. Forty rounds per man will be used, and a system of duplicate score cards, one to be filled out by the officer in-charge immediately after practice, will prevent anything like irregularity in the returns. The plan of practice, classification, etc., as prepared by Gen. C. E. Robbins, head of the rifle department, are incorporated in the order, and provide as follows:

CLASSIFICATION.

The third class shall consist of all who do not appear on a range for practice. The second class consists of all present for practice, without reference to qualifications in previous years, and the practice in this class will be at 100 yds. standing; on a third class or No. 3 target, and at 200 yds. kneeling, or sitting, on a third class or No. 3 target. The first class consists of those who score 25 and upward in the second class, and the practice in this class will be at 200 yds. standing, No. 3 target, and at 500 yds. lying prone, No. 2 target. A score of 25 and upward in the first class constitutes a marksman, and entitles the maker to receive the State decoration. A score of 42 and upward in the first class constitutes a sharpshooter, and entitles the maker to receive a silver bar. All officers and enlisted men, who practice, must shoot through the regular classes, and are prohibited from shooting for a second or higher score in a class in which they have already qualified. The record must stand upon the first qualifying score made. No score by officer or enlisted man will be recognized, unless made at a target to which he has been regularly assigned, and where his name has been previously entered on a score blank.

FIRST GENERAL PRACTICE.

(a.) The practice will commence with class firing in squads, under a competent non-commissioned officer or other duly designated instructor at each firing point, and the whole under the supervision of an inspector of rifle practice, subject to the orders of the commanding officer present. Five consecutive shots will be fired at each distance. This practice will be continued to the end by all present without reference to the scores recorded, except that those who fail to qualify in the second class may be restricted to two shots for practice at each of the higher ranges. The practice of 500 yds. may be postponed until after the course of firing in ranks. In regular class practice no officer or enlisted man will be permitted to fire more than five consecutive shots at any one distance on the same day, except the necessary sighting shots to ascertain elevation, windage and the condition of pieces, which may be fired by officers or well instructed men, under the inspection and approval of an inspector of rifle practice. Trial practice classes will not be permitted. At the first distance of either class (i. e., at 100 or 200 yds.) a score of 12 or upward is considered as qualifying, and second practice may be allowed to such men as fail to qualify at either distance (as above), provided time will permit; but trial practice shall not be allowed in any case. If, however, the entire tour of duty, including volley and skirmish, has been performed, and time still permits, such practice may be had as the inspector of rifle practice deems proper. Those who have qualified at 200 and 500 yds., but not at 100 and 200, may make their scores valid by practicing through the second class without shooting in the first again.

In regular practice each enlisted man will shoot with the piece issued by the Ordnance Department of the State, and brought by him on the ground, unless the same is declared imperfect by an inspector of rifle practice. In that case the man may shoot with the nearest approved piece in the ranks.

(b.) Volley firing, 5 Rounds.—Firing in ranks at 100 yds. shall then be taken up in the following order, the squad or company being formed in single rank: Fire by squad (or company), 3 rounds. Fire by squad (or company), kneeling, 2 rounds.

(c.) Firing as Skirmishers.—The troops shall be exercised as skirmishers from 325 to 100 yds. and return; firing on the advance, 1 round 300 yds., and 1 at 200 yds., and 1 at 100 yds. on the retreat 1 at 150 yds., and 1 at 250 yds., great care being taken by each company or squad, that the men are deliberate and cautious, that no accident may happen.

Officers should use discretion and tact, varying the drill according to their ground and targets, deploying men and taking such distances as targets and range will allow; each body of troops to be so divided that no more may be exercised at one time than can be readily handled on the range, a second class target being used. As soon as the last (fifth) shot is fired, assemble on the right (or left), thus leaving the front uncovered, so that the second squad or company may be deployed during this time the marking can be done. Commanding officers are particularly cautioned to use great care in handling their men, having the element of safety in view at all times.

RANGE AND GALLERY.

FAIRMONT, Minn., April 27.—Five members of the Fairmont Guards (Co. D, 2d Regiment M. N. G.) spent the afternoon at the range and used the standard American target, 200 yds., off hand, Springfield military rifle, 6 pounds trigger pull.

TARGET HINT.—Jamestown, N. Y., April 25.—*Editor Forest and Stream:* A great deal has been said concerning a new short-range target that will answer for off-hand and for rest shooting. I have just made up a target from the Massachusetts decimal, covering the lines so as to leave those between 3 and 4 and 4 and 6, leaving the lines in the bull, and placing it on the Creedmoor target. The count in the bull is 10, 9, 8, 7, being inch rings. The first ring outside the bull is 2 inches wide and counts 6; the next ring 3 inches, counts 5; next one, or outer part of Creedmoor center, 1 1/4 inches wide and counts 4; the balance of the target being Creedmoor, counts 3 and 2.

The target formation runs:		Creedmoor.	
Count.	Radius.		
10.	1 inch.		
9.	2 inches.		
8.	3 inches.		
7.	4 inches.		
6.	5 inches.		
5.	6 inches.		
4.	7 inches.		
3.	8 inches.		
2.	9 inches.		
1.	10 inches.		

By this target we preserve the Creedmoor target, also the division in the bull of the Massachusetts target, and get a target large enough for the poorest and fine enough for the best.—R. H. BURNS.

FITCHBURG, Mass., April 28.—Members of the Fitchburg Gun and Rifle Club went out to the River Street Range to-day. Out of a possible 30 the following number of clay-pigeons were broken: George A. Colony 23, E. N. Cummings 23, G. W. Weymouth 19, A. W. Baker, Jr. 14, J. O. Converse 10, C. R. Burleigh 8.

NATIONAL RIFLE CLUB.—The spring meeting of the club will be held at Vernon, Vt., May 26 and 27. A general invitation is extended to all interested in rifle shooting. Any one can become a member and entitled to all the privileges of the club by paying the entrance fee to the match for prizes. The standard weight for rifle barrels being 15 lbs., all over must give the following odds: From 15 to 20 lbs., 3/4 in. to the pound for every 10 shots. From 20 to 30 lbs., 1/2 in. to the pound for every 10 shots. From 30 to 40 lbs., 1/4 in. to the pound for every 10 shots. Ten per cent. will be allowed to parties shooting from shoulder. Ten per cent. will be allowed for rifles shooting from 10 lbs. and globe and peep sights. The first string will be called at 10 o'clock on Monday. The second string 10 A. M. Thursday; third string 2 P. M. Thursday. A silver medal will be given by Mr. Hiram W. Smith for the best 30 birds. Distance 40 rods, time rules.—JOHN WILLIAMSON, President; N. S. Brockway, Secretary (Bellows Falls, Vt.).

BOSTON, May 1.—There was a fair attendance of riflemen at Walnut Hill to-day, and the delightful weather conditions made the short range men happy. The scores:

WILMINGTON, Del., April 28.—The attendance at the club matches this afternoon was small. After deciding the ties of the first match the prizes were awarded as follows: First to Robert Miller, second to C. Carleton, third to Joseph E. Seeds, fourth to J. Scottwell. The full score is as follows, at 200 yds., Creedmoor target:

R Miller, R. S.	4545-23	J Manz, Bal.	4533-19
W A Bacon, R. S.	4433-23	C Heinel, Jr., R. S.	4433-19
J Scottwell, R. S.	4334-20	C Carleton, Bal.	4334-20
F W Seeds, Bal.	3444-19	S E Seeds, Bal.	3554-21
F Oakes	4345-19	C Heinel, Sr., R. S.	5445-22
J W Seeds, Bal.	2454-19		

The prizes of the second match were won as follows: C. Heinel, Sr., first, J. W. Seeds second, R. Miller third, J. Manz fourth. The following is the full score at 200 yds. on Eame's standard union target, out of possible 50:

R Miller, R. S.	76710-21	J Manz, Bal.	3747-25
W A Bacon, R. S.	64675-38	C Heinel, Jr., R. S.	56623-28
J Scottwell, R. S.	53750-19	C Carleton, Bal.	22475-20
F W Seeds, Bal.	34576-25	J E Seeds, Bal.	55475-26
J W Seeds, Bal.	6572-20	C Heinel, Sr., R. S.	5577-31

The prizes of the third match were won as follows: C. Heinel, Sr., first, J. E. Seeds second, J. Manz third. The conditions were the same as for the second match. The score was as follows:

R Miller, R. S.	5
-----------------	---

HAVERHILL, MASS., RIFLE CLUB, May 1.—Standard target, 200yds. off-hand.

C B Wright	7	6	4	5	4	6	8	4	—

MANCHESTER, N. H., April 30.—The best scores made at the rifle range this afternoon were by W. Morris and C. W. Lyman. It was the first Friday shoot held by the club, and Mr. Morris did the closest shooting in all his experience. The scores were, out of a possible 100, in the handicap medal match, as follows:

W Morris	8	8	8	7	8	6	5	10	6
C W Lyman	8	4	8	9	10	10	8	7	8
	6	9	9	7	9	10	7	6	—

MARKHAM, Ont., April 26.—Much talk has finally resulted in the organization of an enthusiastic rifle club, the object of which being already enrolled—with the object of improvement in the art of shooting off-hand. The target known as the standard American, 26in. in diameter, has been adopted, and is well liked generally, although at 300yds. some of the old 'uns get a surprise—want to rest on something. The following are the officers: President, C. W. Crawford; Vice-President, D. P. Ross; Captain, H. Megill; Secretary, John McGaw; Treasurer, M. Speight.

COLORADO SPRINGS, Colo.—I used several kinds of ammunition last season in Wyoming, in my Sharp's .45 cal., ranging from 110 grains powder and 550 grains lead down to a Marlin .45-285, including a 500-grain Express ball, and found the Marlin .45-25 to do the best in the test, as it did. You are entitled to great credit for the good you have done the cause of rifle shooting by this test.—R.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BROOKLYN, April 21.—The fourth regular shoot of the Fountain Gun Club was held to day at Prospect Park Fair Grounds, and attracted quite a good attendance and a larger number of entries than in the previous shoots. Boudan had again supplied a good lot of birds, although some of them hung in the trap and had to be walked up. The wind was blowing from right to left of the traps, giving the shooters plenty of time to use their second barrel, and enabled some of them to make good scores. Dr. Weed, who won in Class A, killed 5 of the 7 he was credited with his second barrel. J. Rathjen, 25yds., killed his 7 straight with his first barrel, but made sure of one bird by giving it an extra dose with the second. This is Rathjen's second win this season in his class. W. Stuart, although not shooting up to his regular form, still had no difficulty in defeating his two moderate opponents in Class C. The following is the full score:

Class A.									
Dr. Weed, 27yds.	111111	—	7	J Rathjen, 25yds.	111111	—	7
W. Jones, 27yds.	111110	—	6	H McLaughlin, 24yds.	011111	—	6
A Schwartz, 27yds.	110111	—	5	C Chappel, 25yds.	110110	—	4
Dr. Wynne, 28yds.	101101	—	5	Dr Edwards, 24yds.	114100	—	4
A Eddy, 27yds.	100101	—	4	C Kendall, 25yds.	010010	—	3
Class B.									
W Stuart, 23yds.	100111	—	5	J Sawyer, 21yds.	100010	—	2
L Lake, 21yds.	000110	—	3					

WESTMINSTER CLUB.—A small gathering of gentlemen assembled on the grounds of the Westminster Kennel Club, Babylon, L. I., May 1, to see the pigeon shoot between Mr. William Chauncey Floyd-Jones and Mr. Pierre Lorillard, Jr., members of the club, for a wager of \$1,000 each. The Westminster Club rules governed the match, which consisted of supply 100 birds and to shoot at the same number, 100yds. rise, both barrels to count. The birds were sprung from five traps, and Mr. Jones won, killing 86 within bounds. Five fell dead outside. Mr. Lorillard killed 81 out of the possible 100, and 5 fell dead out of bounds. A heavy northwest wind was blowing, and the birds, though tame when they were carried in, flew in rather zig-zag shape. Jones took the lead from the first and held it. He was the favorite in the thing, but notwithstanding this fact considerable money changed hands. After the shoot a dinner was served in the dining-room of the club house. Among the well-known sporting gentlemen who went to see the shoot were: Mr. Colman Drayton, Mr. Howard Jeffray, Mr. De Forrest Grant, Mr. Travers, Mr. Van Buren, Dr. Knapp, the Messrs. Wagstaff, Mr. Charles McAlister, the Philadelphia champion wing shot, and Mr. Watson, who has twice been defeated by Mr. Floyd-Jones. The winner's friends are much elated and talk of matching him against either Mr. McAlister, Mr. Drayton or Mr. Edger Murphy, who is now on his way back from his very successful sojourn at Monaco. Mr. Lorillard's friends think he did very well, indeed, shooting so close in a contest with an experienced hand.

TORONTO, April 27.—The following are the scores in the tournament, Canada blackbirds, held near D. Blea's, West Toronto Junction, commencing on Good Friday and concluding to-day:

Boys competition (under 15), 10 birds each, 9 entries—J. Jennings 5, M. Crothers 5, T. Sawdeu 5. In the shoot off Jennings won, with 3 straight birds.

Competition No. 2, 20 birds each, from 5 screened traps, 30 entries: J. Humphrey 16, J. Townsend 14, W. Felstead 13, T. Kidd 12, C. Rogers 11, A. Kay 10, 13. Consolation competition for non-prize winners, at 10 birds each—G. Thomas 6, J. Jennings 5, B. Clarke 5.

Team shoot, 15 birds each:

Louden's Team.									
T Louden	9	D Blea	10	J Jennings	9	E Wakefield	12	A Ellis	11
W Bugg	13	C Sinclair	9	E Brown	10	T Charlton	10	52	

McDowall's Team.									
W McDowall	12	J Townsend	8	R J Kidd	10	J Humphries	9	A Wyntess	6
G Thomas	10	J Douglas	11	C Lockhart	10	C Cockburn	9	46	

Owl Team No. 1.									
J Wells	11	G Wilkinson	7	C Smith	7	A Dunu	10	C Unwin	6
C Lockhart	10	C Menis	6	J Montgomery	11	A Roe	5	38	

Shooting off ties, 5 each man: Louden's team 10, Blea's team 10. Second tie: Louden's team 8, Blea's team 7.

Double bird competition, clay-pigeons, 8 pair:

W Felstead	12	W McDowall	7	A Ellis	11	W Clark	10	6	
W Smith	10	J Wells	10	D Blea	9	F Wakefield	5	5	
T Louden	9	F Brown	9	W Bugg	8	C Lockhart	8	2	

7 winner in this competition secures as prize a handsome diamond medal.

SARATOGA, April 28.—The regular weekly meeting of the Saratoga Gun Club was held to day at the Glen Mitchell grounds, one mile north of the village. Owing to the rainy weather but few members were present. Ligowsky birds and traps (screened), all directions, 18yds. rise:

H M Levenson, Jr.	11111111	—	10	J A Manning, Jr.	11101101	—	8
G George Bird	11111111	—	10	Wm Shepard	11011011	—	7
Wm H Bookes	11110111	—	9	W M Levenson, Jr.			

WINCHESTER, Ind., April 27.—The Winchester Gun Club shot a match at Ligowsky clay-pigeons, Ligowsky trap, 20yds. rise, 40yds. boundary, N. G. A. rules.

Nells	110001110	—	6	Pockett	111111100	—	8

Nelson	100001010	—	3				

LEOMINSTER, Mass., May 1.—The Leominster Gun Club has been organized by the election of the following officers: President, F. Gorham; Vice-President, C. W. Burbank; Secretary, H. E. Andrews; Treasurer, A. G. Powers; Directors—A. W. Woods, E. F. Blodgett and George L. Rice.

WORCESTER, Mass., May 1.—The series of prize shoots at the South End Range, under the auspices of the South End Gun Club, closed this week. There were five events, the first was Feb. 2. The events were first, five glass balls; second, five Macomber targets; third, five blackbirds; fourth, three pairs of dobles, and fifth, five clay-pigeons, with a possible total of 156. The successful competitors with the prize and score are as follows: W. S. Davis, 125, prize \$30; E. T. Smith, 113, prize \$16; G. J. Jones, 112, prize \$12; Alba Houghton, 110, prize \$10; M. D. Gilman and Corren, 105, prize divided, \$10; J. P. Tongos, 103, prize \$8; L. R. Hudson, 100, prize \$7; W. R. Dean, 97, prize \$6; H. W. Webber, 96, prize \$5; M. O. Whittier, 92, prize \$3; H. B. Franklin, 82, prize half a keg of powder. The Executive Committee of the club have announced for another series of these meets, the first to be May 11. The prizes, three in number, will be divided into three prizes and will include \$30 and the entrance fee of \$3 required of each shooter who competes. The events are seven glass balls, four Macomber targets, five clay-pigeons, three pair dobles, five blackbirds, six straightaway clay pigeons.

WELLINGTON, Mass., May 1.—The weekly shoot at Wellington to-day was well attended. The winners of first prizes were: Six pigeons, Adams, Schaefer and Wilson; 6 blackbirds, Wilson and Adams; 6 blackbirds, Jones; 6 pigeons, Sanborn, 6 blackbirds, Stanton, Wilson and Schaefer; 5 blue rock birds, Stanton, Schaefer and Sanborn; 6 pigeons, Schaefer; 6 bats, Schaefer and Swift; 5 blue rock birds, Sanborn, Swift and Snow; 6 pigeons, Wilson; 5 blue rock birds, Edwards and Schaefer; 6 bats, Moore, Adams and Swift; 6 blackbirds, Edwards; 6 pigeons, Moore; 6 blackbirds, Sanborn; 6 pigeons, Wilson and Moore; 3 pair blackbirds, Stanton and Schaefer; 5 pigeons straightaway, Schaefer; 5 blackbirds, McCoy, Swift and Stanton; 6 bats, Adams.

NEW ENGLAND CHAMPIONSHIP.—The challenge match for the Massachusetts State Glass Ball Association individual gold badge was shot on the grounds of the Massachusetts Rifle Association, at Walnut Hill, May 5. O. R. Dickey, of the Massachusetts Rifle Association, was the holder of the badge, and Messrs. W. L. Davis of the Worcester Club, John Butum, of the Wellington Club, C. M. Stark and E. W. Law, of the Boston Gun Club, and W. H. Allen, of the Brocton Club, challenged him.

HARTFORD, Conn., April 30.—The Colt Hammerless Gun Club made the following scores at their shoot to-day, all shooting being done at 15yds:

E C Howe	11010111111111	—	13	J Melrose	11110001100100	—	8
A Howe	00111110001101	—	10	J Cook	0001011010101	—	8
A Mcullen	10010101101111	—	10	W Johnson	01001011010000	—	8
M Cook	01011110010101	—	9					

Mr. E. C. Howe won the club medal.

JOIN THE NATIONAL GUN ASSOCIATION.—Send 10 cents, for handbook giving all information, to the Secretary MATT R. FREEMAN, General Manager, F. C. ETHERIDGE, Secretary and Treasurer, Macon, Ga. Board of Directors: Dr. L. E. Russell, Springfield, O.; C. M. Stark, Winchester, Mass.; J. Von Lengerke, New York City; Washington A. Coster, Flatbush, L. I.; Wm. G. Cooper, Savannah, Ga.; E. A. THE LAUNCH OF THE ATLANTIC.

SATURDAY afternoon was a general holiday at Bay Ridge, flags flying, crowds of visitors hurrying down the street from the dummy road, and yachts and boats afloat about the two basins. The east wind was blowing heavily, hurrying about a fleet of canoes under reefed muslin, whose maneuvers were eagerly watched by a large crowd on the shore and bulkheads. About 3 o'clock a yacht bound down the Bay rounded into the Atlantic Basin and anchored in her berth in the tier, the Athlon, fresh in paint and lugging a new time the auction of the spectators was attracted to such a small yacht which warped out of Mumm's Basin, ran up jib and mainsail, and started for a reach up the Brooklyn shore. This was the new Ellsworth boat, Arab, on her trial trip, with one of her owners, Mr. Lawton, on board, and Captain John Van Buskirk at the wheel. With boom to port she went staggering along under the whole sail, as yet too new to reef, with her deck at an angle that would have done credit to the narrowest cutter. With the breeze that was blowing she should have carried one reef in her rig, and even then the initial stability considered by some as indispensable for comfort would have been conspicuous only by its absence. Coming down again, she ran below the bulkhead, affording an excellent opportunity to see her. Pressed as she was, she drove down deeply by the head, and heeled until her boom feathered the water. Allowance must be made for the large sail spread, and the absence of proper trim incident to a trial trip, but it looks now as though, even with reduced canvas and well-adjusted ballast, the new boat would in a breeze heel badly and run down by the head, with a corresponding diminution of speed.

While the spectators displayed a lively interest in these side shows it was not to see canoes or small boats that they came by dozens and stood about for four hours in the raw east wind. There was one point in the middle of the yard on which all eyes centered eagerly: one boat which was criticised and commented on, adversely or favorably as the case might be, by the combined "talent" of New York, Brooklyn, Bay Ridge, Gowanus, Bayonne, and adjacent parts. Finished to all appearance as far as hull is concerned, there stood in the center of the crowd of five or six hundred the boat from which so much is expected, the yacht Atlantic, the fourth of the great quartette which is to meet soon in the trial races.

Last season introduced a new and interesting element into the international races. Hitherto the defenders in each race had been distinctly New York, but in 1885, for the first time, New York was pitted against Boston, with the result now so well known. This year not only will two Boston boats be in the field, but New York will have two as well, the work of different designers, which fact has created a strong feeling of rivalry between the friends of each party. Thus the interest in the contest is almost tripled, the three issues involved being between America and England, Boston and New York, and between the three designers whose boats are entered for the trial races.

To classify the Atlantic would be a difficult and thankless task. Judged by the standards that have so long been acknowledged in America, she is a very good boat, with a comparatively good hull, a very successful effort, the Graving, now hauled out almost beside her, she is no way a typical American centerboard yacht, and on the other hand she is not a cutter, though only a very short time since she would have been pronounced one by those who are building her. What she should be called matters little now, the main points are, what is she and what will she do?

The Atlantic is 95ft. 7in. over all, 8ft. waterline, 33ft. 2in. extreme beam, and 8ft. 6in. estimated draft. Her ballast is of lead, 35 tons later, shaped to the form of the hull, and 19 tons stowed inside. The centerboard works through a slot in the center of the lead keel. The keel rockers up sharply into a plumb stem with a forefoot well cut away, while aft it turns up more gradually to meet a stempost raking about 1ft. in 4. The side view shows a high stem and stern, the sheer coming down fairly from the stem to a point well aft of midships, and then springing up sharply. The overhang is long, ending in a very small triangular counter, and the entire after end is down in shape to the point, showing very narrow on deck and cocking well up in the side view. The midship section is well aft, and is of a V form up to the waterline, being very full below, and the bulk of the boat seems to be massed about it. The hull is fair in all parts, but the body of the boat appears very bulky compared to the ends. The bow is a long tapering wedge, with very little hollow, but looking very sharp, being cut away rapidly from the large bulk amidships, and relatively is very much shorter, and also much fuller above the water than the bow. On deck the breadth is distributed in much the same proportion as the great wide water aft, a long thin bow with no signs of fullness at the plank sheer, and from midships aft a quick tapering in, almost to a point.

The yacht looked at her best, as far as form goes, when on the ways just previous to launching. The bottom was of a dark green, verdigris, the topsides black, a gold stripe around the gunwale, and a good deal of gilt forward. The long bowsprit, a clean round spar, was in place and stayed. The bowsprit leads to an iron ball, bolted onto each side of the bowsprit, and a plan that looks less for the simple and strong than the common method of attaching the bowsprit shrouds is about one-third the length of the bowsprit from the stemhead, and of good width, the shrouds leading in from it almost parallel with the bowsprit. The preventer shrouds are not yet in place. The chainplates are all on, with the deadeyes attached.

The ways had been laid for some days and the basin had been specially dredged to receive the new craft, and by Saturday noon all was ready in anticipation of a very high tide, due to the easterly winds that had blown for several days. The spreader was decorated only with an American flag aft, the club signal forward, and a gilt horseshoe hung from her bowsprit at the stem. At five minutes before 5 P. M. the first of the wedges were driven under the heels of the poppets, and soon after the keel blocks were removed and the yacht rested on the ways alone. Some time was lost in digging away the earth aft, but by 5:30 a number of guests were on her decks, the gang planks were removed and all was ready. It was just eight minutes later when she began to move, and gathering way, slid rapidly down into the water, entering smoothly and easily, heaving slightly as she left the edge of the beach and floating out into the basin. As she left the ways, Vice-Com. Swan's four-year-old daughter Ethel broke a bottle of wine over the bow. As she lay on the water, the painted leadline was about 1ft. above the water and a little more forward. The spars, rigging and sails are all ready, and the work of rigging and fitting out will go

CRUISE OF THE COOT.

XXI.

WITH the advent of the sun next morning, the Coot was got underway and proceeded to pick a course through the narrow winding channel leading out of the lower entrance to Millford Haven. By so doing a return over old ground and some seven miles were saved. The Haven itself is broad with 10 ft. of water, but nearing the lower end, the bottom shoals to 1 and 2 ft., a narrow gutter like lead with 6 to 10 ft. carrying you out to sea through a break in the beach. This is not staked nor defined and the charts are on too small a scale to be of much assistance. A boat drawing over 8 ft. should take a local pilot. The Coot managed to shoot the entrance after stirring up the sand in some places. At low water the chart indicates only 3 ft. on the bar which would make it 4 to 4½ ft. on the flood. To me there seemed to be rather more water. Once across the bar the depth suddenly increases to 7, then to 10 ft., which may be carried down the shore until the Wolf Trap Spit is reached. This has several 5 ft. spots half way between the light and the beach, hence you must give the beach a good berth. Below the light house, which is of the screw pile kind, you can sheer it again in trying for a harbor. Horn Harbor can be entered with 4 to 5 ft. and is the proper place to try for, unless willing to round New Point Comfort and sail five miles up Mob Jack Bay for East River, where twenty feet can be found.

I had been told that Deep Creek, just round the Point could shelter the Coot, and so when the cold northerly wind failed, boxed about in a clin and light air and head all the afternoon seeking to get in. In doing so a strong flood set into Horn Harbor was encountered, obliging a long board out into the Chesapeake. After several hours of tedious doldrums, the Coot was coaxed up to New Point and made a close round according to the chart. After crossing some strongly marked tide rips, she suddenly struck where 7 ft. was expected. This led to an investigation. I found a long bar of hard sand extending out to the eastward between two lines of tide rips.

On the bar there was hard 3 ft. As the soundings on the chart were taken twenty-six years ago, this bar may have formed since. It also extended to the westward of the cape, nearly out to the red can buoy, although 14 ft. should have been found according to the chart. There were many very small lumps, over which the Coot could just pass. In making Mob Jack Bay, the can buoy should be hugged pretty close. Around it the water quickly deepens and the Coot went away with lifted sheet for her proposed harbor, the sun already having sunk below the trees in the west.

Approaching the sandy cape the boat hook was kept going and soon brought up in 3 ft. whereupon the yacht was rounded up and anchored while I pulled ahead in the skiff to hunt for a channel. None could be found, a flat of hard sand with 2 ft. of water extending all along and barring retreat into the attractive little cove. With darkness upon me and no indication to sail five miles up into East River and out again in the morning, I determined once more to trust to luck for the night and hold on right there after close reefing the sail. This was the third time the desperate chance of escaping a lee shore in a winter gale was taken and for the third time good luck stuck by the boat. There was a sweep of 10 to 25 miles for wind and sea according to the quarter from which it might come, and the situation was not much relished. Later on I learnt that some of the creeks in the large light to the northward could shelter an 8 ft. draft less than 5 ft. but this I mention with reservation, not knowing how trustworthy the information. Large boats generally make for the Potomac River in this neighborhood, but without wind that was out of the question and a harbor there would have taken me out of my course. Daylight is necessary to make out the buoys marking the narrow cut across York Spit, the water shoaling very abruptly on both sides. Plenty of water can be carried across the Spit lower down however, which will be my course if New Point has been kept close aboard.

The moon rose in all her silvery splendor and the night seemed calm though very cold. Early next morning a brisk icy wind struck from the northward. A haze about the sun and mist rising in the south-east betokened a change before the day was over. This might bring wind and sea ahead and leave the Coot in sore straits, as the nearest practicable harbor would be in Hampton Roads around old Point Comfort, twenty-four miles away. It was necessary, however, to clear out from the meagre protection afforded by New Point and take chances on slipping into Back River as a last resort. The entrance is readily made in moderate weather, but in an on shore wind, a nasty sea tumbles up on the shoals surrounding the tortuous channel, and should you miss the latter, a small boat like the Coot would find herself on an ugly lee shore without the power of beating off. The idea of making Back River was soon given up, as the wind veered into N. E. and came down in hard squalls, turning up a dangerous sea in which I did not dare venture inshore. To make the most way, whole sail was got on and the boat went foaming and boiling on her southerly travels, burying lee waist and flying over the sea as New Point's lofty white tower was dropped in her wake.

For a while everything went well, though the hardening of the blow into a gale forced me to round up and haul out second cringle while the sea assumed a threatening aspect. To the southward it looked decidedly dirty and had a harrier been within reach the Coot would have run for it might and main. There was no choice but to keep at it, after getting on to York Spit. Here the shoaling of the water caused the longer seas so far met, to mount into towering, curling masses, steep and hollow, which piled after the little Coot with a roar. To look back as the foam-crested billows threw the skiff from side to side, almost tossing her bodily aboard, then letting her drop out of sight into the succeeding hollows with a fierce snap on the doubled painter, was enough to make one's head turn dizzy. I did try to bear away for Potomac, but found it impossible to keep the boat off, let alone running dead before the sea without jibing and wrecking the whole rig. At each high roller, the Coot would round up till the wind was brought abeam in spite of helm, and tending sheet and board. Barely was I able to miss ramming the lighthouse on the Spit. But the boat was making wonderful speed all the same and

when the Spit had been crossed a perceptible smoothing in the sea set in. The involuntary luffing had also lifted the boat so far to the eastward as to clear the shoal water about Back River. For half an hour things took a favorable turn, though the sun had become obscured in portentous steam and the wind kept veering more to the eastward.

When it settled N. E., it came out with renewed vigor, this time a full gale in its force, lifting the caps of the seas and driving them along in a heavy shower of spray. The Coot's sail threatened to go out of the holt ropes. Steering had been a great labor and the air was wintry enough to stiffen me from head to foot. Along we flew, the minutes seemed to grow into hours, and one narrow escape from broaching to followed another so quickly that I began to grow used to the trouble, though wishing myself well through with the job. The worst was yet to come. Back River Light had been made and passed. Fifteen miles had been reeled off and seven remained to Old Point. It looked as though we should pull through, if the rig would hold out. The skiff I expected to lose, but strange to say, though indulging in the most frightful antics, sheering square across the stern like a shot out of a gun, spinning along on her side, gunwale to, and turning up the seething waters like a plow does the sod, she escaped all damage and did not ship more than a bucket full the whole trip. I had given her an extra length of painter and doubled the parts and lashed the oars to the thwart.

The gale outside had been nearly S. E., and when the capes of the Chesapeake were opened, the full effect of the ocean swell made itself felt in a way which boded literally the engulfing of the Coot. Huge rollers poured in and grew steeper and steeper, their hoary masses breaking in seas of boiling foam as they tumbled in upon the Horseshoe shoal, which the Coot had reached. It would have been too far out of the course, and more than boat and myself could stand to trim in sheet and head up to round the tail of the Shoe, so we were obliged to cut across inside the Thimble light. This drove us over some 8 and 9 ft. spots and into 14 ft. generally.

For six miles the Atlantic rollers were breaking in an endless boil

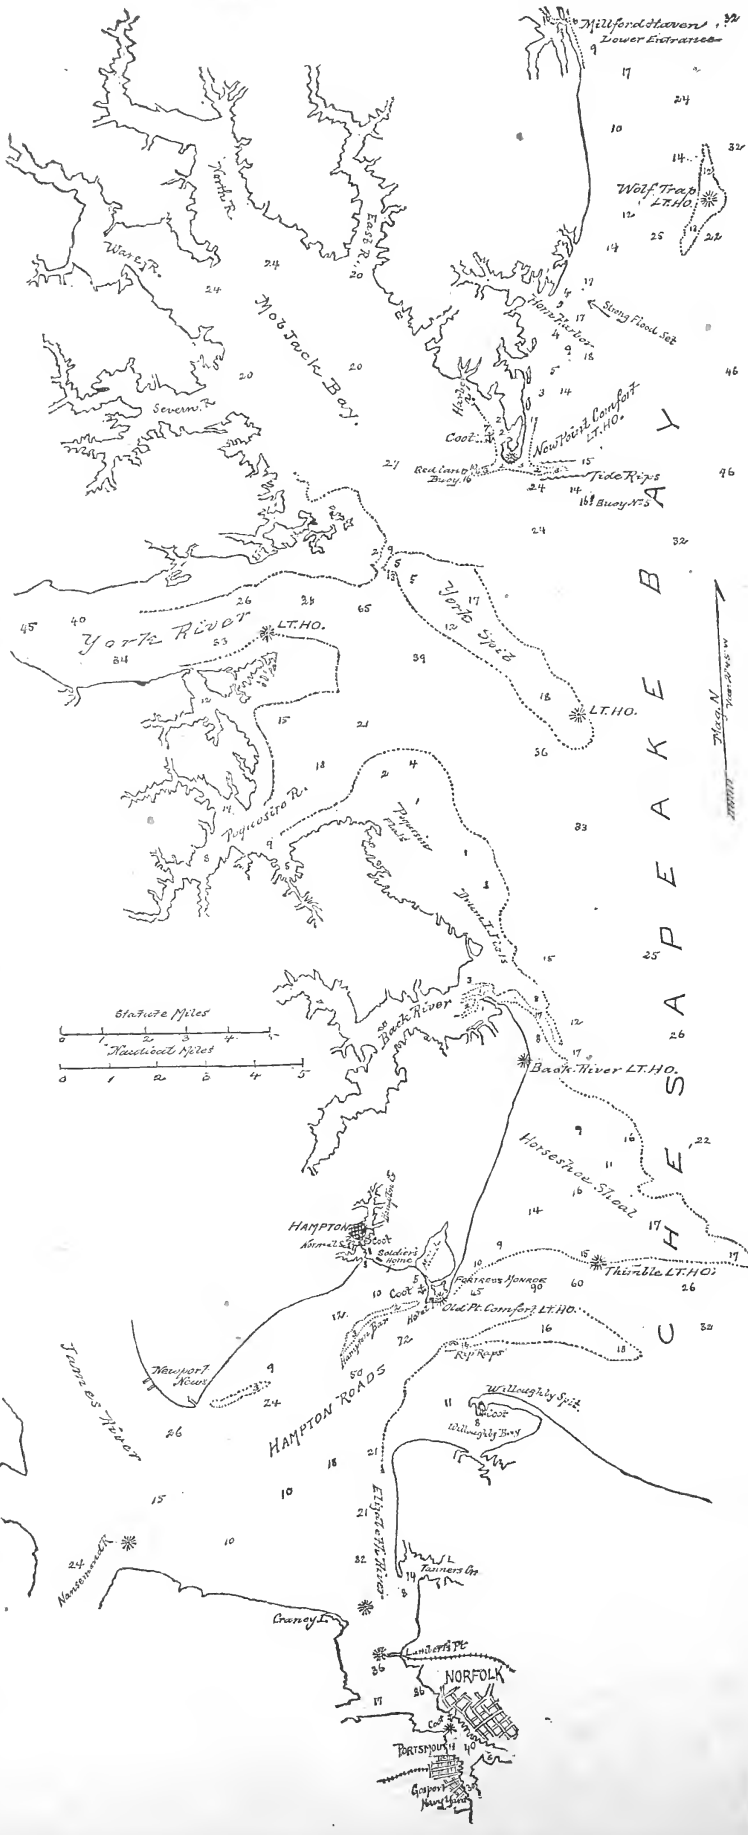

of foam. They would rise so steep and thin as to become a transparent green. Then with a crash, after a moment's poise, the tops would tumble and sweep along with hurrying force and rapidity, impetuous streams of hissing froth. These would lift the Coot under her haunches, propelling her along on the wave front as though she were a feather. They would force her nose down and under, till she buried stem, mast and even up to the cabin house. She would then screw out with irresistible force and broach to, rolling to windward into the next hollow with such a swing that a capsize to windward impended. The boom would be whipped half way up the mast and drop with a thud that was like the report of a gun and send my head into my mouth for some immediate disaster on the canvas and sheet.

I certainly was frightened, but not fright in the ordinary sense. Reason told me that such a state of affairs could not last. The margin of escape was too narrow not to be crossed sooner or later. Time and again I managed to get the boat off in the last second and prevent the next huge sea from tumbling bodily aboard. Had such a thing happened, the cabin and decks would have been stove to atoms, the boat filled and sunk in an instant. The tiller and sheet were the tools with which disaster had to be resisted. The tiller bent like a reed, the tenon in the rudder's head was on the point of giving way. The sheet and boom might have gone any moment, for the boom dipped half its length in the lee rolls and fell many feet after the roll to windward. The sheet would bring up on the blocks with a check they could not long withstand. Three times I was thrown into the lee scuppers of the cockpit and had to scramble back to the helm to keep the boat away. Seas broke aboard, but the violent tossing served to keep her pretty clear. She did not get much down below.

I was well high exhausted and frozen. The welcome pier of the Hygeia Hotel had been opened, vessels could be descried riding comfortably at anchor in comparative shelter and the haven for the Coot was not far away. I looked astern and saw a green monster, bigger than any yet encountered, rushing toward the Coot with implacable fury. On it tore with tumult and confusion at its head. This was a critical one and no mistake. I grasped the tiller tightly, braced with a fresh brace, kept one eye on the ruffian following me up and met him with helm beforehand. Something lifted the Coot high into the air. A momentary sharp tug at the helm, then the boat was suddenly let down easy as on a cushion and nothing remained of the huge sea. It was the last of the lot, for the Coot had slid off into seventy feet of water. The sea was still villainous but longer and regular, so you could figure on ways and means to evade the worst.

Abreast of Old Comfort Light, the wind had a northerly vein and in the sea the Coot had to be jibed, tacking being out of the question. It was done by getting in sheet, seeing it clear, easing helm over very slowly and then letting the boom go out on a spin like lightning. The small patch of sail enabled this to be consummated with success. When the Coot drove between the buoy on Hampton Bar and the government pier, there was a very audible sigh of relief aboard the yacht. Smooth water and a weather shore was something to be thankful for, and Old Point proved a Comfort indeed.

It was shortlived, a few hours saw a shift to the scene. Anchor was let go of the ordnance shops in 6 ft. Sail stowed and a hot stove and grub. It had been blowing 50 miles at the capes and 40 in the roads on the climax of the gale, just as the Coot reached into safety. Everybody about the Point is an old tar of some sort. Pilots and seafaring men opened their eyes in wonder when they learned that the Coot had come across "the Shoe" in the height of the storm and survived the kind of sea they are well able to appreciate. Coasting schooners, a square rigger and numerous oyster smacks had gone ashore and life had been lost, though none of them were exposed like the Coot; and all well maimed in the bargain. I don't quite understand myself how I got through the mess. It certainly was not the fault of the boat.

Provisions were at a low ebb; so were the finances of the establishment; concluded to take out an existence on some sage and snail Norfolk next day where funds were in waiting. This was a lamentable miscalculation, for I missed reaching Norfolk by two months. Toward evening the gale abated in short order and a mysterious calm set in.

At midnight I awoke. The boat was pitching bows under. It must be a gale from the N.W., as nothing could raise such a disturbance. Upon opening the cabin door, the sky was as clear as a bell, a howling northwester was in full possession, the Coot on a lee shore at last, tilling a few lengths from a dock, and worst of all, it was freezing at a great rate, the mercury being down in the twenties. At daybreak it was blowing a hurricane. Could not communicate with the shore owing to high sea and cold. Crumbs of remaining grub were apportioned into homeopathic doses. For three days the gale held on. The last day I was down to a mouthful of hard, not a drop of oil for the stove and no tobacco.

That night the blockade was raised. The wind fell, the ice packed into the light and froze fast before morning. The Coot was nearly rail-to, down by the head, encased in a solid armor of ice, so that nothing but the cabin doors could be distinguished. She was literally buried. As fast as the spray flew aboard the intense cold solidified it in an instant. In this way layer was imposed upon layer, till the boat could no longer be distinguished, resembling a hillock of ice. The skiff had been sunk under her burden. She was stopped out first and an expedition undertaken to the shore. At Old Point stores were procured and carried off. Then with a hatchet I set about cutting the Coot clear of her encumbrance.

All was well for the next ten days, while the ice held fast. When it broke up, the old battle against the drift had to be fought with scarce any rest night and day. Ice out of the James river followed down and only after four days' incessant labor, could I get the Coot under way and sail into Hampton Creek for protection during the remainder of the winter. Many vessels dragged ashore during this freeze, and that the Coot with two little rope cables should have escaped right alongside the big vessels is one more marvel of the cruise. She was fearfully cut and wounded in the encounter and was about being carried out to sea, when a lucky turn in the cake of ice set her free. Once in Hampton creek, in a snug berth, all danger from drift ice ceased.

YACHTING NOTES.—Deloit will be shipped for New York on Monday next... Shona.—Mr. Charles Sweet, owner of the Clara, was incorrectly mentioned as the owner of the 5-ton Shona. Mr. Sweet owns only the Clara and is in no way interested in the other craft... Happy Thought, keel sloop, of New Haven, has been sold to Messrs. Van Wart, of New York, and will be enrolled in the Knickerbocker Y. C... Uncas, steam yacht, Mr. J. Buchanan Henry, has been sold to a Boston gentleman for \$1,400.

AMERICAN Y. C.—The design for the International Challenge Cup has been decided upon, that offered by Tiffany & Co., being the one selected. It will be 8 ft. 5 in. from base to top and will cost 10,000. The competition will be open to yachts of all nations.

MAYFLOWER AND PURITAN.—Gen. Paine's yacht will be launched at 11:30 A. M. to-day. Puritan has been cleaned of the blacklead and will be painted white again. Her bowsprit has been reduced 1 in. in diameter at the outer end. She will be fitted out at once.

To a faithful dog belonging to Mr. Schwartz, the proprietor of a jewelry store in Cherry street, Rahway, N. J., he, and his wife and two children, owe their lives in all probability. Between 4 and 5 A. M. yesterday Mr. Schwartz was awakened by the dog jumping on his bed and excitedly licking his face. He was several minutes before he could realize the situation. Smoke filled every part of the bedroom. Half unconsciously from its effects he hurriedly aroused his wife and then ran to the room adjoining, in which his two children were sleeping. He took them from their bed and with great difficulty groped his way down stairs and out of doors.

Canoeing.

CANOISTS are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, rapids, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, accompanied by the recommendation of an active member of the A. C. A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money should be sent by registered letter, or money order on Saratoga Springs, N. Y.

FIXTURES.

Mohican Races every Thursday through the season.
May 1—Brooklyn C. C. Challenge Cup and Paddling Race.
May 15—Brooklyn C. C. Sailing Race.
May 22—Knickerbocker C. C. Spring Regatta.
May 29, 30, 31—Connecticut Meet, Calla Shasta Grove.
May 29, 30, 31—Hudson River Meet, Coddington's Dock, Roundout.
May 31—Mohican Cruise, Susquehanna River.
June 1—Pittsburgh Regatta.
June 12—Brooklyn C. C. Paddling Race.
June 13—W. A. C. A. Meet, Lake Erie.
July 10—Brooklyn C. C. Paddling Race.
July 10—Brooklyn C. C. Paddling Race.
Aug. 7—Brooklyn C. C. Paddling Race.
Aug. 15—W. A. C. A. Meet, Grindstone Island.
Sept. 4—Brooklyn C. C. Paddling Race.
Sept. 18—Brooklyn C. C. Sailing Races.
Sept. 25—Brooklyn C. C. Challenge Cup.

THE WESTERN A. C. A. MEET.

THE W. A. C. A. have issued a neat pamphlet containing a list of members, the constitution, sailing rules, camp rules and programme of the coming meet to be held at Ballast Island from July 8 to 24 inclusive. The membership roll now numbers 77, including 4 ladies; 21 coming from Cleveland, 30 from Cincinnati, 13 from Chicago and 18 from Sandusky. The constitution, by-laws and sailing rules, except as noted below, are substantially identical with the A. C. A. The classes and programme are as follows:

PADDLING.

Class I. Length not over 18ft., beam not under 24in. and not over 25in.
Class II. Length not over 16ft., beam not under 20in. and not over 30in.
Class III. Length not over 17ft., and beam not under 20in.
Class IV. Open canoes, single or double-bladed paddles.
Class V. Tandem canoes.

SAILING.

Class A. Length not over 18ft., and beam not over 25in.
Class B. Length not over 17ft., with a limit of 23½in. beam for that length. The beam may be increased ¼ of an inch for each full 6in. of length decreased.
Class C. Length not over 18ft. and any beam. Time allowance allowed according to Tredwen's Measurement.
The general programme has been arranged subject to changes in accordance with the weather, at the discretion of the regatta committee.

THURSDAY, July 8—Formation of camp.
FRIDAY and SATURDAY, July 9 and 10, general cruising and visiting among canoes and the islands.
SUNDAY, July 11—Church service 10:30 A. M.
MONDAY and TUESDAY, July 12 and 13—Two days' cruise among the neighboring islands, under command of the commodore. First and second prizes offered for best equipped canoes arranged for cruising, displayed and operated on this cruise.
WEDNESDAY, July 14—Canoe races:
Race No. 1—9:30 A. M. Paddling; Class I., 1 mile.
Race 2—10:00 A. M. Sailing; Class B., 3 miles. No limit to ballast or rig.
Race 3—1:30 P. M. Sailing; Class A., 3 miles. No limit to ballast or rig.
Race 4—3:00 P. M. Paddling; Class II., 1 mile.
THURSDAY, July 15—Canoe races:
Race 5—9:30 A. M. Paddling; Class III., ½ mile.
Race 6—10:30 A. M. Sailing; 3 miles. Open to all canoes, with time allowance calculated as per table.
Race 7—1:30 P. M. All classes; 3 miles. Sail first mile, paddle second, sail third.
Race 8—3:00 P. M. Double paddling race; two men; Class V., 1 mile.
Race 9—4:00 P. M. Classes I and A; 300 feet; upset race.
FRIDAY, July 16—Grand canoe hop at Wehr's parlors.
SATURDAY, July 17—Canoe races:
Race 10—9:30 A. M. All classes; 2 miles. Open to novices only.
Race 11—11:00 A. M. Paddling; Class IV., 1 mile.
Race 12—1:30 P. M. All classes; sailing, 3 miles, with time allowance calculated as per table.
Race 13—3:00 P. M. Paddling portage; Class I.
Race 14—4:00 P. M. Hurry scurry race, open to all canoes; run 100 yards, into canoe and paddle 200 yards.
[17:30.] Meeting for general business and to elect officers for ensuing year.

SATURDAY, July 17.—Canoe races:
Race 15—9:30 A. M. All classes sailing, without ballast; 3 miles, with time allowance calculated as per table.
Race 16—11:00 A. M. All classes, sailing; 2 miles; sail 1 mile, paddle 1 mile.
Race 17—1:30 P. M. Class C, sailing; 3 miles, with time allowance calculated as per table.
Race 18—4:00 P. M. Classes III. and B; 300ft., double upset race.
MONDAY, July 19.—Canoe races:
Race 19—9:30 A. M. Sailing; Class A., 3 miles, without ballast, open to prize winners only.
Race 20—11:00 A. M. Paddling; 1 mile, Class I., open to prize winners only.
Race 21—11:30 A. M. Paddling; ½ mile, Class III., open to prize winner only.
Race 22—12 M. Paddling; ½ mile, Class IV., single-bladed paddles.
At 5:00 P. M. The presentation of prizes at headquarters.
8:00 P. M. Venetian carnival. Each canoe is expected to bring Chinese lanterns with which to decorate his canoe, and Roman candles for the pyrotechnic display.
TUESDAY, July 20, and continuing week, general cruising and visiting to the neighboring islands, and general good time.

CAMP RULES AND GENERAL INFORMATION.
1. A member of the Executive Committee will be appointed daily, by the Commodore, to act as officer of the day.
2. The occupants of each tent are expected to put their tent and the surrounding space in order by 9 A. M. each day.
3. No visitors will be allowed in camp before 10 A. M.
It is left to each canoe to see that the above rules are carried out. Members who expect to take their meals at the hotel are requested to forward their names to the Secretary by the first of July. A branch post office will be established at headquarters. Mail should be addressed to Canoe Camp, Ballast Island, via Put-in-Bay, Ohio. Tents will be pitched to the liking of each individual or club, under the supervision of the Superintendent of Camps. Invitations to the Canoe Hop will be restricted to the canoes and their immediate friends. The number of invitations will, of necessity, be limited, and it is especially requested that all who expect to attend will procure their tickets from the Secretary on or before noon of the day of the ball.
Meals can be obtained at the hotel by those who do not desire to cook in camp. Ballast Island can be reached by daily boats from Cleveland, Sandusky, Toledo and Detroit. Information regarding time of departure can be obtained from the Secretary. Camp supplies can be obtained at Put-in-Bay at moderate prices. Canoes will be carried free of cost on the steamers, provided owners are with them. Headquarters, Commodore's tent, Assembly Room, Ballast Island Club dining room. Secretary's office at headquarters. The Committee desire to impress upon you the importance of giving notice, through the Secretary, of your intention of being present, your date of arrival and size of tent, so that preparations can be made for your accommodation. Address all communications to W. H. Eckman, room 31, City Hall, Cleveland, Ohio. The officers for the ensuing year are: Commodore, Geo. W. Gardner, Cleveland, O.; Vice-Commodore, Geo. B. Ellard, Cincinnati, O.; Rear Commodore, Geo. W. Munger, Chicago, Ill.; Secretary and Treasurer, W. H. Eckman, Cleveland, O.; Executive Committee—Geo. W. Gardner, Cleveland, O.; Geo. B. Ellard, Cincinnati, O.; Geo. W. Munger, Chicago, Ill.; W. H. Eckman, Cleveland, O.; W. C. Brown, Cincinnati, O.; J. W. Hepburn, Toledo, O.; O. A. Woodruff, Chicago, Ill. Regatta Committee—G. H. Gardner, Jas. O. Shiras, H. D. Crane. Superintendent of Camp, Chas. R. Melville.
[It will be noticed that the paddling rules allow one foot more length than the sailing classes of the A. C. A., which will disbar any canoes built up to the full limit of this rule from the A. C. A. races, should they at any time desire to enter. There is also no provision made for the 25in. boats which promise again to become very popular in the East, and they are handicapped in the same class with a 16x20in. canoe. Under these rules such a canoe as the Lassie would have no reasonable chance. The sailing classes A and B are identical with the same A. C. A. classes, but the committee have added a new class C, with a time allowance based on Mr. Tredwen's girth rule, open to canoes not over 18ft. long, but with no limit of beam or depth. There are many good reasons against time allowance in canoe racing, but in spite of them the establishment of the present class is a good idea, for a time at least. It will bring in all the old sizes of canoes outside of classes A and B, and after one or two seasons' trial it shows just what limits should be laid down for this new class to encourage the building of larger boats which can still be efficiently paddled. The programme offered is a good one and promises plenty of variety. No finer location than the Put-in-Bay Islands could be desired by canoeists, and the efforts now making in the West should attract a large number. Eastern canoeists who may have the leisure will find no pleasanter place to spend a few weeks, and we can assure them, from a personal experience, of a warm welcome from their fellow paddlers of the West.]

A BID FOR AN "ACCIDENT."

ONE day last week two canoeists on a Staten Island ferry boat were surprised to see out in New York Bay, near Robbins Reef and from one to two miles from shore, a small white canoe, in the cockpit of which a lady was seated, while on the deck, well out to windward, was a young man, handling the sheet and tiller. There was a strong breeze blowing, and the canoe was carrying a good amount of sail. As no case of drowning has thus far been reported, we may conclude that the venturesome couple reached shore safely, in which case the experiment will probably be tried again until it comes to a disastrous end. It should be well understood that canoe sailing, unless in some special circumstances, is no sport for a lady. If she can swim, can sail a boat, and is perfectly self-possessed, or if the boat is a large one and in the hands of a competent sailor, there is little danger in good weather, if constant care be exercised; but to take out in a small canoe a person who is ignorant of the great risk, and worse than helpless in case of the least emergency, is an offense that should be severely punished. We have had occasion to allude before to this class of small, badly-modeled and built canoes used recklessly about Staten Island, Bayonne and Elizabethport, and in spite of our warning a canoe was capsized last fall through the rig that no expert would venture out with, and the occupant, not a club member, was drowned.

In the interests of canoeing it is the duty of the clubs in these various localities to look up such cases as that reported above, and if possible to put a stop to risks which not only endanger innocent persons, but inflict serious harm on the sport. The occasion seems to warrant a repetition of the warnings so often given by old canoeists to novices. Do not use a canoe unless you are certain that it is of suitable size and model, either for sailing or paddling.
Do not attempt to sail a canoe unless the model and rig have been

approved by a practical sailor, and even then do not go out alone until you have some knowledge of boat sailing, unless you are a good swimmer and the water is such that no danger from tides or boats need be apprehended. It is generally possible to obtain a little coaching from an old sailor; if not, take a very small sail in smooth water and practice until it before trying a larger rig. Do not take a lady, even for a paddle, in a very small or cranky canoe, and do not attempt to move about or to sail with a lady aboard unless under the conditions given above. These rules apply as fully to small row and sail boats as to canoes, and an observance of them may prevent serious consequences.

EXPENSES OF REGATTA COMMITTEE, 1885.

THE following account of expenses is a copy of the one sent to the Secretary of the A. C. A., by the Regatta Committee of last year. By their request we publish it:

American Canoe Association:		ALBANY, N. Y., April 19, 1886.
To R. W. Gibson, Dr.		
FOR DISBURSEMENTS BY REGATTA COMMITTEE IN CONNECTION		
1885.		WITH THE REGATTA 1885.
March—	Paid to clerk for stamps for measurer's certificates, etc.	\$4 73
March—	Paid to clerk for stamped envelopes for flag circulars.	6 70
March—	Paid to clerk for envelopes.	2 40
March—	Paid to clerk for express charges, 50c., 25c.	75
March 13	Paid Van Benthuyzen, printing 600 circulars (flags).	4 75
April 8	Paid Van Benthuyzen, printing 50 measurer's certificate books and blanking.	7 75
April 16	Paid Van Benthuyzen, printing 150 circulars (flags).	3 25
July 2	Paid Van Benthuyzen, printing and padding 400 slips (entry blanks).	1 25
July 2	Paid Michael for stencils.	5 50
July 2	Paid Meyers for flags (padding and second prize).	12 00
July 2	Paid Lawrence for painting flags.	14 00
July 2	Paid Mitchell for sticks for flags (padding colors).	1 00
July 2	Paid at Clayton for books and paper for records.	1 85
Total		\$65 92

THE ROYAL C. C.—The first match of the season took place at Hendon on Saturday, the 17th inst. With a view to bring in some of the cruising canoes, the sail area was on this occasion limited to 75 sq. ft. Pearl, E. B. Tredwen; Diamond, H. Church; Nina, F. T. Miles; Sabrina, Rede Turner. Nautilus, Kitten and Minnie were also entered, but did not start. Nina was first away, followed by Diamond and Pearl, Sabrina being away to leeward. The vessel proceeded to the buoy in the light, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. On the next board Nina's skipper unfortunately did not take the rails which were down into the water a sufficiently wide berth, and stuck fast for some time. The vessel proceeded to the buoy, where Pearl stole the inside station, and obtained the lead running down the lake. In the boat to windward, however, Nina held a much better wind than Pearl, and again assumed the lead, rounding the Eastern buoy just a minute to the good. Nina managed to hold her own on the next run down, and kept ahead until nearly on completion of the second round, when Pearl crossed her to windward. THE TRIAL RACES AT THE MEET.—*Editor Forest and Stream.* In reading Mr. Whitlock's letter, I noticed that the Regatta Committee are thinking of having the trial races for the A. C. A. trophy during the first week of the meet. If this were done, I think it would be debarring quite a number who are not in positions where they can take their holidays during August, and who find it very difficult to get away even for one week of the meet, but who always turn up for the last week and enjoy the wedding of the ash and handling of the sheet during the three busy days. As these races will be among the principal races of the meet, because the trial for a place among those doughty ten will be well worth seeing, I think the committee should try to arrange it so that it all came off during the last week, and if any of the races through lack of time have to come off before the last seven days, let it be some of the minor events. (It will be a difficult matter to arrange the trial races for the race week, as it will disturb the entire programme. If any wish to enter the trial races and cannot possibly be present by Friday, perhaps some special arrangement can be made to suit them, but it is not probable that many will be so situated.)

BOSTON C. C.—The Boston C. C., of Boston, Mass., was organized June 30, 1885, and incorporated Dec. 31, 1885. The officers for 1886 are: Commodore, Arthur J. King; Vice-Commodore, Arthur H. Forbush; Secretary and Treasurer, Charles H. Worcester; Assistant Secretary, Gilmer Clapp; Directors, Arthur J. King, Charles H. Worcester, Walter H. King. The club propose to make their headquarters on the Charles River at Riverside, where they are building a club house and camp.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

F. M. D., Dunkirk, N. Y.—The proposed law for steam yachts was published in the *FOREST AND STREAM* of Dec. 24, 1885.

J. P. P., Hartford, Conn.—Use boiled linseed oil mixed with terebinthine. We know of nothing lighter or better for a canvas boat.

STRIP.—We do not recommend the method for large boats. It is not as strong as a good frame planked over, especially for a sailing yacht.

A. D. F.—You will find the lines of a 14ft. keel yacht in the *FOREST AND STREAM* of Oct. 19 and 26, 1885; also this and other small boats, with directions for building, in "Small Yachts," published by the *Forest and Stream* Publishing Company.

ROSELLE.—1. On what part of the Susquehanna is the best black bass fishing to be found? 2. On what part of the Delaware is the best black bass fishing to be found? 3. Does — make a first-class split bamboo rod? **Ans.**—1. From Danville to Towanda, on the east branch. 2. From the Water Gap down to Lambertville. 3. Yes.

N. C. L., Salem, Mass.—Please tell me if land locked salmon in New Found Lake in New Hampshire can be caught with a hook. If so, what bait should be used. What time do they take most salmon in Sebago Lake above Portland? What bait do they use, and how

do they fish for them? Have they been tried in the lake first mentioned? **Ans.**—See article in this issue by C. G. A.

J. J. G., Steubenville, O.—Is 'any handicap allowed open-sighted rifles—not military or special military—as against globe and peep sights at 200 yards, off-hand? **Ans.**—No.

Cedar, New York.—Please inform me what is the best way to stiffen up the ferrules of rods that have been in a room with furnace heat all winter? Will putting in a cellar have the desired effect? **Ans.**—No. Ferrules are put on with shellac, and if the rod is swollen in a damp place they will loosen again when the rod dries. If not very loose, heat the ferrules and melt the shellac, or send the rods to a rod maker.

J. W. F., North Middletown, Ky.—1. At what place in Louisiana did Mr. P. make his famous snipe shooting? 2. What year was it and what time in the year? 3. What number of snipe did he kill? 4. Was it done in so many hours or was it from sunrise to sunset? 5. How many guns did he use and what kind? 6. How did he carry his ammunition? 7. What assistance did he have? **Ans.**—A number of the above questions we are unable to answer, but the following facts are authentic. 1. Franklin Bayou Teche, Louisiana. 3. 366. 6. By negroes following him on foot. 7. Answered in 6.

SOME OTHER MAN is always the one you think will get hurt by accident, and the "other man" thinks it will be you. If he is right, you will be sorry you didn't insure in the Travelers, of Hartford—or your family will.—*Adv.*

COMPENSATING REEL.

Patented January 17, 1882.

No. 4

ABBEY & IMBRIE, Manufacturers of Every Description of Fine Fishing Tackle,
18 Vesey Street (Fourth door from the Astor House), New York.

The rapidly increasing demand for our patent compensating reels, both double and quadruple, prove that anglers prefer them to all other reels for black bass fishing.

The following reels are all made under our patent as above. They all run on steel pivots; are the freest running, strongest, and in every respect the very best black bass reels ever offered. They have been in use over three years, and so far not a single reel has given out.

QUADRUPLE MULTIPLYING.

Nickel Plated, with Slide Click and Slide Drag.

Nos.	0204c	0206c	0207c
Yards.	40	60	80

DOUBLE MULTIPLYING.

Nickel Plated with Adjustable Click.

Nos.	94c	96c	97c	98c	99c
Yards.	40	60	80	100	150

EXTRA FINE "IMBRIE."

Hard Rubber and German Silver, with Adjustable Click.

Nos.	4	100	150	200
Yards.	80	100	150	200

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 185 page folio illustrated catalogue.

Dickerman Pat. Hammerless Single-Barrel Shotgun.

DESIGNED ESPECIALLY FOR

TRAP SHOOTING.

12-GAUGE NOW READY.

Weight 6 1/2 to 7 lbs.

All Modern Improvements.

Automatic Safety Pistol Grip. Double Bolt, Rubber Butt Plate, Full Choke, Blued Frame, with Twist, Laminated or Damascus Barrels.

The Top Snap is utilized as the lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The Safety Button is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the **Finest Single Gun Made.** INTERCHANGEABLE RIFLE BARRELS OF ALL CALIBERS furnished for these guns if desired. SEND FOR CIRCULAR.

Manufactured by **THE STRONG FIRE ARMS CO., New Haven, Conn., U. S. A.**

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row. LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Chamberlin Cartridge COMPANY'S

Fixed Ammunition for Shotguns.

SORA.

Loaded by machinery. Every cartridge perfect. Every one alike. Wadding of uniform thickness, and placed squarely on the powder and shot. Rammed with uniform pressure. Beautifully and securely crimped. Packed 25 in a pasteboard box, 20 boxes in a case. **The Most Convenient and Best Ammunition in the World.** Highest scores on record made with these cartridges. Persons who use them in the field are constantly speaking in their praise. WOOD POWDER has shown its best results in these goods. PIGOU, WILKES & LAURENCE POWDER does its best work in Chamberlin cartridges. Any of the leading brands of paper shells or powder may be had. THE VARIETY OF CARTRIDGES FOR TRAP SHOOTING IS NOW COMPLETE. WADDING ONE SIZE LARGER THAN BORE OF GUN for such guns as require this style of loading.

PERFECTION AT LAST.

THE BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a perfect Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

MADE IN TEN SIZES. Prices in silver plate: Nos. 1, 2, 3, 4, 5 and 6, 50 cts. each; Nos. 7 and 8, 65 cts. each; Nos. 9 and 10, 75 cts. each. Gold Plate, 25 cts. extra.
MESSRS. A. G. SPALDING & BROS., CHICAGO, ILL.:
GENTLEMEN—Agreeably at your request I tried the new "Hammered" Spoon Bait at Gage's Lake, where, from the scarcity of live bait of any kind, a trolling spoon becomes almost a sine qua non at such times when the bass are so rife to the fly. The "Hammered" Bait is a happy idea, for it is hard and smooth, and well deserves the great popularity it has so soon acquired. It is well and carefully made, has good strong hooks, and well deserves the great popularity it has so soon acquired. Very truly yours,
J. A. HENSALL.

The Forest and Stream Publishing Co. will send post paid any book published on receipt of publisher's price.

ANSWERS TO CORRESPONDENTS.

THE RAILROADS AND THE PARK.

THE Senate Committee on Territories has favorably reported the bill authorizing the granting of a right of way to a railway through the National Park to Cooke City. This favorable report is signed by four members of the committee, while a minority report, presented by Mr. Mander-son, is signed by three.

The majority report consists mainly of the two favorable reports by committees of the Senate and House, which we have reviewed and shown each to be a tissue of misrepresentations. We remarked weeks ago, that these documents furnish abundant evidence that they were prepared by the same hand, and there seems to be little doubt that this hand be- longed to General Armstrong, some time Railroad Commis- sioner, and now a mine owner of Cooke City. This individ- ual has shown remarkable energy in pushing forward this railroad scheme, and is credited with having tried to bully the friends of the Park into ceasing their opposition to his plans by saying to them, in language more forcible than elegant, "If we don't get our railroad, we'll bust the Park." It remains to be seen whether this magniloquent threat of "busting the Park" will so alarm Congress and the people of the United States that they will tamely submit to see their pleasure ground taken away from them, to see it cut up by railroads, to see it dotted with towns in which are machine shops, dwellings occupied by railroad hands and saloons, to see its forests and its prairies burned off, to see its game destroyed or driven out of the reservation, so that it may fall an easy prey to the hide hunters and meat butchers.

In this majority report the false statements as to the length of the line in the Park are repeated. General Anderson again refers to the difficulties of crossing the range between Clark's Fork and the head of Soda Butte Creek, as if there were a steep divide there, whereas it is perfectly well known that the divides are very slight and easily surmounted. General Anderson has never been over the country, but the members of the U. S. Geological Survey have, and the char- acter of the divides can be ascertained from their reports or from the men who made them. Major George O. Eaton, an interested mine owner, says in this report that all that the miners of Cooke want is a railroad, and that one from Bil- lings would suit them just as well as any other. Let the miners of Cooke possess their souls in patience. A road will

be built from Billings, the surveys are being made, and the money for building the road has all been promised. It is a road that does not pass through the Park.

The friends of the Cinnabar & Clark's Fork Railroad scheme are evidently hard pushed for ammunition, for they introduce in their report a quotation from a petition signed by sixty-six citizens of Cinnabar, who ask for this railroad grant. To any one who has been to Cinnabar, this is really laughable. Cinnabar has only four or five houses in all. These are the railway station, a stable for Wakefield & Hoffman's horses, a saloon and one or two cabins. Probably there are not a dozen voters in the town, and every rancher, teamster, cowboy, brakeman, and probably woman and child, in the whole region must have put his or her name to the document to make up the "sixty-six citizens of Cinna- bar."

The minority report is signed by men who have given themselves the trouble to look into the matter and to take the opinion of those intelligent and disinterested persons, who are best acquainted with the National Park and its re- quirements. Against the railroad we find men like Secretary Lamar, General P. H. Sheridan, Mr. Arnold Hague, Lieut. Dan C. Kingman and Mr. W. Hallett Phillips. Letters from these gentlemen giving incontrovertible reasons why the railroad should not be built through the Park, have been written in support of the minority report, and we print them this week. They should be carefully read by every one who is interested in the preservation of this wonderland.

Recent advices from a surveying party now engaged in an examination of the Clark's Fork route, give a very favor- able report of the line along the cañon, the only place on the whole route where it has been pretended that there are any difficulties to be overcome. The practicability of the Clark's Fork route seems thus to be assured. The party, when we heard from it, had been only two days in the cañon, and had already surveyed a line where the grade, for a dis- tance of seven miles only, is 171.4 feet to the mile, with very light work, and there is every prospect that further investi- gation and the running of other lines will result in the dis- covery of a much more moderate grade. It is usual in run- ning new lines through a mountain country to look about for some time before the best and easiest line is found. Suppose, however, that no grade easier than 171 feet to the mile can be found, there is nothing very alarming in this. It is true that it is steeper than the maximum grade on the Northern Pacific main line, but it is 54 feet less than the maximum on the Denver & Rio Grande R. R., and 79 feet less than the temporary line over the Mullan Pass. It is not a heavy grade for a mountain road, and it is less important here, because all the heavy freight to be hauled from the mines will pass down the grade, while only empty cars or very light trains will go up the hill. There seems little doubt that a road from Billings will before long be an accomplished fact, and this being the case, it would be insane to permit a railroad to enter the Park.

The tremendously strong lobby which is working in favor of the Cinnabar & Clark's Fork R. R. has been a good deal of a puzzle to the people who have been watching it, and who are familiar with what it has accomplished.

We have good reason to believe that the strength of this movement, for some time so mysterious, lies in the fact that the Northern Pacific Railway Company is backing the pro- ject. We are informed, on authority which we cannot but trust, that this is the case, that this grant will be utilized by the Northern Pacific people to run a line into the Park, so as to secure considerable additional passenger traffic, that there is no intention of building the road to Cooke, but that it is merely the entering wedge to enable this company to gain a foothold for a railway in the Park. Once within the boundaries of the reservation, it is believed that it will be easy to get permission to build a little further in one direc- tion, and a little further in another direction, until the whole Park is gridironed with tracks, and its usefulness and its beauty destroyed forever.

Already this corporation has a strong hold on the National Park. Theirs is the only railway which runs to its borders. A powerful syndicate of its stockholders have obtained leases for hotel and other privileges within the Park. Yes- terday the franchise and leases of the National Park Im- provement Company were to have been sold at public auction in Evanston, the county seat of Uinta county, Wyoming Territory, and it was the reported intention of the Northern Pacific people to bid them in. These leases include the exclusive transportation privileges in the Park.

We do not at present care to express an opinion as to whether it is desirable to have the national pleasure ground so entirely in the power of a great corporation. But we in- sist that neither the Northern Pacific nor any other corpora- tion shall push a railroad into the Park. Let them be con- tent with what they have, and leave to the people their Park undisturbed by the scream of the locomotive and the rumble of the train. We have already resented the attempts of monopolists to seize this pleasure ground, and there are more people interested in the Park and ready to fight for it now, than there were when we first took the matter up some years ago.

Congress cannot afford to turn over this Park to a cor- poration.

A PLEA FOR THE UNPROTECTED.

WHEN one goes out for a day's shooting he is a little apt, especially if young, thoughtless and too ardent, to shoot at many things that when alive harm no one, that when killed are of no worth to him but as proof of his skill with the gun; not even that. Why not spare them? The world is pleasanter for all of us the more happy wild life there is in it. Why kill for the mere sake of killing or the exhibition of one's knack of killing?

When one is duck shooting on inland waters, sitting alert in the bow of the skiff with his gun ready for the expected gaudy wood duck, or plump mallard, or loud quacking dusky duck, or swift-winged teal, to rise with a splashing flutter out of the wild rice, and there is a sudden beating of broad wings among the sedges with a startled guttural quack, and one's heart leaps to his throat and his gun to his shoul- der, and then—only an awkward bittern climbs the Septem- ber breeze with a slow incline, there is a vengeful tempta- tion to let drive at the disappointing good-for-nothing. But why not let the poor fellow go? If you dropped him back (as the poorest and most poking shot might) into the marsh to rot unprofitably there, disdained even by the mink, unat- tainable to the scavenger skunk, what good would it do you? If he disappointed you, you disturbed him in his medita- tions, or in the pursuit of a poor but honest living. Or per- haps a great heron too intent upon his fishing or frogging, or dozing in the fancied seclusion of his reedy bower, springs up within short range and goes lagging away on his broad vans. If you kill him you will take him home to show, for he is worth showing even then. But if you wish your friends to see him at his best, bring them to him and let them see how well he befits these sedgy levels—a goodly sight, whether he makes his lazy flight above them or stands a motionless sentinel in the oozy shallows. The marshes would be lonely without him, or if one desires the charm of loneliness, does not his silent presence add to it?

A kingfisher comes clattering along the channel. As he jerks his swift way over the sluggish water he may test your marksmanship, but as he hangs with rapid wing beats over a school of minnows as steadfast for a minute as a star for- ever, needing no skill to launch him to his final unrewarded plunge, why kill him! In such waters he takes no fish that you would, and he enlivens the scene more than almost

On the uplands, where the meadow lark starts out of the grass with a sharp, defiant "zeet!" and speeds away on his steady game-like flight, remember before you stop it or try to, of how little account he is when brought to bag; and re- member, too, how when the weary days of winter had passed, his cheery voice welcomed the coming spring, a little later than the robin's, a little earlier than the flicker's cackle; and what an enlivening dot of color his yellow breast made where he strutted in the dun bare meadows.

In some States the woodpeckers are unprotected, and are a mark for every gunner. Their galloping flight tempts the ambitious young shooter to try his skill, but they are among the best friends of the aboriginalist and the fruit grower, for though some of them steal cherries and peck early apples, and one species, perhaps, sucks the sap of trees, they are the only birds that search out and kill the insidious, destructive borer.

any other frequenter of it, never skulking and hiding, but with metallic, vociferous clatter, heralding his coming. Then his still mid-air poise, the same in calm or wind, and his unerring headlong plunge, that one never tires of watching nor ceases to wonder at.

When one wanders along a willow stream with his gun, cautiously approaching every lily-padded pool and shadowed bend likely to harbor woodduck or teal, and finds neither, and his ears begin to ache for the sound of his gun—if a green heron flaps off a branch before him, he is sorely tempted to shoot the ungainly bird, but for what? If the

gun must be heard, let it speak to a stump or a tossed chip, either as difficult a target as he, and let the poor harmless little heron live. Uncouth as he is, he comes in well in the picture of such a watercourse, that has done with the worry of turning mills, left far behind with their noise and bustle on foaming rapids among the hills, and crawls now in lazy ease through wide intervals, under elms and water maples and thickets of willows.

In some States, too, the hare is unprotected by any law, and it is the common custom to hunt it even so late as April, for the mere sake of killing, apparently, or perhaps the charm of the hound's music, which makes the butchery of Adirondack deer so delightful a sport to some, adds a zest to the slaughter of these innocents—though, he it said, there is no comparison in the marksmanship required. Alive, the northern hare is one of the most harmless of animals; dead, he is, in the opinion of most people, one of the most worthless. So worthless that hunters frequently leave the result of all their day's "sport" in the woods where they were killed. Yet the hare is legitimate game, and should be hunted as such, and only in proper seasons, and not be ruthlessly exterminated. A woodland stroll is the pleasanter if one sees "Br'er Rabbit" there in his brown summer suit, or white as the snow about him in his winter furs.

Where there are no statute laws for the protection of game and harmless creatures not so classed, an unwritten law of common sense, common decency and common humanity should rule sportsmen, and be powerful enough to protect all these. The fox is an outlaw; it is every one's legal right to kill him whenever and however he may, and yet wherever the fox is hunted with any semblance of fair play, whether in New England with gun and hound, or elsewhere with horse and hound, the man who traps a fox, or kills one unseasonably, or destroys a vixen and her cubs, bears a reputation but little better than a sheep stealer's.

A sentiment as popular and as potent ought to prevail to protect those that, though harmless, are as unshielded by legislative enactments as the fox, and much less guarded by natural laws and inborn cunning. The truest sportsman is the most merciful, and is never a wanton slayer.

WILD PIGEONS have been nesting in the woods of Forest and Warren Counties, Pa., this year, and the netters and gunners have been reaping an unexpected spring harvest. When the birds appear all the male inhabitants of the neighborhood leave their customary occupations, as farmers, bark-peelers, oil-scouts, wild-catters, and tavern loafers, and join in the work of capturing and marketing the game. The Pennsylvania law very plainly forbids the destruction of the pigeons on their nesting grounds, but no one pays any attention to the law, and the nesting birds have been killed by thousands and tens of thousands. Formerly the usual market demand has been augmented by a large demand for live birds to be shot, for purpose of game protection, by State game protective associations, but of recent years, the birds being unattainable, the demand for them has ceased, and now the consumption of nesting pigeons is confined to the markets. Had some of our State societies been told of the Pennsylvania nesting, there is no reckoning the tremendous impetus that might have been given to game protection by another Coney Island spring pigeon killing tournament.

THE NEW YORK GAME PROTECTORS.—The bill before the New York Legislature creating the office of chief of the game protectors passed the Assembly last week almost unanimously. The bill in its present shape fixes the salary at \$1,200 per year with an allowance of \$600 for traveling expenses. This accords more nearly with the views of Gen. R. U. Sherman, secretary of the N. Y. Fish Commission, upon whose shoulders the burden of supervising the game protectors has fallen, and whose request to be relieved from this labor has been heeded. It is well understood that Mr. A. N. Cheney, of Glens Falls is pressed by his numerous friends for the position, and we do not know of a better man. We hope that the bill may become a law, and that the Governor may appoint Mr. Cheney.

"PISCO."—Capt. L. A. Beardslee, of the U. S. S. Powhatan, has just returned to the Brooklyn Navy Yard after six months of West India service. Capt. Beardslee's last communication to the FOREST AND STREAM, it will be remembered, was a relation of the Powhatan's rescue of the maroons of Ronador. Soon after that Capt. Beardslee was engaged in the relief of the homeless citizens of Key West at the time of the great conflagration; and the efficiency with which he performed the difficult task has won for him much praise from the press.

"PUBLIC OPINION" is a new Washington weekly which gives the collected opinions of the press of the country on current events and the questions of the day. The journal starts out well and promises to be a success. It is under the management of Mr. Jerome Burnett and associates.

THIRTY-TWO PAGES.—Owing to the demand for space in our advertising columns this week, the present issue consists of thirty-two pages. The business-like character of the advertising pages of this journal affords a fair indication of the condition of the trade to-day.

THE REPORT ON THE PARK RAILROAD.

VIEW OF THE MINORITY.

MR. MANDERSON, from the Committee on Territories, submitted the following views of the minority, to accompany S. 980:

The undersigned beg leave to dissent from the views of the majority of the Committee on Territories, in reference to S. 980, granting the right of way to the Cinnabar and Clark's Fork Railroad Company.

* * * Instead of the distance through Yellowstone Park traversed by this projected railroad being from ten to twenty-five miles, it will be seen, by reference to the letters hereto attached, from those having full knowledge of the facts, that the distance traversed is from forty to sixty miles, and that the probabilities are that the length of the projected railroad will be about fifty-six miles.

The undersigned, believing that the construction of this road would be decidedly injurious to the purposes for which the Park was established, and that there are other routes over which a railroad can be constructed from points on the Northern Pacific road to the Clark's Fork mining district, report adversely to the bill, and urge that it be indefinitely postponed; and in support of this view call careful attention to letters from the Hon. L. Q. C. Lamar, Secretary of the Interior; Lieutenant-General Sheridan, Major J. W. Powell, Director of Geological Survey; W. H. Phillips, Esq., special agent for investigating Yellowstone Park, of the Interior Department; Prof. Arnold Hague, of the Geological Survey; Lieut. Dan. C. Kingman, Corps of Engineers, United States Army, and others having knowledge of the facts. A careful reading of these letters from gentlemen who have personal knowledge of the facts will, we believe, quite conclusively show that it is extremely undesirable that a railroad, as projected, should be permitted to be built.

We first attach the letter of the Secretary of the Interior, and the accompanying documents, all of extreme value in the consideration of this bill:

DEPARTMENT OF THE INTERIOR,

WASHINGTON, APRIL 22, 1886.
SIR—I have the honor to acknowledge the receipt of your communication of the 3d inst., inclosing Senate bill 980, and report No. 204, in relation to "granting the way to the Cinnabar and Clark's Fork Railroad Company" through Yellowstone Park reservation, with request that this Department will furnish for the use of the Committee on Territories all of the data and information in its possession. The delay in responding is explained by the inclosed documents, which were obtained mainly through correspondence incident to your inquiry.

The Park, as you are aware, was established by act of Congress, March 1, 1872, and in the language of that enactment (sec. 2474 R. S.) "dedicated and set apart as a public Park or pleasure ground for the benefit and enjoyment of the people; and all persons who locate or settle upon, or occupy any of the land thus set apart as a public Park, except as provided in the following section, shall be considered trespassers and removed therefrom."

"Sec. 2475. Such public Park shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be, as soon as practicable, to make and publish such regulations as he may deem necessary or proper for the care and management of the same. Such regulations shall provide for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonders, within the Park and their retention in their natural condition. The Secretary may, in his discretion, grant leases for building purposes for terms not exceeding ten years of small parcels of ground at such places in the Park as may require the erection of buildings for the accommodation of visitors; * * * he shall provide against the wanton destruction of the fish and game found within the Park; * * * he shall cause all trespassers upon the same to be removed therefrom, and generally is authorized to take all such measures as may be necessary, or proper to fully carry out the objects and purposes of this section."

In the second session of the Forty-seventh Congress (see p. 625, vol. 22, Statutes at Large) the following legislation looking to the preservation of the Park in its "natural state" was had:

"* * * Two thousand dollars to be paid annually to a superintendent of said Park, and not exceeding \$900 annually to each of ten assistants, all of whom shall be appointed by the Secretary of the Interior, and reside continuously in the Park, and whose duty it shall be to protect the game, timber, and objects of curiosity, and the balance of the sum appropriated (\$40,000 was the total amount) to be expended in the construction and improvement of suitable roads and bridges within said Park, under the supervision and direction of an engineer officer detailed by the Secretary of War for that purpose."

"The Secretary of the Interior shall lease small portions of ground in the Park, not exceeding ten acres in extent for each tract, on which may be erected hotels and necessary outbuildings, and for a period not exceeding ten years; but such lease shall not include any of the geysers or other objects of curiosity or interest in said Park, or exclude the public from the free and convenient approach thereto; or include any ground within a quarter of a mile of any of the geysers or the Yellowstone Falls, nor shall there be leased more than ten acres to any one person or corporation; nor shall any hotel or other building be erected within the Park until such lease shall be executed by the Secretary of the Interior, and all contracts, agreements, or extensions of time heretofore made or given in regard to said Park or any part thereof are hereby declared to be invalid; nor shall the Secretary of the Interior, in any lease which he may make and execute, grant any exclusive privileges within said Park, except upon the ground leased."

"The Secretary of War, upon the request of the Secretary of the Interior, is hereby authorized and directed to make the necessary detail of troops to prevent trespass or intruders from entering the Park for the purpose of destroying the game or objects of curiosity, and for any other purpose prohibited by law, and to remove such persons from the Park if found therein."

A similar appropriation was made by the Forty-eighth Congress, second session (see Statutes at Large, vol. 23, p. 499): "For every purpose and object necessary for the protection, preservation and improvement of the Yellowstone National Park."

I quote the statutes in this connection to show the spirit of the legislation had in regard to the Park, and that the dominant idea in Congress in reference to the matter has been the preservation of the wilderness of forests, geysers, mountains, etc., so to speak, and the game common to that region, in as nearly the condition in which we found them as possible, with a view to holding for the benefit of those who shall come after us something of the original "Wild West" that shall stand while the rest of the world moves, affording to the student of nature and the pleasure tourist a restful contrast to the busy and progressive character of the life of the past American enterprise. These assurances will be long repeated in the growth in population and civilizing influences of the Territories of Idaho, Wyoming and Montana, that now border on the Park, and that even now are aspiring to the dignity of Statehood.

The data of surveys in this Park and the region immediately north of it is too meager to enable this Department to answer with any degree of positiveness your inquiry as to military and scientific practicality of the proposed road except the one comprehended in the provisions of the bill in question, but I would respectfully suggest in this connection that the line proposed by the "Cinnabar and Clark's Fork Railroad Company" is a creature of the draughtsman rather than of the engineer, and is not, so far as I can ascertain, a deduction from instrumental survey, supported by notes of topography and levels, and estimates of excavation, fill and grade.

Several other routes are suggested by military and scientific authorities of high repute, whose letters and reports upon the subject I send you, as practicable and feasible, and though these lines have not been subjected to the test of instrumental scrutiny, they are at least as familiar to engineers, geologists and border hunters as the one seeking recognition in Senate bill 980, and while longer and perhaps more expensive in the demands of construction, I do not think that that question should have consideration in view of the aims and objects of Congress in the legislation of 1872 and subsequent years, and the hopes engendered in the hearts of the lovers of science and nature by the burning of a restless civilization, before whose relentless advance the forests, the plains, and even the mountains in their wild aspect, are disappearing, particularly when for the purposes of this legacy to posterity a reservation was made of rugged rocks, bitter waters, inaccessible forests, boiling fountains, and plains, and on the whole a region that, but for its selection by the Government for the people of to-day and the future, would have been rejected by all men and corporations animated by thirst for gain or the selfish frenzy of speculation.

The Lieutenant-General commanding the army, in a communication

that I inclose, says: "The railroad from Cinnabar to Cooke City, following the route proposed, will traverse about 45 miles of the Park and be at the road's most southern point, the junction of Soda Butte Creek with the East Fork, about 13 miles south of the north line of the Park, and the Mammoth Hot Springs, the road will not pass in the immediate vicinity of any of the objects of scientific interest, but it would pass through some of the best grazing and meadow lands in its northwestern corner."

The General, in the above frank recital, gives some good reasons for the company's anxiety to secure a line through the Park, and excellent reasons, in my opinion, for rejecting the application. The fact of the line penetrating 13 miles south of the northern border, its passing in the vicinity of the Mammoth Hot Springs, and its virtual capture of some of the best grazing and meadow lands, are all strong arguments against the granting of its application if the theory that suggested the reservation still holds good, and comprehends the maintenance of its original and present characteristics.

The conclusion of General Sheridan's letter shows that he also holds this opinion, for he says: "A railroad through any portion of the Park is, however, not in harmony with the objects for which this reservation was created, and if permitted in this case, will, I much fear, be used as a precedent by the advocates of the various other roads already projected through different sections. Under the present circumstances the objects of the Park are being well fulfilled. The game is collecting in large numbers, and, if not disturbed, will probably continue to do so in the future. These conditions should then, as far as possible, be maintained. With reference to other lines of communication, that by Boulder Creek may prove possible. This route was traversed by an officer of the army in 1878, and is then reported that he deemed a railroad by this route practicable."

Lieut. Daniel C. Kingman, first lieutenant of Engineers, United States Army, in charge of preparing roadways, bridges, and Government improvements generally, at Yellowstone National Park, in a letter under date of March 25, replying to a communication from the editor of FOREST AND STREAM, expresses surprise that his report of 1882 has been quoted in any way favoring the construction of railroads for any purpose whatever within the Yellowstone Park. "I have," he says, "always been opposed to the construction of railroads in the Park. I have given this subject the most careful thought and study, and I should regard their introduction as the most serious injury that could be inflicted on the Park, and the construction of the Cinnabar and Clark's Fork Railroad would be especially deplorable, because it seems so unnecessary. There is every reason to believe that the route of the Stillwater (lying wholly outside of the Park) is a better one for a railroad to follow than that via the Yellowstone River and Soda Butte Creek."

Under date of April 10, 1886, Maj. J. W. Powell, Director of the United States Geological Survey, forwarded a communication to this Department, which I inclose herewith, replying to some of the inquiries suggested by your letter of the 3d instant. * * * Commenting upon the various routes, and reasoning from the meager engineering data at hand, Maj. Powell says: "The Boulder and the Yellowstone Park route is shorter; can be constructed more cheaply per mile; has less elevation to overcome, and could be maintained and operated at much less expense than either of the other routes."

These conclusions would have force and weight if addressed by a chief engineer, employed on preliminary survey, to the board of directors of a company contemplating an economical investment in railroad construction between given points, but they are not entitled to count trenching upon the precincts of the Park, heretofore so carefully hedged and guarded by Congress and this department. In this connection it seems to me we have no right to consider the questions of distance, grade, or cost, particularly as instances here, where all are within feasible bounds. Such surveys and data as we have—and the information is as meager in regard to one route as another—demonstrate the practicability of connecting the Clark's Fork mining district with the Northern Pacific without trenching by rail on the portion of the Park and, this being the case, it is not for the Department to make estimates of relative cost or consider the matter of relative speed as dependent upon ease of grades, in an instance where speed is not a consideration, and the grades are not excessive as compared with those of many mining and commercial lines in mountain countries, being about 55 feet to the mile on the "Stillwater Route," and about 33 feet to the mile on the "Clark's Fork Route," while it would cost 100 feet to the mile on the Yellowstone Park Route. It must be observed, also, that the distance for the Park route is estimated as nearly as possible upon air line assumptions, while in respect of the others, wide latitude is taken to cover deficits in information and exploration. Further, if we consider the fact that the Park route extends for all its length, except about 15 miles, through a country where "the road would be of easy construction," and yet obtains in an estimated 55 miles an altitude of 10,000 feet, the inference of enormous grades to be accepted, somewhere, suggests itself.

In answer to your inquiry, transmitted through this office as to the importance of the mining district in question, Major Powell says: "No thorough information exists in this office relating to the importance of the mining region at Cooke City. It is known that mineral lodes have been discovered in this district of country and have been worked to some extent. None of the workings have been made, and it is believed that much ore is now piled upon the ground. But the exploitation of the region seems not yet to be sufficient to warrant expression of opinion in relation to the ultimate extent of the mining industries that may be developed therein."

It will be seen that the importance of the mining interests in this district are far from being demonstrated by any data in the possession of this office, and that no scientific authorities of the Government and the doubt is expressed by both as to the ultimate importance of Cooke City as a mining town in the event of the most favorable outcome or the pending "prospecting"; but admitting its importance and future greatness, is it not possible that the researches of the near future may disclose like deposits of mineral wealth in the Territory of Idaho immediately bordering on the west line of the Park, and in Wyoming territory near its south and east lines, and will the demands that now come to Congress in behalf of the Clark's Fork mining district," in Senate bill 980, if favorably considered, be annually echoed from other mineral districts with equal claim to recognition, until the Park shall be, if equal justice be done to all petitioners, webbed with the arteries of intercourse and commerce, and cease to exist as the creature of the legislation of 1872, that "dedicated and set apart as a public park and pleasure ground, for the benefit and enjoyment of the people," this rugged, romantic, beautiful wilderness and wonderland?

In connection with other documents forwarded herewith, I send you a number of extracts from a representative journal of the American lovers of field sports and students of forestry, the FOREST AND STREAM, to show the deep interest that is being taken in the question under discussion by an immense class of our most thoughtful and intelligent fellow-citizens, and the anxiety and suspicion with which they regard the overture of the corporations now being made for the purpose of securing Congress for authority to penetrate the Park with railroads. In the event, however, that the judgment of your committee shall so far incline to the repeal or amendment of the legislation of 1872 and subsequent Congresses as to favor the granting of the right of way proposed in Senate bill 980, I would respectfully suggest that the grant be restricted to such limits as are absolutely essential to road-bed and slopes of cuts, and bases of "fills."

This amendment is suggested rather in the interest of timber preservation, economy of land, and with a view to guarding against that appearance of utter desolation usually incident to a forest right of way from which the timber has been cut or culled for a distance of a hundred feet on either side.

If the grant is to be made upon the simple ground of affording an outlet for the products of the mines of the Clark's Fork district, there is no apparent necessity for stations at intervals more frequent than ten miles. I would respectfully suggest amendment in this particular, and that the grant of land at stations be limited to sites for depot buildings, wood or coal sheds and water tanks. * * * And that the structures erected by said railroad company within the Park shall not in any instance include machine shops, repair shops, supply stations, hotels, restaurants, eating houses, stores or any building except a depot, including telegraph or telephone office, residence or station agent and one building for the residence of the station agent, and said right of way and locations for depot grounds shall not in any instance include objects designated as natural curiosities or matters of interest to tourists, or be surrounded or inclosed by fences, walls or hedges that shall obstruct the view of any contiguous objects, or bar the passage to them of pedestrians or vehicles.

If the purpose of the projectors of this enterprise is fully disclosed in bill 980, their object is not in any degree thwarted by any amendment suggested in the interest of the people and in furtherance of the views expressed so forcibly in the legislation creating the Park, and the property grants asked for naturally excite distrust in those usually sought and accorded in the interest of local trust, progressive enterprise and the aggregating population—three conditions that antagonize the letter and spirit of the law establishing the reservation.

If "right of way" should be granted, I respectfully suggest that it

should be "right of way," plain and simple and so circumscribed as to guard against peopling the Park in the interest of personal or corporate gain of speculation; otherwise it will result at an early day in establishing a condition of affairs that may necessitate abandonment of the original theory of a national park or such a contraction of territorial limits as will surrender to the "Cinnabar and Clark's Fork Railroad Company," and the other corporations in whose interest their bill practically blazes the way, all the lands and settlements in the reservation contiguous to their several lines.

The demand for grants at depots and sidings, of tracts 2,000 by 400 feet in extent, representing areas of 800,000 square feet, or more than 18 acres, in each instance, would, if conceded, enable the company to absorb and control every "oasis" of meadow land through which their lines can be twisted or diverted; or, cutting these tracts in center, or diagonally, practically possess a large number of acres than the grants comprehend, by rendering the other portions of the valleys useless because inaccessible to others. In fact, it is questionable whether any of the valleys of the Park will be more than equal to the demand of a general right of way, 300 feet in width, and a right of way of switches of 400 feet in width. The grant sought would include, and may be intended to include and absorb, the best meadow and grazing lands in the Park, referred to by General Sheridan, Geologist Hague, and Special Agent Phillips, in the letters that accompany this report. Very respectfully,

L. Q. C. LAMAR, Secretary.

Hon. Charles F. Manderson, United States Senate.

DEPARTMENT OF THE INTERIOR,
WASHINGTON, April 6, 1886.

SIR—In reply to your request for information as to the necessity of granting to the Cinnabar and Clark's Fork Railroad the right of way to build a road through the Yellowstone Park and the effect such a road would have upon the reservation, I take pleasure in laying before you such information as I have gathered and at the same time presenting my objections to any railway in the Park.

The Clark's Fork mining district lies just outside the northeast corner of the Park. It is situated high up in the mountains, near the headwaters of the Stillwater and Clark's Fork rivers and Soda Butte Creek. The district as yet is small and undeveloped. It may have a brilliant future, but as yet it is but a hope. Every mining engineer knows that the number of mining locations held has very little to do with the importance of a district. I first visited the district in the autumn of 1883. I again visited the district in September 1885, and found that the mining developments had progressed far less than I had been led to suppose. So far as I was able to judge, upon careful inquiry, I think there were not more than one hundred miners actively employed in the district, and most of these were doing what is known as prospecting work. In no one mine were there more than three or four men at work. Considerable ore has been taken out, but it is mostly of a very low grade and will have to be smelted in the district. From present developments I fail to see how the Clark's Fork mining district could support a railway.

No careful surveys for railway routes have as yet been made, although much misinformation has been scattered broadcast about the impracticability of reaching the district in any other way than through the Park.

Three routes, however, have been proposed—one by way of Stillwater River, from Stillwater, on the Northern Pacific Railroad; one from Billings, Mont., by way of Clark's Fork; and one by Soda Butte and the Third Canyon of the Yellowstone River, passing through the Yellowstone Park for about fifty miles, nearly the entire length of the road.

It has been stated that the mines are all situated on Soda Butte Creek, and to reach them a railway from the north or east would have to cross a high mountain range. This I consider an error. It should be understood that although Cooke City is situated on Soda Butte Creek, it is only a small settlement and inconveniently located for nearly all the recent mining developments of the district. All the more important of the recent developments are situated either on the opposite side of the watershed on the streams tributary to the Stillwater and Clark's Fork, or else within a few hundred feet of the summit of the mountains, such a railway a mining town would be equally as well situated on either the Stillwater or Clark's Fork. From all I can learn I am inclined to believe that the route following the valley of the Stillwater will prove practicable. I have not examined it personally, but more accurate surveys have been made of it than of the other lines. I am told that it is feasible to build the road to within fifteen miles of Cooke City. It should be borne in mind that all the recent mining locations are from three to six miles from Cooke City, highest up in the mountains. The road would be about fifty-four miles in length. Stillwater, the junction of the branch road with the Northern Pacific Railroad, is about 125 miles nearer Saint Paul than Cinnabar.

I have personally examined the Clark's Fork Valley for forty miles east of Cooke City, and I am of the opinion that if the mining interests demand a railway, a road could be built from the mines to Billings, Mont., which would be far more serviceable than a road through the Park. There is this route one very rugged place known as Clark Fork Canyon, a deep gorge six miles in length, but I am told that it is quite possible to avoid it. The route, at least, so feasible that accurate surveys should be made before granting a right of way through the Park.

I am well acquainted with the country through which the railway would have to pass in going from Cooke City to Cinnabar. My own work has compelled me to study the Third Canyon carefully, and I have no hesitation in saying that it would be a very costly matter to build the road for 20 miles from Gardiner to the East Fork of the Yellowstone River. It has been estimated by the friends of the Cinnabar & Cooke City Railway that this road could be built for \$1,000,000. It seems to me that if the output of the mines at Clark's Fork could stand such an expense, either of the other routes should be chosen.

In my opinion there are many persons who are interested in obtaining this right of way through the Park who desire to use the road for the purpose of transporting travelers who annually visit the Park in the summer. Having a right of way, and the one granted by Congress, they anticipate receiving large revenues derived from tourists. Upon the completion of the road we should see glowing inducements held out to tourists of a railway ride through the Third Canyon of the Yellowstone and the charming valley of the East Fork. The granting of one or two hundred feet on each side of the track would necessarily include Soda Butte Spring, the water of which is already much sought after by many people, and the only one in the Park which has yet been found to possess curative properties. In my opinion it would be a mistake to allow this spring to pass beyond Government control.

I cannot but believe that the establishment of a railway in the Park would prove a permanent injury to the reservation, and tend to subvert the purposes for which the Park was originally set apart. The danger arising from forest fires would be very great, and the large game would disappear, as it has everywhere else, with the appearance of railways. With a railway to the Park fifty miles in length, with stations every seven miles, disagreements difficult to settle would immediately arise between a powerful railway corporation and the management of the Park.

A railway means the settlement of large number of people living in the Park, over whom the Department would have but little control. It would require constables, justices and courts, and finally the people would ask for political privileges. It should be the aim of the Department to permit a few people as possible to reside permanently in the Park other than those engaged in the accommodation of visitors. A railway in the Park is, in my opinion, the beginning of the end. The demand of others claiming equal rights would grow with years, and in time the Park would have to be thrown open to settlement.

By preserving the Park intact for the next ten years it will take such a firm hold upon the country that the people will never consent to its desecration for purely personal ends. It belongs to Maine and Florida quite as much as to Wyoming and Montana, but in time the latter Territories will derive the greatest benefit.

With this letter I inclose a communication from Lieut. D. C. Kingman, in charge of the improvements, Yellowstone National Park. His letter is addressed to the editor of FOREST AND STREAM, who kindly furnished me with a copy. ARNOLD HAGUE, Geologist.

Hon. L. Q. C. Lamar, Secretary of Interior.

WASHINGTON, D. C., April 6, 1886.

DEAR SIR—Understanding that your opinion has been requested by the Senate Committee on Territories through a letter from Senator Manderson, dated April 3, as to the effect of permitting the Clark's Fork & Cinnabar Railroad to penetrate the Yellowstone National Park, with your kind permission, I will state in short why, in my judgment, the enactment of such a law would inflict a serious blow to the interests of the Park.

By the organic act organizing the Park, it was set apart to constitute forever a great National Park or reservation, for the benefit and enjoyment of the whole people. As expressed in that act, it was to be kept in a state of nature, free from settlement, occupancy, or sale. The only erections to be allowed within its limits were to be such houses as should be needed for the accommodation of the visiting public. Besides the expressed objects in the act, it is universally conceded that the two main objects attained in the dedication of this wonderful region were the preservation of the great forests within its limits and the large game of the West, which had been almost exterminated everywhere except in the country proposed to be embraced within the Park.

The objects contemplated by the act have in a great measure been attained. Not only from all portions of this country, but from all portions of the world, the people have come to behold the wonders of nature contained in the Park and to seek escape from the trammels of civilized life surrounding them at home. The main wonder and joy to them has been to behold everything that was beautiful in the Park in a state of nature; that the fair picture contained no blot of man's hand.

By the bill under consideration, all this is proposed to be changed. For the benefit of a private corporation, the pleasure ground of the whole people is to be invaded. Where they used to hear the plaintive cry of the elk will now be heard the shriek of the locomotive. The face of nature is to be scarred with a railroad, and one of the fairest portions of the Park surrendered to a corporation for that purpose, upon which may be erected, in the language of the bill, "station houses, depots and machine shops." This railroad will run 50 miles through the Park, penetrating the wonderful canyons, cutting through the forests, and over the finest grass country in the Park, and pursuing its course along the beautiful Yellowstone River.

That the building of a railroad would be destructive of the beauty of the Park will be conceded by all. No less clear is it that the project is opposed to the main purposes for which the Park was set apart. Already a railroad reaches the very gate of the Park, and since it has reached that point, they would have it penetrate within "the sacred precincts."

In my report on the Park, made to you last September, and which has been communicated to the Senate and printed as Sen. Ex. Doc. 51, present Congress, I say at page 7: "Inter-stated parties have for some years brought to bear a constant pressure upon Congress and the Department to induce action in favor of a railroad through the Park. This railroad is sought ostensibly for the purpose of bringing to market the ore from Cooke City, a mining camp adjacent to the northeast boundary line of the Park."

"If there is one object which should be kept in view more than any other, it is that of preserving the Park as much as possible in a state of nature. A railroad through it would go far to destroy its beauty, and besides it is not demanded by the public. The roads are being improved yearly, and soon will make every portion of the Park easily accessible. The distance between the points of interest is not great, and transportation is good and plentiful."

And from the consideration that a railroad is not needed in the Park, and that the preservation of the game and the forests would be unattainable should a railroad be allowed within the limits of the Park. I think the department should strenuously oppose the project. And I further observe that the country through which the railroad would run was one much frequented by game, and that if the object of protectors of the railroad was simply to reach Cooke, I was satisfied that the object could be practically attained by a route which would be wholly outside the boundaries of the Park.

It is needless to point out to you my observation that the game will be utterly driven away from the Park should a railroad be permitted. The road would run through one of the widest portions of the reservation within which the herd of buffalo, sole remnant of the once mighty herds, now roams.

Nor need I dilate upon the damage to the forests which would result should the bill become a law. Owing to the dryness of the climate during most of the year, forest fires are very easily caused, and once started do immense injury. A railroad would be the means of greatly increasing the dangers to the forests from fire.

In the report made at this session of Congress by the House Committee on Expenditures for Indians and Yellowstone Park (Rep. No. 1076, page 53) it is said: "The preservation of the forests, which clothe with verdure the valleys, rugged declivities, and mountain peaks of the whole region, is of special moment. It is made very clear by the scientific views presented on this subject in the testimony of these forests. It is, therefore, in the judgment of the committee, of the highest moment that these forests should be protected from destruction either by fire or the axe. To this extent, having in view at once the beauty of the Park as a delightful resort to the people and the value of the great reams of water that issue from the mountains, as well as the benign influence of the forests on climate and health, this Park should receive the special care of the Government."

Another consideration of importance is that if a railroad is allowed, the difficulties which the Department already labors under as to the management of the Park will be greatly increased. It will be possible to avoid more or less settlement along the line and the introduction of a large number of people connected with the road. New rules and regulations will have to be made, and when made, with the present force under the superintendent, their enforcement will be very difficult, if not impossible.

The general views which I have submitted I have not entered particularly into to question to the most desirable route to Cooke City, nor as to the value of the private interests proposed to be benefited by the railroad. The people of the whole country are concerned in having the Park preserved for the purposes for which it was originally dedicated, and no considerations of private interests should be allowed to interfere with such preservation.

It is to be regretted that the Committee on Railroads in submitting its report should have been so much influenced by the statements of interested parties.

There is but one opinion, as far as I know on the subject among the officers of the Government who occupy important positions in the Park, and that is that the granting of the desired right to run the railroad through the Park would be most detrimental to its interests. General Sheridan, who is thoroughly acquainted with the Park, I believe, shares this opinion, and I have grounds for saying, would be glad to communicate his views to you when requested. It is to be hoped that the Senate Committee on Territories will give the bill the consideration its importance demands. Very respectfully yours,

W. L. H. PHILLIPS,

Late Special Agent for Investigations in Yellowstone National Park.

Hon. L. Q. C. Lamar, Secretary of the Interior.

WE DO NOT attach the voluminous extracts from FOREST AND STREAM, and the maps referred to in the letter of the Secretary of the Interior, fearing that this report may be of too great length, but return them to the files of the Senate that they may be considered and given the weight that their importance demands. We also file clippings from the *Spirit of the Times* and other newspapers, showing the view taken by an observing public of this projected railroad.

Upon the proposition that there is an available railroad route from the Northern Pacific Railroad to the Clark's Fork mining district by way of the Stillwater River, we file with the Secretary of the Senate a map showing that route. This map was prepared by a civil engineer of the town of Billings, Mont., who made personal exploration of the route. From a late letter of the present efficient superintendent of the Park, we extract the following, showing the danger to the timber in the Park from the construction of railroads within its limits:

Another material point is the spread of fires from the locomotives. This country is so high and dry that it would be impossible to prevent the firing of the Park, and in less than three years' time there would scarcely be a green tree on the headwaters of the Yellowstone, to say nothing of the Park. Last fall I extinguished sixty odd fires, resulting from the carelessness of campers, and the railroad would be an hundred times worse. To save the timber on the headwaters of the Yellowstone, Missouri and Columbia rivers should be of itself sufficient to prevent the granting of the right of way to any railroad company.

For the numerous reasons herein presented, we believe the bill under consideration should not pass.

CHARLES F. MANDERSON.

BENJ. HARRISON.

GEO. GRAY.

A Hamburg newspaper gives the following account of a curious and exceptional incident which occurred in the collection of a dealer in wild animals in that city. For some time past one of the largest elephants, brought over by some Cingalese, had showed signs of furious delirium, and it was at length decided to kill the animal, which was valued at 12,000fr. An Englishman had once offered to give 1,000 marks, if the occasion presented itself, for the privilege of shooting the enraged beast. The sportsman was thereupon summoned by telegraph; but in the presence of the raging animal he became frightened, and gave up the intention of bringing it down with shot. Strangulation was then resolved upon as a means of despatch. Chains were passed around the neck of the elephant, which had been bound, and the two ends of the chains were drawn tightly by means of tackle. Ten minutes afterward the colossal creature had ceased to live.

The Sportsman Tourist.

A WEEK ON MICHIGAN LAKE.

PRETTY Lac Vieux Desert, the "old deserted planting ground," had been visited by Beecher and myself last year's season. We found it to be the source of the Wisconsin, and also that of much pleasure and trouble. We camped independently—independent of several indispensable, for instance. We carried heavy packs through swamps, between Twin Lakes and the railroad track. We had scandalous fights with mosquitoes. We had "boots that didn't fit," etc., but when after a few weeks our sore heels were healed, we concluded that we had had a jolly time of it and that this summer we would try again. So we did, and the writer years to relate about it, although nobody asked him to and nothing happened either. But to write something about nothing has been indulged in and tolerated before this.

It was the morning of one of nature's perfect days in August that we three—Hector, Mr. B., and myself—boarded a train of the Milwaukee, Lake Shore & Western Railway, in order to get to Marenisco, L. S., Mich., the station lying nearest to Pre-que Isle River and its source, the Presque Isle Lake, which latter was to be this trip's happy hunting ground.

To the eye of the land-seeking immigrant the scenery along this route may present a pleasing change of hardwood timber (indicating fine farming soil) of numberless small streams, winding rivers and bubbling brooks, of prosperous farms, and extensive pine forests, but when after Antigo, the long, narrow aisle begins, within whose limits the train thunders along up to Ashland—the surrounding primeval woods, beautifully interspersed by lakelets glimmering through the emerald foliage of the fragile birch, the stately maple, or the slender pine, and then these crystal depths disappearing like a flash, soon to be replaced by others still more fascinating, most of them sleeping in undisturbed seclusion; the heart of the angler and pleasure-seeking sportsman bounds in anticipation of luck, such as Izaak Walton would have longed to experience.

At Eland we noticed, for the first time on this trip, some Injuns. But the season for them wasn't open yet. There was no James Fennimore-Cooper style about them. In fact, they appeared so slimy that B.'s remark seemed plausible, that if thrust against a wall they would stick to it. Between Scott and the State line we gazed with elegiac recollections upon the places that witnessed our privations on the former tour. At Watersmeet we met George, a half breed, who had extended to us some favors a year ago. At 3 P. M. the city of Marenisco burst upon our vision. One solitary section house stood there all alone, hard by the turbulent, fast-flowing Presque Isle. Walking down the track about a mile, we came to a sawmill, the owner of which very kindly loaned us his boat, with which we at once began to ascend the river. We hoped to make three miles before sundown. However, these hopes were not fulfilled. The only things filled full were our boots, although the shoemaker had solemnly pronounced them watertight. After having paddled for two hours against the current, and pushed over shallows and pulled over rapids by wading in the water, and cutting and bruising our hands, we had a mile and a half behind us, for miles the same work before us, dusk around us and hunger within us. Just this side of a new series of rapids the gondola was therefore moored, an idyllic ravine was selected as a bed chamber, a thick layer of hemlock boughs was provided, and soon the steaming coffee and sizzling bacon were taken from the flickering camp-fire. After smoking the calumet and cheating at a little six-six, we wrapped ourselves up in our blankets, and the murmuring, talkative Presque Isle and the monotonous song of the mosquito speedily lulled us into peaceful slumbers. As pleasure the evening's toil had not been a success. It had procured less charm than harm, less bliss than blisters. Next morning we brought back the craft. Going down stream was comparatively easy. Out of gratitude I pencilled one of the rapids. Owing to the tortuous flow of the Presque Isle only a small piece of it could be seen at a time, which, in connection with the large rocks strewn about and the leaves of the shrubs and trees hanging down to the margin of the water like a flowery carpet, the more enhanced the picturesqueness of the scene. Under way a quill pig was ticed by Hector. I dropped it, and kept a handful of quills as a token of remembrance. After several bashful attempts to capture speckled trout we neared the mill. The intention had been to be absent four days, but the man was not surprised to have his boat returned so soon, as he had pointed out beforehand the slight difference between seeing and ascending these mimic cascades.

Having thus gained another experience, we lustily tramped back to our duffle and had pork and beans at the section house. Soon the train approached that took us to the next station southward, Gogebic, Mich.

On account of the delay of a train, we were obliged to pass three tiresome hours in this forsaken place. These three hours were destined to become fateful to Hector, our beloved water spaniel. As he had nothing to do, and leisure being the first step to mischief, it was not long ere he, the unapproachable, had fallen a victim to the enticing artifices of an unprincipled though graceful specimen of the same persuasion. She led him further and further into the swamp, till nothing could be seen or heard of them. Finally, when we thought it proper to express our longing for him by shouting, whistling and scolding, he didn't respond. For an entire hour I then crept about the tamaracks with a hickory stick in order to guide him to a sense of his guilt. Alas, all in vain! He was gone but not forgotten. Leaving order to retain him on his return until the following morning, we entered the stage to Lake Gogebic. Fourteen persons, lads and lassies, were packed like sardines in that vehicle; four able-bodied horses could seldom do more than proceed at walking gait with that old broad wheeled box trundling behind, the road was awful, the miles were a deal longer than in Wisconsin, and for all that we only paid \$1.50 in advance. Although the hotel and its management seemed *comme il faut*, we preferred oscillating waves and the mild breeze of a warm summer night, and even the bill of the ever-present mosquito to the bill of the hotel man. We hired a trim little klunker-built and rowed along the eastern shore of the lake. On the way my companion sighted a monster raccoon, but the retiring orb of day was just preparing to bestow upon the towering crowns of the sighing pines a lingering kiss of farewell, and as we wouldn't miss that spectacle, even for a coon, we had to forego the pleasure of a more intimate acquaintance. We discovered a cove of ideal beauty, and within its shady recesses a natural bower so inviting, that we were persuaded to turn our prow to the sandy beach and

commence housekeeping. Our mattress was easily cut from the trees, and supper was appreciated more than at home. Late in the evening we enjoyed another boat ride on the now rather ruffled waters of the "lake of the falling leaves."

The rosy tints of Friday morning's dawn found us breakfasting, for at 7 o'clock the hotel team was to convey our bundles to the station. That attended to, we resume seats once more in the skiff and ferry over to the Point, a distance of about three miles. Were it not for the liaison of that wretched cur, we might now go out with that elegant steamer puffing past us, to the other end of Gogebic, fifteen miles north. Leisurely gliding along the cool waters, one cannot but admire Gogebic's rare loveliness. Rocky shores, wood clad hills, secluded nooks, forests of gigantic evergreens, radiant sunshine, and glittering waves invite to dreamy languor, out of which a sudden pull at the line rouses us. (Right here would be a chance to speak of an amazingly big haul, but I'm just like the father of my country: I cannot tell a lie. That black bass weighed perhaps a pound and that's all.) After an instructive ramble about the woods at the Point, time was up, and the landing oared for. We bade a reluctant good-bye to Gogebic.

At the depot waited our poodle, willing to be forgiven and wagging a joyous welcome. All united, the snorting steam horse hurried us down to the far-famed Eagle Waters.

After securing a convenient, servicable flat-bottomed at a very reasonable price, how did we value it, that there was no necessity for carrying our traps, that we could simply lay them down in the boat while lazily cruising up the quiet Eagle River. The first lake was Yellow Birch. Excellent! The second, Duck. Exquisite! The third, Otter. Exceedingly romantic! The fourth, White Eagle. Ex—well, its attractions induced us to stay. Our attention was directed to a bold eminence stretching along the eastern bank, and, as the receding light of day urged a prompt decision, our boat was directed there also. A few squirrels were shot, dressed and hid, and before the nocturnal shades had enveloped us, all preparations for the night's rest had been accomplished. Dark clouds advised us to improvise with oilcloths a tent, which was fastened to the earth by ropes and pegs. Then we said good-night.

At 5 of the succeeding morning part of the environing dewy landscape was reconnoitered. After a ten minutes' stroll another sheet of water—Scattering Rice—was espied. On the ridge an empty pine tar can, partridge feathers, chips, tent-poles, a tag with the name Rev. T. G., etc., bore evidence that others before us had considered this charming region "good medicine" for overwrought body and mental weariness. But at present we seemed to have nature "devoid of modern improvements" all to ourselves, and were not sorry for it, for this, to my view, belongs to the very acme of camping.

Midnight it had become cooler and cooler. Gusts of wind rushed through the branches, first singly, then in quick succession, the sun was veiled more and more by the blue-gray clouds that rolled by. Nearer and nearer growled the thunder, and slowly fell the first drops, coming faster and faster until they had degenerated into a complete deluge. At first we betook ourselves to the underbrush, and endeavored to look at the funny side of the thing, but failing to find it and things appearing rather suspicious, an oilcloth was spread between four trees. Here we squatted for two full-sized hours till the last dry thread had been well moistened and the pipes had gone out. Seeing no chance here to become wiser, and especially wetter men, we resolved, after a counsel of war, to hasten over to the north side where, the evening before, we had perceived a pile of boards. Five minutes' hard pulling brought us there. A location was chosen, boards were dragged, nails were searched out, we measured, hammered, pounded—within an hour we were sheltered. Well, the exultation. Even old Sol squinted from behind the clouds again. A hearty dinner dispelled the remainder of uneasiness.

Turn our sylvan residence was furnished in princely style. A floor was laid, the roof was improved, nails were driven whereon to hang pans, tin cups, pails, clothes pouches, guns; colossal armfuls of browse were hewn and drawn to camp. In short, nothing was left to wish for. We could afford it.

The rest of the cloudless afternoon was spent in courting a huge fire. One piece of raiment after the other was impartially stripped off and dried. Were I afflicted with an irrequiet, humorous vein, how should I now chucklingly narrate about Mr. B.'s singed pants or scorched rubber coat; but charity forbids and I'll forbear.

Toward evening several wall-eyed pike were hooked in the waveless, pine-encircled Scattering Rice. We had not often disentangled our line from the over-affectionate pond lilies though, before we heard the dwarfish steamboat Eagle whistle behind us and visitors alighted in the neighborhood. Shortly after a skiff, containing two anglers, floated into the S. R. Interchanging the news of the day with them, fishing was recommenced. Birch-bark canoes on different parts of the lake showed that these waters were also frequented by the noble redskin. One of these sons of the forest I accosted. He went up the Deer Skin Creek that night to kill a deer. On White Eagle, not far from our abode, the steamer anchored, and its occupants, four ladies and two gentlemen, awakened the slumbering echoes of forest, hill and dale, with chatting, singing, shouting, screaming and yelling.

The next morning, ere Phebus's golden chariot wheeled into sight, I feverishly pursued the causes of a tickling sensation, of which I had zealously but vainly struggled to rid myself since the stars had begun to fade. They relished me extremely, the frisky darlings. They and their scientific name escaped me, but an Indian once described them as "heap bite an' no see'em," hence their local appellation, "no-see-ems." They are hateful, detestable, voracious—but why portray them!

I went hunting. Discovered a lonely, sinuous, undulating road, from which I could occasionally, where the dense leafy screen permitted, gaze down the steep banks upon the river. Leaning on my trusty breechloader, the faithful dog at my side, the mists that hovered over the pebbly shores sluggishly departing, as the rising sun cast brightest and warmest over the world; the gentle morning wind breathing through the verdant curtains of the white birch; yonder, part of Otter Lake's glassy surface shimmering across; afar off, the hoarse notes of the wary loon; around me solitude and serenity. This was the picture on that morning. It will forever form one of the pleasant reminiscences of the Eagle Waters. I tried to sketch, but it could not be done; the no-see-ems were too fiendish. I jumped to my feet and wandered on.

When I arrived at home, Mr. B. returned from Deer Skin Creek with one fish. We put it under the planks, breakfasted hastily, and set out trolling. Doubling a certain point we came upon an Indian camp of six tepees. The

bucks sat and smoked, one of the squaws cleaned venison, some papposes amused themselves with a dog, and on a scaffold was strained a deer skin. Here I actually caught an Indian washing himself. Further on we surprised some woodducks that dallied on a log perfecting their toilet. At our salute they dropped a courtesy till below the water, and are probably still smiling at our impetuosity. Returning after noon with some pike, we were entertained by one of the campers from yesterday. When preparing dinner we looked for the bass. It had disappeared. My colleague suspected the spaniel, but, having educated that dog myself, I was certain that he wouldn't touch a fish unless it were "well done." His innocence shortly afterward emerged from the pile of lumber in shape of a black mink. I rubbed the pillerling little bandit's skin with salt and delight, and he now adorns my school room in a glass case with tobacco in him, till the moths get him. That's Hector's curse.

Toward eventide we were out on another piscatorial excursion and lugged homeward three handsome pickerel. One of them I estimated at eight pounds to please Mr. B., who caught it. (Between the reader and myself, it was a six-pounder.) After a delectable repast of tea, corn-cake and pickerel, reclining on the bed of leaves, yarns are exchanged. This, after a while, ceases. You stare reflectively on the fantastic pictures, traced in grotesque designs on the pile of wood that the greedy element consumes, the eye follows idly the weird shadows dancing on the sombre background while

"Viewless hands the æolian organ play."

the scintillating Orion leads to reveries of gas-lighted streets, peace and good will toward all rule the heart; the musing thoughts wander from the melodious lullaby of the waves, splashing against the boat and the stones at the landing, to the music and din of city life; before your mental vision there arises home.

At daybreak the chit of the red squirrels and the lances of the no-see-ems aroused me. The spaniel flushed partridges twice, while I sauntered along the forest-hidden path, but—they can fly fast, can't they?—but when a third time he treed three more, up to which he looked with great expectations, while they inquisitively peeped down, probably wondering at the nervous excitement of his tail, I satisfied his wish and their curiosity with neatness and dispatch. Toward evening we started for Cranberry Lake. We had read so many glowing accounts of hunting the deer, where these beauties coyly step down to the pellucid shallows to bathe their lithe forms and to nibble of the water lilies, that we made up our minds to secure a look at them. Let nobody be shocked at the idea of a deer hunt out of season. There is no cause for alarm. What is virtue without temptation? We were not tempted. Those deer probably never read those accounts or else must have mis-ed us. When the pennyroyal and other preventives were used up we started for White Eagle and reached our hearth at 11 P. M.

While at supper Hector occasioned a noise in the bushes and presently swept down the declivity chasing a muskrat of enormous size. As we could not fire during the scramble, for fear of hitting the dog, he had an ugly job of it. Before he was through with her he had quite a lacerated lip himself. We finished our meal, which had turned cold, and soon there reigned at the dying embers the silence of a well-merited repose.

Tuesday, at sunrise, we noticed quite a number of fresh deer tracks, beginning not thirty rods from camp and continuing for miles along the road. With a rabbit and a ravenous appetite we wended our way toward our hut. While resting at the wooded slope, with a grand view of White Eagle and Otter, there passed up the thoroughfare a birch bark, the individuals in which did not perceive us. Two Indian women paddled, while their lords sedulously practiced *dolce far niente*, and, judging from their laughter, related some good ones.

Conformably to previous arrangement we were to leave to day. Our hotel was broken up, and the boards were returned. My blanket, care-worn and aged, was suspended to a tree. It has presumably been adopted by the Indians, and this winter, perhaps, serves another term in the wigwam of the Chippewa. *Sic transit gloria mundi*, says the Latinist.

The capricious White Eagle, the magnificent Otter, the curling expanse of Duck, the attractive Yellow Birch, they were all once more powered by our keel, and Eagle River station was reached hale and hearty, just in time for the M. L. S. that, on wings of steam, brought us back. 793-11.

Natural History.

THE SPARROW HAWK.

Editor Forest and Stream.

I shall have to kill two birds with one stone; all the "scientific fellers" are about to get after me, I perceive. I have discussed the sparrow hawk as I observed him in Maryland, Virginia and Louisiana, and I have found his habits to be the same in all those places. I have never seen any difference in the numbers observed at different seasons in either of those States to warrant the conclusion that there is a general migration of the species in the Atlantic coast States southward in winter.

I suspect that I have spent as many days abroad in the field in pursuit of fish and game as any man of forty-seven years of age in these parts. Moreover, I did for years a very large medical practice in Piedmont, Virginia, which kept me in the saddle some part of every day in the year, many times all day, often carrying dog and gun for a shoot going and coming. In reply to Mr. Henshaw's doubt, therefore, as to the sparrow hawk wintering here long before the advent of the sparrow nuisance, I have to assure him of my personal knowledge of the fact, and while I pay due and respectful attention to what that learned gentleman says and thinks, I know that he is wrong in supposing that the sparrow hawk has not always been a winter resident hereabouts. He asks what evidence I have of it, I reply, my own eyes.

I still adhere to my own opinion that the sparrow hawk feeds in the States named above largely, and well nigh exclusively on field mice. I have, in my personal experience, never seen in my lifetime ten small birds seized by sparrow hawks. I have found the remains of small birds in no specimen ever examined by me, and I have examined not a few. I remain of opinion, notwithstanding what Mr. Henshaw thinks, that the sparrow hawk is now and has been since I was a small boy, a common, and not a rare, winter resident here. I am of opinion that the great majority of sparrow hawks do not leave here for the South in winter, as Mr. Henshaw thinks. The sparrow hawk in the grasshopper cursed regions of the West may feed chiefly or almost exclusively

on grasshoppers in grasshopper season and when the snow falls may go to the South, but such beyond question is not the case here.

I beg Mr. Henshaw to understand me correctly as to the utility of the destruction of grasshoppers. The point I make is that of the thousands of millions of them in a given locality, the few that sparrow hawks destroy neither amounts nor can amount to a perceptible check upon them. To speak of the number of grasshoppers destroyed by a sparrow hawk as "simply incalculable," is to put it in a manner "I do not understand," not being a "scientific teller" accustomed to the precise language of science. If the fishculturists can tell in a minute how many hundred thousand fry are in a pail of water, an ornithologist ought to be able to "calculate" how many grasshoppers a sparrow hawk will hold and how often his contents change in twenty-four hours.

There is no one fact in natural history more apparent to me than that the habits of species vary very widely in different and even in neighboring localities, nor has sufficient importance been attached to this fact by professional scientists. Due attention to this fact would save us outside barbarians the mortification of many an exhibit of ourselves.

Let me say to Mr. Henry Litchfield West that upon his authority I accept the 18th day of March, 1883, as "a warm sunny day in January and February" when brown old grasshoppers were abroad, if "*Acridium albustaceum* in a lively condition," be a "brown old grasshopper," and this I call one grasshopper day between Dec. 1 and Jan. 1, when an "enterprising" sparrow hawk may have had "brown old grasshoppers" for dessert. Next! M. G. ELLZEY, M.D.

WASHINGTON, D. C.

THE DISTRIBUTION OF SPECIES.

BY DR. R. E. C. STEARNS.

[Read before the American Fisheries Society.]

THE geographical distribution of species is one of the most inviting fields which nature offers to the student. Once entered upon, every path is found to lead to new and attractive vistas, and to point the way to curious and interesting phenomena. At every step we receive delightful impressions, and from every side hints and suggestions as to nature's methods.

Through the establishment of the United States Fish Commission and of Fish Commissions in many of the States, as well as by the organization of societies and various private enterprises, the propagation of food fishes has become an important protective resource, and the economic aspect of ichthyology has been made familiar to a great number of persons. Incidentally, too, but to a smaller extent, the scientific side has attracted increased attention from a class of persons who would not have become interested in the biological aspect if the latter had been presented to them first. With the selection of species for propagation and distribution, there naturally followed the investigation as to the habits, habitat, etc., of each selected species; and one inquiry led to another, for in order to insure success from the business standpoint, it is necessary to pursue as closely as possible the various steps, and follow the various methods and order that nature follows. So a knowledge of the character or peculiarities of the environment or native haunts of the selected species has to be obtained.

Preceding the distribution and planting of the young fish, occurs the inquiry and consideration of the factors or physical character of the region in which it is proposed to make a plant and so on. In this way much special and abstract knowledge is accumulated and brought to public attention, and more general notice; the laws of life are better understood, and the relation of species to species, and of all life to its environment, is made more clearly perceptible and more widely known. It will be seen by the foregoing that fish propagating operations and enterprises, both from the scientific and natural history side, as well as from the economic point of view, are incidentally useful as promoters of public education.

I am sure it will not be an uninteresting digression if we turn for a few moments from the consideration of the distribution of species by natural methods, that is to say by the hand of nature, as well as that intentional and artificial distribution by the hand of man, which is such an important and interesting part of modern fish-producing operations, to take a glance or side view through the collateral vista of unintentional, accidental, or more properly incidental distribution, and see what or where it leads to.

The transplantation of animal and vegetable species from their native haunts to some other part of the earth, more or less distant from their indigenous habitat, as an incident of traffic or commercial intercourse and enterprise, has many peculiar and striking illustrations. We have a notable example in the geographical distribution of the common rat. With the extension of commercial intercourse and international trade, the brown rat or as it is often called the Norway rat, as a species, became more and more cosmopolitan. At the beginning of the last century this rat, a native of India, made its appearance in Europe, having stolen a passage on the ships engaged in the India trade.

It first appeared in England in 1730, and twenty years later it had reached France. In Europe it drove out the black rat which appeared in that continent during the middle ages; the black rat coming from no one knew where, having previously driven out the native mouse which was the only representative of the family known to the ancients. At the present time the brown rat is everywhere, pretty much; on the main lands of the globe and the islands of all seas, wherever commerce sends its ships. So too with the cockroaches (*Blattella orientalis*), a very cosmopolitan and very disagreeable form of insect life. These two familiar species are exceedingly active animals, and make their way on board of vessels or hide in packages of merchandise, and are thus carried on board of ships or cars, their inconspicuous size enabling them to steal a passage.

Again we have other illustrations of unintentional distribution by man, where the trees, plants or seeds of one region are sent to another. Upon the trees and plants thus transported there often occur forms like the scale bark lice, *Aspidiotus* and *Lecanium*; also the eggs of various insects. Many seeds contain the grub, maggot or larva of insect forms. If the roots of the trees or plants are protected by a ball of the earth in which they grew, and the earth if protected, by a cover of bagging, from crumbling away and separating from the roots, a precaution which is usually practiced by careful nurserymen, both earth and bagging afford a hiding place for small animals, such as insects (and larvae of insects), worms, slugs and other small forms. If traffic, through the facilities of its machinery, assists in distributing plants that are useful to man, by the same system it contributes to his discomfort and pecuniary loss. It is

within the period of five years, 1874 to 1883 inclusive, embracing counties in four parts of the State, ranging quite one hundred miles in longitude and over fifty in latitude. They were first seen as early as May 17, and latest on the 28th of the month. Only one season, 1882, was omitted during their appearance with us, while since the last seen in 1883 two years have gone by without a record.

The study of those birds which have increased from the encroachments of civilization on field and forest, offers a wide opportunity for observation, and the facts to be derived from a pursuit of this nature are extremely interesting. It may seem strange to many that more species have been added to our State through the advancement of civilization, than there have been removed from our midst by the many ways of lessening their numbers and thereby driving them away. Perhaps twenty species that were once abundant with us have been removed through hunting and other means of extermination. Many have been totally exterminated in our more populous portions, and this loss is irreparable in many ways as regards our game birds. However, I think I may safely say that where twenty have left us, at least twice as many—probably more—new species have appeared, which visit us as a result direct from our advancement in country improvements.

61. *Oporornis formosa* (Wils.) Baird.—Kentucky warbler. This is an extremely rare bird either in Michigan or other States at this latitude, and a record of this nature is necessarily unexpected. In 1875, while actively engaged in collecting, I secured one day a large number of specimens, and, as the weather was extremely warm, I found it impossible to preserve them all. At the time I was busily engaged in my heated task of skinning, after a hard day's tramp, I was called away, and on my return found several specimens past recall, among them one of these birds, which I examined carefully but could not save. The specimen was poorly marked and I had no others of the species with which to compare it, and doubts often assailed me as to its identity. But after the beginning of my acquaintance with Dr. H. A. Atkins, that true lover of nature, lamented by all collectors in the State, I became convinced that my specimen was the Kentucky warbler, for I found that the species had been taken even north of my own field of labors. The Doctor wrote me that he had taken a male July 24, 1877. At the time he shot it, it kept in the tops of the tamarack trees and repeated its curious little notes, *whit-ishee, whit ishee*.

The tops of the tamaracks seem rather against the record, as we might expect this species, like the other member of the genus and as with the yellow-throat and mourning, to confine itself to the underbrush, and this is what shook my confidence in my own analysis; but with an authority like that of Dr. Atkins, I am now satisfied that the embracing of the Kentucky warbler in our list is proper.

BIRDS AND TREES.

SINCE the roads have become passable and comfortable this spring (or what we by courtesy call spring) I have tramped over some old familiar roads (now, alas, becoming unfamiliar from causes I presently will state) and have been surprised and saddened at the contrast they presented with their pleasant condition long since.

A few years ago one of these roads was notably a rural and secluded one, winding through dense growths of pines and maples and ash trees, consequently well shaded and comfortable to man and beast. From hedge and forest came the songs of birds and their pretty forms were seen, flitting hither and yon, enlivening both seen and shadow.

Now in place of the trees are barren wastes of arid brush, charred and unsightly stumps over which fires have swept, and sandy shadeless stretches of dreary road. As a natural consequence the song of birds is hushed wherever this wholesale and ruthless devastation is made, but the few "clumps" of trees that have been spared are sadly destitute of bird life and song. I have, within a month, frequented these roads in early morn and at dewy eve with like result—solemn silence and saddening sights.

Even my dog seems to notice the change as he bolts to slake his thirst at what was once a wayside spring, or trickling stream, now a sandy hollow or dry and cheerless channel. His questioning crest-fallen appearance at finding no water is piteous to behold and accords well with the wide-spreading and desolate scene.

At this season in a wild section of country, one expects to hear the joyous notes of mating and nesting birds, but on a late tramp in the early morning I heard but the plaintive note of a pewee for a distance of nearly four miles. The fact is significant and deplorably so.

The AUDUBON SOCIETY has not been formed a minute too soon, and its influence cannot be too wide-spread and beneficent. It is the bounden duty of every lover of nature to be its zealous ally, and by every means to advance its interests and to aid in the suppression of the cruel slaughter of birds.

What may be done to stay the indiscriminate felling of forest trees? This is a moot question and pertinent. It is evident that something ought to be done.

The institution of "Arbor" days is good and timely, but let us spare as well as plant, let us wisely thin out as well as ruthlessly exterminate all trees.

On many miles of country road the only shade to be had is that cast by the unsightly telegraph or telephone poles, and the doleful or strident sound of their wires is a wretched substitute for the gladsome song of birds.

The independent and fearless course of FOREST AND STREAM in re birds and trees is commendable, and should have the support of all who love

* * * "to muse o'er flood and fell,
To slowly trace the forest's shady scene,
Where things that own not man's dominion dwell,
And mortal foot hath ne'er, or rarely been."

O. W. R.

VORACITY OF THE BLACKSNAKE.—Mifflintown, May 3.—*Editor Forest and Stream:* I not only vouch for the truth of the following statement, but can substantiate it by at least a dozen men who were eye witnesses of the fact. On last Friday, ex-Sheriff Shivery, who has men peeling bark on the ridge about two miles west of Mifflintown, discovered a large blacksnake on the side of a tree about fifteen feet from the ground, head downward, with the end of his tail in a hole in the side of the tree. He called his men to see the, to him, singular sight. They eventually killed the snake, and as he was very thick, one of the party suggested that they see what was in it. On opening him, five young gray squirrels and two young flying squirrels were found in his stomach. The gray squirrels had only been swallowed a short time, and in all probability he had found them in the tree that he was on when discovered. This is no snake story, but a veritable fact.—J. E. H.

Game Bag and Gun.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

A TENNESSEE VALLEY HUNT.

MR. SCHUYLER HARRIS, of Harris Station, North Alabama, was a gentleman of the olden time, and a prince among hunters. A man of fortune and many broad acres, he possessed an ideal Southern home, in the valley of the beautiful Tennessee, the most picturesque of Southern rivers, where the roses bloomed in beauty, the magnolia burdened the air with its perfume, and the pecan waved its fruit-laden boughs in the fragrant air. Though advanced in years, Mr. Harris was as fond of sport as a boy, and seemed never so happy as when he had gathered a few young and ardent hunters around him in his hospitable home, for a few days' hunt in the fall of the year. It was a rare treat to me to make one of the party on occasions of this kind, and I rarely ever failed to accept the oft repeated invitation to come down for a hunt when the autumn frosts had stripped the forests of their leaves and notified the hunters that the time had arrived when wild ducks were feeding in the southern streams, the children of Bob White were as large as their parents, the wild turkeys were fat and ready for the spit, and the dun-birds had rubbed the velvet from their horns and were paying their lordly attention to the meek-eyed does. I never came back from a trip of this kind without a sense of enjoyed recreation, and invigorated in both mind and body.

To the south and west of Mr. Harris's, along the Tennessee River, extended a dense forest, interspersed with almost impenetrable cane brakes. Through the midst of this forest, about half to three-quarters of a mile from the river and parallel to the river's course, for many miles flows a sluggish slough. The gum, the water oak and other fruit-bearing trees spread their giant boughs above the water of this slough, and these, fastened, as they often are, with the black and purple clusters of the wild grape, "casting their bread upon the waters," make here an attractive resort for the mallard and other ducks. The canebrakes afford a safe retreat and protect from extermination that glory of the American forests, the wild turkey, while squirrels in untold numbers sport among the trees and grow fat on the rich nuts which nature supplies with lavish hand for their support. An occasional deer might now and then be found, sleek and fat, lurking among the brakes. Just north of this swampy forest, and following the course of the river east and west, lay a belt of rich, cultivated land, in the midst of which was Mr. Harris's home. The fields around were a famous place for Bob White or quail or partridge, whichever his name may be, for whatever doubt there may be on this subject, there is none, and never can be, as to his character and quality as a game bird. Still further north, and beyond this belt of farming land, lay the post oak barrens, a wooded tract extending for many miles, and too poor for settlement. These barrens were the favorite haunts of the deer. Thus it was at the time of which I write, on which occasion I enjoyed a week of varied and most delightful sport.

The first morning after my arrival, for some reason Mr. H. could not join in the hunt, and Mr. W. N. Richardson and myself determined to try the ducks and squirrels down on the slough. He was armed with a Remington rifle and I with a 7½-pound 12-bore breechloading Scott gun. On the way we were joined by Mr. Lucas, a famous duck hunter of the neighborhood, who was armed with a heavy 10-bore double gun, said to be the best duck gun in the country. I have never been convinced that large caliber and much weight in a gun contributed either to the pleasure or success of a hunt. I have always observed that with a 12 bore gun of good quality and of the proper proportion in the barrels, weighing from 7½ to 8 pounds, I could do as good execution on either small or large game as I ever saw done with a 10-bore of any weight. My little Scott was a model, and I was anxious to test its killing capacity with the big No. 10 duck-killer. Soon after reaching the slough, Mr. Lucas and myself were standing together on the bank looking for ducks. Just then we saw a flock of ducks of a peculiar kind not often seen here, high above the trees, coming directly over us, traveling in steady flight in the form of the letter V. We had just been discussing the relative merits of our respective guns. Mr. L. thought the ducks out of range and made no preparation to shoot. As they came over us I raised my little gun and fired. To his utter astonishment the leader of the flock drooped his head, closed wings and fell from his lofty elevation, striking the water some hundred yards away whence it was nicely retrieved by Mr. L.'s dog. The great height at which the duck was killed brought forth from Mr. L. an emphatic exclamation of surprise and of admiration for the killing qualities of my gun. It was early in the season and ducks were not plentiful, though we made a very respectable bag. When we closed the day's sport, Mr. Richardson had ten squirrels, Mr. Lucas six ducks and two or three squirrels, and I nine ducks and half a dozen squirrels.

Late in the afternoon, while hunting along the bank of the slough looking for ducks, I heard the *put-put* of a wild turkey close by in the cane. Sending in Mr. L.'s dog on a scout, a large flock was flushed and scattered. Soon afterward a hen turkey rose from the switch cane and flew by me. I fired at it as it passed, and at the crack of the gun the turkey dropped both legs, spread its wings, and sank nearly to the ground. But just as I was congratulating myself on killing a nice fat turkey, it made a desperate struggle and recovered sufficiently to fly across the slough and beyond my reach. There was no means of crossing, and I lost my turkey.

The next morning, with our party reinforced by Mr. Harris and Mr. John Tanner, Jr., of Athens, Ala., we returned to the slough for the double purpose of making a drive for deer and of hunting the turkeys that had been flushed and scattered the evening before. Mr. Richardson was to make a wide circuit with the hounds and drive from below, while the rest of us were to be stationed between the river and the slough to intercept any deer that might be started. Just as we were approaching the place where we expected to make our stands, we discovered ahead of us about two hundred yards the flock of turkeys. Before they could run off in the cane, which was close by, Mr. Harris put his horse to a run and soon had the turkeys scattered in every direction. Selecting our positions we remained quiet for a short time and then began to call for the scattered turkeys. Mr. Tanner

was a young man who had quite a brilliant record as a wing-shot on quail, but had no experience with turkeys or deer. Mr. Harris took him in charge for the purpose of giving him a shot at a turkey.

Soon after we began to call we were answered by turkeys in different directions. In a few minutes the loud report of a gun in the direction of Mr. Harris announced that a turkey had responded to his call. Several others were yelping in different directions and I was in momentary expectation of a shot. Just then we heard Mr. R. with the hounds coming up the drive. He had started no deer and I was annoyed to think that he was coming up just in time to spoil our sport with the turkeys. As I was in the act of leaving my place of concealment, thinking my chances for a shot gone, I heard the patter of feet in the dry leaves rapidly approaching. I supposed it was one of the hounds, as they were very near, but just then a black and glossy hen turkey ran out of the switch cane not thirty yards away, coming straight toward me. In a moment it was fluttering in its death struggles on the ground. Before I had time to move a fine young gobble, flushed by the approaching hounds, came flying by and fell to my second barrel.

Mr. Harris and Mr. Tanner then came up with a fine young gobble, called up by Mr. H. and killed by Mr. T. While the others were resting and eating their lunch, I strolled down into the drive, and in walking about in the switch cane, flushed a hen turkey, at which I fired as it flew away. It went on, apparently unhurt, but in a little while I discovered it was rising rapidly in its flight—a sign of a death wound. Describing an upward curve, it rose above the tops of the tall trees, and then making an almost perpendicular flight for a few feet, it suddenly ceased its struggles in the air and fell back dead, striking the earth with a heavy thud. There were no ducks in the slough that day and we turned our attention to the squirrels, of which we made a good bag.

Early the next morning we were off to the barrens for a deer drive. Stationing Mr. Tanner at the best stand, and myself at a stand close by, Mr. Harris and Mr. Richardson went into the drive with the dogs. The drive was a short one, and hardly had we hitched our horses and taken our places before we heard the hounds on the trail of a deer. Mr. T. and myself were stationed on a road that ran through the woods, and Mr. T. was cautioned to stand at a certain tree on the side of the road which was pointed out to him, while I was placed a little further on, just beyond a little knoll that hid him from my sight. After a few minutes of trailing, one hound suddenly burst forth in a united chorus of voices, and on they came. Every dog gives tongue, and the very woods resound with the music of their mingling voices. Ah, what a moment this is to the expectant hunter. He knows the deer is up, and may dash by him at any moment with the speed of the wind. With eyes and ears intent, and ready gun, he awaits the oncoming of the noble game. There, they turn to the left toward the railroad. If they cross that our chances are gone, for they will go to the river. Suddenly they change their course again. Here they come now, like Pandemonium turned loose, straight for my stand. I can almost hear the deer crashing through the brush, and every nerve is tense with expectation. Just before they come in sight they turn toward the other stand, and I listen to hear Mr. Tanner's gun sound the death knell of the buck.

They have crossed the road and no sound of gun. With astonishment I walk over to his stand and ask him why he did not shoot. Imagine my surprise when he told me he had seen no deer; that the deer had walked out of the drive before we got to the stand, and showed me the track of a small deer that had evidently walked across the road the night before. I told him I had hunted deer a good deal and never heard hounds run a trail that way before. Thinking the deer might return, I went back to my stand just as Mr. Harris rode out of the drive. He was greatly disappointed that we had not killed the deer. I told him what Mr. T. had said about the deer walking out before we got there and showing me the walking track. He was too old a hunter to be put off that way, and told me to go back and I would find another track, that those dogs were not running any walking deer. I returned and asked Mr. T. to show me where the dogs crossed the road. He pointed to their tracks, and there in the road, not twenty feet from the tree where we told him to stand, were the tracks where the great, spreading hoofs of an enormous old buck had buried themselves deep in the ground in his headlong flight before the hotly following pack. The mystery was explained. Mr. T. had never before seen the branching antlers of an old wild buck coming straight toward him in the woods, and, as he afterward admitted, he "went a piece up the road" about that time. We had no little fun at his expense that night, and promised him that the next time we would run out a smaller deer or give him the protection of a larger tree.

The next morning Mr. Tanner and I exchanged stands and both were fortunate. He killed a small yearling deer and I a very large and fat doe.

The third day of the deer driving a joint hunt was arranged between our party and a number of gentlemen from Athens, Ala., headed by the noble old veteran of the chase, the Hon. Luke Pryor, whose ardor age has not diminished, and who knows no enjoyment like that of the chase, and no music like that of the well kept pack as they follow the track of the swift-footed deer. We were to meet on half-way ground. There were two roads crossing each other at right angles, one running north and south and the other east and west. The standers were to occupy these roads at places where the deer were known to cross. The party from Athens to take the north and south road and ours the east and west road. The Athens party had the advantage of stand, as the deer usually crossed the north and south road first and afterward the other. Mr. Pryor was to drive south from Athens with his pack, and Mr. Richardson north with his, so as to meet on the half-way ground. Mr. Pryor is an early riser and got the start of us. When our party reached the place where we were expected to stand we found him already there. His hounds had started several deer and ran them through the first stands where his party got several shots but failed to kill. They then crossed to our stands and we were not there. He was provoked and disappointed, as he had a right to be. However, he succeeded in calling off several of his dogs, and directing us to take our stands, said he would go back and join Richardson and drive through again. We promised to remain at our posts until he came through.

It was not a flattering prospect. It was a cold, bleak day, and the sun was struggling to shine through the hazy atmosphere. Wrapping my overcoat about me, I sat down in the leaves on the sunny side of a tree and tried to keep warm. I had been there perhaps an hour, scanning the woods from time to time lest some straggling deer might approach unseen.

when in the distance I saw the noble form of a splendid buck emerge from the thick undergrowth. He was coming directly toward me, but was 200 yards away. He knew he was approaching a place of danger, and as soon as he entered the open ground he stopped, and with head erect looked long and anxiously in the direction where I sat. I was in plain view and knew that my only chance for a shot was to remain motionless. He was a splendid fellow, and as he stood with his branching antlers lifted high, with eyes intent and nostrils snuffing the air for token of danger, he was a picture for an artist. I almost held my breath, knowing full well that his eager eyes would catch the least motion and that he would be off like the wind. Apparently satisfied, he moves forward, and with quick and graceful bounds comes onward to his death. Changing his course as he approached so as to pass about thirty or forty yards from where I was sitting, I waited until he was in point blank range, when I raised my gun quickly and fired. With a terrific burst of speed he rushed by me and across the road. I was cramped by my position and encumbered by my overcoat, but managed to fire the second barrel as he crossed the road. He disappeared like a flash in the thick woods beyond the road. Just then I heard, for the first time, the notes of a single hound approaching on the track. Looking in that direction I saw a piece of reckless riding that would have done credit to the dare-devil accomplishments of a wild Comanche. Mr. Pease, one of the hunters from Athens, had just at the wrong time for him and the right time for me left his stand on the other road for a few minutes, and in his absence the old buck passed. There was a horse tied near by that had been driven to the ground hitched to a buggy. Loosing the horse, he sprang on his bare back, and gun in hand and hatless, he came dashing through the woods like a madman. He was keeping up with the hound that was following the deer. I told him I thought I had wounded the deer and not to lose sight of the hound. On he dashed across the road and into the tangled brush. In a moment more I heard him yell like an Indian. He had found the deer dead about one hundred yards from the road. He was a five-point buck, and I brought his antlers home with me as trophies of the hunt.

NASHVILLE, TENN.

DIFFERENT WAYS OF CAMPING.

DENVER, Col., April 28, 1886.

Editor Forest and Stream:

I have several times thought of coming to the support of "Nessmuk" in his discussion of the camping outfit question. But I do not know that he needs any help. He has so far decidedly the best of it. It is all very nice to go "roughing it" in a palace car or a fifty ton yacht, but "Nessmuk" and I can't go that way, and thousands of others are in the same unfortunate fix. And yet I fancy we can get more real solid enjoyment out of our way of doing it than is realized by our fine haired friends in their buffet coaches and mahogany cabins. They might not enjoy our way so intensely as we do, and therefore we cheerfully concede them the right to carry along a four-post French bedstead and a full service of silverware if they want to. There is a good deal in the spirit and more in the experience to enable the camper to enjoy life.

My camping has been more or less for thirty-five years, and reached from Florida to Puget Sound. Some years it has not covered much time, in others it has been most of the year. In it all I have never driven crotched stakes in the ground and built a bedstead thereon, and I have always been firmly of opinion that the fellow who did it was a consummate fool. Nor will I sleep in a wagon if there is ground under it upon which to spread my blankets. When out doors always sleep on the earth for comfort. Make your bed there as comfortable as time and circumstances will permit. If the ground is cold, or wet, or covered with snow, you must provide some kind of a foundation. It may be of hay, straw, weeds, brush, corn stalks or fence rails, but in any event stick to the ground. Don't roost on a perch like a chicken and get every breath of air that blows and chills you from every side. Balsam fir boughs make the best bed of all beds; the tips broken off short and laid shingle fashion, bottom side up from head to foot. All the fir, hemlock, juniper, cedar and pine, may be substituted in the order named as to choice. Cherry, willow, alder or any such shrubs follow next. If the ground is smooth and dry, and it can generally be so found in this western country, it is plenty good enough. Under any circumstances, when camping try to so provide yourself as to sleep warm, and the nearer you get to the ground the easier that is accomplished. With a comfortable night's sleep you can endure almost anything the next day. Once, a long time ago, after pitching my tent, I was examining the ground for my bed when I found a very small rattlesnake—a young one. That was the only snake adventure I ever had in or about my sleeping place, and I never knew anybody else to have a similar experience.

About shelter; a square of canvas sufficient for a "dog tent" is good enough for anybody, though not as handy as a wall tent or a Sibley. I have lived all summer with nothing better, and other summers with nothing at all. He is a poor woodsman who in a forest of any kind cannot very quickly provide himself with shelter from rain or snow. It may be of palmetto leaves, of branches of trees, or of bark from the trunk of a tree. The favoring trunk of a tree may keep off the storm, or in a rocky country a shelter can often be found under a projecting ledge or in a shallow cave. A good thing always to carry along is a rubber poncho for each person. It is good to roll around the bedding when en route to protect it from wet and dirt; or to put over one's shoulders when traveling in rain or wet snow. When night comes, if the ground is wet and the heavens dry, spread it under your bed. If the reverse, reverse it. With two small stakes at opposite sides of a bed for two, to support two corners of a poncho, the other two corners being stretched backward and held to the ground by a couple of stones or chunks of wood, a very good shelter is provided for your heads and shoulders. Then another poncho spread over the blankets to your feet, and you two can sleep blissfully through any ordinary rainy night. Use only woolen blankets for camp bedding. Let Arctic explorers have the fur bags and feather ticks. In camp outfit, be governed by your ability to carry it. I have made a successful and entirely satisfactory expedition with a tin cup and pocket knife. Meat can be broiled on a stick. Flour can be transformed into dough in the mouth of the sack and baked on a flat stone, a chip or a piece of bark before the fire, but a cup is positively needed for the coffee. Under such circumstances the addition of a frying pan enables you to revel in positive luxury. In it you fry your meat, bake your bread and can make your coffee. The tin cup is

then superfluous. After the necessities add anything you want and can carry. In provisions, bread, meat and coffee are important though not indispensable. It is more comfortable to have them, and unless you are a first-rate rustler it is quite essential that you have plenty of something. After a few weeks the more you have of it the better you will be satisfied, and yet it is quite possible to live off the natural resources of the country for a considerable length of time. Indians do it.

Again, I have gone camping with wagon trains loaded with luxuries—wall tents, spring mattresses, arm chairs, cupboards, four story South African broilers, and china table service, and we had dinners of eleven courses after dark every day—after starving to death all day—and had a high old time generally. This way did seem more comfortable, and stylish, and all that at the time, but the other was decidedly the more satisfactory—after it was over. You have something then to look back to—a kind of triumph over difficulties and hardships overcome, so to speak. Hence "Nessmuk's" great satisfaction, and also that of W. N. B.

IN THE OLDEN TIME.

Editor Forest and Stream:

Your communication from "Nimrod," of Batavia, Ill., about "Spring Shooting," stirs me to add a word in support of his proposition. Spring shooting is an outrage in every sense, and the worst folly for all who care for the future. To day I was vexed at the appearance on the bill of fare at my favorite restaurant of plover and curlew, and I would not think of ordering either of them were they the most toothsome morsels between Boston and Fox River.

I wish metaphorically to shake hands with "Nimrod," and to condole with him over the disappearance from his waters of the great flights of fowl, which in the days of my boyhood made the river between Batavia Bridge and Snyder's Dam as fine a reach of water for a day's sport as one could wish for. I wonder if "Nimrod" knew the river then. It was before the timber was cut from the banks and the islands below the mouth of Mill Creek, and before the railroads and excavations of the quarrymen had made their havoc.

I would not dare to tell from memory the bags of game made in those days by Mr. Morris, and Tom Meredith, and the Belden boys, and other famous shots; nor even what backloads of greenheads and teal fell to the awkward aim of one schoolboy, whenever he could secure a "Saturday down river."

It was in the days when ducks were sometimes shot flying low over Batavia Bridge, when prairie chickens not infrequently alighted on the roofs of the village houses, and when great whirling flocks of them could be seen in autumn from the doorstep of the school house, and when down river among the islands, it was a frequent thing to start up such myriads of ducks that they seemed to darken the air, and the number of species represented would hardly now be credited. It was when deer were still shot in the "Big Woods" and wolves still occasionally prowled on the prairie, and when in spring great flights of pigeons, in long extended lines, reaching out of sight both ways over the prairie, would go roaring over, startling us with the hurtle of their wings, at short intervals for two or three days at a time.

This great abundance of wild life is gone, and it cannot be helped. But something may yet be done to preserve the remnant of it that is left.

To discourage spring shooting and to cause it to be esteemed the improvident and unsportsmanlike thing it is, will be the first step toward this preservation.

AN OLD BATAVIAN.

BOSTON, MASS., May 1.

MY FIRST TRIP TO MAINE WOODS.

AUGUST 20, 1853, with a relative, whom I will designate as L., I arrived at the Franklin, now American House, Bangor, en route to Moosehead Lake. Here we met Johnny M., who was to be our guide. We tarried over one night and started next morning by wagon, in company with two more wagonloads of red-shirted lumbermen, who were on the way to the upper waters of the west branch of the Penobscot thus early to "open up" for the ensuing winter's operations. A jolly, roystering crowd they were, shouting, singing, and dancing juba on the wagon floor continuously.

We dined at Oxford, if I recollect aright. Soon after leaving the town, and where the road lies at the base of a wooded hill, we met several men with guns, who informed us that a bear hunt was taking place and they were surrounding the hill. Soon after the report of several guns announced the death of bruin. This, to our youthful mind, was very exhilarating. At night we stayed at Monson. But little of the hotel or its surroundings is remembered. One thing I cherish in this connection is that I inscribed my name immediately next that of Bayard Taylor, one whom I had learned to love for his charming essays and foreign letters. I inquired for him, and learned with regret he had just departed.

We stayed the following night at the Lake House, Greenville, and next morning went on board the little steamer Moosehead for passage up the lake. We made a brief stop at the Hines House and warmed ourselves at its large, open fireplace, on whose broad mantle shelf were many specimens of backwoods bric-a-brac that pleased our youthful fancy.

About the middle of the afternoon we landed at the foot of the long narrow pier at the Northeast carry. Our duffle was transferred to a truck or car that ran on a wooden tramway and was hauled over to the landing on the river by a single ox. Our party kept to the rear. On reaching the stunted growth of timber, but a short distance from the pier, we came upon a large flock of grouse feeding upon the low-growing raspberries, who paid not the least attention or seemed in the least afraid. This was a revelation. We had often heard of, but never seen the like. L. and I immediately opened our gripsacks, spread out our ammunition upon the tramway and kept up a murderous fusillade for a few minutes. But the sport soon failed. Gathering up the twenty odd birds we proceeded to camp. As we reached the little clearing on the river we beheld another sight that sent me wild. The lumbermen were ranged along on the bank at the landing and were lifting out the trout continuously. Setting down rifle and grip at the door of the log camp, I hurried down and was soon having a hand in the game. Supper being announced we went to camp and did ample service with knife and fork.

At that time one camp was used for sleeping berths, one on each side extending the whole length, with a tall "ram-down" stove in the center of the camp and a deacon seat on each side. Soon after supper the stove cover was used as a frying pan and the catch of trout was cooked and eaten before bed time. The lumbermen were up and away before daylight. Our party enjoyed the novelty of a browse bed,

and only turned out as the sun's rays came through the chinks. We went outside to sit a while in the sunshine, for it was quite cool and a heavy frost covered the ground. We were about to go in, when a monster moose—the first wild one L. or I had ever seen—came out of the woods which grew close to the further side of the tramway, and entering a gully came out into the clearing. The road was supported on trestle-work at that place some eight or ten feet high, yet the moose, a bull, had to lower his crest to pass under. At first we were too surprised to act, but as he came into full view we went for our rifles, but when again outside he was out of sight, beyond the narrow clearing.

In the course of the day we started in a canoe, a birch, for Lobster Pond, where we were to camp two weeks. About two miles down stream we came to the outlet of the pond which was a couple of miles further. The thoroughfare was dead water. We had seen all along tracks innumerable of moose, as well as of bear and wolf. On rounding a bend we came upon a cow and calf moose. The former at once leaped up the abrupt bank and in a second was out of sight in the thick growth of white birch. The calf fell back in its efforts to follow, then started up stream. L., sitting with rifle in hand in the midship, had a good chance for a shot but failed to improve it. I held the bow paddle, but exchanged it for my rifle just before the calf went out of sight around another bend in a thicket of alders. Johnny swung the birch just in time so both could shoot. The game went out of sight but was found dead on the next stretch with one bullet wound. Cutting out the meat and shouting engaged our attention awhile. As we came into the pond a shout, sounding like "halloo, you!" greeted us. I suggested going ashore, as in all probability some one was in distress. At this the guide, a backwoodsman, gave a quiet chuckle and kept on the course. I was about chiding him for his inhumanity, when he explained that it was a bear, whose halloo was incited by the scent of the meat. On the opposite side, about a third of the way up, was a cove with sandy beach and a huge pile of dry drift wood. Here we pitched camp long enough to jerk the meat. On the thoroughfare were large meadows of wild grass and their margin was cut in frequent places by moose paths. Every day and night we saw or heard moose, but though near enough often, never tried to shoot another. We had been told at the camp how a man the year previous had killed over seventy moose for their hides, leaving the meat to rot. This had a due effect upon us. We would not kill to waste.

That was a very dry season, and the streams had shrunk so as to leave a wide margin everywhere, and all the shores were completely tracked up by moose, bear and wolf, and many other animals. Every night the wolves were howling about us. One night while camped at the head of the pond the pack had congregated nearly at the end of a big moose path, and we gave them a shot from the two rifles and an old musket carried by Johnny, which was loaded with buckshot. In the morning we found blood and hair to show we had warmed them. Our staples now gave out about the time we set out to return, but in the two weeks we had lived a hundred years, and it was the commencement of the life in the woods for the writer. His companions, alas, have long since gone to the happy hunting ground. Good men and hunters, and generous, steadfast friends. Peace to their manes. The return trip was devoid of startling events, only, as we came in view of Bangor at set of sun, a fine deer crossed the road out of a little clump of brush, cleared the fence by several feet and was out of sight ere the rifles could be gotten out of their covers. In those days deer were "thick as hoppers" in the immediate vicinity of Bangor, but none were found in the vicinity of Moosehead Lake, so I was informed, nor were there many caribou.

I forgot to state that on the boat, returning down the lake, was a hunter-farmer from Suncook, having quite a large bundle of moose hides, a calf moose which he shot that morning in the river just below the "carry" and a magnificent set of antlers which he sold at Greenville for the then munificent price of five dollars.

About ten years ago, while camping on the Moluncus, I met Sam Smith, of Veazie, a veteran hunter and lumberman. We swapped yarns, as hunters will, and I related, among other things, my trip as here given, dwelling, at length, on the great number of moose I found. I was some in doubt how he would receive it, but was relieved when he replied, saying, "O, lordy! that's true enough. Why," said he, "I was booming logs that very fall at the head of 'Suncook,' and one day in September, when moose were 'traveling up,' I counted fifty-two, and wasn't looking for moose neither." Sam, too, dear fellow, has gone to his rest to the deep regret of many, and none who knew him will doubt the truth of his statement. And what of that noble game? Alas! too, going, going, and soon will be gone.

CORPORAL LOT WARFIELD.

CAMP REYNOLDS, N. B., May 1, 1886.

NORTH CAROLINA DOINGS.

Editor Forest and Stream:

As I carefully oil and clean my guns and lay them away, recollections of the past season's shooting and outings crowd upon me, and I feel like reviewing them and writing them up, thus affording myself some pleasure in the retrospect, and it may be a moment's relaxation to some of your readers.

The past season's shooting has not been much for me to brag of in the way of big bags or fine shots, though I have managed to get lots of solid enjoyment and unalloyed happiness out of it. My outings up to February, 1886, were more numerous than usual, but game seems to have been educated up to the point of being self-protecting; and this knowledge, of which it avails itself by remaining in thick cover during the best of the open season, when more guns are in the field than at any other time (that is during December and January), together with our game laws, which are beginning to be respected, promise us plenty of quail (or partridge) shooting for years to come. The birds were seemingly abundant during the months of October and November, and some fine bags were made; but in December and January they retired from the fields and betook themselves to the depths of the thickest and most impenetrable woods, and during those two months one might do a great deal of hunting and have very little shooting. Most of our local shots therefore retired from the field, and very few birds were killed. In the months of February and March I only made a few excursions after birds and found them in abundance, but owing to poor health on my part and the extremely robust condition of the birds, my game bag was but poorly filled; so, early in February I concluded to give it up, and only took my dogs out a few times afterward to keep them under control. Thus many healthy, fine birds have been saved over to multiply for next season's shooting.

During the early fall of 1885, together with some congenial

companions. I made a visit across the Albemarle Sound to East Lake for the purpose of deer hunting, with Bill Bass-night, the great bear hunter. We bagged only two deer, but had lots of fun fishing, camping out, etc. It was then too early for bear shooting, so we didn't see Bill in his favorite rôle. One of our party gave him two fine hounds and I gave him a pup, and in a letter from him some time in December he says he has killed twelve deer and fourteen bears with them already, and begs us to come again. Which pleasure we will probably avail ourselves of the coming summer. During the months of October and November we had some good bear hunting near this place, and killed ten very fine specimens of our common hog bear.

But the outing over which I lost most sleep, thinking and planning, was a trip to Currituck Sound for the double purpose of shooting geese, ducks and swan, and going over to the banks near Kitty Hawk on a deer hunt. Two congenial spirits from Washington, D. C., met me at the hospitable residence of Mr. A. J. Forbes on the evening of Dec. 8, and before retiring that night our plans were laid for the morrow's sport. I had taken my favorites, Monroe and Crowder, along, and it was agreed that, as the wind was quite high and ducks scarce and wild, we would get a boat and join forces with Captain Barrett, of Powell's Point, and go across to Mrs. Gallop's on a two-days' deer hunt, not forgetting to take along old Uncle Jim, an old colored man, who knew every foot of the ground over which we were to hunt, and where lay, to quote Wimsatt, the "big buck of Currituck."

The next morning opened dark and lowering, with a threatening looking cloud rising and flying from the southwest, and occasional mutterings of thunder. However, our plans had been laid and we set out, made a run of about six miles to a landing, where we met Capt. Barrett and son, with Uncle Jim and two hounds. We had now quite a party—Capt. Gregg and Mr. Wimsatt, of Washington, Capt. Barrett and Sam, Uncle Jim, myself, and four hounds all packed away in a Currituck canoe. After a short parley over the weather prospect, the wind blowing strong from the southeast, having veered, we boarded our frail craft and with Capt. Barrett at the helm sailed for the banks, the weather growing worse all the while. Pretty soon a dense fog set in and the wind blew great guns. After a run of about an hour the Captain sighted the mouth of the creek in which we were to anchor, and attempted to make it, but to our utter discomfiture we found that our centerboard had in some manner been carried away, and we could do nothing at all with the craft. The weather grew worse all the while, a terrible thunder storm coming on us, and the rain pouring down by bucketsful. After vainly trying to make the creek and nearly capsizing, sails were lowered, the anchor cast, and we resigned ourselves to our fate and the storms. Phew! how it did rain, and how the wind did blow! We were wet through. Oilcloths, sails, etc., seemed to be no protection, and finally Wimsatt and Capt. Gregg said they could stand it no longer, and would make a break for the shore; so taking the Captain's small boat, which he brought with him from Washington, they struck out, and after hard pulling and terrible effort they struck shoal water, and leaping out waded ashore, pulling the boat after them. They immediately struck for Mrs. Gallop's house, about a half mile away, where they soon changed clothing, Mrs. G. providing for them from her son's wardrobe, and dried and warmed themselves before a roaring fire.

In the meantime what of us who were left? For four long cold hours we sat and shivered, the dogs whining around us, with no protection from the raging storm. In vain we tried to be merry; the wind took away our breath as we tried to laugh. I tried the lunch basket, but the rain soaked the grub and it didn't taste good. Monroe crawled up in my lap as I sat crouched down against the mast, and Crowder tried to get in also, but falling sat down beside me, and we contributed to each other's warmth. After hours of weary waiting the storm abated somewhat, and two small boats came off for us, and we finally left the boat anchored and made for the shore, soon reaching the house where the Captain and Mr. W. had warmed up, and recovered their wonted spirits and flow of good humor. My! but didn't that fire feel good, and didn't the hot coffee cheer us up? Ask those who have been through like experience. The dogs were tied up and fed, and we ensconced ourselves around the open fire place and made ourselves comfortable until a late hour, then retired and sank to sleep, such sleep as is known only to tired hunters and weary seamen, the soft downy feather beds adding everything needed to induce the deepest forgetfulness. On arising the next morning the clouds still hung heavy and looked threatening; but after a hearty breakfast we untied the dogs, and taking boats went up the creek some distance, ran the boat ashore and proceeded to our stands, which were to be pointed out to us by Capt. Barrett, Uncle Jim having gone ashore some distance below with dogs. Soon we were on our way, and the Captain had placed us where he thought we "would do most good."

We have hardly got settled down before we hear Monroe's bugle note, followed by the deeper notes of Crowder and the others and they are coming toward us, but the wind is blowing directly to them and before the deer gets to us he gets the wind and strikes across, running near enough for Captain Gregg to see, but not to shoot him. Passing between the Captain and me he strikes south for a half mile or more and then turns back and runs past Wimsatt, just out of range, but in sight, and makes a straight run for Uncle Jim who is following on toward us. Pretty soon we hear a roar, but the dogs keep on and we know that Uncle Jim's old cannon has failed to do its work. The dogs have now gone out of hearing and as the old darky comes up he is greeted with the question, "What did you fire at?" "De biggest buck in dis woods, sah, but I didn't tech him; doan know what the matter was, but he wa'n't over twenty yards away; guess I se too shore on him!" Thus our big buck had escaped—Wimsatt had never shot a deer and was all aglow, as this was his first sight of a live wild deer in his native forest. To make a long story short, we started and ran no less than six deer that day and got neither hide nor hair of one, as we did not follow them to the water where they all took refuge. The rain coming down harder and harder we finally left disgusted and took boat for the house.

The next day was but a repetition of the first. Never saw so many deer in one piece of woods, but got none at all. On this last day we concluded to quit about noon, and had started out blowing our horns for the return of the dogs that had gone off after deer, when chancing to look over his shoulder Wimsatt saw a fine deer standing on top of a high knoll about fifty yards away, and turning quickly he fired. But the deer was too quick for him, and he didn't see her again. He called to me, then on the edge of a swamp, to "look out," but I could see nothing of her until she sprang

in the bushes, when I sent a .38 bullet after her, but guess it was a clean miss as I saw no blood signs. We were now thoroughly disgusted and concluded to return to Forbes' and have some duck shooting; so returning to the house we found dinner awaiting us, and while the others prepared to pack up, eat dinner and get the boat ready, I struck for the sound, a quarter of a mile away, to try my hand on a swan with my .38 rifle. I soon reached the fringe of bushes growing near the water, and peering through saw several fine swans floating lazily on the water and cackling to each other. Raising my rifle hastily I overshot my mark, and the swans immediately took wing, but having a repeater I kept firing until I cut out two fine ones, the last one being fully a half mile out when shot—accidental shot, perhaps. A couple of boys rowed out and got my swan, and I returned to the house feeling that I wasn't "skunked" after all. After dinner we set sail, bade our hostess adieu, and returned to Mr. Forbes that night. Mr. Wimsatt was completely disgusted by this time, so took steamer for home that night. Capt. Gregg and I remained, thinking to try our hand on geese the following day, as Mr. Forbes had some excellent trained decoys; but "man proposes," etc. The following day was so inclement that the professional shooters could not go out, and thus our shooting was not to be thought of. The next day was Sunday, and we sat indoors and listened to the patter, patter of the rain until 12 o'clock at night, when we took the steamer for home, Capt. Gregg leaving me at Elizabeth City, where he took the northern bound train. We have planned for another excursion next fall and hope to do better. "Wells" had my fullest sympathy in his article on "A Wild Goose Chase." I "had been thar." A. F. R.

BELVIDERE, N. C., April 20.

HOW TO LOAD.—New York, May 6.—In reply to "C. C. G.'s" inquiry in your issue of to-day, I would say decidedly that in most guns he will get better pattern, penetration, and less recoil from two pink-edge wads on powder than from one three-eighths felt wad. This applies to black powders. The reverse is the case with wood powder, provided there is a hard card wad first put in on the powder. This should be done in any case to prevent grease coming in contact with the powder.—BEDFORD.

LONG ISLAND QUAIL.—Quail have wintered well in the neighborhood of Southampton, Suffolk county, L. I., and those in charge of preserves were only obliged to feed twice during the winter.

Sea and River Fishing.

HOW TO CAST A FLY.

Dear Uncle:

Are you coming up here this summer to fish, because if you are not I wish you would tell me how to throw them flies with which you caught the big trout on the Little Diamond. You promised to show me when you came again, but mamma says you are going to Paris this summer and will not come here. So if you will only write me all about it I will try and learn myself. Your affectionate nephew,

WALTER.

COLEBROOK, N. H., March 1, 1885.

My Dear Walter:

I am delighted to note that the angling spirit still holds a place in your heart, for there is no recreation that will afford you more innocent pleasure. It will fill your cheeks with nature's signboard of health, make a good man of you and bring you nearer to your Creator. Obey your mamma, Walter, and go a-fishing and your maubhood will be healthy, happy and honorable. With the instinct of an angler in your bosom you have only to turn about to gratify your desire. A few miles eastward from your home nestle the beautiful Rangeley Lakes, from whose waters the largest brook trout known have been taken. Rising in the Notch and tumbling over a hundred cascades until it broadens into a charming little river that passes at your very door, you have the Mohawk of the north. It is a glorious stream from which vast numbers of trout have been lured. This river shall be your school room in which to learn fly-casting, and the box I send you to-day contains your implements of warfare. On opening it you will find a bamboo rod ten feet long, weighing nearly seven ounces, a No. 1 click and drag reel, a line of silk, made waterproof by enamelling, leaders and a variety of flies. Each is the best of its kind, and with ordinary care will serve you many years. Take good care of them, my lad, for they are worthy of your every attention and affection.

When the weather is pleasant and there is no wind, walk up the Notch road to Wellman's farm, where the bridge crosses the Mohawk. A short distance above the bridge, in the center of the river, there is a broad rock with a flat surface. Wade out to it and rig your tackle. Of course your leader has been soaked in water over night and straightens at once. Loop a fly on the end, which we will call the "tail" fly, and fasten another fly to the leader two feet from the "tail" fly. This we will call the "dropper." Reel out fifteen feet of line and let the swift current float it down stream. When its full length has gone down, raise the tip of your rod slowly until the "dropper" just clears the water. There, the whole secret of fly-casting lies in casting your flies so they alight on the water in this position, and but little more line will ever be required to do effective work. You have doubtless read of casting flies eighty or ninety feet, but these long casts are merely for display, and are never used in fishing. If a fish rose at a fly at this distance he would rarely be hooked, and if he were hooked it would be purely an accident, while if the fish was saved it would be a still more remarkable accident.

While the flies are down stream give your rod a lively inclination backward until the tip is above and a trifle back of your head. This will throw the line straight back, and when it lies out straight in the air behind you, send your rod forward and the flies will shoot straight ahead. Let them fall on the water, raising your tip to guide them and draw them toward you. Do not let your line touch the water when the flies fall in the forward cast, if you can avoid it, and never, under any circumstances, in the backward cast. Keep your flies in the air behind you and on the water in front of you, and when you are drawing them toward you do not let the tip of your rod come nearer than an angle of 45 degrees before retrieving and making another cast. If the tip of the rod is over your head and your flies are on the water, you would, in case a fish rose, either miss your fish or, if hooked,

you might break the rod. Besides, you cannot retrieve your line to make the next cast while the tip of the rod is above your head. I could write a large volume on this subject, for there are many pretty points in fly-casting; but I will simply advise you to practice daily for a month, watching and correcting your errors, and then ask Lawyer S. to go out with you and see how you can cast a fly. He will readily do so, for he is an expert and rejoices at the very sight of a rod, and he will advise and coach you far better in ten minutes' actual work than I could in a dozen long letters.

When you have learned to cast flies with some little skill, go over to the Diamonds, get one of Heath's boats, anchor in a good place, and try to catch a trout. You will find that casting flies and catching trout are not precisely one and the same thing. I feel rather sure that some splendid fly-casters whom I have seen would make very tender fishermen. You will read in books that the instant you see a rise, "strike." Don't do it, at least not yet. For the present, when you get a rise, wait until you feel your fish, then a light "strike" will fasten him or her, as the case may be, securely. You are but a beginner and your enthusiasm will very likely cause you to forget the delicate nature of your apparatus. If you "strike" hard you are likely to break your rod, or if the fish is small you are liable to send him sailing through the air over into the next county. Therefore "strike" just hard enough to fasten your fish and play him in the water until he turns over exhausted. If he pulls too hard, of course, you will give him line, but make him earn every inch. When he seems very weary you can reel him in, but look out for his last break, for every fish, no matter how tired he may seem, will make a final vicious rush for liberty when it is brought near the landing net, and his capers in this last frantic struggle are dangerous and often end in his escape.

You have doubtless read of the beautiful and perfect arch formed by your rod while playing a trout in the water. If you desire to make these arches a study fasten your tail fly to a gate post and pull; but if you are fishing don't let the beautiful arch worry you. As long as a fish is hooked and pulls, you will necessarily hold your rod up and play the fish on the rod, and the bend in the rod will remain as long as the fish remains. When the fish escapes, your rod, especially the one I have sent you, will straighten at once. In such a predicament, that is to say, after you have hooked and had lots of fun with a good fish, if he should escape all you need do is to exclaim, "There now!" and continue casting and wait for the next victim. Do not get angry, at least do not display anger. You will be tempted to exclaim "Hang it all!" and "Blame it!" and "Jiminy Pelts!" but don't do it. Swallow your bubbling sentiments cheerfully, if possible, but somehow under any circumstances. Pretty soon you will become familiar with the loss of a fish, it will become easier, and you will be master of the angler's greatest virtue, patience. This, with practice, will soon make an accomplished fly-caster, and then, when you start on a day's outing on a stream, discard your worms, minnows, grubs, grasshoppers, bugs and all the other nasty things, and take only a few pretty and artistic flies. You will at once see the great difference between fishing with the fly and murdering fish with bait. One is clean and artistic, the other repulsive and dirty. At certain seasons the bait fisherman may be more successful, but at others the fly will prove by far the best, if not the only lure, while on the whole, I consider it immeasurably the most honorable method of catching trout. Your affectionate uncle,

KIT CLARKE.

New York, March 10.

ROCKY MOUNTAIN TROUT STREAMS.

DENVER, Col., April 28, 1886.

Editor Forest and Stream:

"Hollow Rib," of Hastings, Ia., asks for information about trout fishing along the Denver & Rio Grande Railway in this State. He can hardly go amiss of good fishing along almost any of its lines. Taking the main line hence to Salt Lake he will reach the trout country at Salida, and find them plentiful in the South Arkansas and all the smaller tributaries of the Arkansas. Continuing west over the main range at Marshall Pass he will reach the headwaters of the Gunnison, and follow down that stream, with good trout streams coming in from right and left every few miles all the way to Grand Junction at the crossing of Grand River. After passing the great valley of the Grand and Green he will find trout in all or most of the mountain streams of Utah to Salt Lake City. Returning to Salida he can turn north up the Arkansas to Leadville, and fish Lake Creek, Twin Lakes, Clear Creek and numerous others. Beyond Leadville he can take the Eagle River branch and go by rail far down that stream, which is one of the best for trout in the country. Coming back to Leadville he can take the Blue River line to Dillon, at the junction of Ten-Mile Creek, Blue River, Swan River and Snake River, in all of which, and in scores of their tributaries within easy reach, he will find as good trouting as he need ever hope to enjoy. Coming further back to Pueblo he may there take the San Juan branch of the road over the Saugre-de-Christo range of mountains to San Luis Park. There he can fish the Rio Grande River along the railway track from Alamosa to Wagon Wheel Gap, to say nothing of South Fork and many smaller tributaries. Having exhausted that field he can come back to Alamosa and take the Durango line, reaching thereby the network of tributaries of the San Juan River, said to abound in trout, but of which I cannot speak from personal experience. In short, "Hollow Rib" can take the Rio Grande Railway and it branches and put in an "open season" trouting, and every day a new stream. It is not necessary to wade to fish any of these streams. Some fishermen wade from choice, and it is occasionally very handy to do so, but I never yet have been obliged to wade a single Colorado stream in trouting.

W. N. B.

Editor Forest and Stream:

Noticing "Hollow Rib's" inquiry in your issue of the 22d, as to trout fishing localities along the line of the D. & R. G. Railway, I venture to give the results of my knowledge on the subject.

In the immediate vicinity of Salida are the following, all good trout streams. The South Arkansas, part of which, in the shape of ditches, runs through town, and its branches, Poncha and Silver creeks and North Fork. Above town, thirteen miles distant, is Chalk Creek, and further, at Buena Vista, Cottonwood Creek; Pine and Clear creeks, near Granite and Twin lakes, near Leadville. Crossing Marshall Pass, a trip that should be taken owing to its scenic attractions, with Sargent's as a base of operations, are Marshall and Tomichi creeks. At Parlin, twenty miles below, Quartz, Cochetopa and Tomichi. From Gunnison, the Gunnison

and Taylor rivers; from Sapinero, Sapinero or Soap Creek, a fine stream, and the Gunnison; at Cimarron, both branches of the Cimarron and the Gunnison in the Black Cañon. I should have mentioned Lake Fork at Sapinero. I have fished all these streams and can pronounce them excellent. The proper time to go is after the spring rise, when the streams are clear and not too full. For flies I would suggest coachman, governor, brown hackle, peacock body; gray hackle, peacock body, in the order named on small, say No. 8 hooks, except in the Gunnison River, where No. 6 is more suitable. All the streams can be fished from the banks, but your correspondent will find wading more satisfactory. He will find that the officials of the road and especially at Salida, are courteous and accommodating, and will willingly afford him any additional information he may require. KOKOMO.

SALIDA, COL., April 27, 1886.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—XL.

ATTELL in the rain gave us a chance to shed our hot rubber coats, and when we had changed place, Ben settled down to the oars and the "coincidence," and I give it in his own words but not in his inimitable manner, as near as I can now recall it. When I had trimmed boat to his liking, he began:

"Several years ago I got a letter from my brother William that lived in a little town away off in Northern Texas, invitin' me to come down an' spend the winter an' hev some sport a huntin' with my neffew Harry, who had a cow ranch on the Little Wichita River, about 120 miles from the town where he lived. He said there was jest slathers o' deer in the woods along the river an' in the hills not fur from the ranch, an' wolves an' kyotes an' jack rabbits on the prairies till ye couldn't rest. The bait was too temptin', an' I made up my mind to go.

"But I'm a leetle ahead o' the houn's—started the story without a preface, ye might say—an' I might as well tell ye what was the main reason that started me. Ye see, the winter afore that I'd got into the habit o' hitchin' a boss to the buggy every day or two an' drivin' to town to hev some fun with the boys—a gang o' town fellers that I was acquainted with—an' we generally, six or eight of us, got into one pertickular saloon an' set an' played sell-out seven up till we got our hides chuck full o' a mixtur' o' malt lickens an' blue ruin. Lots o' times it would be after midnight when I got home, fuller 'n a goose, an' I git up next mornin' with a head on me bigger 'n a country school house, an' several nights, ef my boss hadn't a had more sense than the driver I'd failed to show up at feedin' time. Well, the day I got this letter it was late in the fall, the crops was all in and housed, the farm work all over, an' I'd got to goin' to town agin an' tamperin' with the flouin' bowl. Goin' home that night with a lighter head on than usual, I got to thinkin' things over, an' I concluded I'd paid about my sheer to 'ards the new house the gin slinger was a-buildin', besides hev'ing right smart o' stock in the sparkler a-glistenin' on his shirt buzum, an' techin' up the boss kinder mad-like at myself, I said, 'Ren R., yer a cussed fool fur the want o' sense—an', mind ye, I said it a heap stronger 'n that—an' the best thing you can do is to shake the gang an' go to Texas an' get the on-rectified corn juice out o' ye and keep it out."

"Ye see," he went on after filling and lighting a fresh pipe, "I hev to tell ye all this afore I kin git a good start to Texas."

"Next mornin' I got up dryer 'n a fish, but I'd made up my mind the night afore jest what I was a goin' to do, an' as my head was not so big but what I could git it through the door, I went out to the pump an' let about a half a bar'l o' water sizzel down my throat, an' from that day to this I've not teched a drop o' anything strong enough to confuse a hossfly, 'thout it's coffy an' tea an' sich like home-made floods."

"Brother Jack an' his wife an' me talked it all over that mornin', an' as Jack an' a hired hand or two that we generally kep' through the winter could git along with the stock an' what little work there was to do about the farm in winter time, they thought it would be a good scheme fur me to go, 'specially if I kep' on 'tendin' the seaneens in town."

"I went to town that day, an' after paralizin' the boys by refusin' to drink with 'em, I bought some things I'd need, ye see I didn't hev to buy a gun fur I had as good a Winchester as ever was turned loose, an' next day was off fur the Southwest, dry as a contribushun-box, but feelin' a heap better 'n I expected."

"I reckon the gang an' the head sawyer o' the gin mill missed me from my usual place at the costive board, but I'd had enough o' his buzz saw whisky, an' the move I was makin' would be money in my pocket ef nothin' else, fur ye can bet yer last fish hook, Hickory, that ye never draw out any dividends from money that ye invest in a gin slinger's buidin' associashun; the more ye put in the less ye take out."

Just here a thoughtless big-mouthed bass interrupted the story by a savage pull at the frog trailing away astern, and at the end of a few minutes' vigorous remonstrance with him for the breach of good manners, he was towing alongside the boat with a stringer through his lower jaw, to take his turn in the frying-pan next day as a brain sharpener for the family. Ben reached for the stringer, raised the fish out of water to 'heft' it, and dropping it back remarked, "three-pounder, I reckon, an' a right smart fighter fur one o' the open-faced kind."

"Well," he continued, after wetting his whistle with a tin cup of water dipped from the lake, "I arrived at my brother's in due course o' time, an' he was as glad to see ole Ben as ef he'd found a soap mine, an' I was mighty glad that I was about at the end o' my journey, fur I was nigh about clean bushed, as Jim says, but after a few days rest an' a heap o' talk about ole times when we was youngsters together I felt in middlin' good trim an' got ready fur a start to the ranch."

"I bought a rackin' good little hoss, or pony I'd call him [by some unaccountable oversight Ben left off the usual prefix to "rackin'"], a big navy pistol an' a scalpin' knife of unusual dimensions, an' I felt heeled fur killin' deer, buffalow, wolves, injuns, or any other species o' wild animals that might git in my way."

Then he told about his long ride to the "cow ranch," and described in his humorous way the peculiarities of the four "cow punchers" and the cook, who with himself and nephew "are a couple o' lean lookin' dogs without any leadin' traits o' character less it was bein' always hungry," were to make up the "family" and pass the winter in this isolated region, near a hundred miles from another habitation.

For near an hour he rowed slowly along the line of bulrushes and grass fringing the shore, now and then stopping

for me to make a east or two inshore at a likely-looking spot, recounting in his droll way the many days of great sport he had with deer, wolf and sneaking coyote, and each day's hunt with any special feature of interest in it was told with such accuracy of detail and with such realistic descriptive power that at times I fancied I was an actual participant in the glories of the day.

Then, as we passed a patch of yellow water lilies reaching out into the lake from the grass line, came a sharp dispute with another "snake," which ended di-astrously for his snakeship, in that he was shortly doing a ground and lofty flopping feat in the boat, snapping his vicious jaws together on the gim, and glaring savagely at us with his snaky eyes. When quiet had been restored by a smart rap of the club, Ben dropped the oars and lighting the brier-root for not less than the twentieth time since leaving camp, he went on without removing it from his mouth.

"I'll leave out several o' the least interestin' chapters o' this tale, an' jest say that I had more sport there at the cow ranch than I ever had on the face o' this livin' earth, 'less it was when I ketched that big muskylunge over in Central Lake last year."

"Deer was plenty, an' it was no trick to go out an' kill more 'n we could use, an' knockin' over a wolf or kyote every once in awhile was worked in as pastime to keep us from killin' too many deer; but"—with a solemn blink of his eyes—"but the injuns must a got wind that I was a comin', fur not a solitary one o' 'em showed up while I was around, an' I didn't git to use my big scalpin' knife only to peel the hides off the game I killed."

"I hunted most o' the best days an' loafed around the ranch in bad weather, and eat deer meat and jack rabbit stews an' slept good o' nights, till I got as fat an' lazy as a possum in a paw paw patch, an' afore I thought the winter had fairly set in it was mighty nigh time for me to hustle home an' put in a few licks at the spring work on the farm."

"I hadn't brought my trunk nor no dude clothes with me, so I strapped my wardrobe on behind the saddle, said goodbye to Harry an' the other fellers, an' one mornin' afore daylight a solitary horseman might hev bin seen pursuin' of his way across the prairies, with his outwater a-pintin' a leetle south o' sunrise."

"Just about dusk, after ridin' between eighty an' ninety miles, I pulled up at the only house between the ranch an' the little town, where I intended to stay all night an' rest myself an' the pony, fur it had bin a long pull on the little feller; but he was a clean stepper and a stayer from 'way back on his gran'father's side, an' he'd made the whole distance on a few bites o' grass about noon an' a drink o' water once 'n a while without turnin' a hair."

"I hollered to see ef anybody was at home, an' a woman opened the door an' asked what was wantin', an' I told her very politely who I was, where I come from an' where I was goin', an' asked ef I could stay all night an' git somethin' to eat for me a' my hoss."

"She said she could git me some supper, but I couldn't stop over night unless her husband got back from town. She expected him back in an hour or two, an' I could eat some supper an' wait that long anyhow. A bite to eat an' a rest was good enough fur Ben, even ef I had to move on afterward, an' it wasn't many minutes till the pony was stripped an' picketed out, fur there was nary a sign of a shed or stable in sight, an' I was settin' in the house with my mouth a-waterin', waitin' fur the promised supper."

"The lady said they hadn't much of a variety in the way o' entables, but ef I could git along with some corn bread an' bacon, an' some molasses an' a cup o' tea I was welcome to it. I told her that corn bread an' side meat was one o' my best bolts when I was a-travelin', an' as fur tea, I was a heap fonder of it than the beethen chinee that makes the turkle tracks on the tea boxes."

"When I said that I noticed a small smile lurkin' around the corners o' her mouth, an' she didn't 'pear quite so skittish as when I first went in the house, an' I kinder felt then that I was in fur the best in the ranch. Tell ye, Hickory, there's nothing like playin' a little strategy on the wimen folks, 'specially when yer a-talkin' fur somethin' to eat."

"The first proceedin' she made to 'ards supper was to git out a shaller east iron skillet with a handle an' three legs to it, wipe it out with her apron an' set it on some coals she raked out from the fireplace, fur there was nary stove in the house, an' then lean the lid of it up agin one o' the dog irons to git it hot. Then she got some corn meal in a pan from somewhere 'baek in the corner an' set in to mixin' it into a tolerable stiff dough, an' when it was the right thickness, she scooped out a big han'ful an' patted it an' tossed it back and forth from one hand to 'other, an' then patted it agin till she got it into a ball about as big as my fist, an' then she laid it down on the table."

"About this time I noticed a cradle a settin' jest back o' me, an' d'rectly there was a commotion in it an' then a squall, an' in about a second there was some o' the tallest kickin' with a pair o' chubby legs an' a sawin' of the air with two fat little arms an' fists a goin' on in that cradle that ever was seen on the face o' this livin' earth, an' the squallin' was increasin' with every kiek."

"Hush, baby," sed Mistress Jones—I forgot to tell ye the folkses name was Jones, some o' the original Jones family, I reckon—'hush, baby!' don't cry now till I git the gentleman's supper ready.' The gentleman was me, mind ye," said the blessed old sinner, with a wink and a comical twist of his sun-browned face that would have made a Digger Indian laugh."

"She was a patten' the second corn dodger jest then an' I hitched over an' went to rockin' the cradle to see ef I could pacify the baby an' keep the supper proceedin' from comin' to a full stop."

"Sho, little feller,' sez I, ye see I took the chances on it bein' a boy by the way it yelld. 'Sho now; don't cry, little snoozer; don't ye see yer mammy's a makin' patty cakes fur the gentleman?"

"I kep' a rockin' an' talkin' taffy to the little sardeen till I reckon I must a rocked a little too hard, fur I felt his head bump agin the side o' the cradle an' then he jest turned himself loose an' squalled with renewed vigor. Great hoss ches'nuts! how he yelled, an' I rocked with increased vehemence."

"Jest then his mammy had begun to pat dodger number three, but she dropped it on the table an' in less'n a second was sittin' in a cneer alongside o' the cradle, an' had the little fellow yauked out an' spread out on her lap a layin' flat on his stummick."

"She jerked the little loose calico slip that stood fur a whole suit o' clothes up over his head, and there he lay as bare as the back o' my hand, an' a kickin' an' a yellin' fit to kill. Whack! she took him jest about aft o' the dorsal fin, ef he'd a bin a trout. Clip, clip, whack! without givin' him time

to ketch his breath, an' at every lick the dough flew clear over to the fireplace."

"The performance didn't last more 'n two seconds an' a quarter, but when it was over the little feller looked like he'd bin a sittin' down in the bread pan, an' his mother pulled the slip back to its place an' socked him down in the cradle an' sez quiet like, 'There, now! I guess you'll stop bellerin' till I git the gentleman's supper ready.'"

"I reckon he'd bin there before fur it knocked all the squall out o' him, an' he snuggled down as quiet as ef he'd swallowed a whole bottle o' soothin' syrup, or a pint o' parygorick."

"I felt kinder sorry fur the little cuss, for he wasn't more 'n fourteen or fifteen months old, an' at the same time I was nearly a bustin' to laugh at the way the dough flew. When she put the little man back in the cradle Mistress Jones went straight back to the table an' grabbed up the unfinished dodger, without washin' her han's, mind ye, an' patted an' tossed it this a way an' that. [Here Ben let the oars trail while he went through the motions of tossing and patting a corn dodger, in such an utterly ludicrous manner that I laughed till I was forced to lay the rod down that I might employ both hands in holding my aching sides, Ben joining in at last out of pure sympathy.] like she was in a hurry to make up fur lo-t time, till she got it into the ight shape."

"She laid No. 3 'longside o' the other two," Ben went on when we had come to our senses, "an' I kep' on rockin' the cradle easy like fur fear the kickin' and squallin' would break out agin, but ye kin bet yer last claw tobaeker I kep' my eye on that pertickular dodger, fur I didn't jest like the experience it had jest bin through."

"There was only dough left fur two more, an' when they was finished she greased the skillet with a piece o' bacon rine an' put 'em in one at a time an' patted 'em down flat till the bottom o' the skillet was kivered; an' me a keepin' a peeled eye on No. 3 by makin' a landmark o' the skillet handle. But when she put the lid on an' shoveled some coals on it an' turned it around two or three times while they was a bakin', I forgot which s de o' the handle No. 3 was on, an' lost the bearin's o' the durned thing altogether."

Here the yarn seemed to end, as Ben rowed along for several rods seemingly lost in thought without saying a word, and smoking placidly the while as was his wont."

"Did you eat any supper, Ben?" I finally asked.

"Conorse," he said, rousing himself, "a little thing like that don't amount to nothin' when yer hungry, but I was jest a tryin' to think which side o' the skillet handle that cussed corn dodger was on. When the table was set an' the tea made an' the bacon fried, I sailed in, an' I don't believe I ever eat a meal on the face o' this livin' earth that tasted better 'n that did. Ye see, I'd made up my mind not to eat No. 3, but I'd lost the bearin's of it, an' ef I'd a left one o' 'em it would hev bin jest my luck to leave No. 1 or 5, so I eat the whole five so as to give the one I was the most concerned in a fair show with the rest, an' they all tasted jest alike. I done some monstrous braggin' on that supper as it disappeared, but when the table was cleared I come mighty nigh spillin' it all an' makin' a cussed fool o' myself, fur I was jest a goin' to say that it was good enough fur the Joneses, fur they never was used to the very best o' everything, nohow; but I ketched myself jest in time, an' choked it back, but it was sich a narrer escape that it made me sweat."

"After supper, when I was a thinkin' I'd hev to saddle up an' move on, Mister Jones himself come an' I got permission to stay all night. I went out an' hobbled the pony an' turned him loose to rustle 'round after the rest o' his supper, an' next mornin', after walkin' a half a mile after him, I saddled up, thanked the folks fur their hospitality to me an' my hoss, said goodbye an' rode on to the little town before noon."

"I stayed at my brother's a few days, sold the little hoss, an' then he rode with me to Sherman—at the end of the railroad—to take the hosses back, an' we made the whole distance o' ninety miles in one day. In a few days I was back at the farm wadin' into the spring work like I was a seinin' fur minners. An' the trip done me a heap o' good, only for one thing," said Ben, soberly. Here he removed a pair of blue tinted spectacles from his nose that he usually wore when on the water, wiped his eyes with great deliberation with a voluminous silk handkerchief secreted somewhere in his overshirt, and after replacin' specs and handkerchief and picking up the oars, continued, "Ever sence that trip it 'pears like my eyes hev been kinder weak an' watery, an' I reckon I must a strained 'em that night a-tryin' to keep track o' that durned Texas corn dodger."

The "coincidence" was told, and could it be told on paper in old Ben's inimitable manner, with his ludicrous motions of shaping the dodger and administering the "soothin' surup" to the "little sardeen," and with his serious deliberations of speech, the reader would doubtless have occasion to hold his aching sides, as I did, but an effort to do justice to his quaint droll rehearsal of the "fun he had in Texas" would be as futile as an attempt to paint a streak o' moonshine.

KINGFISHER.

CINCINNATI, O.

TIM AND THE SEVEN PONDS.

TELEGRAMS say the ice has gone from Moosehead Lake.

No doubt this is the best lake in Northern Maine for the sportsmen that prefer to fish in deep water or troll for large trout. The steamboat nuisance has not so badly infested it as it has the once noble lakes of the Rangeley region; nor have high water and low water, new dams and broken dams, as spoken of by your recent correspondent, demoralized the trout and guides so the fish cannot be found. This doubtless is regarded by the State Commissioners as a grand provision of man and nature to restock these Androscoggin lakes. They have become so much depleted they needed rest.

But for greatest number of trout, ranging from 6 ounces to 2½ pounds in weight, and for the greatest amount of sport to the fly fisherman, the Dead River region has no equal. This is clearly proved by the fact that "old-timers" have bid adieu to other waters and turned to Tim and the Seven Ponds. This is true of Bostonians. Very large parties leave soon for these ponds, and still larger numbers are preparing to go about the last of this month or early in June. Those best posted say the ponds will open about two weeks earlier than last year. Mr. Lambert, the favorite landlord at Tim Pond, has been there nearly a month putting wharves, boats and camps in better order than ever before. Edgar Smith and wife are to have charge at Seven Ponds, and their thousands of friends know what this means. A new hotel has been built at Kingfield, furnished in grand style for a country hotel, and is to be run by a man well known and popular in that section of the country. This, as I have said in your columns, has been a great need since the old "tavern" of the place was burned. Thousands with me will rejoice at this

item of news. I am informed on good authority that a competent man proposes to run a stage daily from Kingfield to Smith's Farm. Smith has been ill, but "Ken is himself again."

From a recent conversation with one of the efficient Commissioners of Fish and Game for the good old Pine Tree State, I learn that grand sport is promised to the lovers of salmon fishing at Sebago and on the Penobscot, and when the season opens there will be "no end of fun" for those who like myself gain health and happiness in fighting the gamy black bass in the chain of ponds extending from Monmouth, through Winthrop, Readfield and Mt. Vernon, to Belgrade. Manchester and Gardiner have some of the oldest stocked ponds, but are a little off the line I have named. Maine has now great wealth in all which attracts a true sportsman. Later on I may have something to say of ruffed grouse and large game.

Boston, May 5, 1886.

NOTES FROM EAGLE'S NEST.

TO-MORROW signals the "trout opening" in this vicinity and a hundred rods will bend over the flashing waters of the west branch of the Delaware here, and in over twenty pretty trout streams which are now flashing down our hills close by. For the first time in many years at this date all the snow and ice is gone, the trees are leaving out, the grass is green, the apple trees in blossom and all nature on the broad smile. Where will be my rod to-morrow? Resting in its case beside my rifles and shotguns in the armory. Why? Ten weeks will be reached to-morrow since I have been so near to bliss as I am now, propped up in my invalid chair near the window where I can look out on my green lawn and see the sparkle of my trout brook at the "Pines." Ten weeks of suffering—lingering between life and death—ill fit me for this correspondence, but I can't let the season pass without a note to the dear old paper which has cheered me even in my darkest hour. I do not know now when I will be able to get nearer to the bright water to listen to the long cherished music of forest and stream.

And now, I wouldn't "tell tales out of school" if it was not to prove that our streams, repeatedly stocked by two citizens, dead within two years, John Griffin, John Bennett, and myself, are strangely full of trout.

As early as the 10th inst. Mr. E. S., one of your subscribers and an evident lover of rod and gun, encouraged by my physician to wink at the law, brought to my sick room six speckled trout, the largest ten inches long, the smallest six or more inches. It was a four-day feast, yet he caught them within sight of Eagle's Nest and in a twenty-minute tramp from his store. Bless him for thinking I might love to look on a trout, even if unable to enjoy it. Four days' rations were in those trout, anyway.

And since this little luck loving schoolboys have sent in to "Old Uncle Ned" proof that the alder rod is as good as the split bamboo, and a red worm as potent as an artificial fly.

Dell Maynard, while spearing suckers at night, by accident struck a beauty trout that weighed one pound and a quarter and measured near fourteen inches long. It was sent to cheer and strengthen the invalid. I grieved to see such glorious yellow meat borne away, but I was too sick to eat. I think "Ned Buntline, Jr.," my little five-year-old, could tell a different tale, for he is a chip of the old block and likes to catch fish and eat them, too.

Now, I have got to hold on. I have written as long as I can hold my pen, and must fall back on my "beam ends," as the captain of the Coot would say. From all I hear—and I have many visitors—fishing has not been so promising for years as it is now in Delaware and Sullivan counties.

E. Z. C. JUDSON ("Ned Buntline")

STAMFORD, N. Y., April 31.

POACHING IN SARATOGA.

Editor Forest and Stream.

The following is from a Saratoga paper of to-day:

The Schenectady Gazette has the following, which should engage the attention of our sportsmen: "It is reported that parties are illegally catching black bass in Saratoga county. What are our game clubs for? What are State protectors of game and fish appointed for? It is about time something was done to stop the wholesale slaughter of black bass in Saratoga county by men who use spears, nets and other illegal devices to deplete the lakes and streams in that county of black bass. We are informed that parties have a 'rack' built in the rifts of the creek near East Line and are capturing black bass by the wagon. A few arrests and convictions might prove beneficial." Why don't the town game constables look into this matter?

"Why don't the town game constable look into this matter?" Because it is a well-known fact that in many of the towns of Saratoga county no man can be elected to the office of town game constable unless it is well ascertained that he will wink at infractions of the law. I have heard of one who not only does this, but actually engages in illegal fishing and shooting. In Saratoga county many trout streams are fished with nets in order to supply the hotels. It is said that in July and August "chicken partridges," the young ruffed grouse, are to be found in the ice boxes of the larger hotels.

And what is to be done about all this? There is no public sentiment against it; it would be next to impossible to procure information or secure a conviction. Each man will say "Well, if I don't do it somebody else will, and I don't see why I should not." And so it goes on. Meanwhile this devil-born selfishness is cutting away the limb upon which it is sitting, for year by year fish and game are growing more and more scarce, not because of the destruction of their habitat, but because of the violation of the protective laws by selfish men and the connivance of those whose duty it is to see the laws enforced.

[If the local authorities will do nothing, application should be made to the State game protector of this region. If he cannot or will not act, write to Gen. R. U. Sherman, who will certainly help you if it be in his power. If the bill to appoint a superintendent of game protectors ever becomes a law and a good man shall be nominated for the place, we may hope that outrages, such as those detailed above, will no longer be practiced openly.]

FISHING IN THE ADIRONDACKS.—The Malone *Palladium* says: "The roads leading from Malone into the wilderness were never better at this season than they are this year, and if first reports indicate anything the waters in this vicinity have not been more amply stocked in recent years with trout eager to reward the efforts of the angler. Many parties from Malone and a few from abroad have already tested rod and reel in the neighboring waters, and from Meacham and Chateaugay Lake in particular come reports of remark-

able catches. Two rods at Meacham have taken in five hours full twenty-five pounds of speckled trout. At Chateaugay Lake the catches have been made mostly by trolling and the salmon taken have been large both in number and in size. One speckled trout weighing over five pounds has also been caught.

TROUTING IN CALIFORNIA.—San Francisco, May 1.—*Editor Forest and Stream:* But few trout have been taken in our streams to date because but few anglers have fished them because of the high water and discoloration. The streams in San Mateo county have not been flooded, and consequently fishing has been good. I went down there last week with a party of three, and we fished Tornillas and San Gregorio creeks and filled our creels. These streams are bushy, and fly fishing is difficult and often impossible. These streams are little visited, and therefore they afford better fishing than those which are better known. I learn that Sulphur Creek, in Sonoma county, promises well, but the best fishing near San Francisco is said to be at Crystal Springs, where some of our local anglers have distinguished themselves.—SAN MATEO.

TO COOL WATER.—In a recent book of African travel, mention is made of a linen bag used to hold water, which by evaporation becomes ice cold. Could any African traveler explain how the bag is made and of what precise material?—X. P. [The principle of cooling water by evaporation is a very familiar one, but we should be glad of any information as to the particular mode above alluded to. Old army men and campaigners on the plains will remember how often they have cooled water by wetting the felt with which their canteens are covered. So, too, with the porous crockery used in Mexico, South America and India. In the Southern States this method of cooling water is extensively employed.]

WEST CANADA CREEK.—This once famous trout stream of Herkimer and Hamilton counties, N. Y., still has chances for the angler, owing to repeated stocking by the State and individuals. Mr. John J. Flanagan, president of the St. Lawrence Angler's Association, writes, under date of May 5 from the Mountain Home, that trout are biting lively in the creek and fairly in the lakes. Mr. Flanagan finds Wilmurt Lake too high a climb for his 300 pounds weight, but he has taken several fine trout from the creek. This is a fine stream for both wading and boat fishing, and is easily reached from Herkimer, Prospect or Remsen. Quite a number of anglers are at Ed Wilkinson's, and most of them have done fairly.

HOW GOT HE THERE?—One of the most prominent dairymen of Orange county, N. Y., has a spring on his farm in which for years he has kept a fine brook trout. The dairyman is a most upright and conscientious man, and was grieved to get the following note from a New York man: "The trout you sent me in one of the cans of milk was very fine, thanks; but wasn't that a queer way to send it?" When the dairyman explains it to his neighbors that the trout jumped into the can they grin and say, "O, yes," and this is what puzzles him and us. Perhaps the cow drank the trout, who knows?

SALMON IN THE HUDSON.—A ten-pound salmon was taken last Monday in Gravesend Bay, by John B. Denise, a fisherman of Coney Island. We saw the fish at Middleton & Carman's, in Fulton Market, and looked it over carefully to see if there was a brand of "Cold Spring Harbor" on it, but could not discover it. The fish no doubt is one planted in the Hudson by order of Prof. Baird and was on its way back. It was labelled "The first salmon from the Hudson and probably the last," but all of the inscription may not be true.

MASSACHUSETTS TROUTING.—Ayer, Mass., April 30.—Some trout have been taken in our neighborhood. I am usually quite successful, but have not tried them as yet. Partridges wintered finely about here.—W. F. F.

Fishculture.

AMERICAN CARP CULTURAL ASSOCIATION.

THE regular spring meeting of this Association was held at the St. Charles Hotel, in Philadelphia, on Tuesday, the 4th inst. Universal regrets were expressed because of the absence, for the first time, of the honored president, Judge Parry, by reason of severe sickness. Dr. J. H. Brakeley presided. The following board of officers were elected for the ensuing year: President, William Parry; Vice-President, Dr. J. H. Brakeley; Secretary, Milton P. Peirce; Treasurer, Samuel K. Wilkins; Directors—S. T. Davis, Joseph Pyle, Edwin Tomlinson, George Hamel, Sr., Amos Ebert, Dr. J. H. Brakeley, Dr. E. G. Shortridge. [The president and secretary are *ex-officio* directors.]

An important resolution was passed respecting the establishment of a monthly journal.

Information having been sought by members of various State Legislatures concerning a close time for carp in public waters, and inasmuch as such waters throughout the country are rapidly becoming stocked with millions of surplus young carp from thousands of ponds, and there being as yet no laws regulating the same, it was

Resolved, That this Association respectfully recommend that the taking of carp in public waters, by any process whatever, be prohibited throughout the Northern States between the last day of March and the first day of October, and in the Southern States for such longer period as experienced carp culturists there may deem necessary, probably with the addition of March and October to the close season.

A committee was appointed, with Dr. S. T. Davis as chairman, to make such arrangements as they may deem proper for a carp dinner upon the occasion of the fall meeting in 1886.

The Association desires it more generally known that they are not a company for speculative purposes, but a national organization for the mutual benefit of carp culturists, their only income being derived from membership fees, the same (and much more in addition) being expended for the issue of documents—no person connected with the organization receiving salary or emoluments of any kind. The membership fee is \$1, and any person interested in carp culture may become a member.

MILTON P. PEIRCE, Secretary,

44 North Fourth street, Philadelphia, Pa.

A GOLD MEDAL.—Fish Commissioner E. G. Blackford was on Saturday morning visited by a delegation of the members of the Assembly under the leadership of Hon. E. P. Doyle, for the purpose of presenting a gold medal which had been bestowed upon him by the Department of Fishculture of the Lower Seine, France. This medal was sent by the French Government to Governor Hill, and by him placed in the hands of this delegation to present to Mr. Blackford. The inscription on the medal is, "Mr. Blackford, Commissioner of Fisheries of the State of New York, Departement De La Seine-Inferieure La Commission de Pisciculture, 30 Novembre, 1885."

THE NEW YORK FISH COMMISSION.

A MEETING of the New York Fish Commission was held at the hatching house, Caledonia, on Wednesday, May 5. Messrs. R. B. Roosevelt, E. G. Blackford, W. H. Bowman and Gen. Richard U. Sherman were present. The meeting was called for the purpose of considering the report to the Legislature which has been prepared, and also to inspect some land which adjoins the grounds of the State that have been thought should be purchased in order to get a more convenient entrance to the hatchery.

The report was read and agreed to, and it will be presented to the Legislature within a few days. It will be larger than any previous one and will be a valuable document, giving details of the work done at all the hatcheries, and will be more than a mere account of waters stocked and a list of shipments of eggs and fry. It was decided that it was inexpedient to purchase the property adjoining the grounds at Caledonia, as the owner demanded too high a price for it. It was also voted to authorize Gen. Sherman to employ a secretary to the Fishery Commission. Reports were received from the different hatcheries, showing a large increase in the work.

After the business was disposed of, the Commissioners rigged up their rods and tried the wild trout in the stream, and took brook trout, brown trout and rainbow trout. The Commissioners expressed themselves pleased at the condition of the hatchery and ponds.

DOG SHOWS.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

May 25, 26 and 27.—First Dog Show of the Ninth Regiment, Wilkes-Barre, Pa. W. H. Tuck, Secretary, Wilkes-Barre, Pa.

July 20, 21, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3689.

NOTES FROM THE OCCIDENT.

Editor Forest and Stream:

Accept my most cordial greetings. My Federal duties have prevented me from writing to your journal on many subjects which interest lovers of good dogs, but I have read its glowing pages every week with real pleasure. This very moment I am greatly gratified by reading that Beaufort, the grand pointer owned by my valued friend Mason, has won the champion ribbon at Newark against Graphie. I never saw the latter, but consider Beaufort the best large pointer I have seen in many a day. With the exception of one or two minor points he comes nearer to my idea of what a dog of his kind ought to be than any pointer I remember. What those points are I will not say, as you may think me too hard to please and hypercritical. And Mason will say I want a dog made to order! Beaufort is certainly a splendid specimen of the modern pointer, and far in advance of Croxteth *et id omne genus*.

I am glad Americans are purchasing some of England's best St. Bernards and mastiffs. Merchant Prince must be a noble animal from all I have read of him, and only second to the grandest dog I ever saw and which I persuaded Mr. Hearn to import—Rector. He may not have been perfect as a typical St. Bernard; but his vast size (I measured him 35½ inches at shoulder at Crystal Palace, London, in 1881) and majestic carriage entitled him to be called the king of the canine race. Had I been the happy possessor of much gold and abused silver, Mr. "Fritz" Emmet would never have been a mourner over the grave of that lost love, for Rector would have been mine over and above any dog I ever saw, of any breed, and at no matter how long a price.

In vain have I endeavored to induce some of our wealthy citizens here to invest in No. 1 specimens of man's most faithful friend, the dog. Absolutely in vain have been all my efforts. A man here who will give a few hundreds for a mastiff, a St. Bernard, a setter, a pointer, a Newfoundland, or even a greyhound—fond as some of our people are of coursing—is looked upon as fit for Barnum or for an asylum!

There is some talk of a bench show, but where the dogs are to come from—except from the East—I "dinna ken!" There are some fair setters and greyhounds here, a very few noticeable pointers, and so far as I know (and I have pretty accurate knowledge of them) not one mastiff, St. Bernard, Newfoundland, deerhound, field spaniel, bulldog, bull-terrier, (except my Kitten) or type of any other breed which could under a good and conscientious judge win even lie in an established and reputable Eastern bench show.

I tried to induce some men of means to bring Memnon and Mother Demdike, those two grand greyhounds, out here, the price being quite reasonable. No, not one could be persuaded to touch them. Apropos of greyhounds, I recently induced a friend to purchase of Mr. H. W. Smith, the owner of Memnon and Mother Demdike, five puppies by Friday Night out of Demdike. They arrived here recently in the most pitiable and filthy condition imaginable. They were almost starved, were so weak they could scarcely stand and the box they were expressed in was not large enough for three of their size. Such a cruel piece of work on the part of the sender and the expressman of Wells, Fargo & Co. in charge, deserves severest condemnation. It will deter me from ever again inducing any friend to transport puppies from the East.

A man who is not kind and considerate, where the welfare of our little four-footed friends is concerned, would be pitiless with children at the same tender age. I may be laughed at, but the comfort of my dogs must be guarded with almost as much solicitude as I would extend to human beings.

There are many lovers of the horse here, revelling in lucre, whom I am trying to interest, too, in fine dogs, and to get them to import the best specimens of several breeds. They have fine "ranches" on which to create kennels. A man who doesn't love horses and dogs, and women and children, has got an infernally mean streak in him somewhere, don't you think? The fact is, people here generally seem to manifest a total indifference to good dogs. They display ignorance about them that is really laughable, and appear to think that the man who does own them, or knows anything about them, is a queer kind of a fellow anyway. In my opinion a man can show great brain power, and all kinds of talent, or genius, and yet know a thing or two about the canine kingdom. "A man's a man, for all that," don't you agree with me? Out here by the Western Sea you can almost count on your fingers the men who take a real interest in this subject, or who read the papers

devoted to that kind of literature, and know a bull-terrier from a fox-terrier, or don't call a deerhound a staghound.

Why, I just this moment sent a messenger to the Bohemian Club to borrow for five minutes its copy of your paper (or one devoted to similar subjects), my own having been lost, and the response came back to me, "They are not taken any more, no readers." I was amazed, because from the luminous pages of FOREST AND STREAM I derive not only pleasure and amusement, but profit and instruction on many subjects linked with outdoor life, and which "greater than me" can afford to peruse. Why, your columns on natural history alone are worthy of the scholar's study. I never spent a couple of hours over the "North American Review," or "Macaulay's Essay's," or "Baxter's Saint's Rest," or the endless accounts of unquenchable and incomprehensible "Shiloh," that I didn't want to woo recreation and comfort in the pages which tell me, as well as do yours, of sports afloat and ashore. I think it is Balzac who says, "If those who are the enemies of manly sports had the direction of the world, they would take away the spring and youth—the former from the year and the latter from human life."

But I am wandering, and only intended sending you a few lines of kindly greeting. I hope we will have a bench show and that a judge or judges from the East will be requested to visit us. The fact is, people who have been living here for the past five and twenty or even for the last ten years without crossing the Sierras, have no idea how great an improvement there has been in all breeds of dogs, and unless they have very recently paid visits to the Westminster Kennel Club show, or some other of equal fame, their knowledge of dogs and dog lore cannot be valuable, to say the least, and their judgment as to points must have fallen into "innocuous desuetude."

STUART TAYLOR.

SAN FRANCISCO, April 1.

THE NEW YORK SHOW.

THE tenth annual dog show, under the management of the Westminster Kennel Club, opened in this city on Tuesday last and closed Friday night. It was held at the Madison Square Garden, a place better suited to the purpose than any other that we know of in this country, for there is always room in it, and it is always light and well ventilated.

The show was excellently managed. The dogs were benched in the usual fashion, and were kept well provided with clean straw and fresh water. Their comfort was well looked after. They were fed on Spratts Patent biscuit. On one point the management was open to very severe criticism, and much annoyance was caused by, and complaint made of, the order in which the dogs were benched. Exhibitors were allowed to place all their dogs together no matter what the classes to which the different animals belonged. Thus in looking through what he supposed to be a certain class, the visitor would suddenly come upon dogs of a different class, and would find the numbers running in most eccentric and unexpected fashion, to his utter bewilderment. This method has to be recommended only the fact that it saves a keeper a few steps in caring for the animals, and that it pleases the owner, who likes to see his dogs together. The men whose duty it is to take the animals into the judging ring suffer, however, and the reporters who also have to find the dogs, and above all the intelligent visitor, who desires to compare certain dogs in the class, is greatly inconvenienced by the confusion. This sort of thing should not be tolerated. The dogs should be benched in order, the classes and the numbers following one another in regular rotation. With the exception of this unfortunate mistake, the management was very creditable, and Mr. Mortimer is entitled to high praise for his share in it. The first three days of the show were pleasant, but on Friday it rained, which somewhat cut down the attendance of that day. On the whole, however, the attendance was fair, and many well known New Yorkers dropped into the show every day.

The quality of the different classes varied greatly, as will be seen from our remarks on the dogs. Some of the classes which are usually best were this year quite ordinary, and others, which are usually poor, were much above average.

We regret to have to speak of the judging, which was, on the whole, the worst which we have ever seen at a dog show, and created almost universal dissatisfaction. The trouble began with the printing of the catalogue, in which Mr. Kirk was given as the judge, among other classes, for mastiffs and St. Bernards, while the fact is that Dr. Perry judged the former, and Mr. Tucker the latter. Mr. Kirk was very unfortunate in many of his decisions, though it was pleaded in his behalf that too many classes had been assigned to him, and that he was obliged to hurry through them in one day in order to return home. This excuse, however, gave no special relief to the exhibitors. Mr. Tracy made terrible work with the pointers, and Dr. Perry was unfortunate with his mastiffs. The setter judging, with one or two exceptions, was fairly satisfactory, the collies and fox-terriers the same, and the St. Bernards were well handled; but the miscellaneous class was judged in most extraordinary fashion. It was the opinion among those best qualified to judge that very many of the classes were slaughtered. There were a great many sales at the show, among them several champions. Robert le Diable is said to have brought \$800, Molly Bawn \$400; Trux's price is confidential.

We give below a detailed account of the dogs and the judging:

MASTIFFS—(DR. PERRY).

The quality of these classes was not quite so good as it was last year, and, as usual, the best specimens exhibited were bred in England. With first-class stock at their disposal, American breeders should succeed in producing better speci-

mens than Homer and Boss. Of the puppies exhibited this year none will equal in good looks the dogs just named, and this looks as if there was something wrong. With this hint to the mastiff breeders we pass to the dogs themselves. Homer, Prussian Princess, Rosalind and Lady Gladys are of correct type, in good condition. The open dog class contained fourteen entries, and the quality was above the average. With the champion dogs to set the type, Dr. Perry should not have made any bad mistakes, but he was not fortunate in his selections. He did not award prizes to poor dogs, but he did not keep to type, and several of the dogs selected for leading positions cannot possibly be first-rate if others, such as Prussian Princess, Rosalind and Lady Gladys are of correct type, as we believe they are. Baby, placed first, has few good points, and we can assure those who regard him as a crack that they are woefully mistaken. He is a dog of fair size, stands well on his legs and is a good mover. This is all that can be said in his favor. His muzzle is too long and lacks in width; his skull, too, is faulty, and his ears are too big. He stands too high on the legs, is very light in bone and faulty in feet, and there is a lack of substance all through him. Add to these faults a rather boudy expression and our readers have a truthful description of Baby; vhc. was his place. Boss, placed second, is a more massive and better-boned specimen than Baby, and after cutting him for his faulty muzzle and expression, there would be left several points in his favor. We would have placed him third. Ilford Caution, third prize, should have scored rather an easy win. Pharaoh, hc., should have been second. He is not a big dog, but shows more true mastiff character than either Baby or Boss. He is above the average in head, and is a well-formed dog of good substance and bone. His eyes are rather light and his ears are too large. Vulcan, vhc., is long in coat and faulty in head; a c. card would have been quite sufficient for him in this class. Bismarck, c., is a very poor specimen; he is very faulty in head and feet, and shows little character. Dictator, hc., although small is of good type and deserved his card. Hector, c., is a better dog than either Vulcan, Bismarck or Jag. The last named is faulty at both ends. Lady Gladys showed far more character than anything in the bitch class. This is a good specimen. She has a better skull than any bitch in America, has a good frame, plenty of substance, and a fair amount of bone. She is faulty from the hips down, and would be improved by more depth of muzzle. Ilford Cambria, second prize, is too long in face, and is light in bone and faulty in feet. She is a big bitch and has a good body. We would have placed her third. Hilda V., vhc. and reserve, was our choice for second place. This bitch is well known. Regina, third prize, is faulty in head, vhc. was her place. Venice, c., is too long in face. Lorna, c., is boudy in head, heavy in ears, crooked in forelegs, and she lacks character. Queen II., well known, was our choice for the reserve card, and we thought it a very close thing between her and Ilford Cambria for third place. Dog puppies were not a good lot. Sir Roderick, placed first, scored an easy win; he is faulty in muzzle and lacks in volume of skull. Ajax, second prize, will never make a good one; he is long in head, domed in skull, and has a bad tail. The bitches, although not a good class, were better than the dogs. Lady Florence, first prize, and Regina II., second prize, are faulty in head. The other entries are not show dogs and commendation cards were withheld.

ST. BERNARDS—(MR. TUCKER).

The quality of these classes was about the same as at last year's exhibition, and the dogs were nicely handled by Mr. Tucker, who made quite a favorable impression as a judge. Duke of Leeds, well shown, had no difficulty in beating Ocho for the champion prize for rough-coated dogs, and Miranda, in the corresponding bitch class, scored a rather easy victory over Mr. Heam's old favorite Gertie. These dogs are too well known to require further comment. Of the seventeen entries in the open dog class Merchant Prince was much the best, and Bosco II. was well placed second. Courage II. and Rudolph II. came next. The former, in better shape than his opponent, was rightly placed third, but we think Rudolph a trifle the better dog. A full description of these dogs may be found in our report of the Newark show. Nero (Ehrich's), vhc., is faulty in head, and the same may be said of Schoonover, hc., and Barney, vhc. The latter is good in bone. Og, vhc., is a fairly good dog, not very strong in any point and not very bad. Prince Leopold, vhc., whose good looks were overlooked at Newark, well deserved his vhc. card, but Duke, c., was rather fortunate in receiving mention. He is faulty in head, ears and tail and shows little St. Bernard character. The ten bitches entered did not make a very strong class. Lady Athol, too long in face and light of bone, made a good first, and St. Bride, faulty in head and out of condition, was just about second best, although she was closely pressed by Margery, whose color is against her. Sheila, described in our Newark report, was vhc. Lady Clyde, vhc., lacks character and her color is not good, still she was in her right place. In the champion class for smooth-coated dogs Don II., in good condition, easily beat Verone. He was very badly shown. Both are well known, the former being the better dog. The magnificent Leila was alone in the bitch class. In the open dog class it was a close thing between St. Botolph and Hector, the latter rather better in head and with youth on his side, was properly placed first. Cora, third, is cheaky, faulty in ears and straight behind. Trust, vhc., gets worse in head as he gets older. Barkis, vhc., is faulty at both ends and so is Berg, vhc., in addition to being light in bone and bad in feet. Pluto, c., is leggy, light and faulty in expression. Flora II. was the best of six bitches and Belle of Stirling, faulty in head, was rightly placed second. Alma II., of good type, but small and faulty behind, was third best. Tony, vhc., has bad shoulders and is light in limb, cheaky and small. She shows character. The puppies were a poor lot and nobody seems able to breed a dog that can approach in good looks the imported stock. Barry, first, was the best of the rough-coated dogs; his best points are his coat and color. He is faulty in head and eyes. The second prize winner (three months old) lacks character. Byron, third prize, was absent when we called on him. Hero, vhc., is faulty in head and color. St. Triphon, c., has a very poor head and shows little character. Carlos, hc., is very faulty in head and ears. The two last-named were hardly worthy of notice. The three bitches were a very seedy lot. Lucy, first prize, is faulty in head and is very light in limbs. Gipsy, second prize, is of poor color and has a bad head. Ise, vhc., has a most peculiar head. She is very short in skull and too long by half in muzzle. We would have withheld the prizes in this class. The smooth-coated dogs were little better than their rough-coated brethren. In the dog class, Cardinal, faulty in head ears and expression, was placed over Leo. Here we cannot agree with the judge, for although Leo is but three months old and Cardinal eleven months, the youngster shows far more character and is better in head, bone, color and markings. Noble II., vhc., is not worth a card in any company; he has a very bad head. Cryl, first in the bitch class, is only moderate, and Queen of Sheba is not likely to be heard from at future shows. Mr. Haines showed some fairly good specimens in the puppy classes, but they were not exhibited for competition.

NEWFOUNDLANDS—(MR. KIRK).

With the exception of the first and second prize winners, the class was very poor. Bruno, placed first, has the best of Major in size and bone, but the latter is of better type and is much better than Bruno in coat, tail and body, and is quite his equal in head and ears. Rocks, vhc., is faulty in head, eyes and ears. Juno II., hc., is faulty in head, coat and eyes; she is too small. Guy, c., is faulty in head, eyes and coat.

GREY DANES—(MR. KIRK).

The best class we have seen at New York. Tiger, first prize, is much above the average in head, size and limbs, and is a

good-looking dog. Bismarck, second prize, is of fair size, but his head is not nearly so good as the winner's. Café-au-lait, hc., was third best. Tigress, vhc., is a fairly good puppy, but she is much too long and flat in loin, and her feet are faulty. Hector, c., is too small for a show dog. Nero, hc., and Jumbo, vhc., are faulty in head and expression. We did not see them off the bench, and they may have had faults that escaped our attention.

GREYHOUNDS—(MR. KIRK).

There were 24 entries in these classes, and the average quality was about the same as at the other spring shows. The two champions, Memnon and Mother Demdick, were in wretched condition, and had we been the judge we would have disqualified both. Harlequin scored a very easy win in the open dog class, and second prize should have been withheld for want of merit. Joe Juniper, placed second, has wretched head and ears, is very straight behind and heavy in neck. He is a big coarse dog, sadly deficient in greyhound points. Rajah, vhc., and Rawhe, hc., are not show dogs, but they are better specimens than Joe Juniper. Louise, a black bitch, shown in elegant condition, was first in the next class. She is very faulty before the eyes, straight behind, and too long from the hocks down; she is too stout in body for her strength of limbs, and we would have placed her second. Juno, second prize, is a very poor specimen, scarcely worth a commendation card; she is weak in muzzle, full in eyes, light in bone, weak in pasterns, has bad feet, and is very faulty behind. Hawthorne Belle, vhc., was just about the best in the class; she was fully described in our New Haven report. Lady Maud, vhc., is very faulty in head, ears and eyes; she did not deserve a card. Sister in Black that was first at Boston and second at Hartford, was first in the puppy class, and was the best of a bad lot. Dora, second prize, although a poor specimen, was just about good enough for second prize; her head is very bad. Misting, hc., was not worth a card; a very poor specimen. The same may be said of Bold Brigand, vhc.; he is flat in loin, shallow in body, slab-sided, and very faulty in head and ears. Ahwaga Chief is a strong dog, faulty in head and lacking in character; he deserved his card.

DEERHOUNDS—(MR. KIRK).

Chieftain, Roy, Mac and Perth were the entries in the champion class, and Mr. Thayer's grand dog scored an easy win. Bras, first prize in the open class for dogs, was fully described in our Hartford report; he has improved in condition, and while he is better in head than Bevis III., second prize, the latter is his superior in almost every other point save size. Bryan, vhc., is faulty in head, eyes and coat. Heather, well known, was hc. Mr. Kirk made a fearful blunder in the bitch class. Wanda was a very easy winner and Heather Belle, hc., was much the best for second place; she is faulty in head and stands too high behind, but shows character, and is a bitch of fair size. Mercia, second prize, is a very poor specimen; she has a wretched head, is small, faulty in coat, and shows little deerhound character; a commendation card should make her feel very happy. Storma, faulty in ears, ribs and loin, and not first-class in other respects, was the only puppy shown and was given first prize.

POINTERS—(MR. TRACY).

Ninety-six pointers were entered, with sixteen absentees. With the exception of the show held in 1878, this is the smallest number of pointers ever shown at New York, being four less than last year. These figures include the dogs shown by the club. There were quite a number of very fine animals shown, notably the exhibit of the Graphic Kennel. Aside from a score or so of the really good dogs present, the average was not equal to that of previous shows. Next year we shall expect to see a great improvement, especially in the puppy classes. Last year and the year before the pointer judging was remarkable for the many erroneous decisions made, and we regret to add that there was no improvement this year in this respect. In FOREST AND STREAM of Jan. 23 is an article entitled "Ancient and Modern Setters," written by Mr. Tracy, in which he says, "The uniform lesson of old pictures is that our best types of setters existed as long ago as any record can be traced." In summing up he says, "Surely if every ornamental point as well as every useful point in the breed is a heritage from the distant past, we ought to so frame our standard as to guard all of them from change or innovation." This in a great measure will apply to the pointer as well as the setter, especially so in some of the more important characteristics of the breed. We failed to find, however, in some of the animals selected for high honors, much resemblance to the pictures of the past or present time. If Mr. Tracy could get his pointers as nearly right in the ring as he does on canvas, we should have no occasion to find fault with his decisions. In the champion class for large dogs, Robert le Diable was placed over Graphic. This decision we cannot indorse. Robert has filled out and does not lack so much in substance as when shown here last year, and is improved in appearance thereby. He is a very good dog, but not good enough to beat Graphic. Our description of him in our report of the New York show last year, with the exception above noted, holds good to-day. He is also tied up in shoulders, which can be readily seen when he gallops. Our opinion that he is not the best of his kind is not weakened by the fact that he was sold during the show by a club whose ambition it is to possess the best kennel in the country. In the bitch class, Revel III. was alone. She was in elegant condition, as were her kennel companions. In the open dog class Tammany was placed first, Duke of Bergen second, and Fritz third, with Danby, William Tell and Tempter, vhc. All are well-known and have been frequently described. Fritz was the best of the class, and should have been first, with Tammany second and William Tell third. Danby and Tempter were well placed. Duke of Bergen was just about worth the three letters. Drake, not looking his best, was hc. Frank, the Flock-Finder, also deserved the two letters at least, for his good head, chest, legs and feet. He is a big dog with plenty of bone. He is somewhat coarse and too throaty, but one of the best movers in the class. In the bitch class Seph G., placed first, has a fair head, body and legs. Her ears are carried badly and she lacks depth of muzzle. She is also light in bone, has moderate feet and a coarse tail that has been docked; vhc. was about her place. Jilt, placed third, was looking well. She was the best in the class and should have been first. There was not much to choose between Nell, Nan and Vera for second place. The latter is a good looking bitch, a little off in back and too straight behind. In the champion light-weight class for dogs Bracket won the prize and his kennel companion Meally won in the bitch class. In the open dog class Mr. Tracy placed Consolation over four better dogs. Mr. White, who bred this dog, publicly announced previous to the judging, that he had made a change in business, but would also "indulge to a limited extent in the continuance of a favorite theory of pointer breeding, which he has been studying for some time past. His dogs will not be for sale, however, and will be confined to the number needed to carry out the experiment." As he had sold Consolation it is to be inferred that the goal of his ambition was not yet obtained. After the wonderful merit of the dog had been discovered by the judge, however, his breeder paraded him before the public as the culmination of his fondest hopes, the result of long years of study and experiment. We have bred many pointers and occasionally one would turn up approaching in form this wonder, but, like Mr. White, we soon got rid of all such specimens. We have never seen a dog of this stamp that possessed both speed and endurance. There are exceptions to all rules however, and we are informed by gentlemen in who we have the utmost confidence, that this dog can go and stay. He is a small dog, hardly good looking with good neck, loin, tail, legs and feet. His head is not good, his chest is shallow and he is too narrow at hips, he is badly out at elbows and stands very awkward in front. He should have been

content with her, even in this company. Nick of Naso, second, showed more pointer character than any in the class, he should have been first. Puck, winner of third, is fair in shoulders, chest and fore feet. He is weak in head, with ears set too high; he has a deformed last rib, is weak from hocks down, and is not straight in front; he should not have received a card. Bang Grace, reserve, was worth the place; he has filled out and improved. Castor, vhc., was one letter higher than he deserved. Tom Peter, hc., was the second best in the class. He is quite a fair all round dog, with no serious faults except that he is a trifle weak in head; he was in working condition. Slam Bang, hc., was lucky. He is bad in head and ear, very throaty and only passable at other points. Doctor, the best in the class, was ruled out as over weight. He has a fair head, good shoulders, chest, loin, legs and feet, and a good tail. In the bitch class first went to Keswick II. A description will be found of her in our report of the Cleveland show; we had a better opportunity to see her move here; her gait behind is very bad and indicates weakness. For this reason we should place Blo-mo, winner of second, over her; the latter is a nice little bitch, good in body, chest, legs and feet and tail. She is a little off in head and might be better in bone. Jill, placed third, was worth about nc. She is fairly well formed, but is weak in head, a trifle wide in front, and lacks character. Jon, reserve, should have been third. She is fair in head, shoulders and chest, and very good in loin, bone, legs and feet. She is a bit wide in front and straight behind. Next to her we liked Young Beulah, vhc., a nice lemon and white, with a pretty head, good body, chest, legs and feet; her ears might hang better, and she is a trifle wide in front and coarse in tail. Lalla Rookh was looking well and deserved her card. Happy Medium, also vhc., was looking fairly well. Virginia received the three letters, but with her poor head and bad condition he would have been sufficient. Jane, hc., is a pretty bitch, well worth her card. Beldame, c., would not have disgraced another letter. In the dog puppy class, over 12 and under 18 months, first went to Consolation, winner in the open class. Rosedale, second, is not a good one. His head is only fair, with too small eyes; he is slack in back and has open feet. Nixon, reserve, is a big, coarse dog, not square enough in muzzle, too wide in front and straight behind; he is fairly well formed, and deserved second. First prize should have been withheld. Ros, vhc., is a fair looking dog, weak in muzzle, with bad eyes and lacking in character; he also had a tumor on his chest. Queen Fan was alone in the corresponding bitch class. She is a nice little bitch, a bit weak in head, with good neck, shoulders and body, and fair legs and feet. In the class for puppies under 12 months first went to Penelope, a handsome, fairly well-made one with the best of feet. She promises to turn out something good. We liked Sir Anthony better for the place; he has the best head and shows more quality than any in the class. He is a very promising youngster. He is a trifle faulty in shoulders and tail. His litter brother and sister, Beau of Portland and May F., respectively vhc. and hc., are also nice puppies, and worth their cards. Two of this litter, also entered, smothered in their box on the way. Monte, placed second, is quite pretty and promising; he is a bit lathy, but has plenty of bone and may come out all right. Virgilus, vhc., is also quite promising. Taken all through, the puppies that were noticed were a very fair lot.

ENGLISH SETTERS—(MR. DONNER).

There were 103 entries this year, against 76 last year and 154 two years ago. The average quality was better than last year, and take them all round they were a fair lot. In the absence of Mr. Wilson, the regularly appointed judge, the managers appointed Mr. J. O. Donner to act in his place. Mr. Tallman, although perfectly satisfied so far as the other classes were concerned, objected to him as judge in the champion dog class upon the ground that he had previously judged the dogs entered, and that the result was a foregone conclusion. Although visitors are entitled to no voice in the matter, the selection of judges being entirely within the province of the committee, the managers, however, allowed the competitors to select a judge that was mutually satisfactory, and they agreed to abide by the decision of Hon. John S. Wise, who decided that Foreman was entitled to the blue. He was in better form than we have seen him this year. Rockingham was also looking well and should have won. Old Thunder was shown, but not for competition. He carries his years well and was fat, but showed lack of grooming. Mr. Donner took the remaining classes, and with two or three exceptions, handled them very well. In the open dog class, Rock, winner of third last year, was placed first. He was shown a trifle low in flesh and his coat was not at its best, neither did he move at all well. Gus Bondhu, looking better than we have ever seen him, was placed second. He is better than Rock, and should have had the place. Mack B., third, and Mandan, reserve, are also better than Rock. He should have been content with the reserve card. All are well-known. Bob White and Glen Rock, both vhc., are also well-known. Count Ranger, also vhc., is a taking color, and has good loin, legs and feet. He is rather plain in head and a bit shallow in chest. Patch, hc., is fairly well made, with good legs and feet. Buckeye II., also hc., is rather a nice dog with a plain head. Clyde T. also received the two letters; he is a fair specimen with an ordinary head and straight stifle. Shot, c., we failed to find in his stall. Dan, c., is a big dog with many good points; he would not have disgraced the two letters. Carl Dale, also c., deserved his card for his good head. Prince Imperial, Prince Jester, Roderigo and Knight of Snowden were absent. The bitch class brought out two good ones in Daisy and Cora of Wetherall. Daisy, placed first, is a very taking looking animal; she has a nice coat and is of good color, with a beautiful neck, the best of shoulders, good chest, bone, forelegs and feet, her ribs are just the least bit too much sprung, giving her the appearance of being slightly round in barrel; her head is not a good one, too short in skull for width, too full in cheek and lacking in stop; she might be better just behind top of shoulder and has a weak spot at back rib; there is not bend enough at hocks, which are not quite clean enough; she also carries her tail badly; she shows lots of quality, and take her all round she is a very nice bitch; the faults mentioned, except in head and tail, not being great in degree. Cora, placed second, should have been first, as she is the better bitch; she has a wonderful head, good neck, shoulders, chest, back, loin, legs, feet and tail; she is well balanced and moves easier than Daisy; she is out of coat and the lack of it on her chest gives her the appearance of being a bit leggy; she is not quite so well sprung in ribs as we like to see; she has recently arrived from England and was not in first-class form; should she show up in good shape next year we shall look to see her sweep the deck. Rosey, placed third, was in better condition than at Cleveland, and deserved her place. Dashing Belle, reserve, was looking well. Bess M., vhc., is well made, but coarse. Chesten, also vhc., was shown too thin; she is well formed, with a plain head, Daisy Laverack, well known, also received the three letters. Leindor, heavily marked with black, was hc.; she received all that she deserved. Mirth Elgin, a very fair lemon and white, also received the two letters, as did old Cornelia, looking very well for her years. Alice Dale received only a single letter; one or even two more would not have been out of place. Drncy, unnoticed, did not show up at all well. She is a very well-made bitch, with capital legs and feet; she is a bit plain in head, but just about as good as any of the vhc.s. Addie M., also unnoticed, was nearly as good, and Fannie M. we thought worth a card. Lillian was absent. In the dog puppy class, over 12 and under 18 months, first went to Draco, a good-looking son of Dash III. Ned, placed second, has a plain head, but otherwise he is quite fair. The reserve went to Prince Dash, winner of first at Newark. He was looking fairly well and

came very close to the winners. Druid's Rock, hc., was shown too thin. Warwick, also hc., is a bit leggy and lathy, but may improve. Shot, c., is a strong coarse puppy. The bitches were few and poor. Vhc. was all that the best one could do. The class for dogs and bitches under 12 months was better in numbers and contained several quite promising ones. First went to Daisy Foreman, greatly improved since New Haven, where she received vhc. Countess Leah, placed second, is a nice bitch, a bit shallow in chest. Reserve went to Chintz, a well built, rather coarse dog, not in good condition. Gath Dale, vhc., promises well and was worth his card. Prince Rockingham, also vhc., was lucky by one letter. He has a good coat, a moderate head, good legs and feet and loin. He is too straight behind and has a broken tail, and wants a year to mature. Lulu also received three letters. She is well known. We liked Rock Glen, hc. He also needs a year to fill out, when we shall expect to see him higher up. There was nothing else in the class that calls for special notice.

BLACK AND TAN SETTERS—(MR. GLOVER).

There were 38 black and tan setters entered with three absentees. In the champion class Argus was absent, and Royal Duke had a walkover. The open dog class was a more even looking lot than we have seen in the ring in some time. Mont, winner of first, is a new comer. He is a nice dog, with a fair head, well put together, with good coat and color and capital legs and feet. Second and third went to Phil and Don, both well-known. They were looking well. Friedlander's Don, reserve, is a fairly well-made dog, with good head, legs and feet. Bruce, vhc., won third here two years ago. He has grown coarse and his coat was not in good condition. Jim, hc., has a good head and lots of bone. He is heavy at shoulders and out at elbows, and might be better in feet. Dash, c., is fairly good with a sour expression, and a little off in color and markings. Macbeth, also c., is a nice-looking dog with a fair head. He is a trifle shallow in chest. The bitches were not so good as the dogs. First went to Madge, looking better than we have ever seen her. Jip, winner of second, is a moderate specimen with too much tan on head. Crenmore, winner of third, was vhc. at Newark. Perley won in the champion class here two years ago. She has grown wide in front and does not move well. She was shown too fat. There was nothing else in the class worthy notice. The puppies were not a very good lot. The winner has a fair head with plenty of bone and good legs and feet. If he goes all right he will do to show again. These classes were well judged.

IRISH SETTERS—(MR. GLOVER).

There were sixty-seven Irish setters entered, seventeen less than last year. All were present except four. In the champion dog class Elcho, Jr. beat Blarney and Chief. All were in good form. The famous Berkley, looking very well, was also in this class, but not for competition. In the bitch class Reeta and Trix were not for competition, leaving the battle to Molly Bawn and Faun. The former won and soon afterward changed owners. The price paid was \$400. In the open dog class first went to Bruce, looking his best. Burke, winner of second, has greatly improved since last year. He is a bit wide in skull and lacks stop, but otherwise is quite good. Third went to Tim, notwithstanding his bad condition. We should like to see this dog in good form, as we think him about as good as the best. Glenclaire, vhc., is a grand young dog not yet fully mature; he was several pounds heavier than at Hartford, and was greatly improved in appearance. We thought him fully as good as Burke, and had he been given equal second with him, no fault could have been found. He has not quite stop enough and carries his tail too high. Gerald, also vhc., beat Glenclaire at Hartford, but cannot do it when they are in equal condition. Chief II. got all he deserved. He is not quite up to the others. Glencho Boy, hc., is better than Chief II. and might have exchanged places with him. Patsy also received hc., just about his place in this company. Glen Elcho and Pat Glencho, both hc., were well placed. In the bitch class first went to the well known Hazel; she was looking well and deserved the place. Lorna, looking well, was second. Rue, placed third, we thought good enough for second. She has a nice clean cut head and has no serious faults. She is a little light in color, but as she is only a year old she will undoubtedly improve in this respect. If nothing befalls her we shall expect to see her well to the front another year. Jessie, looking well, was given vhc. Rose of Killarney, also vhc., was lucky. She is a pretty little bitch, but not good enough for such company. Daphne and Nellie, both hc., are much better and fairly deserved another letter each. Bessie Glencho, also hc., has a good head and deserves the card. Nellie Husted, unnoticed, should have been in the money. Meg, c., is too short in head. Youbee and Miss were absent. The dog puppies were a very ordinary lot. The two winning bitches promise to make something good. Mr. Glover handled these classes fairly well.

CHESAPEAKE BAY DOGS.

There was only one entry in this class and she was absent.

SPANIELS—(MR. KIRK).

The spaniel classes filled unusually well. There were seventy-nine entries, with only six absentees. The Irish water spaniels had one representative—a poor specimen. The Clumber classes were well divided up, there being a champion class and an open class for dogs and one for bitches, but the Clumber men did not support them as expected, there being only five entries. Newcastle took his champion honors easily; he was looking well. Punch, second in the open class, had to our mind, a clean win over Bateman, who got first; Bateman's short body and short ears handicap him; Punch is improving. In the bitch class Tyne received first over Kolena, a very small specimen, poor in head. The class for champion field spaniels dogs contained but one entry, Black Prince; he was in good show form. The corresponding bitch class contained only Newton Abbot Lady; she was looking better than we have ever seen her. In the open class for dogs and bitches Black Beau, Jr., won, under his new name. Second went to Dush II., a much improved dog from his last year's form; his ears are a bit short and body perhaps a trifle long in the wrong place, but otherwise, if shown in better condition and with his tail docked, would press the winner closely. Reserve went to Lady Abbot; she would be improved with a little more substance; she has a nice coat. Jim, vhc., is light of eye and high on his legs, but has an unusually fine coat. Hornell Mikado is a black and white with many good points; we have criticised him before; he got vhc. Black Joe, hc., is short-bodied and high on the legs. The class for champion cockers contained four entries. Black Pete won hands down. Silk is much improved. Marion and Brahmin were shown well. In the open class for dogs, liver or black, first went to Doc; we have described him before. Obo, Jr., received second, and Ned Obo vhc. We do not agree with the judge in this decision. Obo, Jr., is short of ears and out at elbows, while Ned is a compact little dog, with plenty of substance, a good coat and a fair head, barring his being undershot. Sweep, hc., has a nice coat, but ears set on too high. Hornell Jock is poor in head. In the bitch class Woodstock Nora was placed over Miss Obo II., a mistake, we think. While Nora beats Miss Obo a bit in body, the latter's beautiful head should have carried her through. Good bodies are easier to breed than good heads. Vhc. reserve went to Suzette, a nice bodied little bitch, but a little weak in the head and lacking substance. Belle, vhc., has a poor head. In the class for other than liver or black first was won by Little Red Rover. He made his debut at Newark and improves on acquaintance. Second went to Hornell Belle III. Her body is good, but her head is bad; her coat is good, but rather short. Don, vhc., deserved his card. He is a bit high and off in head. Prince Hal, c., should have fared better, and Blarney, a liver and white of the working type, should have had a card. The dog puppy class contained several good ones, and was well judged.

Premier honors went to Doc, Little Red Rover and Hornell Mikado coming next in the order named. They all were in the open classes. Gath we did not think much of, and Romeo might have had another letter. In the bitch puppy class Woodstock Nora won, with Suzette second and Lady Abbot the reserve. They are three nice puppies and were well to the fore in the aged class. Vhc. went to Young Belle. She is good in body, but high on her legs and snipy. Juliet, hc., is high, but has a fair head. Vere, c., lacks substance. Taking the spaniels all in all, they were a fair lot, with many individual good ones. The number entered has never been equalled in this country.

FOXHOUNDS—(SIR BACHE CUNARD).

There were fourteen entries in this class, which was divided into dogs and bitches. They were the best lot we have ever seen here. The Essex County Hunt showed a couple, the Meadow Brook Kennels two and a half, and the Montreal Hunt two couple, all typical hounds, and a workmanlike looking lot they were. Those of the Montreal Hunt were in the pink of condition for work, with muscles as hard as iron. The others had more flesh and were perhaps in better show form. The dogs were well placed. Airy, vhc., is a bit long between couplings and too flat-ribbed or he would have been better placed; his head and stern are about as good as any. In the bitch class Scandal, winner of first, is not so good in chest and stern as Hasty, placed second, but has a trifle the best of her in head. The legs and feet of all the winners were well worth studying, as better are seldom seen.

BEAGLES—(DR. DOWNEY).

There were thirty-one beagles entered, with five absentees. This number has been exceeded but once, in 1881 there were thirty-six entries. The quality all through was better than we have before seen at New York. In the champion class Little Duke won over Bannerman and Mischief. Both of the former are getting soft in coat and need a season's work. In the open dog class Rattler, well-known, was placed first. Racer, Jr., winner of second, is a very nice puppy. If he improves as he ought he will beat anything in the class next year. Trailer, looking well, except that he was too fat, received third and Leader, in good condition, was vhc. Both of these dogs are well known. Jupiter, also vhc., is a nice dog, with a good head, except that it is too coarse below eye, good body, coat and loin and excellent legs and feet. Tony Weller, unnoticed, deserved mention. With the exception of a little too much length between couplings, he is a fair little hound. The bitch class brought out the newly imported Myrtle. She has won several prizes in England, among them is a first at the Crystal Palace. She is the best importation we have seen. She is weak in head, too small in eyes and ears and not quite right in coat. Otherwise she is very good indeed. She was shown too fat. Jessie, placed second, crowded the winner closely. She has a better head and is about as good in other respects. Chase, looking fairly well, made a very good third. Virginia, vhc., is quite a fair bitch, except that she is too snipy. Vixen, hc., we thought just about good enough for another letter. Rye, unnoticed, we also liked for the three letters. Except that her ears are badly carried not much fault can be found with her. Magnet, also unnoticed, was heavy in whelp and should not have been shown. There was not much to choose between the two puppies, neither are good. Theo, the winner, is bad in head and bowlegged, while Belle is round in barrel and a bit sway-backed. The classes were well handled. There were four basset hounds shown. Bertrand and Nemours, both well-known, were first and second. Jacques, unnoticed, was worth a card.

DACHSHUNDE—(DR. DOWNEY).

There were ten entries in this class, which was divided. In the dog class, Rubenstein, the Hartford winner, was much the best in the class. He is a long, low dog, good in crook, bone and skin, and above the average in head. Downy, placed second, is quite a fair dog, too tight in skin. Diana, the winning bitch, also won at Newark. The quality of the class was above the average.

FOX-TERRIERS—(MR. W. RUTHERFORD).

There were two entries in the champion class, Fennel and Belgrave Primrose, and the judge, true to his old love, gave the prize to Primrose. Fennel was shown much too fat, but we cannot indorse the award. Richmond Olive was alone in the bitch class. The open dog class was above the average, and contained some good specimens. Bacchanal, first prize, occupied the position he should have held at Boston and Hartford. He is the best dog in America. Valet, second, is a nailing good dog without any conspicuous fault, when examined point by point, but when taken as a whole he is found very lacking in terrier character. It was the same with old Rattler; nobody was able to find a very weak spot in him, but he was never quite a "terrier." Shovel, third prize, is faulty in skull and stands too high in front, but he shows far more true terrier character than his kennel companion, and we would have placed him second and Valet third. Rustie Flash, vhc. and reserve, has a bad eye and is too big and coarse. Regent Vox, vhc., is leggy and light and faulty in head. Baby Jack, vhc., is well known. Mixture Agent is long cast and faulty in skull. Banquo, hc., is too big and faulty in skull and eyes. Somerset Mike, hc., is faulty in head and lacks character. Spot, c., was out-classed in such company. Regal, c., is faulty before the eyes, has poor feet and a sleepy expression. Clover Turk, hc., is too big and is faulty in head, ears, and expression; his legs and feet will do. Diadem, first in the bitch class, is a recent importation and is backed by a first class English record. We expected to find a much better specimen. She must have been at her best when a puppy or from that time up to two years old. She has grown very cheery, is a trifle round in skull and does not carry her ears at all well. Her feet are by no means first rate, and she is light in bone and faulty in eyes. She is of nice size, has a good body, a working jacket, carries herself well, and is a terrier. Marguerite, second prize, was fully described in our Hartford report. We would have placed her third on this occasion. Delta, third prize, is a wreck and should not have been noticed for the very simple reason that a broken up dog without a tooth in its mouth is incapable of doing a terrier's work. What Delta once was, and what she now is, are two very different things. We would have placed Nina, vhc. and reserve, second. Clover Fidget, hc., is light in bone, faulty in feet, wide in front and does not carry her ears well. Clover Belle, vhc., faulty in head and ears, is well known. Lulu, hc., is light in limb, faulty in body, and deficient in character. There were eight entries in the class for wire-haired dogs and bitches and the quality was fairly good. Bundle, placed first, has been a good bitch, but her day is gone, and her bad mouth should have put her back. Trophy, second, is fairly good, faulty in loin, wide in front. He should have been first. New Year's Day, vhc., would have been our choice for first, had he been in condition, but he was in poor form, having lost most of his coat in Philadelphia. Mystic has a bad mouth for a youngster, and is not straight in front. Clover Turk, hc. in the open class, was first in the puppy, and Cocaine, faulty in head and ears and light in middle, was second. Yankee, c., was much the best puppy in the class. He is rather too cloddy all over, but was away ahead of the rest. Mac, c., is a big leggy dog, with bad ears and eyes, and he shows very little character. This was a poor class. Nellie was much the best of the bitches. She is rather light of limb, wide in front, and faulty in expression. The others are not deserving of notice and the class was about the worst we have ever seen at a large show.

COLLIES—(DR. DOWNEY).

Much dissatisfaction was expressed over the awards in these classes; but with the exception of the absurd decision in favor of Robin Adair over Royboy, we failed to find more

than a few mistakes, and conclude that the awarding of almost every prize to a member of the W. K. C. had something to do with the complaints. There were two entries in the champion dog class, and if ever there was any doubt as to Dr. Downey's ability as a judge of collies it was removed when he placed Robin Adair over Royboy. Lady of the Lake was much the best of the three bitches shown in the champion bitch class. The open dog class was a good one, and Glengarry, a very nice young dog, was very properly placed first. We fear he is growing coarser in head, and that he is at his best; but we hope not, and especially so as one of his owners, although very successful with his bitches, has been unlucky in buying and breeding good-looking dogs. Success, second prize, was in his right place. He is a bit faulty at both ends, but is of good type and is a good dog. Craft, third prize, got more than he deserved; the place belonged to Nullamore, vhc. Craft has a very scanty coat, but Nullamore excels in that essential, and is a much better dog. His head is faulty and he does not move well. Joe Nettles deserved a card. Aramis, hc., is very faulty in head and coat. Kolly B. is soft in coat. Con, not mentioned, is a better dog than either Nigger or Aramis. Laddy, although not in very good condition, should have been noticed. First in the bitch class went to Daisy Dean, faulty in head, ears and coat. Lass o' Gowrie, short and soft in coat and in bad form, should not have been second. We preferred Fairy—too strong in head and heavy in ears—for the place. Lass o' Lowrie, third prize, has bad ears and is very soft in coat. Mavis, c., is a poor specimen, being very faulty in ears, loin and feet; she stands out at the elbows. Norma, a well-bred one, has bad ears and is swayed back. This was a poor class. In the class for dog puppies Glengarry had a very easy win. Sigma, second prize, is faulty in hocks and soft in coat. We liked Balmoral, not noticed, as well as anything in the class outside of Glengarry, but the judge overlooked his many good points and gave him to two worse specimens from same kennel. Gifford, vhc., is a niceish puppy, too straight behind and faulty in ears. This was a fairly good class. Lady Ellis, a sweet little bitch, scored an easy first in the next class; it is a pity her hocks are so bad. Mabel, given second, is not so good in head as her kennel companion, but was properly placed. There was nothing good looking behind them.

BULLDOGS—(MR. KIRK).

Boz, Ben, Robinson Crusoe and Tippoo made the champion class a good one. We like Tippoo's grand head better than Crusoe's, but the last-named is not so leggy and was in capital condition. Boz is always a hard dog to beat, and holds his own in the best company. Bellissima was alone in the bitch class. She is a host in herself. Bendigo, first prize in the open dog class, is not one of our sort. He has bad eyes, terrier ears, and his elbows are not thrown out as they should be. Dick Fuller, was our choice for first, and Hamlet, short in face, but lacking in chop, was about second best. Bellona was about the best of the bitches but she is sadly deficient in volume of skull and muzzle, and is too long in face. Norwich Bess, second prize, is much better in skull than Bellona, but her muzzle is very shallow. Rose, third prize, is a long way removed from first-class form. The puppies were a poor class; every one is too long in head. Boz II., hc., may make the best dog of the lot.

BULL-TERRIERS—(MR. KIRK).

Count and Victoria were the only entries in the champion classes for heavy-weights, and there was nothing very brilliant in the open classes. Earl, faulty at both ends, was the best of the dogs, and Judas, very faulty in head, was second best. Lord Nelson, a patched dog, is faulty in head, and the same remarks apply to Punch, vhc. Anthony, hc., was not in good shape; he is cheeky and faulty before the eyes. For reasons that must have been apparent to Mr. Kirk as to the lookers on, Modjeska should not have taken a prize. White Violet, second, should have been first. She was described in our New Haven report. White Rose, hc., should have been second. She is faulty in eyes and before them, out at elbows and is not good in tail. Little Maggie was the best of the light weights. Bess, second, is only eight months old and will be over weight when matured. She is faulty in muzzle and eyes. A Chicago paper has just discovered that bull-terriers should be narrow in chest, consequently Mr. Kirk's decision in favor of Bess for second prize is certain to be indorsed. Nellie, third, is out at elbows, full in eyes and very faulty before them. Bess, second in this class, was properly placed first in a wretched class of three puppies.

BLACK AND TAN TERRIERS—(MR. KIRK).

Queen, a niceish bitch, was placed first; she is weak in muzzle, too leggy and light, and has no thumb marks. Bessy, second prize, was the best terrier in the class; she is a trifle cheeky and wide in front, but is a good bitch. Squaw, vhc., is above the average in good looks; she is too cheeky. Britts is too smutty in color and his head is very faulty.

SCOTCH, HARD-HAIRED, DANDIE DINMONT, IRISH, BEDLINGTON AND SKYE TERRIERS—(MR. KIRK).

A brace of Airedale terriers were shown in the first class; both are faulty in head.

Of the three Dandies entered we failed to find a really good specimen, although Badger II. is above the average; his coat is too soft. Kelpie is faulty in head and coat.

Irish terriers were badly judged. Sheila, first prize, is very faulty in head, ears, expression and coat, and was not looking well. Evictor, second prize, was away ahead of the class; his head is not quite right, but in coat, color, body, legs, feet, size and carriage, he smothered his opponents and was the only dog in the class with a decent beard. Garryowen, c., has grown all wrong. Erin, hc., is too weedy, but was about second best, and Tina, c., faulty in head, short of coat, and light in bone, was little, if any, behind Sheila.

Sentinel, the well-known son of Pioneer and Dusky, was alone in the class for Bedlington dogs, and the same owner's good bitch Tynesider II. was the best of the bitches. Domino, second prize, is a nice bitch, but is not so good as the winner in head, eyes, tuft, bone or shoulders. Cinder, c., was outclassed in such company.

Jim was alone in the champion class for Skyes, and Phenix, first at this show last year, was again first in the open class. Topsy, second prize, is short in coat. Teenie, roached in back and faulty in coat, was placed equal with Topsy; we like the last-named better. Chaucer, c., is fluffy in coat. Tazzie, vhc., is soft in coat. Mopsey, hc., is faulty at both ends and is soft in coat.

PUGS—(MR. KIRK).

Mr. Kirk's awards in these classes were very badly received by a large majority of exhibitors. He was evidently in a hurry to get home, and the result was injustice to exhibitors and bitter complaints against himself. Pugs have never been a specialty with Mr. Kirk, and knowing this, he should have been very careful in handling them; whereas, he rushed his classes, and awarded at random prizes to every type of dog under the sun. Master Tragedy, first prize, although not yet in good condition, was the best dog in the class. He was fully described in our New Haven report. James G. Blaine, second prize, is not a good one. He is faulty in muzzle, wrinkles, ears and color. Sancho, third prize (breeder and pedigree unknown), is not a show dog. Punch (Kisteman's) vhc., is not a show dog and was not worth a card. He is a big, smutty, bad-headed specimen, and is very faulty in head and ears. Moss, in the next cage, although not noticed, is a better dog, poor specimen as he is. Pert, c., is a big, leggy animal, faulty in eyes, ears and tail. He was not worth a card. Punch (Burke's), c., is another wretched specimen, big, leggy, and very faulty in ears, eyes and tail. Surles's Duke II. and Rob Roy were each given hc. cards. This is all wrong, as Duke II. is a much better dog than Rob Roy and was about second best in the class. Punch (Cassidy's), c., certainly is a better

dog than Kisteman's Punch or Burke's. This must not be taken as a compliment, for he is very faulty in muzzle, wrinkles and trace. Jim Crow, an ordinary specimen, very faulty in head, ears and markings, is a better specimen than several of the more fortunate ones. Scamp, hc., is a better dog than Sancho, third prize, or Punch, vhc. He is faulty in muzzle. What's That, first prize in the bitch class, was correctly placed, but the balance of the class was slaughtered. Beauty, second prize, is a big, leggy specimen, faulty in ears and very smutty. Tra-la-la, hc., should have scored a very easy second. This bitch is well known. Fannie, hc., is faulty in muzzle, eyes, carriage of ears and in trace. Nellie D. c., is a wretched specimen, and is not worth a card in any company. Her ears are as long as a beagle's, she is smutty in color, and has a head more like a fox-terrier than a pug. Mr. Kirk could not be serious in commending such an animal. Flora, third prize, is a very poor specimen and should not have been noticed; she has a bad head, whit- toes, faulty ears, white vent, is leggy and stands badly on her forelegs. What's That, the first prize winner, is faulty in ears, coat, trace and markings. The puppy class contained a lot of mongrel-looking animals, and the prize should have been withheld. Tiny was absent.

YORKSHIRE TERRIERS—(MR. KIRK).

The first prize winner in the class for dogs is neither a blue and tan or a silver; he has white legs, tanned ears, a light face and a blue back. Ben, second prize, is short in coat and faulty in color; he should have been first. Young Hero is rather long in back and is short of coat and light in color; he should have been second. Lancashire Star, third prize, is short in coat, long in back, and faulty in color, too dark on the back, and not rich enough in tan on head and legs. Billy, vhc., is short of coat, and has no head color. Priz, c., has a bad head, is leggy and faulty in coat, color and back; he was not worth a card. The winner in the bitch class is neither a blue and tan or a silver, but was about the best of a wretched lot. The second and third prize winners, two poor specimens, faulty in coat and color, should have been changed places.

TOY TERRIERS—(MR. KIRK).

This class was very badly handled. Prince, first, entered as blue and tan, is a mongrel and the same may be said of Monarch, second prize. The last named is a white animal with a round skull, full black eyes and the coat of a wire-haired fox-terrier. We questioned the owner as to the breed of the animal in question and he replied: "I give it up." So do we. Dot, c., winner of first at Boston and New Haven, is at least a dog of recognized breed and should have been first. Thos. Moody's highly commended black and tan terrier should have been second, and Dot II., hc., was next best. Fanny, vhc., is not so good as the highly commended dog from the same kennel.

TOY SPANIELS—(MR. KIRK).

Jumbo II., the well-known English winner, was absent. It was easy to see that of the others in the class, Roscius, hc., was much the best. This dog was first at Birmingham and the Royal Aquarium show last year, and his successful career was continued at New Haven and Hartford. Clifton Belle, first prize, cannot compare with him in good looks. She is faulty in skull, muzzle, ears and color. Milwaukee Charlie, second prize, was rightly placed. He is not nearly so good, either in skull, muzzle or eyes, as Roscius. Duke, hc., was third best. His hind parts are faulty, or we would place him over Milwaukee Charlie. It is a farce to place a bitch like Dolly, vhc., over Roscius. She beats him in two points, size and ears. The two Blueheims were properly placed. Jap, c., was the best Japanese spaniel in the class, and in the class for rubys or Prince Charles spaniels, Sister Sally, hc., a fairly good specimen of the former variety, should have won. Lilly, first prize, is a moderate Prince Charles, faulty in head, feather and trill. Nora, second prize, is not very good in head. We like her as well as the winner.

ITALIAN GREYHOUNDS—(MR. KIRK).

The winner in this class is not an Italian greyhound but a mongrel terrier. Fanny, second prize, was in wretched condition. Zephyr, hc., is a plain white puppy. Dido, c., is as big as a Waterloo cup winner. The prizes should have been withheld.

POODLES—(MR. HECKSHER).

Styx, a very grand specimen, was first in the dog class. This is one of the best dogs we have ever seen. Fritz, second prize, is a fairly good specimen although much below the first-class form of the winner. Jack, vhc., is not close enough in curl. All prizes were withheld in the bitch class. Jet II., vhc., was good enough for first prize at the same show last year, and we are not aware that she has deteriorated. In the class for poodles other than black there was only one entry and the prize was awarded although the dog is not nearly so good looking as Jet II.

MISCELLANEOUS—(MR. TUCKER).

The judging of these classes was the greatest farce we have ever witnessed. Mr. Tucker, who frankly admits he knows nothing about the dogs exhibited, should not have allowed himself to be prevailed on to judge them. Of the eighteen dogs exhibited, most of which were mongrels, only two were considered unworthy of notice. Sir Lucifer, a bobtail sheep-dog, Kuma, a fairly good Chow Chow, and Belle Tinker, the best retriever we have seen in this country, should have been placed "equal first," and commended cards should have gone to Mr. Brasher's Dalmatians. Don, vhc., is a mongrel mastiff, and should not have been allowed to compete in the class. Wallie, Bruno and Boz are mongrels, and we venture the statement that neither their owners or the judge can give the breed to which they belong. Jim, entered as a "terrier," was second in the light-weight class and was afterward disqualified. The judge then gave second prize to a mongrel Pomeranian that had not been noticed the first time he passed on it. We thought that as Lulu, vhc., a poor white English terrier, had been placed over the Pomeranian when the class was first judged she should have been able to repeat the victory a few minutes later on in the day—another illustration of the glorious uncertainties of dog show awards.

SPECIAL PRIZES.

Many of the awards of the special prizes followed the decisions in the regular classes. Our comments upon the dogs will show that some of these decisions were wrong, and consequently the awards of some of the special prizes were wrongly given. Some persons not well up in St. Bernards claimed that Merchant Prince should have beaten Duke of Leeds; they were wrong, however, as the latter is much the better dog. Sir Anthony was entitled to the special for the best pointer under eighteen months, and Graphic was clearly the best pointer in the show.

The special for the best English setter belonged to Rockingham as did that for the best setter of any breed, won by Elcho Jr. The latter rightly won over Daisy, but could not have beaten Rockingham. The special for the best fox-terrier went to Diadem. We think it would puzzle the judge to explain why. The fight really lay between Richmond Olive and Bacchanal and the bitch should have won. Diadem is of better size than Olive and beats her in length and strength of back. Olive has much the best of it in skull, muzzle, eyes, carriage of ears, legs, feet and bone and is undoubtedly the better terrier. The special for the best field or cocker spaniel should have gone to Miss Obek II.

We published last week a full list of the awards. With the exceptions noted below they were correct: In Newfoundland W. A. Lally's Rocks was vhc. and Juno II. hc. In English setter dogs, L. Shuster, Jr.'s Clyde T. was hc. In collie bitches, A. R. Kyle's Mavis was con. In miscellaneous class over 25lbs., E. Dexter's Belle Tinker was first instead of vhc. In

small class, M. W. Bronson's Fritz was second and Nellie was third instead of vhc.

SPECIAL PRIZES.

Eastern Field Trials Club medal for dogs placed at field trials in America. Best pointer dog, Bang Grace; bitch, Lalla Rookh. Best English setter dog, Foreman; bitch, Daisy Laverack. Best Irish setter dog, Chief; bitch, Meg.

Best kennel pointers, Graphic Kennels. English setters, Blackstone Kennels. Irish, Claire-Reeta Kennels. Black and tan did not fill. Best black English setter, C. Eldridge's Turk. Best pointer under 18 mos., Consolation. Best English setter, Daisy. Best Irish setter, Elcho, Jr. Best black and tan setter, Royal Duke. Best rough-coated St. Bernard, Duke of Leeds. Best smooth-coated, Leila. Best mastiff, Lady Gladys. Best collie, Glengarry. Best field or cocker spaniel (two), Newton Abbot Lady. Best fox terrier, Diadem. Best brace of field spaniels, Black Prince and Newton Abbot Lady. Best kennel mastiffs, R. J. Aston. Best mastiff bred in America, Boss. Best mastiff sired by Homer, Pharaoh. Best kennel St. Bernards, Hornetaze Kennels. Best pointer sired by Graphic, Sir Anthony. Best sired by Bang Bang, Consolation. Best English setter with field trial record, Foreman. Best kennel English setters, Blackstone Kennels. Best English setter sired by Rockingham, Prince Rockingham. Best English setter dog under 12 months, Prince Rockingham. Best English setter, Daisy. Best k-mel black and tan setters, Chas. S. Fitch. Best Irish setter, Elcho, Jr. Best collie dog, Glengarry. Best pair dachshunde, Herzog and Diana. Best Blenheim spaniel, King Victor. Best pug, Bradford Ruby. Best beagle in open classes over 12 inches, Rattler. Best pointer, Robert le Diable.

American Fox-terrier specials (members only).—Best fox-terrier in champion classes, Richmond Olive. Best dog, in open class, Bacchanal. Best bitch in open class, Diadem. Best dog puppy, Clover Turk. Best bitch puppy, withheld. Best wire-haired, Fyke. Best American bred (two) Baby Jack. Best in show, Diadem.

Best kennel collies, Hempstead Farm Co. Best collie bitch, Lady of the Lake. Best St. Bernard, Leila.

AMERICAN KENNEL CLUB.

A REGULAR meeting of the executive committee of the American Kennel Club was held at the Hoffman House on the afternoon of May 5. In the absence of President Smith Mr. L. L. Morgan was called to the chair. The clubs represented were as follows: New Haven, L. L. Morgan; Philadelphia, W. H. Child; Pittsburgh, W. Wade; Cleveland and New Jersey, C. J. Peshall; Hartford, A. C. Collins. The minutes of the last meeting were read and adopted. The treasurer was not present and had furnished no report. Dr. H. M. Perry having appealed from the sentence of disqualification passed upon him by the New England K. C., Mr. A. C. Collins was appointed a committee of one to collect the evidence in the case and submit it to the A. K. C. at its next meeting. A committee was appointed to collect the evidence respecting the charge brought against L. F. Whitman for retaining special prize money intrusted to his care for payment to the winner of the prize. The application of the Rhode Island Kennel Club for admission to the A. K. C. was referred to the committee on credentials. Mr. Osborn offered his resignation as secretary, which was accepted with the thanks of his associates for past services. Mr. A. P. Vredenburgh was elected to fill the vacancy. Mr. Peshall gave notice that at the next meeting of the A. K. C. he would bring forward a motion forbidding the appointment of any person to act as a judge at a show given by the club of which he is a member, or who is directly or indirectly interested in any dog entered in his classes. Mr. Morgan gave notice that at the next meeting of the club he would move that the offices of the secretary and treasurer be combined. The secretary was instructed to notify the N. E. K. C. that no notice had been taken of his communication respecting the entries of Sensation and Watty at its show of 1885. The championship rule was amended so as to authorize show committees to transfer a dog from the open to the champion, which had become qualified subsequent to the date of the closing of entries. Rule 2 was also amended by making it read, "And, if known, its date of birth," etc. Also the striking out of the word "first" in the sentence calling for the giving of the previous name when a dog's name is changed. The next meeting of the club will be the annual one for the election of officers, and will be held at the Hoffman House on May 29, at 8 P. M.

SPRATTS BISCUITS.—St. Louis, May 7.—*Editor Forest and Stream:* I have just read Mr. Watson's letter in your issue of the 26th ult., relating his experience in the use of Spratts dog cakes. For the past three years I have used these biscuits almost exclusively in feeding my dogs, and during that time not one has been in the least degree sick. On the contrary, they are in good condition at all times, and eat their allowance of these biscuits with seeming relish. I regard them as a wholesome, cheap and convenient food, and think Mr. Watson's dogs were sick from some cause other than eating Spratts biscuits.—J. A. LONG.

EASTERN FIELD TRIALS CLUB.—The regular monthly meeting of the Board of Governors of the Eastern Field Trials Club was held at the St. James Hotel, New York, on Tuesday evening. Messrs. Chas. F. Watson and John Simpkins were elected members, and Mr. D. C. Bergundthal was unanimously elected a life member. The names of six other gentlemen were proposed for membership. After mutual congratulations upon the brilliant prospects of the Derby, the Board adjourned to the second Tuesday of September.

KENNEL NOTES.—Owing to the crowded state of our columns during the show season Kennel Notes have accumulated on our hands. We hope, however, to be able to publish them all in a short time, and trust our readers will excuse the unavoidable delay.

THE EASTERN FIELD TRIALS DERBY.—The entries for the Derby of the Eastern Field Trials Club number one hundred and four, with probably more to come in later mails. We hope to be able to publish a full list next week.

THE WAVERLY DOG SHOW.—*Editor Forest and Stream:* The New Jersey Kennel Club claim Sept. 14, 15, 16 and 17, 1886, for their fall dog show, to be held at Waverly, N. J.—C. J. PESHALL, President.

HARTFORD DOG SHOW CATALOGUES.—*Editor Forest and Stream:* On receipt of three cents for postage, we will send catalogue of our late show.—HARTFORD KENNEL CLUB, A. C. COLLINS, Secretary.

THE ST. LOUIS KENNEL CLUB.—May 7, 1886.—*Editor Forest and Stream:* The St. Louis Kennel Club is not a member of the American Kennel Club.—A. P. VREDENBURGH, Secretary A. K. C.

A curious story comes from Toulouse of a laboring woman who, during her work in the fields, was in the habit of leaving her baby in a shady corner, returning to give the child the breast as opportunity occurred. To protect the child from harm, the dog (a bitch) was left in charge. The mother noticed after a time that the child no longer exhibited the same impatience for the breast as formerly, although its general condition was excellent, and its indifference could not be attributed to a failing appetite. One day, on returning to take charge of her offspring, she was astonished to see the dog standing tranquilly across the child and sucking it. The mother, who saw no objection to the proceeding, allowed the habit to continue, and the child seemed to thrive on the milk of its novel nurse. The dog exhibited a truly maternal tenderness for the child, and as the child grew older this tenderness was heartily reciprocated.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, May 8.—The attendance at the range at Walnut Hill today was small owing to the inclement weather. The wind blew from 2 o'clock north of the day. A team match was shot between the Arlington Heights Rifle Club and a team from the M. R. A., which resulted in victory for the latter by 13 points. The date of the spring meeting of the M. R. A. has been made June 17, 18 and 19. Following are the scores:

Decimal Off-Hand.		8	10	8	10	8	10	9	6	10	87
J. Francis, D.	8	10	8	10	8	10	9	6	10	87
C. E. Berry, A.	8	6	9	10	9	10	10	10	7	87
R. Reed, D.	8	10	6	7	10	9	10	6	8	84
W. H. Oler, D.	7	8	10	9	7	8	9	9	8	84
J. R. Misan, A.	8	9	10	8	5	7	10	9	7	81
G. Lemmon, A.	8	7	9	7	9	8	8	7	6	76
N. F. Tufts, A.	9	5	10	7	10	6	5	8	7	73
W. Henry, D. (mil)	7	7	6	10	7	9	5	10	7	70

Team Match.											
M. R. A. Team.											
R Reed	7	10	4	7	9	6	6	9	6	10-74
H Severance	8	6	10	7	6	8	4	4	8	5-71
N F Tufts	5	8	6	7	6	9	5	9	6	9-69

J C Holmes	8	2	6	4	5	5	7	7	8	57-336

SPRINGFIELD, May 4.—The second in the series of 50-shot rifle matches between J. L. Paine, C. C. Trimmer and G. E. Morrison, of the Topeka (Kan.) Rifle Club, and L. H. Mayott, S. K. Hindley and T. T. Cartwright, of the Rod and Gun Club here, was won by the Topeka club to-day by the score of 1020 to 1029. The first match having resulted in favor of the Rod and Gun Club, 1038 to 1022. The scores were:

Topeka.											Rod and Gun Club.				
J L Paine.....	65	69	81	70	81	386	T T Cartwright...	73	72	71	64	361			
G E Morrison.....	65	60	70	76	78	349	L H Mayott...	67	75	72	64	342			
C C Trimme...	61	65	58	71	71	325	S K Hindley.	64	69	66	62	326			

The American field target was used. Messrs. Hindley and Cartwright also shot a 20-shot match, Massachusetts target, with Dr. E. L. Spencer and Charles Henty, of the Bunker Hill (Ill.) Rifle Club, and were defeated by a score of 418 to 392. The scores were:

Dr Spencer.....	115	106—221	S K Hindley.....	103	94—197
Charles Hintey.....	103	94—197	T T Cartwright....	106	89—195

Dr. Spencer used his new .35-caliber Bullard Arms Company's single rifle and made 14 consecutive bullseyes. His first score of 115 was a full score, Creedmore count. The 115 is the best 10 consecutive shots that is known to have been made on the Massachusetts target in a match.

THOMASTON, Conn., May 1.—Owing to illness have been unable to forward scores of Empire Rifle Club until this late date. Hope to be more prompt in future. The opening shoot was held April 3. Hunnam decimal target, off-hand, 200yds.: Dunbar 75, Lemmon 72, Carr 67, Williams 59.

April 10.—Lemmon 80, Thomas 78, Canfield 68, North 62, Williams 52, Carr 50.

April 17.—Dunbar 76, Williams 74, Lemmon 71, Thomas 66, North 65, April 24.—Thomas 79, Lemmon 76, Bennett 73, Canfield 73, North 66, Dunbar 64, H. Canfield 63, Fox 61, Gilbert 61, Carr 57, Williams 54.

May 1.—A good light, but a tricky wind, veering from four to seven o'clock: W. H. Dunbar 79, E. Thomas 74, F. A. Perkins 71, G. A. Lemmon 69, P. North 61, Carr 57.

A team match of three men each closed the day's shoot. E. Thomas's team: E. Thomas 40, F. A. Perkins 48, F. Carr 30—108. W. H. Dunbar's team: G. A. Lemmon 38, W. H. Dunbar 37, F. P. North 31—106.

May 5.—Teams of 8 men each, 15 shots per man, off-hand, 200yds., Hunnam target. The match was shot during a heavy thunder shower, the wind blowing from all points of the compass.

Canfield shot under a disadvantage by disabling his gun and using a strange one during part of the match.—32 Cal.

WILMINGTON, Del., May 5.—The regular weekly matches of the Wilmington Rifle Club took place this afternoon. Conditions at first match, Creedmore target, 300yds., off-hand, and prizes divided by score classes. After shooting off ties the prizes were awarded as follows: First to H. B. Seeds, second to R. Miller, third to J. Mahoney, fourth to H. Heisel and fifth to W. C. Seeds. The following is the full score:

H. B. Seeds, D.	4445—21	H. Heisel, D.	4434—18
C. Heisel, D.	4345—21	J. Mahoney, D.	4443—18
W. A. Bacon, D.	4353—20	W. C. Seeds, D.	3344—17
R. Miller, D.	4444—20	W. H. Hartore, D.	2943—15
J. E. Seeds, D.	4444—20	W. S. Simmons, D.	4043—15
J. W. Seabury, D.	4413—20	P. Chandler, D.	2923—11
J. Mahoney, D.	4514—19			

The conditions at second match were: Massachusetts target, 200yds., off-hand, and prizes divided according to the highest scores. After deciding this the prizes were awarded as follows: C. Heisel, Sr., first, Robert Miller second, H. B. Seeds third and W. H. Hartore fourth. The full score is as follows:

Brown 98, Perry 96, Watson 62, Koppes 64—602.												
BOSTON, May 3.—The Boston German Rifle Club held its first shoot of the season to-day at its range at Clarendon Hills. The distance is 200 yds., and in the following scores the first three shots were at rest and the other three off-hand, Massachusetts targets:												
A Kocb.....	11	13	19	7	13	7—65						
F Hbbner.....	11	13	17	7	13	7—64						
J Kimmell.....	11	13	11	11	10	7—65						
G Kraft.....	11	13	10	12	8	9—65

J Harms.....	11	9	8	6	0—47							
O Paehler.....	11	10	9	7	5	0—43						

GARDNER, Mass., May 6.—At the last regular meet of the Gardner Rifle Club they shot a telegraph match with the Jamestown (New York) Rifle Club. The shooting was a standard American target was used. The shooting was off-hand, 200yds., the wind was blowing strong at the time. The totals were as follows: Gardner team: Matthews 82, Goodale 81, Loveland 77, Dodge 72, Newton 68, Ellsworth 67, Nichols 67, Warfield 65, Crabtree 65, Knowlton 61—705. Jamestown team: Martin 76, Ayres 74, Moore 72, Hazeltine 70, Burns 70, Allstrom 69, Brown 68, Perry 66, Watson 62, Koppie 64—682.

BOSTON, May 3.—The Boston German Rifle Club held its first shoot of the season to-day at its range at Clarendon Hills. The distance is 200yds., and in the following scores the first three shots were at rest and the other three off-hand, Massachusetts target:

A. Kocb, D.	11	13	13	11	11	7—65
F. Hubner, D.	11	13	13	11	11	7—64
J. Kimmell, D.	11	13	11	11	10	7—63
G. Krafft, D.	11	13	12	12	8	6—63
A. Pillow, D.	9	12	10	10	6	10—59
C. Hotelmann, D.	10	10	9	11	11	5—58
E. Alther, D.	10	9	10	8	13	5—58
W. R. Schaefer, D.	12	11	11	10	6	5—56
J. Wilfert, D.	10	11	10	9	4	8—50
G. A. Klucken, D.	10	10	11	11	6	9—50
H. Loser, D.	10	10	10	10	11	1—50
K. Klucken, D.	11	11	11	6	8	2—48
J. Harms, D.	11	11	9	8	6	0—45
O. Peubler, D.	11	10	9	7	5	0—42

SPRINGFIELD, Mass., May 6.—The Schuetzenverein did some good shooting at Belden's Range in West Springfield this afternoon. The range will be open every Thursday for shooting and any one desiring to practice at the general target for the June rifle "fest" at Riverside Grove will be welcomed. The best scores were:

F. R. Bull, D.	20	22	16	18	21	15—194
G. E. Barnes, D.	20	22	16	18	21	15—193
M. W. Bull, D.	20	16	17	16	18	17—190
S. Bowers, D.	18	17	23	18	12	5—190

NORTHAMPTON, Mass., May 6.—The local shooting club had its first meet at Lookout Range, Smith's Ferry, to-day, a score of marksmen being present, including members from the Amherst and Easthampton clubs. This is the record of off-hand target shooting indulged in:

NEWARK, N. J., May 6.—John Coppersmith last evening at the Essex range, made the following fine score in 100 consecutive shots: 50-117, 50-115, 50-116, 50-118, 49-115, 50-116, 49-116, 40-114, 49-114, 50-116; a total of 493 Creedmoor, 1,160 ring count. To-day at the Shooting Park, in 100 consecutive shots, at 300 yds., he made a total of 2,173 points.

NEWARK, N. J., May 6.—John Coppersmith last evening at the Essex range, made the following fine score in 100 consecutive shots:

50-100, 50-110, 49-115, 50-110, 49-110, 40-114, 49-114, 50-116; a total of 493.

Creedmore, 1600yds. to-day at the Shooting Park, in 100 consecutive shots, at 300yds., he made a total of 2,172 points.

THE INTERNATIONAL MATCH.—Gulf Hammock, Fla., May 3.—Editor Forest and Stream: I noticed in your issue of April 22, I cannot quite acknowledge your claims to produce the best both long range and military weapons and the best men. In my opinion the English under the tutelage and experience of Mr. Wm. Metford were the first to produce a good muzzleloading long range rifle, the Americans through the aid of the Sharps Rifle Co., produced what was at the time the best breechloading long range rifle in the world, closely followed by the Remington-Blond Co. But I totally deny that the Americans have shown that they can make a military breechloader which is at all equal at 1000yds. to Mr. Metford, and they have until lately, at any rate, ignored his progressive spiral twist which is essential to the success of any long range rifle used without cleaning out between shots, and if used in this country it is certainly an imitation of his. Of course there may have been improvements on it, but I think not in the form of barrel, though the polish of the Sharps barrel when under the regular firing of the British is unequalled. With regard to international matches I should like to make a suggestion. An annual match is too great a strain on riflemen, both in the way of expenses and personal work, and a match every two years would leave the intervening year for rest, practice, and improvement in weapons. I also think it would be much better if matches took place alternately on opposite sides of the Atlantic, irrespective of the winners of any competition. This would give every fourth year a competition at Creedmore or elsewhere in America, and every fourth year a competition at Wimbledon. I hope these suggestions will be taken from an old shooter. I very much regret to hear of the serious illness of my old friend and captain, Sir Henry Halford.—ONE OF THE BRITISH RIFLE TEAM OF 1877.

CREEDMORE.—At the regular meeting of the Board of Directors of the National Rifle Association May 4, it was decided to open the Creedmore range this season to all comers without charge. Formerly not but the members of the Association were allowed to shoot over the range. T. gets will be paid for as in the past. The qualification and champion marksmen's class matches have been set for May 22 and June 5, 6 and 26. The first prize in the champion's match will be a gold marksman's badge, presented this year by the association. The cost of entering either match will be 50 cents. The British Rifle Association has as yet sent no reply to the challenge of the American Association, and in that unsettled condition of affairs on the other side it is thought by the directors as unlikely that a team from there will visit America this year. The rifle practice in the National Guard—First and Second divisions—will be commenced at Creedmore on May 17, the Fourteenth Regiment of Brooklyn taking the lead. The Thirty-second follows on the 20th, and the Thirtieth on the 24th. The Twenty-first and Twenty-second are ordered for the 27th of May. The Twenty-third and Forty-seventh regiments will practice on June 3 and 7. The First division will commence practice on May 18th, and continue on the 21st, 25th and 28th, and June 4, 8, 10, 11, 14, and 15. The assignments of regiments for these days have not yet been announced. Every officer and enlisted man, excepting members of the batteries and musketeers, are required to visit the range at least once during the season for general practice, and, after having once visited either match will be 50 cents. The British Rifle Association has as yet sent no reply to the challenge of the American Association, and in that unsettled condition of affairs on the other side it is thought by the directors as unlikely that a team from there will visit America this year. The British Rifle Association has as yet sent no reply to the challenge of the American Association, and in that unsettled condition of affairs on the other side it is thought by the directors as unlikely that a team from there will visit America this year. The rifle practice in the National Guard—First and Second divisions—will be commenced at Creedmore on May 17, the Fourteenth Regiment of Brooklyn taking the lead. The Thirty-second follows on the 20th, and the Thirtieth on the 24th. The Twenty-first and Twenty-second are ordered for the 27th of May. The Twenty-third and Forty-seventh regiments will practice on June 3 and 7. The First division will commence practice on May 18th, and continue on the 21st, 25th and 28th, and June 4, 8, 10, 11, 14, and 15. The assignments of regiments for these days have not yet been announced. Every officer and enlisted man, excepting members of the batteries and musketeers, are required to visit the range at least once during the season for general practice, and, after having once visited either match will be 50 cents. M. Pasteur's failure to save the life of a Russian peasant who had been bitten by a wolf does not in itself prove that his method of inoculation for rabies is worthless, for the treatment may have been begun at too late a day, or virus cultivated from dogs and rabbits may not be effective in the case of persons bitten by wolves, even if it be of any value when introduced into the systems of persons bitten by dogs known to be mad. There is some difficulty about proving the efficacy of inoculation by positive evidence. A great deal was said about the Newark children who were bitten during the terrible epidemic of rabies that raged for weeks in the *Herald* office. They were inoculated, but it has since been conclusively shown that the biting dog was not mad. Doubtless many other persons who were in no greater danger have been inoculated, but their good health proves nothing. One or two inoculated persons have died of hydrophobia, and they were in all probability bitten by dogs that were really mad. These persons gained nothing by inoculation. M. Pasteur is laboring in an unselfish way for the relief of mankind. Nevertheless, there are indications that he is more successful in saving persons who are not in danger—like the Newark children—than those who are in great need of protection. Freedom from rabies in the case of any inoculated person proves nothing unless it can be shown beyond a doubt that the biting dog was mad, and even when this can be shown, success in a few cases is not a test of the value of inoculation, for only a small proportion of those bitten by rabid dogs ever have hydrophobia.—*N. Y. Times, March 24.*

	Puritan.	Mayflower.
Length on deck.....	95ft.	100ft.
Length on waterline.....	80ft.	85ft.
Extreme beam.....	22ft. 7in.	23ft. 6in.
Least freeboard.....	8ft.	8ft. 2in.
Draft amidships.....	8ft. 2in.	8ft. 2in.
Draft, heel of sternpost.....	8ft.	9ft.
Area midship section.....	80 sq ft.	82 sq. ft.
Displacement.....	105 tons.	110 tons.
Ballast on keel.....	27 tons.	37 tons.
Ballast inside.....	19 tons.	11 tons.
Ballast, total.....	46 tons.	48 tons.

In construction the two boats are very similar, but the Mayflower has been more thoroughly strengthened, and at the same time is somewhat heavier above water. The deck plank run fore and aft. The

Mr. Burgess has also designed a centerboard cat of 22ft., another of 20ft., both to carry outside lead, an 18ft. cat for a Philadelphia yachtsman, and a centerboard cat 20ft. long for Mr. George McManus now building by A. D. Story at East Boston.

The knowing ones can discern the origin of all these queer make-shifs and the bay craft. The pungleie is of Baltimore clipper descent, with a rocker keel, drag and raking post like the British racing cutter. She is never painted black or white, but a light buff with green wales in the north and with brown wales elsewhere. She has a long eye, always called a buryer, and a long, straight, narrow keel. The vessels of the same style, but of the eastern shore of Maryland. Smaller vessels of the same style, with each side hewn out of solid log and the five ends patched out, are a specialty of the York River. They are painted white with black wales and smart, saucy, handy little clippers they are. Above 40ft. the cabin is in the run surmounted by

the usual small house. Under 40ft. It is in the forward end, just abaft the foremast, the hatches to the hold being amidships in either case. A rail of gas pipe is run around the after end of the boat, as bulwarks or waist are dispensed with, the decks being flush and the sea allowed to sweep across to its heart's content, while the clipper with her load of oysters goes pegging away to windward with the stately swing of a cutter. A 60ft bugeye will draw not over 2½ft. aft, and can be trimmed to less, although the northern boats used in deep water dredging are often keels with drag and considerable draft. It is indeed very dirty weather when a bugeye shirks putting to sea.

Hampton, burned by General Magruder during the war upon the approach of the Union troops, has blossomed forth with fresh life, thanks to the oyster trade. Many neat little cottages and frame buildings mark the new era. A canning factory, crab fishery, menhaden fishery, shipyard, the colored Normal School, the Soldier's Home and traffic from Fort Monroe keep up the life of the place. It also boasts some very fair stores and a church built of brick imported from England during colonial days. On Sundays the harbor is crowded with smacks, among them representatives from Statter Island and Long Island Sound in search of seed or loads for Northern markets. The Old Dominion Steamship Co. runs five boats to Norfolk at a steep price. During the ice blockade the Louray rendered some valuable service in picking up frozen darkies in their "kummers," as the canoe is termed, fighting her way through the ice to their assistance. I saw a party of three rescued after considerable labor. They had been out all night, thermometer at 8 degrees, and were icicles from head to foot. Hot coffee and sandwiches were served out to them while they thawed out by the cabin stove and retained their experience in good humor. The average white man would have frozen to death three times while these hardy mariners looked upon the whole thing as a joke. The African may like a warm climate, but he can withstand the cold as well. He may be seen in mid-winter bobbing up and down in a tiny canoe, anchored in the swell of a fierce northwester while he works the wet tongs and hauls forth the oyster from sunrise to dark, more severe and exposed labor than many white men would face.

I will not attempt a description of Norfolk. It is a bright city with a great future, and in my belief destined to become one of the chief marts of the continent. Its prosperity does not depend upon one staple, like Charleston upon cotton, but lumber, coal, oysters, fish, trucking, corn, wool and manufactures all contribute a fast increasing quota to the trade in cotton. With ample water front and water, a temperate climate, rich soil and unsurpassed connections by water and by rail, the advantages of Norfolk as a shipping point are becoming appreciated the world over. Every time I revisit the city fresh evidence of healthy growth presents itself. Were the inducements of the section of which Norfolk is the center more thoroughly placed before the emigrant from abroad, I fancy he would not hesitate between the Arctic regions along the northern boundary with their overproduction of wheat and the easier and more remunerative opportunities of the central belt of this country. The notions that south of Mason and Dixon's line there is no welcome for the settler and less security and respect for the law is a nonsensical piece of Northern provincialism, which has no foundation in fact. Nowhere have I found law and order more strictly and conscientiously enforced than throughout the Southern Atlantic States, and nowhere else is the majesty of the law held in such respect. It is a relief to the Northern man to find a portion of his country where the best and most responsible citizens hold office, and where the administration of public affairs is not given over to an alien rabble.

Provisions and equipments of all sorts are to be had in Norfolk. The James, Chickahominy, Nansemond and tributary creeks, offer plenty of attraction to the yachtsman and sportsman. Quail, duck, geese and deer are still plentiful, though the best lands are posted and permission to shoot is necessary. The Chickahominy, 40 miles up, was reported as swarming with ducks last season, and birds and rabbits are plenty about the headwaters of Back Creek. York River and neighborhood also afford abundant sport. Norfolk harbor has good anchorage for yachts in the Eastern Branch beyond all steamboat traffic. The Navy Yard in Portsmouth is also an attraction, and festivities at the great Hygeia Hotel at Fortress Monroe are within easy reach. A short railroad runs from the city to Virginia Beach, a growing summer resort on the Coney Island plan. Drummond Lake, where perch abound and the angling in general is good, can be reached via canal, and the route south is open into the sounds with their endless miles of rivers and bays down to Beaufort.

I visited the office of the Chesapeake and Albemarle Canal Company, paid a nominal sum and was allowed to sail through on my own hook. One day was devoted to cruising down harbor on a visit to the German sloop war or corvette, Louise. I wish the naval committee of Congress and the corps of constructors could have inspected the vessel. She is only a wooden craft, but for all that so much superior in model, speed and fighting efficiency to the old plugs of our own service that even an unprofessional person could not fail to appreciate how we have been left in the race among shipbuilding nations. The Louise had a ram bow, clean cut hull with low elliptical counter flush with the water as a protection to rudder and screw. Per contra, the new Dolphin of our own service, evolved after a mountain of discussion, showed a high yachtlike overhang, exposing as an excellent target such vital details as rudderpost, rudder and after deadwood. Though the Dolphin is a kind of show boat and the Louise a fighting ship, the latter completely takes the shine out of the Dolphin, for in paint, decorations, brass work and elaborate rigging the German surpassed our largest and finest steam yachts. Even his cutters were models of style and finish equal to any yacht's gig. What with a cleanliness to ship and crew with rided ordinance, Nordenfot multiples mounted on each quarter and in the tops, the Louise was the finest vessel of her class I ever beheld, and I have seen most things that float the world over.

The following day a beam wind of moderate strength saw the Coot jogging up the Western Branch, past the Navy Yard and on to the mouth of the canal. The Elizabeth is tolerably broad and deep and well buoyed in the lower reaches, until you bring up at the entrance of the old Dismal Swamp Canal, where the river takes a sudden turn to the eastward. A mile up the draw of the Norfolk and Western will be found open, except at train time, and you can shoot through without notice. This bridge is an iron structure of such low truss that it speedily showed lameness in the back and had to be shored up extensively. The engineer should never be allowed to design another bridge, for the error in this one is palpable. The river narrows into tortuous turns, though a small boat like the Coot can beat up easily enough. Large vessels must tow. Give the points a good berth. Most of them have flats and stumps. At a sudden turn, where Deep Creek joins the Branch, I spied a buoy about midchannel. The paint was rubbed off and I took the wrong side, spiked up on a stump amidships, the boat jumping out two inches. She wore round, slid off and tried the other side of the buoy with better success, and by afternoon had worked up close to the canal lock, where she was tied up to the shore to await a fair wind through. C. P. K.

BAY OF QUINTE Y. C.—Belleville, Ont., May 6.—Although the yachting spirit is by no means dead in our little city, it is not as strong as it was a very few years ago. This is to be accounted for only on the ground that the expense of maintaining even a small craft is more than the majority of the devotees of the sport care to stand. Hence our local fleet has been dwindling in numbers year by year, until now there are only three yachts of note owned in this city, namely, the Norah, Dauntless and Iolanthe, the former, of which races only at one or two ports, the second not at all and the third regularly. The latest loss to the roll of the B. Q. Y. C. has been the big sloop Atlanta, champion of the lakes, which was recently purchased by Messrs. Ward, J. Eyne and Dave Claus, of Brighton for, it is reported, the beggarly price of \$1,500. In the way of building nothing is said to be in contemplation except a small cruiser by Vice-Commodore Pike, who recently sold his cutter Sylvia to parties in Buffalo. The annual meeting of the Bay of Quinte Y. C. was held on May 5, when Messrs. John Turner and George Brown were elected members of the club. The following officers were unanimously elected: Commodore, R. S. Bell; Vice-Commodore, Wm. Pike; Captain, C. S. Hostage; Secretary, F. S. Campbell; Treasurer, Geo. N. Leavens; Measurers, Geo. N. Leavens and Wm. S. Drewry. Messrs. W. H. Biggar, C. S. Hostage and R. M. Roy were appointed delegates to the Lake Yacht Racing Association, meeting to be held on Saturday, 8th inst. An effort will be made, and there is every reason to believe that it will be successful, to have the first race of the circuit held at Belleville, Wednesday, July 29, or Friday, July 30, were spoken of as desirable dates who has served the club as Hon. Secretary for eleven years and has decided to withdraw from the cares of office, was nominated for the position of Commodore and has declined to accept the position.—PORT TACK.

CAROLINA Y. C.—The officers for 1886, elected on May 3, are: Commodore, Pabrooke Jones; Fleet Captain, Norwood Giles; Flag Captain, Wm. L. Smith, Jr.; Purser, M. S. Willard; Measurer, T. W. Meares; Governing Committee, W. L. Parsley, G. H. Smith, H. M. Bowden; Regatta Committee, H. G. Smallbones, George D. Parsley, J. McRee Cowan; Committee on House and Grounds, H. R. Latimer, Clayton Giles, G. H. Smith. Twenty members were also elected. The club fleet has been divided into two classes, the first to consist of those measuring 20ft. and under to 16ft. and 6in. in length, and the second to embrace yachts of 16ft. 6in. and less. Yachts of the second class may compete for a first class prize, provided the measurer is notified of the intention to thus compete at the time of entering the yacht; but yachts of the first class will not be permitted to enter for a second class prize.

Chesapeake Bugeye.

Chesapeake Canoe.

Hampton Flattie.

Chesapeake Ringier

RIVERSIDE Y. C.—At the regular meeting of the Riverside Y. C. of Jacksonville, on April 30, there were four new members elected. A new set of by-laws was submitted and accepted. Quite a considerable amount of money was raised among the present members, which will be used in improving the club house. Steps were also taken in reference to buying the 35ft. sloop yacht Cheemaun, a well-known boat in and around New York. She is considered one of the ablest and fastest boats of her length. At present she is owned by Mr. Will Fred Porter, who is a member of the R. Y. C., and ex-measurer, but has returned to New York, his old home to live. The yacht Arthur B., owned by Mr. W. L. Davis, was sent to New Berlin, Fla., to be overhauled and a new set of sails made and an additional storm jib put on her, making her one of the finest looking sloop yachts in Southern waters. The club is making good progress and hopes to be in good condition this coming winter to welcome our Northern visitors as they should be. It is also the desire of this club that all owners of yachts anticipating a visit to our waters this next winter will send in their names together with name and rig of yacht, and at or about what time she expects to arrive here; also if said owner or owners wish their names presented for active membership.

KNICKERBOCKER Y. C. SPRING REGATTA.—The spring regatta of the K. Y. C. will be sailed on May 31, starting from the club house at Port Morris. The iron steamboat Sirius will carry the club's guests. All yachts enrolled in the club will be considered as entered for the regatta, and will be classed as follows: Class 1, cabin sloops and cutters 31ft. and over. Class 2, cabin sloops and cutters under 31ft. Class 3, open jib and mainsail yachts, 25ft. and over. Class 4, open jib and mainsail yachts, 21ft. to 25ft. Class 5, open jib and mainsail yachts under 21ft. Class 6, cat-rigged yachts, 21ft. to 25ft. Class 7, cat-rigged yachts 17ft. to 21ft. Class 8, under 17ft. Special class, steam yachts. The course for the 8th class will be to and around Fort Schuyler buoy and return. All other classes to and around Gangway buoy and return. The preparatory gun will be fired at 10:30 A. M. Full sailing directions will appear in programme. A prize will be awarded the winning yacht in each class on time allowance. A silk club signal will be given to the sailing yacht making the fastest time over the Gangway buoy course without time allowance. The regatta committee are Messrs. E. E. Brown, A. Varian and D. M. Winne.

BUFFALO Y. C.—The Buffalo Y. C. have taken a new start this season, and their prospects are much more promising than ever before, as the interest is not confined to a few enthusiasts, but is extending widely among young men. The roll now numbers 75 active and 20 life members, and the fleet includes the schooners May Bell and E. B. Jewett, the sloops Curlew, Iolanthe, Rumble, Turk, Lillie R. and Alarm; the cutters Vera and Sylvia, and the cat One Such. A new club house is now proposed at the foot of Porter avenue, and it is expected that it will be ready early in the summer. The building, designed by Mr. H. M. Reebe, will be 24ft. square and three stories high. Below will be lockers and houses for the yaws. The second floor, with a balcony 7 1/2 ft. wide around it, will be the club room, and the third will be used for storage. On the roof is an open observatory. With a new house and larger fleet the Buffalo Y. C. will be as well settled as any club on the lake, will be in position to devote all its energies to racing and to building up yachting on Lake Erie.

QUAKER CITY Y. C.—The events for 1886 are: Opening review and harbor cruise, May 23. Annual spring regatta, June 9. Ladies' day, June 15. Review and harbor cruise, June 27. Corinthian cruise and regatta, July 3 to 6. Review, Lazaretto, Aug. 8. Annual cruise in Chesapeake and Delaware bays, Aug. 14 to 29. Review and cup race, second class, Sept. 6. Closing review and cruise, Sept. 19.

LARCHMONT Y. C.—The spring regatta will be sailed on June 5 and the annual on July 5. An oyster boat race, similar to that of last year, will be sailed in August for prizes given by the club.

JERSEY CITY Y. C.—The opening day of the club will be as usual Decoration Day, the start being made from the club house at 9 A. M. The annual regatta will be sailed on July 17.

A LAUNCH AT FALL RIVER.—On May 5 there was launched by Read Bros., the Mable F. Swift, designed by Mr. J. Borden, Jr., for Mr. C. W. Anthony, of Fall River. Her dimensions are: Length over all, 43ft.; waterline, 38ft.; beam, 14ft. 6in.; hold, 6ft.; draft, 5ft. 6in.; iron keel, 8,290 pounds. The under-water body of the yacht shows a very fair form and promises a speedy boat. The sheer is noticeable from its lowest point being far aft, with a quick spring to the counter. The stem and sternpost are plumb. The boat is very roomy below, with a large cabin, a stateroom to starboard and plenty of stowage room and pantries, while the forecabin is of a good size. In the cabin four berths can be made up back of the lockers. The interior is finished very handsomely in oak and mahogany. The yacht will be sloop-rigged and will enter the local races this summer.

LAUNCH OF THE CINDERELLA.—On Saturday last, in spite of the rain, the new yacht Cinderella was launched by Mr. Piepgrass, at Greenpoint. On her wet decks were Mr. and Mrs. Iselin. The yacht had her spars and gear in place, topmast on end, and was ready to bend sails as soon as afloat. At 1:15 P. M. the dog shores were knocked away and she slid rapidly into the water, Mrs. Iselin breaking a bottle of wine over her starboard bow as she left the land. The Cinderella is still at Piepgrass's, but will go into commission as soon as the inside ballast is stowed.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

P. M. C., Lawrence, Mass.—Address Wallace Huntington, Wilton, Conn.

C. F., Boston.—Please tell me the best places in Maine to get good trout fishing in July? Ans. Tim Pond, the Rangeley lakes, or the headwaters of the Aroostook.

A. B. D., Boxford, Mass.—For compilation Massachusetts game laws, address H. J. Thayer, Secretary Massachusetts Fish and Game Protective Association, No. 246 Washington street, Boston.

E. S. G., Cleveland.—Please inform me where I can obtain gold fish at wholesale. I wish to sell them again. Ans. Write to E. G. Blackford, Fulton Market, New York, or to Hugo Mulert, Cincinnati, O.

A. D.—Where is the best place on the Hudson to catch shad with a fly and when? Ans. We do not know of any such place. The only spot where fly-fishing for shad is successful is below the dam at Holyoke, Mass.

W. L. B., Randolph, Ia.—I have a wild goose which has mated with a tame swan this season for the third time. Unfortunately the eggs were broken in 1884 and 1885. Is there any reason why the eggs should not hatch? Ans. There is no reason for supposing that the eggs will prove fertile. The birds are of different genera and a hybrid would not be expected.

BASEL, Providence, R. I.—Do they catch shad with a fly? if so what are the best, and what size? Do they fish in shallow or deep water for them? Ans. Yes. A little later, in July or August, we shall have an article on this topic. The white miller and the coachman are good flies and should be dressed on Nos. 4 to 6 Sproat hooks. They fish for them in the swift water of the channel in the Connecticut River below the bridge at Holyoke, Mass., and at no other place that we know of.

GATCHO.—J. C. Bandle & Son give a medal to be contested for by clubs of Hamilton county, O., five men to a team, each man to have been a bona fide member of the club he represents at least three months prior to first shoot. Is it compulsory under these conditions that the members of the various competing clubs be residents of Ohio, nothing having been said on that subject by the donor, while he had actually placed a man on one of the teams whom he knew lived in Kentucky? Ans. No.

New Publications.

FRANK'S RANCHE; OR, MY HOLIDAY IN THE ROCKIES.

THE author of this little work, who signs himself F. M., in his dedicatory letter, is one of those respectable well-to-do citizens of famous London Town, who in common with many of his species, carries under his broadcloth an ineradicable taint of the roving blood which, whether inherited from the Norsemen or the restless followers of Hengst and Horsa, is apt to assert itself most unexpectedly. The author appears to have escaped the controlling influence of the disease in his own person, only to transmit it in a concentrated form to his son Frank, in whom it exhibited itself in an aggravated type, which necessitated his being sent to the "Far West" for change of air. In both father and son there appears to have been an abiding faith in the old time tradition that if one can only get a piece of land to plant money in, it will return to you in time an increase of forty, sixty, or even a hundred fold, and Frank being started as a farm pupil on a Minnesota farm, both he and his parent were naturally anxious for the time when the young hopeful should be prepared to fill his own acres. It took six months before Frank was able to satisfy himself and father that he knew enough of farming to give his preceptor "wrinkles," and the fates willing it, that at that very period a farm of two hundred acres was thrown on the market a dead bargain, the opportunity was embraced eagerly, and Frank began to plant his father's dollars in improvements. At the close of the first year the return was not quite what was expected, but just then a splendid opportunity occurred for establishing a creamery as rich in promises as a Senatorial candidate; the fates were further propitious in turning up at the very moment a man without means but with all the experience necessary to the working of a creamery with a moneyed partner. The hand of fate was so distinctly recognizable here that when the author received a letter intimating that the farm was sold, the creamery established and an opportunity presented for the profitable investment of more dollars, he not only refrained from exhibiting surprise, but determined not to be eclipsed by his son in the abiding faith which works miracles, and came down with the useful like a man.

But when a year later the partnership was dissolved, and Frank received as his share the experience only, plus two hundred dollars, while the partner who invested the experience took the creamery and prepared to run it under difficulties, the buoyancy which prompted Frank to the investment was not shared in by the author, whose faith had waxed cold. Frank started for the Rockies, homesteaded a farm at the base of the foothills, and, left to his own resources, faced the difficulties of his position like a true descendant of the hardy Norseman. Finally the author determined to come out and see for himself. This visit restored his wavering faith, and left Frank a good start on a five hundred acre ranch on which he is likely to prosper, the sanguine dreams of his youth having given place to the well grounded self-reliance acquired in the protracted struggle in which he passed the difficulties of his position.

The Yellowstone Park and Salt Lake City, Niagara and the Catskills are visited and described, together with the region passed over, in a style at once animated, fair and judicious, and the description being interspersed with lively anecdotes of men and things, the little book may be described as essentially interesting. It has been favorably received on the other side, and we have little doubt that Houghton, Mifflin & Co., who are bringing it out in this country, will find it a successful venture. The writer is already favorably known in angling circles as the author of "An Amateur Angler's Doings in Dovedale," and the present contribution to the literature of the far West wants none of the brightness, freshness and geniality of the former work.

A DEFINITE AMOUNT OF INSURANCE, lowest cash rates, plain contract, ample security—such are the special advantages offered by the Travelers, of Hartford, Conn.—*Adv.*

Fishing and Hunting Parties furnished with everything necessary for the woods on the shortest notice.

The St. Lawrence Gang.

This cut shows No. 1-0 (or Black Bass size) with living Minnow attached.
MANUFACTURED IN ALL SIZES FROM No. 5-0 TO No. 4, SUITABLE FOR
Muskallonge, Pickerel, Black Bass, Lake Trout, Etc., Etc.
All have patent treble hook with baiting needle, adjustable lip hook and treble swivel, and best silk metal wound gimp.
This is the most ingenious invention and radical improvement in trolling tackle yet made. Its manifest superiority to all gangs now in use is evident to every expert angler. A few of its peculiar excellencies are:—It is the only gang on which a bait can live. It is the only gang which can be adjusted to any sized minnow instantly and perfectly. It is not only the simplest but also the strongest gang made. It does not scare away the big and wary fish by a long array of treble hooks. The treble swivel insures perfect revolution of bait and reduces to the lowest possible point the liability of kinking the line.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

STEVENS'

J. STEVENS & CO. "PREMIER" RIFLES, Nos. 7 and 8.
CHICOPEE FALLS, MASS.

Swiss Stock with Fore-end, Vernier and Open Back Sights and Globe Sight.

American Field, Jan. 10, 1885.—"The next gun was a 22 caliber Stevens, and a pair of beautiful pistols, made by Stevens, on the Lord pattern. These weapons Dr. Carver uses on the stage, and does all his fancy shooting with. I saw him during the morning shoot with these pistols, in two consecutive shots, two half dollars thrown in the air, and he sent them whizzing away with holes nearly through the center of both. Opening a window, and calling upon Hans (one of his

He would hardly allow even a 10 inch Pocket Rifle to pass unless it would make a better target than this.

WHY should every Lawyer, Doctor, Preacher, Teacher, or any one who needs pleasant recreation to draw the mind away from their daily cares, buy and constantly use some one of the various arms made by J. Stevens & Co.?

BECAUSE you can have more fun in a day with a Stevens' Rifle or Pocket Rifle than with a common weapon in a whole year.

BECAUSE when any one practices with weapons of such wonderful accuracy the interest does not diminish, but increases constantly. You can practice an hour or two a day, a hundred and fifty times in a year, without tiring. When your skills is such that you can make targets like the first, try it at a longer distance and you will be surprised at the pleasure that results from the accomplishment of the object.

BECAUSE all their arms are so light and convenient, and easily taken apart to carry in a trunk or bag, or in a small package.

BECAUSE you can with a little practice become a really expert shot at a merely nominal expense.

BECAUSE when you buy one of these arms you are sure of an accurate shooter. Every arm before it can leave their factory must be actual trial make targets of which the best one above is a fair sample. No fisherman's outfit is complete without a two-pound Pocket Rifle with which to knock over any game, large or small, he is likely to come across.

Mr. Jones, of Pittsburgh, lately made some remarkable shooting with Stevens' Rifle with 22 short cartridge at 200 yards. It is something new to see a Rifle with 22 short cartridge competing successfully on the 200 yard range with Rifles of the best makers shooting very much larger cartridges.

Mr. Butler, of Syracuse, N. Y., has four other Rifles of the best makes, but says he uses his Little Stevens' a dozen times as much as all the rest. It is so convenient to carry and so wonderfully accurate.

Mr. R. B. Fuller, 172 South Clark St., Chicago, has a twenty dollar Stevens' Rifle that has been used in his shooting gallery every day for eight years, which is now in good order after having been shot over 500,000 times.

Mr. Carpenter, of Louisville, Ky., lately went to a turkey shoot and secured 7 turkeys in a couple of hours. He shot a 22 caliber 18 inch New Model Pocket Rifle weighing 2½ pounds at

225 yards.

Mr. Ingersoll, who has two of the finest shooting galleries in Pittsburgh (and probably in the world) has at present Thirty-one (31) Stevens' Rifles in use in his galleries.

R. P. Cory, of Connecon, Canada West: I have used for three years a Stevens' 22-caliber Pocket Rifle, have shot it about 15,000 times, can kill all sorts of small game with it a great deal farther than with the best Shot Gun. For squirrel shooting I will match this Little Pocket Rifle against any man with the best Shot Gun that can be brought forward.

From *American Field*.—"For careful boring and grooving, and perfection of workmanship in every particular, I consider the Stevens' Rifle the superior of any in the market." COQUINA.

My Old Model Pocket Rifle after being used 8 or 9 years, is as fine as ever. A. R. C.

I have one of your J. Stevens & Co., 26 in. barrel, 38 calibre Rifles, and it is the finest shooting rifle I ever saw. I have also one of the Hunter's Pet, 32 calibre, the best short range rifle I ever owned. They are a perfect rifle in every respect.

I received the 10 inch Stevens' Rifle, and was very much pleased to find it the best shooting article that I have ever handled. The first shot I fired, I knocked one of Dad's hens over at 8 rods. C. T. T.

THESE ARMS ARE SOLD BY ALL PRINCIPAL DEALERS,
ALSO BY THE GENERAL AGENTS,

WIEBUSCH & HILGER, 84 & 86 Chambers St., New York City.

CHARLES DALY HAMMERLESS

Is the Foremost Gun of the Day.
READ A FEW FRESH WORDS OF COMMENDATION.

No. 1—From the Pacific Slope.

LOS ANGELES, Cal., April 15, 1886.

Messrs. Schoverling, Daly & Gales, New York:
 GENTLEMEN—I have a 10-gauge Daly—the one I ordered expressly for myself about a year ago—and now I want a 12-gauge Daly. *It is the best gun in the world.*
 I have had one of the club Medals here ever since I had my *Diamond Daly*, and still hold the champion medal. I have broken ten out of fifteen clay-pigeons at 75 yards with No. 7 shot with it. C. B. Gould, who holds the first class medal, shoots Daly 12-gauge. J. B. Cline, one of our crack shots, shoots Daly 10-gauge. Frank Day, one of our crack shots, shoots Daly 10-gauge. J. Downey Harvey, one of our crack shots, shoots Daly 10-gauge. Harry Houghton won first prize, Alexander County Sportsmen Club, with a Daly 12-gauge. Martini Chick, the Champion of Southern California, shoots a Daly 10-gauge.
 We are about making a match for Chick and Crittenden Robinson, of San Francisco, and have got \$500 that says the Daly gun beats him.
 We have sold all the above and several others. Now I want a Daly 12-gauge, and I want you to pick me out one which will be up to the mark in outward appearance—a beautiful piece of timber and finely marked barrels. For the shooting part, I have no fear that it will be to my satisfaction.
 Respectfully yours,
 (Signed) T. E. WALKER, of Walker & Smith.

No. 2—From the Gulf.

HOUSTON, Tex., March 27, 1886.

Messrs. Schoverling, Daly & Gales, New York:
 GENTLEMEN—The Charles Daly Hammerless Gun that I ordered through your house has been received, and to say that I am pleased with it only conveys in part what I think. It has been examined by the best judges in this country, and they say that it is the finest piece of work that they have ever seen; that in fact they don't think the workmanship can be excelled. I have thoroughly tested the shooting qualities, and it comes up to the specifications. I enclose you a slip from the *Post*.
 Respectfully yours,
 (Signed) M. FLOECK.

(SLIP FROM HOUSTON "POST.")

"A *Post* reporter while taking in the sportsmen's element of our population this morning, dropped into Mike Floeck's gun shop on Travis street, and there found several of the crack shots looking with a degree of unusual interest at a gun that seemed to be on exhibition. It turned out to be a piece that had been made to order by Charles Daly, and brought on by their Agent E. B. Kissam. It is one of the prettiest pieces of human mechanism that the eye of man ever feasted upon. The experts in that line, including some of the older members of the Gun Club, were present, and they could not speak its praises loud enough. The beauty and purity of the material, the close-fitting work of the master artist in putting the parts together, the ingenious carving and ornamentation adorning parts of it, with the desirable weight and handiness, all appealed to their judgment in a manner that elicited expressions of unbounded admiration. The barrels are of Turkish Damascus steel, 10-gauge, and finished to the Queen's taste. The stock is of walnut, beautifully finished. The trigger guard, in the height of art and taste, is inlaid with small figures of bags and birds, being a brace of handsome setters on a hunt, a pair of quail about to flush, and a brace of prairie chickens standing as if they had just spied the common enemy. Altogether the gun has not probably an equal in the State, and no superior in the South. It seems to be the perfection of the gunsmith's art."

No. 3—From the Great Northwest.

CHICAGO, May 1, 1886.

Messrs. Best & Co., Minneapolis:
 GENTLEMEN—You ask permission to publish the letter I wrote to my friend Mr. C. in reply to his asking my advice as to the purchase of a gun. I have no objection except I request you to leave out the portions in which I have given the bad points of a few well-known makes. I have friends who handle these goods and do not wish to have my comments put in print.
 Yours truly,
 (Signed) GEO. T. FARMER.

CHICAGO, April 10, 1886.

Friend C.:
 Your esteemed favor of the 16th inst. at hand and contents noted. In my judgment the best gun made is the Charles Daly. I have shot a Diamond quality hammer gun for five years, shooting 5½ drams powder at the trap and on ducks. I won the Illinois State Championship with it last year, which I still hold subject to contest next June. A duck gun should be 10-bore and 10 to 10½ lbs. Mine weighs 10 lbs. 4 oz. It has shot away since I owned it at least 400 lbs. of powder, and it is solid and compact as the day I bought it. I paid \$200 for it and it is more than equal in style and finish to a ———, which my friend Mr. S. paid \$415 for. If I were to buy one now I would of course get a hammerless, but I would buy nothing but a Daly. The lower grades of American guns are superior to the same grade of imported ones, but our American makes cannot compete with the best foreign makes in durability and finish on the higher grades, and none of the foreign ones can compare with the Daly, though costing considerable more money. In short, my advice is, get a *Diamond Daly Hammerless*, and it will last you your lifetime. If you don't want to use it till fall get it made to order. This you can do by giving length of stock, drop at the butt and the nose, the gauge, the length of the barrels and the weight.
 We will have a shoot here commencing the second Monday in June, lasting six days, requiring twelve to fifteen thousand birds. Try and come down and you will see enough to convince you that my advice is correct, and I promise you a good time.
 Very truly yours,
 (Signed) GEO. T. FARMER.

PRICE:

No. 120—Damascus Barrels, Well Engraved,	\$125 00
200—Finest Barrels, Locks, Stock, and Superb Engraving,	200.00

Manhattan Hammerless.

We introduce this new aspirant for the favor of the shooting public, with great confidence that before this fall season is over it will have made its mark.
 Heretofore Hammerless Guns have been used only in the most expensive kinds; all previous attempts to bring out a cheap or medium priced one have been a failure. THE MANHATTAN is a medium priced, well fitted gun, and is equal in work or finish to any American make.
 Every care has been taken to make of them first-class shooting guns.

PRICE:

Fine Damascus Barrels, Neatly Engraved,	\$75.00

FOR SALE OF THE

Chamberlin Cartridge COMPANY'S

Fixed Ammunition for Shotguns.

SORA.

Loaded by machinery. Every cartridge perfect. Every one alike. Wadding of uniform thickness, and placed squarely on the powder and shot. Rammed with uniform pressure. Beautifully and securely crimped. Packed 25 in a pasteboard box, 20 boxes in a case. **The Most Convenient and Best Ammunition in the World.** Highest scores on record made with these cartridges. Persons who use them in the field are constantly speaking in their praise. WOOD POWDER has shown its best results in these goods. PIGOU, WILKES & LAURENCE POWDER does its best work in Chamberlin cartridges. Any of the leading brands of paper shells or powder may be had. THE VARIETY OF CARTRIDGES FOR TRAP SHOOTING IS NOW COMPLETE. WADDING ONE SIZE LARGER THAN BORE OF GUN for such guns as require this style of loading.

PERFECTION AT LAST.

THE BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a perfect Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

The Spalding Hammered Bait.
(ENDORSED.)

Made in Ten Sizes. Prices in silver plate: Nos. 1, 2, 3, 4, 5 and 6, 50 cts. each; Nos. 7 and 8, 65 cts. each; Nos. 9 and 10, 75 cts. each. Gold plate, 25 cts. extra.
MESSRS. A. G. SPALDING & BROS., CHICAGO, ILL.:
GENTLEMEN—Agreeably at your request, I tried the new "Hammered" Spoon Bait at Gage Lake, where, from the scarcity of live bait of any kind, a trolling spoon becomes almost a sine qua non at such times when the bass refuse to rise to the fly. The "Hammered" Bait is a happy idea, for it is hardly possible to devise a more attractive lure, as all who have used it can affirm. It is well and carefully made, has good, strong hooks, and well deserves the great popularity it has so soon acquired.
Very truly yours,
J. A. HENSHALL.

J. F. MARSTERS, 55 Court Street, Brooklyn.

The Celebrated "UNION HILL,"

First target represents 10 consecutive shots made by Otto Jaeger, June 10, 1885, at Wheeling, W. Va., 200 yards off hand, with some wind, using a No. 6 1/2 Off-Hand, .32-caliber. It counts 94 on Massachusetts Decimal and 117 on Massachusetts Target. The cut is one-half size.

Second target represents 5 consecutive shots made by J. D. Marks, June 24, 1885, at Springfield, Mass., 200 yards, with rest, using a Union Hill, .32-caliber. The entire five shots are inside of a 1 1/2-inch circle. The cut is full size.

This style of Ballard Rifle and the "Off-Hand" are the standard guns for target shooting, carrying off nearly all the prizes. Send for Catalogue.

For Sale.

"HAMBROOKS." AN EARTHLY PARA-
dise. Pleasure, Health, Happiness. "A
Thing of Beauty is a Joy Forever." A charming
home on the Chesapeake River, the prospective route
of the Chesapeake & Delaware Ship Canal. About
1 mile from Cambridge, the most attractive and
thriving town in Maryland. Contains 166 acres of
very fertile land, in the highest condition of im-
provement—8 acres in wood. Choice fruit. Double
brick house, 50x50, with frame addition, 11 rooms,
besides pantries and cellars. Large barn, stable,
corn houses and tenant houses. Soil mostly loamy,
easily cultivated, very responsive, equally adapted
for fruit, grass or grain. House stands in a 4-acre
lawn, well shaded, 100 yards from the terraced
bank of the river—at this point two miles wide.
Situation in the highest degree healthful, beautiful
and convenient. River sail, abounding in fish, oys-
ters and game. Best situation on the river for bed-
ding and packing oysters profitably. Climate mild;
diphtheria, catarrh and pulmonary diseases almost
unknown. Suitable in an uncommon degree for a
place of public resort or sanatorium summer and
winter. Equally desirable as a gentleman's country
seat, affording every facility for boating, bathing
and all aquatic amusements. Society of the best in
Maryland—intelligent, courteous and kind.
Present owner has occupied it for 13 years. No
mortgage or other incumbrance. Title unquestion-
able. Steamboats and rail facilities daily. Likewise
telegraph. No such property is offered or can be
bought in this State. A rare opportunity for a
gentleman of wealth, taste and leisure, seeking
recreation, health and rational enjoyment. Steam-
ers leave Light street wharf, Baltimore, every night
at 9 o'clock for Cambridge. Early morning train
from Philadelphia, Wilmington & Baltimore Depot,
via Delaware Railroad, at Wilmington. Come and
see. Price, \$30,000. E. G. WATERS, 316
McCulloch st., Baltimore, Md., or A. E. WATERS,

of Sutherland's famous kennels, Dunrobin Castle.
Address Mrs. GEO. SHEPARD PAGE, Stanley,
Morris Co., N. J. may13,3t

FOR SALE—IRISH SETTER LEO (A.K.R. 3441),

14 mos. old, by Chief out of Moth. Was he.
Dunrobin show in open class, 1886. Price \$25. Ad-
dress BROOKLYN KENNELS, 161 Lincoln place,
Brooklyn, N. Y. may13,4t

FOR SALE.—BLACK COCKERS, FANNIE OBO

(A.K.R. 1311); also two black bitch pups, Fannie
Obo ex Obo II., whelped Feb. 23. For full par-
ticulars address H. C. BRONSDON, 345 Dudley st.,
Boston, Mass. may13,3t

FOR SALE.—FOUR GREYHOUND BITCH

pups, 4 mos. old, very handsome, very cheap.
Address C. W. TRAVIS, LaFayette, Ind. 4t

FOR SALE.—GORDON SETTER BITCH, 3 MOS.

old, black and tan, good stock. Price \$6. L.
F. HERRICK, Millbury, Mass. may13,4t

SPORTSMAN'S KENNEL.—TRAINING, BREAK-

ing and boarding of sporting dogs, having a
fine run; capacity for fifty boarders. D. F. WIL-
BUR, Prop., Box 303, Bridgewater, Mass. may13,4t

COCKER SPANIEL PUPS FOR SALE, BY BEAU

(E.K.C.S.B. 976) out of Bessie Obo (A.K.R.
3606). Address LYNN KENNELS, Box 02, Lynn,
Mass. may13,4t

FOR SALE.—BLUE BELTON PUPPIES, SIRE

by the field trial winner Gus Bondhu out of
of Lynn, she sired by Dash III. ex Isabella. Also
one bitch, whelped Sept. 14, 1885, sired by Count
Bondhu ex Drury; very fine. Address A. M.
TUCKER, 85 Main st., Charlestown, Mass. may13,3t

The Kennel.**Inaugural Bench Show of Dogs**AT
WILKESBARRE, PA.

Tuesday, Wednesday and Thursday,

May 25, 26, 27, 1886,

Under the auspices of the Ninth Regiment, N. G.
P., and for the benefit of the Armory Fund.

ENTRIES CLOSE MAY 15, 1886.

For Premium List and Entry Blanks address

W. H. TUCK, Secretary,
april29,3t 63 Public Square, Wilkesbarre, Pa.**Rough-Coated St. Bernard Puppies****FOR SALE.**

By NERO out of RUTH.

Whelped April 30. Send stamp for illustrated pedi-
gree. Nero sired Strathmore, who received 3d prize
at Newark when only 4 mos. old in puppy class,
and special for puppies under 5 mos. Ruth is out
of the best and purest rough-coated St. Bernard
stock. Both above imported from Switzerland by
owner. Address WM. J. EHRICH, 306 West Fifty-
eighth street, New York.

Buena Vista Kennels.**ST. BERNARDS**

Fashionably bred and of the best
known strains, Correct in col-
or, markings, etc. Grown dogs
and puppies for sale; full and
guaranteed pedigree sent
each dog sold. Only superior
specimens sent from the Kennels.

Address, with stamp,
KENSICO STATION,
WESTCHESTER CO., N. Y.

NEWFOUNDLAND DOG**FOR SALE.**

MAJOR, winner of 1st at Cincinnati and
at New York Fanciers' show, 1886, of 2d at
Philadelphia and at W. K. C. show, 1886.
Undoubtedly the best Newfoundland in the
United States. A superb guard dog, well
house broken and kind with children. Just
the dog for a gentleman's country place.
Price \$200. Address

WILLIAM BURKE,

may13,4t Station M., N. Y. City.

Mill-Brook Kennels**Thoroughbred St. Bernards.****Thoroughbred Scotch Collies.**

In the Stud—Champ. Verone, smooth St. Bernard,
2 yrs. old, winner 1st prize. Fee \$50. Young stock
for sale. Address with stamp, WM. MONTGOMERY
Jr., Bergenfield, N. J.

E. B. GOLDSMITH,

Custom House and Forwarding Agent,
58 WALL STREET, NEW YORK.

Receives and forwards Dogs, Fowls, etc., to
any destination. Kennel Clubs, Sportsmen and
others, intending to import dogs from Europe,
should have their stock consigned to him. Infor-
mation furnished in regard to the best methods of
importing, shipping, etc.

Choice Red Setter Pups.

A dog and bitch, 8 mos. old; dark mahogany red,
very handsome, healthy, of same litter as Sham-
rock, the winner of 1st prize in the late N. Y. dog
show. Also pups now 3 wks. old, deliverable on
1st June. All by Kelsco (champion Glencho), a
superb Irish setter and excellent in the field.
4t X. Y. Z., Station R., N. Y. City.

ELMHURST KENNEL.—PEDIGREED RED

Irish setters Bena, partly broken, and brood
bitch Rosalie (A.K.R. 2067). Water spaniels, dog,
bitch and pups, all fine stock, for sale very cheap.
C. T. PIERCE, Riverside, Conn. may13,3t

FOR SALE, A NUMBER OF WELL BRED AND
well broken pointers and setters, also dogs
boarded and broken, satisfaction guaranteed.
Address H. P. RICHMOND, Lakeville, Mass. Sept22,4t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, MAY 20, 1886.

VOL. XXVI.—No. 17
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$3.50 for six months. Address all communications,

ANSWERS TO CORRESPONDENTS.

HOW THE CASE STANDS.

IN the year 1872 Congress withdrew from settlement, occupancy or sale under the laws of the United States, the region now known as the Yellowstone National Park, and decreed that it should be "dedicated and set apart as a public park or pleasuring ground for the benefit and enjoyment of the people." For a number of years after the passage of this act, small appropriations were made for the improvement of the Park, and as each year more people visited it, the public interest in it increased. Then in the autumn of 1882 a syndicate of shrewd capitalists endeavored to secure a monopoly of the Park for a period of ten years. This attempt was opposed by those best acquainted with the region. The press at large took up the question, and forced the authorities at Washington to deny to the monopolists the extraordinary privileges which they had almost secured. The noise which this contest made awoke the public not only to the importance of the Park as a region of rare beauty and startling wonders, but to its value from an economic standpoint. They learned now for the first time that, in the pine-clad mountains of the Park the sources of two great rivers which water immense tracts of arid desert on either side of the main chain of the Rocky Mountains; that the forests which clothe these mountains protect the stored up waters, which fall during winter and spring, and give them forth all through the summer, thus furnishing an equable flow to these streams; for in the decaying vegetation which forms the floor of this forest, the melted snows of winter are held as in a sponge, and springs, rivulets and brooks are supplied. They learned that if these forests should be destroyed by fire or the axe, the rains would soon wash away the forest floor, the waters would no longer be arrested on their way to the streams, but thrown into them at once on falling, would cause at first great floods, to be succeeded by periods of drought. So the great rivers, on which so many farmers depend for water to irrigate their crops, would be useless for this purpose.

It has been a hard struggle to protect the reservation against the greed of the rich and the stupidity of the foolish, but so far this difficult task has been accomplished.

Now, a new danger threatens this Park, which has been dedicated and set apart for the "benefit and enjoyment of the people." Another attempt is being made to deprive the

people of their rights in this region, and the attempt is so strongly backed that it has been favorably reported on by committees of both Houses of Congress. A bill has been introduced in both Senate and House to permit a railway to pass through the Park. If this bill should become a law, the people's Park will be utterly destroyed. A railroad through it means settlements in the Park, means game destroyed, means forest burned off, means barren deserts along the Snake and the Yellowstone Rivers where they traverse the plains. The Park, set apart for a pleasuring ground for the people, will be swept bare of everything which now makes it attractive.

The danger is a most serious one and it is imminent. It is a matter which concerns each citizen of our country. Shall this Park, which was set apart for the benefit of the people, now be taken from them and be handed over to a railroad corporation? No poor man can go into the Park and build a cabin there to spend a few months in the year, and yet it is proposed to permit this projected railway, which menaces all the objects which it is desired to preserve, to have enormous privileges in the reservation. The plea that the railway is necessary to develop a new mining region is specious, but misleading. It has been clearly shown that railroads can be built to this mining camp without threatening the integrity of the Park, and, therefore, Congress has no excuse to grant permission for any railway to be built within the Park. If the American people are prepared to suffer this infringement upon their rights, we very much mistake their temper.

As stated last week, the property of the National Park Improvement Company was sold on Wednesday, May 12, at Evanston, the county seat of Uinta county, Wyoming Territory. It was bought by Mr. E. E. Thorne, acting in the interest of the Northern Pacific Railroad Company. The price paid was twenty three thousand dollars. The receiver will report at once to the court for confirmation of the sale.

A "SHY" SENATOR.

AMONG those who voted in favor of the law to permit the killing of Adirondack does and fawns with clubs was Senator Cullen, of New York, known to his intimates as "Jack" Cullen. When Senator Cullen voted for the law which was to legalize clubs and "tail holts," his knowledge of the former was almost wholly confined to them as they appear when printed on card board, and employed in the fascinating but uncertain game of draw. Of the material club he then knew nothing, except by hearsay. He is wiser now. A practical application of clubs to his own Senatorial skull has entirely changed his views on the subject, and it is probable that should the question of clubs or no clubs ever come up before any body of which "Jack" Cullen is a member, his voice will be recorded in no uncertain tones as against clubs.

The Senator has experienced a change of heart, and this is how it came about. A couple of weeks ago Senators Daly and Cullen and ex-Senator Gibbs were riding down town in a Third Avenue car. It was during the strikes on that line, and Cullen, who poses as the friend of the workman, was inveighing bitterly against the outrages of capital and the wrongs of the laboring man. Either through balky horses or the interference of another driver, the car in which they were riding became blocked and could move neither forward nor backward. The delay irritated Cullen, who stepped out on the front platform and began to issue orders right and left in loud and authoritative tones. So noisy did he become that one of the police officers, who was trying to get the car out of its difficulties, took him for a striker, and seizing him by the collar, pulled him off the platform, intending to take him to the police station. The honorable Senator pulled back as vigorously as the officer pulled forward, and finally the latter, whose temper had become somewhat soured by sleepless nights and numerous rows with the strikers, lost patience, and raising his club, rained down a shower of blows, beating the unhappy Senator about the head most vigorously. It took but a brief season of this to subdue the bewildered lawgiver, who, hatless, torn and bleeding, was haled to the police station, whence after a short detention he emerged, feeling no less injured in his sensibilities than in his person. It is understood that Senator Cullen has remarked that he has no further use for clubs, though his experience has taught him that their use does make those upon whom they are employed shy. So far, he agrees with Dr. Ward, but he thinks that there are some things more desirable than being made shy just in this way,

and he is clear in his own mind that hereafter he shall favor no such methods.

No doubt Senator Cullen, as he was being clubbed in the streets and dragged along to the station house, congratulated himself that in this way he was escaping from the hands of the bad strikers, who but for this might be throwing bricks at him, and in other ways abusing him. And it must have been a great comfort to him to feel, as the club descended on his honorable skull, that it was the club of an officer of the law and not the brick of a striker. Such feelings, we suppose, animate the exhausted Adirondack does when they are being clubbed to death by the "true sportsmen." With their last breath they thank Providence that they are not being killed by bad still-hunters.

THE ENTHUSIASM which has been developed in connection with the AUDUBON SOCIETY shows very clearly that our estimate of American women was correct. The bird-wearing craze grew out of thoughtlessness, and now that attention has been called to the evil results sure to follow from it, those who formerly led the fashion are the first to condemn it. The press, the pulpit and the school are helping on the good work. Within the past few days over a thousand certificates of membership have been sent out, and our last order for circulars was for 20,000. The birds will not be slaughtered this year as they were last.

CAPT. CHAS. A. BENDIRE, after more than thirty years of cavalry service in the United States Army, has been retired, and is now devoting his time to arranging and perfecting the National Museum collection of birds' eggs and nests. His own collection, the most complete in the country, has been presented to the museum. Students of oölogy are to be congratulated that the National Museum collection has been rescued from the condition of neglect in which it was rapidly depreciating, and has been intrusted to the enthusiastic and devoted care of one so competent as Capt. Bendire.

"DAYS WITH THE BARMECIDE CLUB" is the title of a series of papers recounting the experiences of an angling club during its Adirondack outing. The club's name is taken from the "Arabian Nights" story of one of the princes of Barmecide, who, being importuned for food by a beggar, treated the hungry man to a feast of imaginary viands. Whether or no the pleasures of the Barmecide Club were in like manner wholly pretended or more substantial, will be disclosed in successive chapters of the relation.

WILD TURKEYS FOR PRESERVES.—It is stated that three pairs of wild turkeys taken from America in 1880 by Count Brenner and let loose on his estate in Austria have increased and multiplied until the number is now estimated at 500, and the count enjoys his shooting very much. This is an example for some of the American game clubs who own preserves adapted to the turkey. No nobler game can be found for stocking island preserves.

NEW JERSEY SPORTSMEN are talking about a convention at Lake Hopatcong next autumn to prepare for the next Legislature a codification of the game and fish laws. The game laws should be made a chapter separate from the fish laws.

CHANGED GAME LAWS.—As changes have been made by the various Legislatures in the game and fish laws, secretaries of game societies and others are requested to notify us of such changes, particularly changes of the open seasons.

REPORTS OF CATCHES.—Anglers are invited to send to us for publication reports of their catches and any information about fishing resorts which is likely to prove of service to others. News notes are always welcome.

ANGLERS ARE FLOCKING in force to the Maine waters; and the reports so far received show that the catches are good. The salmon anglers are jubilant over the restocking of the rivers.

DEER HOUNDING.—The deer hounding bill passed by the New York Legislature having become a law, the practice is now legalized for the season Sept. 1—Oct. 5.

IN TIME OF PEACE PREPARE FOR WAR.—In another column a valued London correspondent describes a device for circumventing insect pests.

COOKE AND THE CLARK'S FORK MINES.

THE number of untrue statements put forth by the advocates of the Cinnabar & Clark's Fork R. R. is rather surprising. In a case of this kind we are apt to look about for a motive, but here it seems difficult to find one, for these people must have known when they made their misstatements that many persons besides themselves are acquainted with this region, and could at once show their allegations to be false. Perhaps they acted on the old adage that a lie can travel a hundred leagues while truth is putting on his boots. The strongest recommendations of their route came from a man who has never been over it, and who has never been over any other route to Cooke City. The absurd assertions as to the difficulties of crossing the range and the impracticability of building a line up its eastern slope have been pretty well knocked to pieces by articles published in these columns.

Among other utterly wild and baseless statements made by the Park Railroad people and repeated in the favorable reports made by Congressional committees, is the allegation that Cooke City is the central point of the Clark's Fork mining district, the implication being that all the mines are tributary to it. That an assertion so unfounded and so easily disproved should be made, only shows how entirely the promoters of this railway project rely on the ignorance of Congress, and how much faith they have in their ability to rush the bill through both Houses without any investigation whatever. To hear Cooke City spoken of as the center of a thriving mining district is extremely comical to any one who knows that the town is a collection of twenty or thirty log cabins and canvas shanties of the most temporary kind. It is just such a mining town as may be found in any district which has yielded a few good prospects, but which may be deserted to-morrow for some other site and left to the occupancy of the hawks, owls and coyotes.

Cooke is not the center, geographical or commercial, of the Clark's Fork mining district. The town was located near one of the earlier discoveries of the region, and is on its extreme southern border, almost all of the claims and prospects being to the north and separated from the town by an impassable mountain range. From most of the mines the ore would have to be hauled by wagons for a long distance to the south and east to the south branch of Clark's Fork, and then—if the Park Railway should be built and Cooke should be its terminus—up that and over the divide to Cooke. This would be a great thing for the town, but it would not be so good for the mine owners. A railroad built up Clark's Fork would enable the great body of the mines to get their ore to a shipping point by a much shorter haul than if it were necessary to take it by wagon down to the Billings road and then up the river to Cooke, for of course the ore would be delivered at the nearest railway station. A railway terminus at Cooke would benefit chiefly the two mines which lie close to that

MAP SHOWING LOCATION OF MINES AND COOKE.

place. To most of the other mines some point east of Cooke would be far more convenient, as well as much cheaper. Cooke City real estate owners and the proprietors of the mines adjacent to it will be satisfied with nothing less than a railway to Cooke, but so far as the development of the district is concerned, that small town may be altogether left out of consideration.

A glance at the accompanying map will show the reader more clearly than any explanation, the relation which Cooke City bears to the mines of the district. It will be seen that it is just on the borders of the National Park, and quite a distance south of many of the mines. There is no reason why it should be the terminus of the railway.

The projectors of this railway scheme desire a road built to Cooke not because of any

relation which this town bears to the mines, but because it is so close to the borders of the Park that it furnishes them an excuse for urging the building of a road through the reservation. What they want is not to tap the mines so much as to tap the Park; not so much to secure an outlet for the ore as to secure an inlet for passenger traffic in the Park; not so much to establish the industries of this mining camp as to establish themselves in the people's pleasure ground; not so much to develop the Clark's Fork mining district as to benefit themselves. With all the forces to be commanded by money and influence, they are laboring to secure the assent of Congress to the project which they have in view, but they will scarcely succeed so long as the interests of the people are guarded by men like Senator George G. Vest and Senator Chas. F. Manderson.

The Sportsman Tourist.

DAYS WITH THE BARMECIDE CLUB.

I.

WHEN the spring with its bright young face is full of curious movements and the vagabond blood of the angler begins to bubble, when the meadows are yellow with buttercups and daisies, and the slightly sweetened tones of the German band are heard on the corners, when violets carpet the turf and emit their perfume, when the sap is racing and the maple buds are swelling and the returning birds are ravishing the ear with their exquisite notes, and when our acquaintance with all the other multitudinous trademarks of spring which need no copyrighting is renewed, we become exposed to the influence of spring fever and inoculated with the inspiring malady.

We know the terribly disastrous effect that all work and no play had on poor Jack; so to avoid that danger three of us resolve to expunge the word business from our vocabulary, recover our first identity, and if we must be busy, be busy angling, tramping, rowing, learning some of the wondrous ways and mysteries of nature, living with no anxious thoughts of the morrow, and rollicking in the exuberance of increasing health and strength.

After very little discussion between the three individuals who feared the contagion of supineness and who were thoroughly familiar with the sovereign remedy therefor, the old locality was again selected and preparations for a change of air and scene completed. There were no tenderfeet included in the brotherhood, for all had from many years of practice and experience become familiar if not expert with rod and gun, oar and paddle, inured to long tramps and heavy loads, missing meals and camping where night overtook us. We were models of good nature and brotherly love, with "malice toward none and charity for all," but there was a limit to even this kindness, and we drew the line at burdening ourselves with inexperience. It may not be a judicious admission, but after many years of life in the woods, on the plains, on lake and river and sea, I am fain to admit that while my heart goes out in sympathy for the tenderfoot, if he wants it, yet ninety and nine times in the hundred I don't hanker after him out of his element. In town he may be the cleverest, brightest and most genial of fellows; but transferred to the woods, subject to drunchings, duckings, long tramps, mosquitoes, days when the fishes' favors are nothing, and the petty discouragements and annoyances which come "not single spies but in battalions," he's the devil and Tom Walker combined; and one to quietly endure his complaining must be possessed of more Christian fortitude and resignation than is vested in me. They certainly have to learn, but we claim exemption from teaching more of them. We have done our duty without a murmur, and for this trip we do not propose to make ourselves uncomfortable for a sentiment. Out for a day or two, it matters not; but for several weeks outing we must know our man thoroughly.

All the paraphernalia which goes to make up the outfit of the angler was in fighting condition. Rods, reels, lines and flies had passed a pleasant winter, due to being properly cared for at the finishing of last season's sport and an occasional overhauling during the winter evenings. Ferrules had been tested, frayed whippings replaced, lines and leaders carefully examined, reels oiled, and in fact after a careful diagnosis of our fishing tackle every precaution was taken to have it in fighting trim at a moment's notice.

An accident may occur at any time and place and from innumerable causes and in spite of the greatest precautions, but ailing when avoidable is inexcusable. As well might a parent turn loose a favorite child in the autumn and let her go uncared for until the spring time comes, gentle Annie, as for an angler at the end of the season to lock up his tackle and give it no thought until he needed it for service. Then the keeping it in order is a pleasure and a duty. We went to clean our own gun, repair our own tackle, and not do as most physicians do when they are ailing, send for their brother practitioners.

Our ride on the railroad was over, and we were met at the station by the big good-natured driver, who had met us for the three previous years and taken us to the last house on the road, from which we foot it to our lake. His turnout was complete and one in which he took great pride, and well he might. His horses, handsome chestnut geldings, standing full fifteen two, with well laid and upright shoulders, powerful hindquarters but not too heavy, broad, flat legs, barrel closely ribbed, plenty of chest and lung power, thin ears, necks full and crested, and with a look of undoubted courage and unflinching gameness in their large and sparkling eyes.

"A roadster good, not straddling high,
Nor shuffling low, I find thee;
But stepping straight and cheerily,
Thou leav'st the miles behind thee."

Well seasoned and hard as nails, with an elasticity in their smooth strides, driving up on the bit, roading ten miles an hour without an apparent effort, and pulling up strong finishers, told, so far as a non-professional horseman can judge, that their conformation was nearly perfect.

We pulled up toward the middle of the afternoon at the great, overgrown public house or tavern. This was the end of our ride, for at this place the road bumped its nose against the stable and disappeared in a stall. At the tavern we found the usual crowd of hangers-on characteristic of such places—boys with letters in the post office and "knowledgeable" men waiting for invitations to drink. We had met the same crowd too often and in too many places to pay much attention to them. Glen, however, disposed of one of them most thoroughly. The fellow remarked to one of his companions in a way that Glen should hear, "Here's a lot of dandies, with their horse hair lines, little flies and flimsy rods. Wonder what they'll reckon on ketchin' with sich an outfit of tackle? Six-ounce rods be ding danged! I'll take my old, stiff bamboo an' agree to discount the best man among 'em, or I don't want a cent. Give me the stiff rod, a stout line and a big hook, so I can make 'em come out of the water wish afore they have time to think of fightin'. I'd make 'em do all their fightin' arter they git in the basket. I'd have little of their nonsense under water arter they once took holt." Glen, in a Chesterfieldian manner, entered into the middle of things immediately by telling the fellow he had better attend to his own affairs, if he had any, and not meddle with those of strangers. "I'll just be frank with you, and we'll have a distinct understanding between us, that the first one who indulges in any personalities or interferes by word or sign or look will find it rather unpleasant for him."

Of course there was a little flurry and a flaring up on the fellow's part at such plain talk, but Glen meant business, which was soon understood and acknowledged; and when this little affair was amicably settled we passed a pleasant evening reviving old acquaintances and forming new ones. It was not absolutely necessary for us to employ a guide, as all of us were fully competent to perform all the duties of cooking, chopping, carrying and the rest, and familiar with the tangled wilderness through many years acquaintance; but then a good guide is handy to have in the house, and we secured one whom we know well. He was always willing to go with us as he had little trouble, knowing we were workers and he could have some sport on his own account, and we were assured that we would not be subjected to extortionate charges.

Where the Barmecide Club goeth no man knoweth save those directly interested; and we plead guilty to a certain amount of selfishness regarding it, which searchers for quiet sport might condemn. Some things are said to be too good to keep. Our lake is not too good but just good enough; and it's more than twelve miles from a lemon. When one has had to rustle around pretty diligently in search of such a place he does not want to divulge it to Tom and his partners. Not even our wives and sweethearts knew of our temporary whereabouts and we told them that no news from us meant all was well, and they were reconciled to kissing us good-bye. Guide had arranged for transportation from the hotel to our lake. The distance was about sixteen miles—and miles in the woods at that. None of your common Gunter miles, laid out with mathematical accuracy; but literal ones, where the yards and rods are thrown in with sufficient prodigality to prevent any dispute regarding short measure, and if there is an extra half or three quarters on the last mile there is no charge for it.

Our traps were loaded on a home made sledge, drawn by a pair of sorry looking bay horses, which resembled the aforesaid miles, inasmuch as there was more to them than appeared at a casual glance, and as our acquaintance with them increased during the day's tramp our respect grew greater. The principal ingredient of their harness was leather, but there was a strong well-defined suspicion of wire and old rope, and altogether the outfit was about as primitive as you could find in a century's searching, but it was far and away better than it looked. The horses were admirably trained for their duties, and it was an interesting caution, the manner in which they handled that sledge through the pathless entanglement of the forest; but they had a sovereign contempt for roads and would climb over logs and go through dense underbrush and windfalls without a serious hitch in the proceedings. Our traps were strapped and tied on; and the only things broken that day were our fast and an iron canopener, though the sledge was turned over a score of times before we reached our camping ground. This was late in the afternoon, but early enough to give us ample time to unload, cut the night's wood and attend to various details conducive to comfort.

We launched our boats, which had been cached in a thick growth of young hemlocks some little distance above the shanty. We found them in good order with seats and oars, just as they had been left a year before. The shanty had evidently been tenanted since the previous summer, save for the presence of the hedgehogs which, being unable to write, had made their marks in the old bed of browse carpeting the front and only room in the house. We took the carpet up and laid a new one, so they'll not make their mark on us. That was the only repairing we found necessary, and then we prepared to enjoy our existence and solve the problem of "is life worth living?"

MILLARD.

Natural History.

THE AUDUBON SOCIETY.

ON Friday, May 7, at the close of a meeting of the Ladies' Christian Union of New York, held at the Home of the Society, 27 Washington Square, the subject of bird preservation was introduced by the president of the Association, Mrs. Thompson H. Hollister. Mrs. Frank Bottome made a stirring address, calling attention to the wholesale destruction of North American bird life, and to the responsibility incurred by women in regard to this destruction. Her remarks excited great interest. Mrs. G. B. Grinnell gave an account of the methods of the AUDUBON SOCIETY, and spoke of the great work which it had accomplished, and pointed out the benefits which would result from the spreading of its doctrines among all classes of our people. The addresses evoked great enthusiasm, and Mrs. Skidmore, the vice president, moved that the Association in a body join the AUDUBON SOCIETY, and do what it can to assist its work. The motion was adopted unanimously.

At the founding of the AUDUBON SOCIETY we had in contemplation comprehensive measures for concentrated efforts for the diffusion of the movement in New York, Boston, Philadelphia and other great cities of the Union, but have not yet been able to take the first steps in this direction. Our preliminary measures consisted in inviting the opinions of leading minds in every department of thought, the diffusion of economic facts, bearing on the rapid extinction of our once familiar birds; the publication of our methods and aims through the columns of our own widely diffused periodical, and in an appeal to the press to give publicity and aid to the movement. The press has responded nobly—not with the fiery zeal which characterizes political discussions, nor with the energy with which it is wont to enforce one side of a question which has undoubtedly another side with a strong partisanship, but with the quiet assurance that it was propagating important economic facts which were being universally although thoughtlessly ignored, and a movement designed to arrest an impending evil by an appeal to the public intelligence and sense of social duty.

As a consequence the seed thus sown broadcast over the land, and cropping up in patches everywhere, has given birth to a seemingly spontaneous growth of the movement, involving a demand for circulars, pledges and certificates of membership, creating a current daily routine of correspondence and registration which taxes all the energies of the general secretary of the Society and his assistants to keep level with, and renders it impossible to carry out the plan of action originally contemplated. The movement is spreading in second and third-class towns with a rapidity altogether unparalleled by the great cities. This is only what might have been foreseen. Wherever a few leading minds in the smaller towns have grasped the movement, and thrown themselves energetically into it, they have been able to appeal to

their whole community, while in the larger cities the efforts of individuals who are not in a position to appeal to large audiences from the pulpit or the platform, command but little attention; hence it is that neither New York, Philadelphia nor Boston contribute as large a membership as many of the smaller towns in these States. Happily the obstacles in the way of concentrated effort carry their remedy with them. They are simply imposed by the rapidity of provincial growth, which, receiving its first impulse from the center, is now spreading outward from a thousand isolated centers with an energy which will not fail to include the great cities in its spread.

The leading branch societies, the membership of which has come into the hundreds within the week, arc Le Roy and Utica in New York, Orange, N. J., and Davenport in Iowa. Buffalo, too, has afforded very gratifying results, as have innumerable towns in Massachusetts, yielding a collective whole perhaps equal to New York State. For the past three weeks we have been issuing an average of a hundred and fifty certificates daily, and the current correspondence demands our attention so closely that to our extreme regret we are unable to spare the time necessary to go over the pledges received before the certificates were ready, and ascertain where certificates are due. We should, consequently, be very glad if all our secretaries and isolated members who sent their pledges direct to us, would now send in their applications for certificates; in all cases furnishing a list of the members for whom they claim. In some cases this is absolutely necessary, as we have many pledges which afford no clue to the local secretary who sent them, and in all cases it would save us a great amount of labor.

The friends of the movement will learn with pleasure that it promises every assurance of ultimate success. Feather millinery is beginning to be regarded as in questionable taste, and the ultra devotees of fashion who asserted roundly that they would not discard feathers as long as they remained in vogue, have no longer the same satisfaction in their display, now that every second or third person looks askance at them.

EAGLES BREEDING IN CAPTIVITY.

A VERY interesting case of the breeding in confinement of the white-headed eagle (*Haliaeetus leucocephalus*) has recently come under our notice and the facts and details are certainly worth recording. The birds are a pair taken from the nest when quite young by Mr. Henry Hulce of Toledo, O., nearly six years ago, and ever since in his possession. Their owner writes us as follows:

Editor Forest and Stream:

There has been at Eagle Point, five miles above the city proper, a nest or family of eagles as long as the oldest inhabitants can remember, and they are there still. They are what we call the true American eagle. Their principal food is fresh fish or muskrats, but occasionally they pick up a lamb or small pig.

On June 6, 1880, I captured a pair of young eagles from the nest in the top of a white oak tree, eighty-five feet from the ground. They were probably about four weeks old at the time.

The first year their heads were dark in color; the second year their heads began to turn white. At the end of six years their heads are entirely white. Some people call them the bald eagle, but I claim there are no bald eagles in North America.

On April 6, 1885, the female laid one egg, but it did not hatch.

On March 20, 1886, there were two eggs in the nest, and April 26 one bird was hatched, which is eleven days old to-day. It shows no sign of feathers, but is covered with a sort of yellow down.

I have handled the parent birds ever since they were caught, but they are too proud and saucy now and I dare not go inside the cage.

The male bird measures, from tip to tip, six feet eight inches; the female exactly seven feet. HENRY HULCE.

EAST TOLEDO, May 3, 1886.

Another and more full account is given by our Toledo correspondent, "Jay Bebe":

Editor Forest and Stream:

In June, 1880, Mr. Henry Hulce, of the sixth ward, in this city, took from a nest at Eagle Point, some five miles above Toledo, a pair of eaglets, then about four or five weeks old. These birds were the American bald or white-headed eagle (*Haliaeetus leucocephalus*), and are now splendid specimens of their kind, having matured greatly both in form and plumage since I first made their acquaintance, some three years ago.

For a long time Mr. Hulce kept them in a large cage made of heavy wire, but about two years ago he fitted up in a porch in the rear of his house where he had an eastern exposure, a slatted inclosure some six by eight feet square and eight feet high. Near the top of this he placed a box a foot deep and three feet square, to serve as a nest. Last spring for the first time the hen laid a single egg, and though she sat upon it the full time it failed to hatch.

Last March the female laid two eggs, and on the 26th of April one of them hatched, the other proving infertile. It is worthy of note that, according to Mr. Hulce's statement, the period of incubation was just five weeks or thirty-five days. This appears to be one week longer than the period given by Wilson, who places it at four weeks. It is evident, however, that a single instance could hardly affect the general rule. During all the five weeks the female remained constantly on the nest, where she was regularly supplied with food by her male companion.

When I saw the eaglet to-day, through the kindness of Mr. Hulce, it had entered upon its second week with every prospect of a prolonged existence. The mother remains closely in the nest, and when she was persuaded to rise for a moment I saw a mass of straw-colored down about the size of one's clenched fist, and resembling nothing so much as a very young gosling. The only food of the newcomer thus far has been raw fresh fish, which the mother tears into fragments small enough for its purpose.

A newspaper item recently published here speaks of the hatching of two birds. The facts, however, are as herein stated, and what I have written is the result of personal investigation made to-day in accordance with your suggestion.

JAY BEBE.

TOLEDO, O., May 3, 1886.

CRAWFISH.—Woodford, Me.—Editor Forest and Stream: I have never found the crawfish in Maine, but think he must be a resident here. If not, would he be a valuable or otherwise addition to our trout streams? Is he, as I suspect, an eater of trout spawn, and how destructive is he to small trout? Years ago I found him abounding in a small stream

in Quebec, north of the St. Lawrence River, and also abundant in the stomachs of trout taken from the stream. The trout were also abundant, so the war between the races was evidently not carried on to the point of extermination of either. The habitants called them "escrevisses," and said they were common in other streams as well as in the one where I observed them. I had always supposed they were a fish of warm latitudes, and was surprised to find them so far north. The soil there was mostly clay, overlying limestone of the "Potsdam" formation. Is *Astacus* found in Maine, and if so where, and is his other name *affinis*?—Mac. [We do not think the crawfish a desirable tenant of trout streams. They are not wholly scavengers, but catch small fish and fatally pinch large ones. They burrow through dams and are a nuisance about ponds. Years ago they were called *Astacus*, but now that generic name is only applied to those west of the Rocky Mountains, the eastern genus being *Cambarus*. In the latter are thirty-two species. *C. affinis* is found in the Middle States, while *C. viridis* and *C. bartonii* are found in the northeast. None are known to exist in New England except in the western portion of Vermont and Massachusetts, and in the central portion of Maine.]

CENTRAL LAKE, Mich., May 6.—The Tompkinses are our nearest neighbors. They recently moved into their new building, and have just laid two blue eggs. Some say their name is Finch, but we call them the Tompkinses for the sake of brevity. Their home is situated in a Japanese honeysuckle and on the south side of one of the pillars of our veranda. Our wrens have not yet made their appearance, though we daily look for them. The spring is well advanced and the forests are green. On the 20th of April, in driving along the shore of Grand Traverse Bay, as the ice was breaking up along the shore, I observed a solitary kingfisher peering anxiously into the water streaks among the floating ice. He sent his compliments to his relatives in Cincinnati, and I drove on. On the same day I saw the golden-winged woodpecker for the first time. The trailing arbutus was just ready to blossom, and the hepaticas had preceded them by a week.—KELPIE.

STRANGERS IN CITY HALL PARK.—May 11.—*Editor Forest and Stream*: It was quite curious to-day to watch the crowd at City Hall Park. There were half a dozen brown thrushes and as many catbirds hopping about the oasis of lawn among a hundred or more sparrows, and the people going up and down Broadway would stop and look with open mouth and eyes at these strange creatures, and one had only to stop also and look a little wise to be pried with questions as to what they were, whence they came and whither bound. It gives a person a pretty good idea of how far these birds must have traveled for them to stop to rest and feed in such a place as this and in such company as the English sparrow.—J. D. E.

CENTRAL LAKE, Mich., May 13.—First humming bird seen.—KELPIE.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

DAYS OF THE TEXAS RANGERS.

Editor Forest and Stream:

I have just read in FOREST AND STREAM of May 6, the editorial under the heading, "A Century of Extermination." It makes me feel really sad. You say that the bison, antelope, elk, wild turkey and some others will probably be wiped entirely out of existence by the year 1900. You will no doubt prove correct in this prophecy. In 1858-9 I was a Texas Ranger, ostensibly engaged in "protecting the frontier," at \$5 per month, but mostly engaged in having lots of fun in hunting, fishing, and having a good time generally. There were just Indians enough to spice up this business in a very interesting manner, but not to make it too dangerously interesting. I roamed all over the country, from the San Saba River on the south to the Red River on the north, and from the Brazos River on the east to the Pecos on the west. In those days that great scope of country literally swarmed with game. I have seen deer in herds of probably a thousand head, and wherever we went they were seldom out of sight. They were everywhere, on the prairies and in the woods. On the prairies the antelopes were still more numerous, but they hated the woods and seldom or never ventured in them. In the evening and the early mornings the woods along the stream were resonant with the gobbling and yelping of turkeys, and during the day they swarmed out on the prairies. I have seen them as thick as blackbirds in the valleys.

In those days the buffaloes or bison crowded down upon us every winter in apparently innumerable armies, staying till the spring was well advanced. So abundant was good meat and so easy to obtain that when we fellows started out on a scout or bumming trip—bumming on the good things of nature—we never thought of taking along anything to eat except a little flour, coffee and salt. This is all changed now. The buffaloes are clean gone; the antelope is driven to the Staked Plain; you may ride over the country a week now without seeing a deer, and the gobble of the turkey is rarely heard, and only in the profoundest bottoms and thickets. In those days also these very prairies before me now were full of herds of the beautiful wild mustang, his slick skin flashing like a mirror in the sunlight, and his flowing tail streaming like a banner in the wind. All gone now—all gone; gone into the dead past. Indeed it makes me sad to think of it. I almost feel like crying. My boys will never see what their father saw. My mellow years will never see the fun that my youthful days revelled in, and I love it now just as much as I ever did. They seem to have gone like a flash.

Such are the doings of man. He is the lord of creation and all these things must wither away before his glance. These wild things were provided for the wild man, who was too confounded lazy to work—and he is now a "gone sucker," too—withered away before the above-mentioned powerful glance. It is fate and the Almighty God. The beautiful and rich land had to be enjoyed by those who would glorify their Maker in their works; schools, churches, Christianity had to spread. And after all, while we miss our buffalo meat and our venison, antelope and wild turkey, we must confess that a good porterhouse or tenderloin beefsteak, or a rich mutton chop, or a good fat gobbler from the

barn yard are pretty good substitutes, to say the least of them. As long as we have enough of these things, we shall not starve. Indeed, we shall be able to get along pretty well. Still it is sad to see all these pretty and good things marching away into the dead past, never to return any more.

Touching these things that are dying, there is another extraordinary thing that is now quietly going on in this part of the world. The prairie dog, which until recently covered this whole country with his millions, is, I am told by countrymen from all directions about Abilene, going the way of all flesh without apparent cause. They say that where hundreds were last year, there are not now tens, and in some places that only a few despondent-looking individuals are left where there were recently great prairie dog cities. It is not the work of poison; it is simply a natural dying out. Perhaps his epoch has closed, and that the bell is tolling for him to take his departure into the dead past too. He does no good now that we know of, and probably can do none, and therefore he goes.

ABILENE, TEX., May, 1886.

N. A. T.

A MOSQUITO-PROOF TENT.

Editor Forest and Stream:

Although some months must elapse before the great army of what "Nessmuk" calls "outers" will again seek for pleasure and relaxation from toil in the American bush, I would like to draw their attention through the medium of your paper to a simple means of lessening the annoyances to which they will be subject from insect tormentors. Oily mixtures such as "Nessmuk" recommends are doubtless excellent for those who care only to fish, shoot or loaf around the camp, but many campers enjoy an occasional read in some interesting book, or like to write a journal; others, including myself, are fond of sketching scenery or making drawings of wild flowers. It is impossible to keep paper clean when ones hands are coated with a greasy compound, and equally impossible to write or draw when they are covered with flies or mosquitoes. For those, therefore, whose amusements sometimes require clean hands, I strongly recommend a kind of muslin screen somewhat in the shape of a bell tent. The

top is formed with a thin cane hoop, about two feet in diameter, covered with calico like the head of a drum. Two strong pieces of tape are sewn from side to side of the hoop, crossing each other at right angles, and in the center where they meet is attached a thin rope about ten feet long. To the calico at the rim of the hoop is sewn a quantity of muslin, descending so as to form a bell six feet in height and eight feet in diameter at the ground. Around the lower edge, at intervals of two feet, are small tape loops for pegging out wide when two or three people wish to sit inside.

The whole article weighs only about two pounds, and can be folded flat so as to go inside a bag when traveling. When required for use the rope at the top is thrown across the branch of a tree and drawn up just enough to let the lower edge of the muslin rest on the ground. Danger from fire can be avoided by soaking the screen in solution of tungstate of sodium.

In 1870, when starting for an excursion in the Himalayas, where insects are extremely troublesome, I had one made by the advice of a friend, who had, not long before, marched through those mountains into Tibet and back into India through the valley of Cashmere.

W. H. H. Murray, in his "Adventures in the Wilderness," recommends campers who are troubled by flies to go inside the tent, smoke them out and drop a piece of muslin over the doorway; but one objection to this is that on a hot summer's day the interior of a tent is stifling. With the muslin screen above described a lady can enjoy the fresh air and read, write or sew in peace; a painter can carry it slung on his shoulder and hang it to any convenient bough when he finds an object worth drawing. The above sketch will give an idea of the shape.

LONDON, Nov. 23, 1885.

WAYS OF THE RUFFED GROUSE.

ONE morning late in September in 1884, just as it began to grow light, I was forcing my way through a dense beech thicket, when a ruffed grouse flushed not over twenty feet distant. Instinctively my gun came to my shoulder, when just as I was about to "cut loose" at him what was my astonishment to see him turn a complete back somersault and land upon the ground. I was not quite on the trigger so I held my fire, and quicker than thought he recovered and was off again, not, however, rapidly enough to evade the charge of No. 8 which I sent after him and which brought him again to the leaves, this time to stay, for I had not removed my gun from shoulder, in fact did not have time so quickly did it all transpire. At first I was at a loss to account for the freak, for the monarch of game birds is not in the habit of making mistakes, as our empty game bags so often testify. On examining the ground I found that after he had risen some three feet from his bed he flew against a beech limb about three-quarters of an inch in diameter, which at first yielded to his momentum then sprang back like a bow, when the bird performed the gyration described. Perhaps his late nap had dulled his faculties, or this may have been his customary manner of taking morning exercise. I only know he was in good health, that he helped to grace an excellent dinner, and that while performing his gymnastics he presented a most ludicrous spectacle.

AMERICUS.

ONEONTA, N. Y.

NOTES ON QUAIL SHOOTING.

Editor Forest and Stream:

As a matter of fact I have never waited on a flock of partridges that utter failure did not follow as the result of the experiment. From the fall of '65 to '81 inclusive, I was afield nearly every good day, and generally by myself, which gave the best opportunity for watching the ways of birds. At Sandy Point, on lower James River, I hunted two falls over 3,000 acres of level cleared fields, and have seen a covey of birds hover as though they were in the very act of coming to the ground; then they would seem to take a second thought and fly off at right angles at least half a mile. If you don't note with precision where a partridge or a covey lights, finding them is a very uncertain business. A. VIRGINIA.

Editor Forest and Stream:

"Old Timer" is probably aware that the question of the ability of the Virginia partridge to withhold its scent was much discussed in the old *American Turf Register and Sportsman's Magazine*, pro and con, and no conclusion arrived at. Experience has led me to the conclusion that there is nothing in it, the nature of the soil, of the air about the spot and of the cover upon it, renders the scent very poor at times, which is all there is of it. Much more frequently men's eyes deceive them as to the spot where the birds actually drop into cover. Fox hunters, coon hunters and all who pursue game with dogs have scent puzzles bottled up in their experience.

M. G. ELZEY, M.D.

WASHINGTON, D. C.

Editor Forest and Stream:

I have been an ardent and persistent sportsman for more than half my life; have owned and hunted pointers, setters and spaniels for the past twenty-five years; have bagged everything in our catalogue of game native to our fields and forests, and long before I knew of the existence of such a character as "Frank Forester" became aware of the difficulty of finding scattered bevy of quail under certain conditions. That I am not alone in my belief and experience, a reference to the reports of our field trials for the past five years will fully substantiate. When we read in these reports of dogs famous as field trial performers and victors in many well-contested battles failing to find carefully-marked scattered bevy, we have reason to believe (coupling that with our own experience) that it is not fancy, but well-proven facts. That under favorable conditions dogs can and do find scattered bevy, I do not deny. That this is not an infallible rule (as applied to the birds of Northeastern Pennsylvania), I as stoutly assert.

I am now the owner of a brace of dogs, one a liver-colored pointer, the other a red Irish setter, that, like all concealed sportsmen, I am vain enough to believe have few equals. I have hunted the setter two seasons on grouse, quail and woodcock, and consider him by far the best quail dog I have ever known. I have hunted the pointer one season on grouse and quail, and, while not thoroughly broken, he shows wonderful nose and staunchness, and will do. On the last day of December, 1885, a friend and myself, with Fred and Dred at our heels, betook ourselves to a stubble, a short distance from town, on which had been reported a day or two before a large bevy of quail. The stubble was skirted on one side by a small piece of woods, and in passing through this I cast the dogs right and left, more for the pleasure of seeing them go than from any hope of finding game, when, in passing a fallen treetop at full speed, the setter suddenly froze in such a manner as to leave no doubt he meant business. I called to my companion to be on the alert, and at the same time whistled up the pointer to back, when up jumped a very large bevy of full-grown birds and settled in plain view along an old brush fence and a patch of brakes and briers not more than two hundred yards away.

We followed them at once and secured two points and two birds among the brakes and briers, while a third I kicked from under my feet and sent toward a piece of woods about five hundred yards away, "shedding his feathers" in such a manner as to satisfy me I should see him later. We then hunted the brush fence thoroughly, but failed to start another bird, and thinking, perhaps, that we might have been mis taken, and that they had led the way to the cover that the wounded bird had sought, we followed him up and had hardly entered the woods when both dogs pointed simultaneously in the same direction, and in kicking the debris ahead of them a wounded bird got up with difficulty and fluttered along a short distance till my shot mercifully stopped her. We hunted the remainder of the woods thoroughly and secured two points on grouse, one of which I bagged; but I found no more quail. We then returned to the old brush fence and secured in rapid succession five points on different birds, and that on the identical ground we had hunted persistently two hours before. We then tried the brakes and briers once again, and the setter, a very fast dog, we found on a staunch point within ten yards of where I had killed my first bird but a short time before. While we were admiring the (to us) rare picture of a double point, up sprang still three more birds and sped away unharmed.

Although nearly twenty-five years have gone by and I have had many similar experiences since, I cannot forget the first time I became fully aware of the power of the quail to withhold his scent, or to so secrete himself as to baffle both dogs and sportsmen. I was spending a few days shooting with a friend, and one frosty morning early in November, after beating a willow swamp with a spaniel for woodcock, we left him at the house and tried the stubble for quail. I was hunting with a pointer with quite a reputation for field work, and he was not long in locating a bevy in approved fashion. After being flushed they flew in a body to one corner of the field, which had been left unplowed, and settled in the grass and briers, from which we expected rare sport, as the cover was not thick under, and above it was comparatively open shooting. We followed at once, and after beating the ground carefully in every direction, succeeded in kicking out one quail but got never a point. My friend condemned my dog, although he had seen him do good work before, both on grouse and woodcock, and insisted on my watching the "patch" while he went to the house after Don, the spaniel, assuring me that he "would have every one a going in less than ten minutes." I was incredulous, but to please him sat down and patiently waited. After about thirty minutes he appeared with Don, and for the second time carefully beat out the patch without finding a feather. We then went to dinner thoroughly disgusted and mystified, and while at the table heard the quail calling from the very spot we had hunted so persistently a short time before. That dinner was a hasty one, and at its conclusion we hurried again to the grass and briers and got point after

point in such rapid succession that we were "bothered entirely."

I could take up columns of your esteemed paper in citing cases from actual experience similar to the above, but I think the two mentioned sufficient to show that from excessive fright or other causes quail can and do withhold their scent to the utter discomfiture of dogs and sportsmen.

W. W. Mc.

SPRINGVILLE, Pa., May 3, 1886.

RECOLLECTIONS OF A SPORTSMAN.—III.

ONE morning in November, after a severe and long continued northeast rain storm, which filled all the ponds and swamps, the sun rose in a perfectly clear sky. The atmosphere possessed that feeling of crisp coolness indicative of approaching frost. It being a holiday the boys were out in force. I had started early after quail, and soon found a covey in our buckwheat patch. I bagged two on the rise, a beautiful right and left shot, the first I ever made. Dash behaved nobly, retrieving my birds in fine style and seemed to say, "I'll do my part, if you'll keep your end up." We followed the birds into the woods where Dash soon pointed a single, that I killed with my second barrel. While retrieving this bird Dash came to a pretty point, with the dead bird in his mouth—a picture to delight any old sportsman, much more a youth like myself. I flushed the bird and missed it with both barrels, and continued missing all that got up, until I had fired perhaps ten or a dozen shots. When, attracted by my firing, seven other boys joined me, having with them one bird dog and two rabbit dogs, feeling that I had the best dog, and could beat any of them shooting, I was anxious to show off. We proposed to take a short cut through a piece of oak sprouts and woods about half a mile to another buckwheat stubble where we knew a covey of quail dwelt. In going through these oak sprouts, which were eight to ten feet high, and still covered with dead leaves, we struck the biggest lot of flight woodcock it has ever been my luck to see. They had dropped down during or just after the storm, and the place was literally alive with them. I killed seven and probably fired thirty shots to accomplish it. I think our party got thirteen woodcock in all. We then had to go for more ammunition, and when we came back could not find a bird. One of our party, a rather eccentric fellow and one of the best players on our base ball nine, though he couldn't hit a "barn flying" with a shotgun, did a most remarkable thing. A woodcock that several of us had fired at, made a direct flight toward him, flying pretty low down; he threw his gun on the ground, jumped up and caught the bird in his hand as neatly as ever a base ball was caught. Now don't cry "fish story," for this man is yet living, and there were plenty of witnesses.

A little further on we came to a noted squirrel tree, a tall poplar, dead at the top, hollow about thirty feet from the ground clear to the top. As we came in sight of it I spied a squirrel lying close against the trunk near a hole. I fired quickly to prevent any others shooting first, and struck him hard, but my shot being too small to kill, he got into the hole. It was proposed to smoke them out, and as I was the only one who could climb the tree, to me was delegated this important task. The tree was the tallest in the wood, without branches for at least fifty feet. The first hole was about thirty-five feet from the ground, another about half way to the top and one in the top. The trunk near the ground was too thick for me to hug, so we cut a tall slender birch sapling some six inches thick at the but, two boys climbing it and bending it over, while another cut across the but with a jack-knife until it came down. This we leaned against the tree, the boys holding it steady until I shinned up to where I could get a hold on the larger tree. I succeeded in reaching the first hole, and it was a pretty hole I can tell you, worn smooth and slick where the squirrels ran out and in. I lit a match and found the draft good. I then produced paper from my pockets and fired it, stuffing it with a lot of leaves into the tree. We waited patiently until it burnt out, but no squirrels came. My stock of paper was almost exhausted and I feared I would have to give it up, when some one proposed putting in some powder. The difficulty was, how was I to get the powder? I happened to remember that I had a fishing line in one of my pockets. I let down the line and the boys passed me up a powder flask and more paper. I made a bundle of about two ounces of powder and shoved it well up in the interior of the tree, then I stuffed in more paper, set fire to it, and started cautiously to slide down. I had descended about ten feet when I was notified of the appearance of squirrels by the firing of some half dozen shots. Just then a squirrel ran down the tree and tried to pass me. I struck at him with one hand, when I suddenly felt something like a dozen keen switches striking me and burn like fire. I realized that some of the boys had shot me, and for fear of getting more of it, I dropped some fifteen or twenty feet into soft mud and moss, so my fall did not hurt me. The next thing was to whip the boy that shot me, but to this day I have been unable to find out which one did it. There is, however, a standing invitation for him to show up. I soon found I was not seriously hurt, so continued with the party. We could not find any quail, but started a number of rabbits, which we all shot at without effect, except when Dash pointed one in its nest, and I shot its head off.

As it was going to be moonlight that night, some one proposed that we go after opossums, and swing around by the old mill creek and shoot some muskrats, as they now had on their winter coats. It took furs and the like to buy powder and shot in those days, when shot sold for twenty-five cents per pound and rifle grade powder at \$1.25 per pound. As my wounds were stiff and smarting considerably and I felt quite sore, I declined, knowing well that there was more fun for me in one of the neighboring farm houses, where dwelt one of the prettiest little Jersey maids to be found in the county.

BEDFORD.

ALBINO TURKEY.—A well-known resident of Wolf Hill Prairie, Ind., who goes under the name of "Old Wabash," while looking for some cattle in the bottom land the other day, started a big wild turkey. The bird flew over "Old Wabash's" head and was making for the treetops, when "Old Wabash" fired a stick at him and knocked the turkey down and caught him. It turned out to be a young male bird and a partial albino. A large number of persons have seen it, and it now allows them to feed it out of their hands. Since "Old Wabash's" streak of good luck, a large flock of twenty-five turkeys have been seen in the same bottom, among which, it is said, there is one bird almost pure white in color. Several attempts have been made to shoot it, but, as it is very wary, it has thus far saved its bacon by long flights.

CLEVELAND "GAME."—*Editor Forest and Stream:* A huckster called my attention this morning to a "nice lot of game just received from Chicago." The contents of the box I give you as he counted it off. You will agree with me that the slaughterer brought quite a variety to bag, especially if the work was all consummated at one hunt: Three prairie hens, 2 blue winged teal, 5 scaup ducks, 3 black-bellied plover, 2 golden plover, 1 killdeer plover, 2 Bartram's plover, 23 lesser yellowshanks, 2 solitary sandpipers, 16 pectoral sandpipers, 2 jacksnipes, 2 meadow larks, 1 bobolink. Sixty-four head in all, mostly male birds in full spring plumage and poor in flesh. The ornithologist will appreciate all this. In the evening I was informed by Monsieur the Huckster, that he had disposed of the "whole lot" to a Mrs. Dude, on the avenue, who is noted for her swell lunches, local humane and foreign missionary efforts. How nice to see those pretty fingers picking the spare meat off the bones of the innocents. The old black cat that skulks in from the meadow with a bluebird in his maw is to be admired when contrasted with the destroyers and consumers of this lot of birds "fresh from Chicago." Success to your game laws, Audubon clubs, anti-hounding deer laws and your efforts to keep railroads out of the Yellowstone Park; but for my part, I quit, I "throw up the sponge," hoping that the coming man will have only *Passer domesticus* for game and song bird and the European carp for his bamboo rod.—Dr. E. STERLING (Cleveland, O., May 8).

NEWARK AND BOSTON GUN CLUB.—Messrs. William R. Williams, John Illingworth and Joseph Mundy of Newark, N. J., and Henry A. Priest of Boston, Mass., have taken a five year lease of a large portion of what is known as "Middle farm," on Spesutia Island, Maryland. The organization, which is called the Newark and Boston Gun Club, is limited to the above named members. They are building a beautiful club house which will be well appointed. It faces the famous Havre de Grace flats at the headwaters of Chesapeake Bay, and is the nearest club house to the best canvasback duck grounds. The club is building a large iron steam launch at Newark, N. J., which is to be fitted up with batteries, decoys and boats. Where the club has located was several winters ago the trysting place for the famous gang of big-gun night shooters. It was on the north shore of Spesutia Island that they met at night at certain periods throughout the year. Fortunately the Maryland ducking shore owners were successful in capturing some of the big-guns and arresting several of the outlaws, as detailed at the time in the FOREST AND STREAM. Wash. Barnes, the ringleader, is now employed by Mr. Middleton, who also resides on Spesutia Island.

RHODE ISLAND GAME LAW.—The statute enacted April 28, 1886, provides: Section 1. Section 4 of chapter 94 of the Public Statutes is hereby amended so as to read as follows: "Section 4. Every person who shall take or kill, sell, buy or offer for sale or have in his possession any woodcock from the first day of January to the first day of September; any ruffed grouse or partridge from the first day of January to the first day of September; any quail from the first day of January to the first day of October; any Bartram's tatter or upland plover, commonly known in Rhode Island as grass plover, from the first day of April to the first day of August; any dusky or black duck from the first day of March to the first day of September; any wood duck or summer duck from the first day of March to the first day of September; any blue or green-winged teal from the first day of March to the first day of September, shall be fined twenty-five dollars for each of said birds." Sec. 2. This act shall take effect immediately, and all the acts and parts of acts inconsistent herewith are hereby repealed.

VERMONT.—Rutland county has a new game protective club, with headquarters at Rutland and branches in different towns. The officers are: President, W. R. Dorr; Secretary and Treasurer, D. N. Baxter; Executive Committee—C. L. Howe, A. W. Higgins, J. C. Dunn, O. W. Sterl, S. E. Burnham, G. T. Loop, A. Kilburn, John P. Hunt and W. L. Ferguson. These vice-presidents by towns were elected: Rutland, W. Y. W. Ripley; Benson, H. S. Howard; Braintree, E. Thayer; Castleton, H. L. Clark; Chittenden, Edwin Horton; Claremont, W. G. Marsh; Danby, Dr. Frank E. Whipple; Fair Haven, R. C. Colburn; Hubbardston, Cyrus Jennings; Ira, Simon L. Peck; Mendon, Alonzo Ormsbee; Middletown, C. E. Green; Mt. Holly, Marshall Tarbell; Mt. Tabor, Edward Foley; Pawlet, D. W. Bromley; Pittsfield, Dr. C. W. Brigham; Pittsford, Edward Smith; Poultney, M. J. Horton; Sherburne, D. W. Taylor; Shrewsbury, H. C. Gleason; Sudbury, E. C. Spooner; Timmouth, I. D. Tubbs; Wallingford, Lyman Batcheller; Wells, R. M. Lewis; West Haven, R. C. Abell.

VIS MEDICATRIX NATURÆ.—A drake wood duck was shot this spring near Eagle Pond, Ind., in whose under bill there was a large hole, through which its tongue protruded. Evidently the hole was the result of an old shot wound. The tongue had become callous and enlarged at the tip and the bird was unable to withdraw it. On the same shooting ground this spring seven jacksnipe were killed marked with old shot wounds. One had a No. 10 shot imbedded in the second joint of one of his legs. Old Western gunners say that there is not a live jacksnipe to-day that has not had at least a score of shots fired at it. It would be interesting to hear from shooting men of experience what they consider the natural period of life of the snipe, woodcock, grouse, quail and other game birds.

A CAPTURED SWAN.—Charles Ross, of Lyons, Indiana, made a lucky shot at swans this season at Bee Hunter Prairie. Three came low down over the marsh. Ross saw them coming, and although a flock of geese passed temptingly within range, he did not fire at them, and waited for the approach of the bigger game. The swans came head on, and were just about alighting when Ross fired and downed them all with one barrel. Two fell dead, but the other was only wing-tipped. He was captured after a long chase, and when Ross started for home he made the swan walk in front of him all the way. The town turned out to see Ross driving a wild swan down the road, and a stranger was so much interested he bought the bird for \$5.

INFORMATION WANTED.—Perry, N. Y., May 13.—We want a place where a party of four or five can find good deer hunting, and would like a few bear also. Give the name of some party near the locality with whom we could correspond regarding guides, transportation (if necessary) etc.—J. L. W.

DIFFERENT WAYS OF CAMPING.—I think "W. N. B." cannot have tried the fur bag or he would not condemn it as he does. After sixteen years given up to wild life and big game hunting in all parts of the world, thirteen of which have been spent in Western America, I find that there is no bed so warm or so portable as a fur bag. Mine will go very easily behind my saddle, including an outside waterproof canvas bag, which entirely does away with any necessity for a poncho or ground sheet. It weighs exactly ten pounds and is warmer than three pair of blankets, which is the usual allowance for a man in the mountains, and these would weigh some twenty-four pounds, besides ground sheet and cover. I always try every new and promising device for camping before condemning it.—C. A. M.

THE NARROWS.—A club, consisting of twenty-two members, chiefly Newark men, have leased a ducking shore in "The Narrows," which is six miles south of Havre de Grace. The club has purchased a large sloop to carry the game, and is making ready for a big shoot when the season opens. Canvasbacks and redheads are now circulating a notice at their breeding grounds at Alaska, to beware of "The Narrows" next autumn.

FLORIDA.—Jupiter Inlet.—Hunting has been quite good the past winter. Deer have been killed in large numbers, especially by the numerous Indian pot-hunters. Wildcats, panther, bear and other smaller game are numerous. Sea-trout, bass, snapper and other fishing good.—G. G. F.

NEW JERSEY.—New laws prohibit killing red or gray squirrels during months of November and December; impose a fine for having in possession any sort of game after the same has been snared; restrict killing European pheasant, partridge or grouse for three years.

A PIGEON STORM.—A Titusville, Pa., old resident recalls that on March 25, 1852, in a tremendous snow storm great flocks of pigeons were blinded and bewildered, and coming to the ground were killed by hundreds.

BUT LOTS OF FUX.—Viicksburg, Miss., May 6.—We had an interesting trip after turkeys, but found the birds "up to snuff," and got only three in a ten days' hunt.—P.

EAST BERKSHIRE, Vt., May 12.—No spring shooting of ducks about here, because they did not come to be shot. Trout fishing has started in fine.—L.

Sea and River Fishing.

FLY-FISHING FOR SHAD.

Editor Forest and Stream:

The shad season of 1886 has opened with brighter prospects than the three previous years have shown at the same date. Not having my memoranda with me, I will have to trust a treacherous memory, which reminds me that the season of 1883 opened some days after the 25th of May, with very unsatisfactory results. The season of 1884 opened about the 1st of June, and for some days the fishermen had to be satisfied with from one to three fish per day; 1885 opened with one shad on the 21st of May and no very perceptible increase until June. The three years were unprofitable except in blistered hands from persistent rowing. The season of 1886 opened Saturday, 15th, with seventeen shad, all good fish. To-day, Monday noon, shows considerable increase on Saturday's catch. How it will continue remains to be seen. Let us hope the anglers will find a few pleasant hours with the Connecticut River shad.

The two seasons of 1884 and 1885 gave the fish a better opportunity to do their own hatching than they have had for the previous eight years. With the exception of three days last summer and about a week of the summer previous, surplus water was running over the dam. Through the close seasons of both years (when out after bass) shad were plenty and good size.

One evening in September, 1884, I was wading and whipping the rapids between the bridge and the dam. The fish were so attentive to my personal pleasures I did not notice that a storm was gathering. I was manipulating a 3-pound bass in strout water between the large stones which dot the bed of the river, unconscious of the then raging storm until the fish swam up the rainstorm, passing over my head and seeking refuge in another pool behind me—out of the water into the wet. After he had found his way to the creel the storm was about spent. Making my way across lots for my boat below the bridge, I struck a pool about three rods long and a rod and a half wide, in which were about two dozen shad. They could not get out of it, as there was no flow of water through. The water raised that night and set them free.

Will keep you posted on the prospects for the fly.

THOS. CHALMERS.

HOLYOKE, MASS., May 17.

Editor Forest and Stream:

In your "Correspondents" column of last week I notice the statement that "the only spot where the fly-fishing for shad is successful is below the dam at Holyoke, Mass."

Very fine shad are taken with the fly on the Housatonic River, near Birmingham, Conn.

The shad of this river are widely known as being equal in size and excellence to any found in the United States. Formerly they ran up to spawning grounds many miles above Birmingham, and in those days I believe were never taken with the fly, but several years since a dam twenty-two feet in height was built at the place named, and at the same time a huge timber box, so fearfully and wonderfully made that it is a terror to all well-organized shad, was placed in the dam and called a "fishway." The natural result is that all fish now make Birmingham their terminus, and as no seines or nets are allowed here, the shad congregate in great numbers, giving much sport to the local fly-fisherman.

THOMAS CLAPHAM.

ROSLYN, N. Y.

[We knew perfectly well that shad had been taken with a fly on the Housatonic, having fished there for them with success. The omission to mention this locality was an oversight for which we cannot account. We have always regarded it as an uncertain locality, however, and have never considered it worth while to send anglers there. We are glad to know that shad take the fly freely on that river.]

TOWING FOR KINGFISH.

TO-DAY I have been a-fishing, the first time that I have had leisure to do so since the fire (we in Key West date from that event altogether now; it has superseded "befo' the wah," etc.), and I have had so capital a time of it that before I sleep and the muscles of my pulling-in anatomy get stiff and sore, and undoubtedly they will be to-morrow, I will share my good luck with my FOREST AND STREAM confères, and send "A. N. C." to bed green with envy when he compares his biggest bass with my grouper, my kingfish, amber fish and red snappers.

I wrote you a letter some weeks ago which you published under the heading of "Fishing at Key West." I had hard work to get that letter up, and had to draw on the catch of others to get a respectable creel of fish together, my trophies up to that date having been entirely of the genus panfish, varieties innumerable. In that letter I told you of a cruise I made in the Foam of the Sea, skipper, Acosta; cook, Gabe; and crew, Charlie, of all of whom I spoke a well-deserved good word. But when I distributed among them some of the papers containing my letter, they did not seem quite satisfied and urged that I should try it again. They thought that the history of a day of calm, most of the time passed at anchor, with no bait that would draw anything but sharks, was hardly a fair description of the average and ordinary events of a day king-fishing. Their arguments convinced me and I did try again, and as many times again as I have been able to; for a good six knot breeze from the start, and a lumping big kingfish landed before we had gone a mile, to be followed during the day with lots more (my own share of the catching was over 300 pounds), impressed me with the idea that there was lots of fun at "towing." Lots of work, too, and I have tried in vain to cipher out how many foot-pounds my arms lifted that day, using as data 22 kingfish from 10 to 16 pounds' weight, a barracouta about twice as heavy, and Spanish mackerel to make up the score, each caught about 30 yards from boat, and hauled in with her going at the least 6 knots; except when that big barracouta got hold; then, if there is any truth in the axiom that action and reaction are equal, that boat must have slowed down, although judging by sensation, at every yard gain she seemed to go faster.

I had a savage pleasure in seeing that big head thoroughly clubbed, for not only did he, with one of his razor-sharp teeth, cut my finger to the bone, but just before, either he or one of his breed, bit in two, as clean as though cut with an axe, a good-sized kingfish I was hauling in. I'm sure that fish must have had a tail when he started, but he came to hand minus, not only it, but over a foot of his body. Kingfish I knew to be like all of the mackerel family, excellent bait, and had often used it, but never before an entire ten-pounder.

There are some very pretty points connected with "towing for kingfish." Although not always the case, yet generally the fish rushes from below at the bait, and his momentum carries him high. Three or four lines are out. No fish on. In an instant, perhaps, half a dozen are in the air at once, and among them each hook has been appropriated. Then as they strike the water something is very likely to break, if you are at all aesthetic in your taste for fishing. Until I used them all up, each one lasting just one strike, it was my fancy gear that broke. When I had thus gotten clear of my ivory and pearl spoons and spinners, my revolving baits, fluted and plain, lake trout spoons, etc., and had snapped all of the lines I had brought with me, I came down to the native style, and then when anything broke, it was the fish's neck, and this happened a number of times. I suppose we turned him a back somersault without due notice to be ready. The gear which caught kingfish and staid with us, consisted of a cod hook, largest size, shank filed to a point, ganged to a copper wire snood a foot long, so put on that the end of the shank is left projecting, thus forming a handy peg to hitch the upper end of bait on.

The bait most successful is a strip of pork skin, cut frog-shaped, *à la* "Nessmuk;" but when they are biting well anything will do, and we generally come down to white rag. They will jump at a knot in the line, and close to the boat. The line used is about three-eighths of an inch in diameter, and I presume when not in use as a fish line does duty as a bed cord. When we hook them we don't waste much time playing them; we keep them a coming, hand over hand, and their mouths are so tough, and they are generally so well hooked, that we lift them right over the stern with the line. Then comes in the value of the pointed spur to hitch a new bait on; no time to waste in tying.

It was in early March that I made my first successful trip. They had been abundant all winter, the favorite grounds being in the vicinity of the Pelican and American shoals, ten and eighteen miles to the eastward, where the strip of reef fringing all of the keys is comparatively narrow; so that in half a mile's distance you can troll in from five to one hundred fathoms, and strike them somewhere.

The line of demarcation between the blue water of the Gulf Stream and the green on the shoals is so well defined, that one end of a boat may be plainly in the one, the other in the other. We started for the shoals, and before we were clear of the channels had perhaps a dozen fine fish, ranging about ten to sixteen pounds. After we struck blue water we neither saw a fish nor had a strike during our twenty miles' sail to the eastward and back; and gradually the wind died away, so that even if fish were plentiful we would have got none. I have seen a school of them swimming all around the boat, occasionally examining it, but not one would touch it, at a four-knot speed. A puff of wind that would start us up, started them up, too, and the instant the baits got lively enough they were seized.

The jump of a kingfish is somewhat like that of a bass, but higher. As to the height, authorities vary. I am sure I've seen them five or six feet out of the water. I believe reliable Conks, who increase the figures up to say ten feet; but when they get up, as in one instance, to fifty, why, I draw the line lower.

Towing (a very appropriate name) having failed, we made for a ridge running parallel with the coast line, but separated from the shore reefs by a mile or more of deep water. On this ridge, a narrow one, the depth varies from ten to twenty fathoms, and there's where the snappers and groupers lie. The usual method of fishing is to drift along, with lead on bottom, until a good "drop" is struck, then anchor and lower a bundle of fish carcasses, etc., for cium. By the time we got to the ridge the breeze had sprung up again, and we drifted too fast to do more than lose our lines, by getting fast, so we saw nothing of the snappers that day. Started back for Sand Key, and as soon as we got into the green water fun began again. And our day's fishing was a grand success.

But what Acosta told me of what might have been, in the way of big snappers, etc., determined me that on the very

first opportunity I should fish that bank. That opportunity came to day. Starting with a good breeze we again went as far east as on the first trip, and again failed utterly in that direction. After passing the Pelican, between it and Sand Key, we got three fine kingfish and a couple of large (four and six pounds) Spanish mackerel trolling, and I caught a magnificent amber fish weighing 24 pounds. We still fished off the shoals in from five to fifteen fathoms, but not a fish. Then the breeze dying again, we made for the deep-water ridge, and in five minutes from the time we struck it a 23-pound grouper was on deck. Then came an hour to be remembered. All hands were fishing, and some one was landing a fish all the time. Our catch consisted of red snappers, groupers and rockfish of various varieties. My own catch included a red snapper of 14 pounds and a grouper of 43. I thought sure I had a shark. Several of our lines having been carried off by them, and having but the one gear left, I determined to, if possible by careful handling, get him to the surface and shoot him, hoping thus to save hooks. Presently I doubted his being a shark, for he stopped fighting and came up quite easily, and that a shark never does. In all respects his action was that of a big codfish, lug back occasionally, then hang. When he came to the surface his mouth was wide open, and he was so far exhausted that there was no difficulty in inserting a gaff hook just opposite to mine, and then three of us lifted him in; then that merry-making became temporarily and literally a symposium, for he was the big grouper of the season.

I sent him ashore this evening to a lady, who, since the fire, is compelled to hunt up food for about thirty people; and have just received her note of thanks for that "what shall I call it, young whale?"

Having thus placed him on record, I'll turn in. PISECO
P. S.—I suppose I ought to interject some useful data. On Plate 94 of "The History Industries of the United States" are given pictures of the spotted cero (*Scomberomorus regalis*) and the cero or kingfish (*Scomberomorus caballa*). In the text, page 116, describing the two fish, it is said, "It is more than likely that this (spotted cero) and the preceding species (cero) are both included by the Key West fishermen under the name kingfish, the difference in general appearance being so slight that it is hardly likely they would be noticed by ordinary observers." They both are so included. I have caught them both, the most of the catch up to March 10 was of the spotted variety; since then the *caballa* has predominated. Lying side by side, the difference (aside from the markings) between the males and females of either variety are greater than between two of the same sex, different species.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—XII.

WE pulled ashore to eat our lunch, for we were now just off the Alexander farm, and the wind came sweeping down the lake past the point which sheltered us with a force that precluded the idea of pulling against it and fishing with any comfort. Lunch disposed of, we caught a few frogs in a little wet meadow back of us to increase our store of bait, swung out into the rollers and headed across the lake over the same course I had taken the previous Sunday. We put out two trollers, a Hili and a Chapman, but the big pickerel maskalonge that took my spoon that day had probably not yet digested it, or mayhap he had changed his mind about new-fangled bugs with glittering propellers as an article of diet, and we had no call from him nor from any of his relations. Down near the point where Maybert's Creek comes in through the wilderness of deadened trees we changed back to frogs, and in a couple of minutes Ben was engaged in a sharp fight with a big-mouthed bass of nearly three pounds, who finally took a position on the stringer under vigorous protest, after vainly trying to smash "ole quitatessence" by a sudden dash under the boat. Then in less than fifty yards two more tried to belch up the frog after swallowing it, but Ben's hook had a fashion of "always a ketchin' on to somethin'," and they too were slipped on the stringer, to end their career in the frying pans of the philosopher across the water. Meantime the skipper was not idle; he was holding the boat in proper position for Ben to handle his fish, enjoying the fun and waiting for his turn to come next; but the struggles of the last one seemed to have scared the others, if there were any more, and the turn did not come.

We drifted along down with the wind toward the point opposite camp, over a stretch of shallow water, four to eight feet deep, with a sand and mud bottom, with only a stray bulrush nodding in the breeze here and there, and not even a patch of "muskrat grass" big enough for a sunfish to hide in.

It may be mentioned here as a matter of possible interest to any of the brethren not used to fishing the lakes of this region of Michigan, that such a piece of water as that is, as old Ben says, "jest the place where ye won't ketch nothin', an' ye might as well reel up or go ashore an' fish in a rozberry patch."

Just off this point the water is shallow for fifty or sixty yards out and then comes a strip of grass and thickly growing bulrushes reaching down the lake for a hundred yards or more, and along the outside of this bank the water deepens straight off till the bottom cannot be seen. This is the kind of water where you may look for fish.

We drifted along down to the lower end of the rushes without taking anything, however, but one longface of four pounds, which fell a victim to the rod of the skipper. Here the wind had a fair sweep at us, making the water so rough that it was hard work to hold the boat anywhere, and as we turned to go over the water again along the bulrushes, a rain storm coming down the lake less than a mile away admonished us it was time to get into the rubbers and head across for the camp. Ben said this was "a hoss sense move, fur the fish wasn't a bit'n' much nobow, an' he wanted to git ashore where he could rub the knots out o' his legs."

At this point we afterward took a number of fine fish, bass and pickerel, and one day old Danny struck a fish there with such persistent and dogged fight in him that he was preparing to chuckle over the capture of a big maskalonge, but when it was brought in sight and in reach of the gaff, it proved to be a villainous bead-eyed "lawyer" of large size much to the disgust of the old pelican and the hilarity of Hyperboler, who barked and snarled as he jerked the gaff into him, in derision at Dan's "new style o' muskylunge."

We beat the rainstorm to camp by a few minutes, but no sign of life greeted us as we stepped out and pulled the boat up on the bank except five mischievous little pigs that were engaged in an industrious rooting match under the kitchen fly for stray scraps and crumbs that might have fallen from the table. These little porkers, only a few weeks

old, were a fund of considerable amusement for the girls and a source of much and continuous anxiety and annoyance to the keeper of the frying pans and the direct cause of a large amount of comprehensive but suppressed profanity on his part. They paid the camp irregular but frequent visits, trotting down from the barnyard in solid columns whenever the (evil) spirit moved them, and there was not one of the quintette, but had been "knocked silly" a half dozen times by diverse missiles flung with unerring precision by him of the pans, but they were of a hard breed and minded a knock-down or "dislocated ear" but little more than a sneaker bite. A squeal, a tumble, two or three astonished grunts and "woofs" and they were back again with some freshly hatched devilment with which to make life a burden to the philosopher. Only for our respect for the property of others and our good name as law-abiding sportsmen, I am afraid neighbor Horton's pigs would have found a watery grave before the first week was out. We offered to buy them and convert them into roasts, but he would not sell and we finally came to look on them as a nuisance that had come to stay, and toward the last their presence would have been gladly missed. Ben said, "The only thing that saves their bacon is, the close season fur hogs ain't out yet, an' I don't want to break no game laws."

We laid our rods on the table out of reach of the pestiferous pigs and walked cautiously over to the big tent to learn the cause of the masterly inactivity going on in the camp. Peering around the tent flap, there sat old Dan and Muller, about as we had left them in the forenoon, the cribbage war still raging, and from array of "tallies" on either side of a line drawn on the tally sheet, the slaughter on both sides must have been something very considerable. Miss Fanny peeped at us an instant from behind the leaves of a *Century*, in which she was deeply absorbed. Jim and Mother Jim sat near each other with visible traces of the original "honey-moon look" still lingering around them, gazing placidly out on the lake now dotted with myriads of tiny bubbles kicked up by the falling rain, and just back of them on a quilt spread on the "floor," with an army blanket around them, sat the two bundles of mid-chief, Bob and Kit, each demurely sacking at a lump of maple sugar, as usual, with a look of serene content on their faces that proclaimed they had about mastered the problem of "how to pass a rainy day in camp and be happy." Altogether it was a pleasant picture, and good to look on, but where were Top and Annie? "Over in the henry asleep," Bob answered, as she wiped her lips on a corner of Kit's apron, and got to her feet with, "What luck, James Mackerel?" and then the two Misses Curiosity sallied out in the rain with the blanket over their heads and down to the boat, "to see if Papa and Uncle Ben had brought in any trout."

The warriors at the crib board agreed to a truce, counted the slain and came out to see the fish and kick the cramps out of their legs, with the understanding that hostilities were to be renewed by candle light that evening under the protection of the mosquito bar in Dan's tent.

Fanny marked the page by turning down a leaf corner, donned a rubber gossamer and followed the twins down to the boat, and Jim, after due deliberation, relieved his camp stool of its burden, jointed himself together and said to his better half, "Let's go down and see what the old cranks have brought in, anyhow."

Meantime the philosopher was nowhere to be seen, but a well-known sound coming from the direction of "the Knot tent," betrayed his whereabouts, and looking in he was discovered under a pile of blankets sound asleep, doubtless devising in his dreams a plan whereby he might circumvent neighbor Horton's pigs without slaughtering them outright, and the plan seemed to have matured, for next morning, when they were rooting around the provision box well bunched together, a dipper of water from a camp kettle on the stove—the stove was quite warm—scattered impartially over the group, suddenly reminded them of something they had forgotten at the barnyard, and the haste they displayed in going back after it, moved Ben to compare the performance to "a yaller dog tryin' to outrun an old oyster can tied to his tail." They stayed away nearly half a day, and the medicine worked so well that the philosopher repeated the dose at intermittent intervals with very gratifying results to himself.

We roused the philosopher out of his dreams, and while he started fire in the stoves and arranged the table, Ben and the skipper dressed the bass for supper and breakfast, leaving the pickerel for any of our neighbors who might drop in for a mess of fresh fish, this being an arrangement that would suit all parties concerned, as we have noticed that the residents along the lakes where we have made our camps and fished prefer the longsnouts to bass, for the reason perhaps that their tastes have been educated on them because of their more easy capture.

We went to bed that night not in the best of humor with the weather, and had it not been for the quieting music of the pattering rain on the canvas there doubtless would have been mutterings deep and dismal from the old campers, but this blessed rain music of the night is a panacea for most of the ills born of an unpleasant day, and we went peacefully to sleep to the dreamy melody, with a hope that the morning would bring signs of clearing skies and sunny weather.

KINGFISHER.

[TO BE CONTINUED.]

[In issue of April 29, "Camps of the Kingfishers," page 267, first column, eighth line from bottom, read government blankets for goat blankets; line 42 from bottom, second column, read red boss for red bass.]

EYED HOOKS.

Editor Forest and Stream:

Early last spring I obtained from England several dozen flies tied on the turned up "eyed hooks," and used them throughout the season with great pleasure and success, and after giving them a thorough trial I thought them about perfect. The result was that I procured more of the hooks, and those flies which I required of American pattern, I had tied on them also. Since April 1, this year, I have used some with the turned down eye and find them much superior to those with the eye turned up. I have now some bass flies tied on the Pennell turned down eyed hooks and intend in future using no other for fly-fishing, and would recommend to anglers who wish to "fish fine and far off" to give the turned down eye Pennell hook a fair trial and not lose any time about it either. By the use of the jam knot it is as easy to attach the eyed hook to the leader as a hook with the usual snell or short loop, and for the dropper flies the snell may be attached to the hook previously, if preferred. If for no other reason than that of economy, I think there must be at least fifty per cent. in favor of the eyed hooks.

BROOKLYN, N. Y., May 8.

C. G. LEVISON.

NEW ENGLAND TROUT WATERS.

DURING the winter and early spring it is easy to make up one's mind to be sure to make a trip to the trout waters this year; to once again drink in the beauties of the stream, the woods and the lake; to reap anew the rich benefits found only in an outing; to add another five years to one's days by throwing off, if only for a brief season, the worry and strain of business or professional life. But it is not so easy to put the good plan into execution. Unexpected happenings thrust themselves in the way, and it is often hard to find the courage to start off on what looks to the ordinary mortal like a foolish jaunt for the sake of a few fish. The true and only way is to start when the fever is on. Delays are dangerous; they are more dangerous to our fishing trips than is that procrastination which is the thief of time. Our ardor cools, if arid it is, and not a fixed, annual purpose, and so the trip is lost for want of mere decision such as we should bring to bear upon any of the other real affairs of life. Mere trifles or slight changes hinder us. The ice went out of the Maine lakes from eight to ten days earlier this year than usual. It was not wholly unexpected, and yet the lovers of line and rod were not generally prepared for it in all its force. The time to take up the tackle came too soon, and business could not be left just then, and the result has been the breaking up of a great many parties; and many will stay at home altogether. This is chiefly true of those who may be termed the early rushers, to be sure, but it shows how slight a circumstance may spoil even a much contemplated trip. It is a fact that the movement to the Maine lakes is being much less than last year, so far as Boston is concerned, at least. A report of the same nature is suggested from other cities. Strikes and the uncertainties of labor may have hindered the builder, the manufacturer, the carpenter and other tradesmen from taking that fishing trip, and the early trips are not being taken to the extent of former seasons. Now just here comes a selfish suggestion, but it is too good to keep—there will be all the more trout for those who go later in the season.

But the silly number of lies have begun to be told. The Maine country newspapers of small circulation and less influence, devoted to the attempt to help some lazy tavern-keepers, stage owners and tradesmen into a fortune through the summer resort business in one-house towns, begin to contain such items as these: "Mr. Thusandso of Suchaplace caught yesterday 100 'speckled beauties' in an hour and a half, out of Impossible Pond, and there are plenty more left." How happened there to be just a hundred? Why did the fisherman not leave off at 99 or 101? Such stories with enough of truth in them to be worthy of a passing thought, even the country newspapers ought to be ashamed of. They give at least the sound of respectability to the despised fishing for numbers which has done so much of the deplorable depletion of our lakes and streams, and which threatens, in a very few years, to reduce the trout to a fish of the gone by, in spite of all protection can do. The man who would take even a hundred minnows for the mere sake of telling a big story, ought to be ashamed of his cruelty and destructiveness, say nothing of robbing his brother fishermen of fifty trout or a dozen salmon. Oh! for the time when the man who goes to the lakes and streams for health and recuperation shall have learned to be satisfied with trout enough for the table. It is devoutly to be hoped that time is coming, under the good sense of true anglers and the training of the **FOREST AND STREAM**. It is also to be hoped that it will not be too tardy—will not be delayed till the work of depletion of our best waters is done irrevocably.

But the teaching of moderation is no easy task, and as you well know, good **FOREST AND STREAM**, there are a good many interests at stake. The entire summer resort and summer travel interest is arrayed against good sense and the perpetuation of the best locations as the fishing grounds of the future. The daily papers are being called upon to advertise the localities in two-column, illustrated articles, by gushing hack writers. But they say too much. There are millions of trout waiting to be caught. Only patronize a certain hotel, stage line or railroad, and thousands of trout are sure. But like the patent medicine advertisements, they say too much. If there was a shadow of truth in them, any man would be a fool to ever die. After all, such trash catches only tourists and greenhorns, and greenhorns catch no fish. They go once. That is enough. They are done. Ever afterward they listen to fish stories and blame their luck.

The trout season of 1886 is now fairly begun, but unless some sudden impetus is given, the hotels and summer resorts will not make their fortunes this year. The attempt was made to start off their business with a boom, but somehow the thing is being overdone in the way of big stories and show. At Phillips, Me., the first fishing party of the season was met at the train by the Phillips Brass Band and escorted to the hotel in grand style. Alas! has it come to this? Must we go fishing to the tune of a brass band, and a country band at that?

SPECIAL.

The trout season of 1886 is proving to be one peculiar to itself. The redspots or brook trout are hardly coming up to time in the record of catches thus far, but the blackspots, or landlocked salmon, are surprising even their warmest friends. This is particularly true of Weld Pond, in Maine. This pond was first stocked with salmon scarcely more than ten years ago, and yet the catches being made there this spring are something of which the Maine Fish Commissioners may well be proud. Commissioner Stanley has just returned from a very successful trip to that pond with some of the first sportsmen in Maine, and they all express themselves as highly pleased with the success of landlocked salmon. Commissioner Stanley gives an account of one caught the other day which weighed eleven pounds, and I have just taken up a Maine paper, rather given to telling big fish stories, which mentions the taking of a landlock, Friday, weighing fourteen pounds. This last story should be taken with a grain of salt, at least till confirmed. But even a salmon of eleven pounds comes with a great deal of pleasure to those most interested in the culture of the landlocks in Maine. It must be remembered that this is all the work of ten years, and that too, under difficulties. Weld Pond is full of blackspots of less size. Commissioner Stanley remarks that they are taking fish there from two to five pounds by the thousand. These smaller fish, he remarks, are evidently the work of more recent stocking, since the State has done more for that purpose. As to the growth of these salmon, Mr. Stanley is much pleased, as well as surprised. Together with Mr. Stillwell the Maine Commissioners are now of the opinion that trout, the conditions of food being favorable, grow much faster than many writers have told us. Certainly the results of landlocked salmon in Weld Pond go to prove that they are correct. Speaking of the monster brook trout of the Androscoggin waters, Mr. Stanley does not give them credit

for the great age usually ascribed to them. He finds trout of this class to have grown to six inches in length which he has every reason to believe were only two years old. From that time he believes them to grow very rapidly. The Maine Commissioners may also be put down as fully convinced that fair angling—that is, with single hook and line—can never totally exhaust the trout or landlocked salmon in any waters. They admit that the fish may be "thinned out," but not exhausted entirely. These gentlemen commence this week the work of planting the several quotas of landlocked salmon in the Maine waters. Commissioner Stanley is authority for the fact that landlocked salmon are being taken with the fly this year, a fact heretofore considered doubtful. The latest report also shows that landlocks are at last being taken in Rangeley Lake. An eight pound fish of that species was taken there one day last week and several have since followed of less proportions.

BOSTON, MASS.

Under date of May 4, Mr. O. A. Dennen, of Moosehead Lake, writes to Mr. T. Sedgwick Steele, of Hartford: "The ice left the lake earlier than usual this year, the date of its going out being May 1 and 2. The weather for three weeks past has been fine. Clear, cloudless sky, with wind not over six miles an hour. Temperature for the week ending May 4 averaged 36 degrees, taken at 6 A. M. Average for the month of April, 32 degrees (taken at same hour). The fur hunters have had a fair run of luck. Two Indians came out of the woods about three weeks ago and received \$735 for their skins, consisting of beaver, mink, sable, black cat, otter, etc. Considerable large game has been killed the past winter, or up to Jan. 1, when the time closed. In the latter part of December, 3 moose were killed on Blue Ridge in sight of the hotel. One cannot, however, go far into the woods without seeing plenty of signs which indicate that moose, deer, caribou and bear are still quite plenty. The fishing season is fairly opened, several parties are already on the ground and the steamers Kineo, Day Dream, Twilight and Ripple are scudding about the lake seeking out the best grounds. Everything indicates a fair season at Kineo. The spring opening about two weeks earlier than usual will be likely to rid us of the black flies early in July."

Editor Forest and Stream:

The ice left the lakes on Tuesday, May 4, and the fishing season was commenced by the guests of the Greenvale House, Geo. M. Esty, proprietor, Greenvale, Me., on Saturday, May 8. At this point the waters of the Sandy River are discharged into the Rangeley, or Oquossoc Lake, and flow through the connected lakes, discharging finally into the Androscoggin River. The best early fishing for the celebrated Rangeley trout is found here. The record for the first two days is as follows, no record being made of trout under three pounds in weight. Of these smaller trout large numbers were taken:

May 10, 1886, Henry T. Richardson, New York; boatman, H. R. Fuller, Phillips, Me., land-locked salmon, 3 pounds.
May 12, Henry Hobart, East Bridgewater, Mass.; boatman, Nathan Ellis, Greenvale, trout, 3½ pounds.
May 12, Wm. L. Reed, South Abington, Mass.; boatman, Nathan Ellis, Greenvale, trout, 3 pounds.
May 12, Eugene H. Clapp, Boston, Mass.; boatman, Chas. H. Toothacher, Rangeley, trout, 5½ pounds.
May 12, Horace P. Touey, Boston, Mass.; boatman, Chas. H. Toothacher, Rangeley, trout, 5½ pounds.
May 12, C. L. Browning, Milbury, Mass.; boatman, a friend, trout, 6½ pounds.
May 12, Geo. E. Keith, Brockton, Mass.; boatman, Ebenezer Hinckley, Rangeley, land-locked salmon, 6½ pounds.

The land-locked salmon were introduced into these lakes in 1874 by the Fish Commissioners of the State of Maine, and their increasing number establishes the success of their undertaking.

SEBAGO LAKE.

SEBAGO LAKE, Portland's great water reservoir, lies in the northern part of Cumberland county, Maine, and is easily reached by rail from Portland via P. & O. R. R. to Lake station. It is a most beautiful "stretch of water," as its Indian name signifies, being about twelve by fourteen miles in area and noted for its large land-locked salmon. A few years since a male fish of this species was found dead and stranded in Roger's Brook, a tributary to Long Pond, one of the head waters of the Sebago Lake system. Four years ago Mr. J. Hamilton, superintendent of the P. & O. R. R. captured one in Sebago Lake, with an eight-ounce rod, that weighed sixteen pounds, and many have been taken with rod and line weighing upward of ten pounds. The fishing season lasts usually about two weeks, commencing soon after the ice leaves the lake and when the smelts (for salmon are not the only salt-water fish land-locked in these waters, for smelts and cuskies are abundant) are returning from their migrations up rivers and streams, where they have deposited their eggs. The method of capture most in vogue is trolling with a smelt for bait—care being taken that the bait does not spin but runs straight and true—fifty yards of line being sufficient.

The fishing has not been quite as satisfactory in numbers this spring as in some previous years, owing, no doubt, to the greater abundance of smelts, or perhaps the season was in advance of the fishermen, but never before did the catch average so many heavy, well-conditioned fish. Not a single "racer" (spent male) is reported. The best fish taken can be credited as follows: J. Hamilton, Portland, Me., 13½ pounds; R. E. Edes, Naples, Me., 12 pounds; E. O. Noyes, Brockton, Mass., 11½ pounds; A. S. Hinds, Portland, Me., 11 pounds; P. Burnham, Portland, 11 pounds; J. Hamilton, Portland, 9 pounds. Many more weighing over six pounds have been boated, one touching the beam at less than four pounds being an exception to the general rule. About thirty speckled trout, weighing from one to four pounds each were also taken. It is now only about ten years since the salmon fishing here with rod and reel attracted any attention. Before that time the practice of spearing them on the spawning beds had been almost universal, and even now we are sorry to say, that notwithstanding stringent laws and the untiring efforts of commissioners, wardens and friends of the cause, it has been impossible to entirely suppress the poacher. Yet public opinion is steadily gaining ground against this evil, and at no distant day we hope the spear will be a relic of the past. Last fall, through the efforts of Frank Gibbs and J. Mead & Son, of Brighton, sixteen thousand land-locked salmon eggs were taken from Roger's Brook. These, with thirty thousand fry of land-locked salmon from Grand Lake stream, a gift from the State, are soon to be turned into these waters. Encouraged by the success of Gibbs and Mead on Roger's Brook, the Fish Commissioners have decided to operate on Crooked River this fall, and it now looks as though fishing would rapidly improve. The favorite fishing grounds on

Sebago Lake are at the mouths of Songo and Muddy rivers, both places being at the head of the lake and about two miles apart. At the former are three camps, owned respectively by the Songo Club, Robt. E. Edes and Raymond Parties. At Muddy River two camps have been erected this spring, one owned by O. B. Gibbs, of Bridgton; the other by Naples parties. Transient accommodations can usually be obtained near the fishing grounds. Guides charge about \$3 per day for man and boat.

BLACK SPOT.

SEBAGO LAKE, May 6.

THE MONTREAL FLY.

Editor Forest and Stream:

I have recently received a copy of the work "Fishing With the Fly." Most of the colored plates in the book are correct; but there is, however, one important exception, that is the one of the Montreal fly, which is wrong in several particulars.

The Montreal fly has a strong hold on my affections and has for many, many years occupied the most prominent place in my fly-book, being especially adapted for our Northern waters. It had its origin with my old and lamented friend, the late Peter Cowan, Esq., of Sweetsburgh, Quebec, who first made and used it at least half a century ago. The original and genuine Montreal fly is made with a "red body, ribbed with yellow tinsel, the hackle assorted scarlet and ginger, and a light gray mallard wing." Soon after its first appearance it became a standard fly with the English fly-fishers who were in Canada, and through them samples of the fly were sent to England, where they were made for the trade.

Mr. Cowan was one of the most enthusiastic of fly-fishers; genial, jolly, a true and warm-hearted friend, a good reader of human character, and a thorough hater of shams and affectation. He held for many years an important office of trust in the eastern townships of this Province, and often had for companions on his fishing excursions one or more of the English army officers who were formerly stationed in Montreal; but woe was sure to befall them if they brought their cockney airs out to the trouting grounds. Many a practical joke did Uncle Peter, as he was familiarly called, play at their expense.

Some twenty years ago I was traveling by stage through one of the back districts of the townships, a noted trout region, when we picked up at a small farm house Uncle Peter and a young officer who were returning from fishing, well laden with full creels of *S. fontinalis*. Uncle Peter's sunburnt phiz beamed with the expression of good nature and satisfaction that told the story of success and a general good time. The old veteran and the writer were soon engaged in exchanging fishing experiences and discussing the merits of the different waters of that section of the country when the young Englishman, who had been quite silent, apparently in a deep study, said, "I say, Uncle Peter, I am awfully much obliged to you for your kindness, you know. We over in England have a wrong idea of you fellows out here, but, by Jove, you have taken me down a peg, you know." This brought out a roar of laughter from Uncle Peter that made the woods ring. The young fellow joined in quite as heartily, and when their mirth had partly subsided, he said: "But, you know, that first morning was a stunner, though." This admission was followed by another explosion, if possible louder and longer than the first.

I afterward received from the old gentleman a condensed account of their trip, and the incidents concerning that particular morning. This young Englishman who was anxious to show the natives how to kill a trout, you know, had presented himself at Uncle Peter's office bearing a letter of introduction, etc. He was clad in the most nobby of cockney fishing suits, and also wore a pair of wide top knee boots, but underneath this exterior Uncle Peter saw what he thought would be good stuff when the dinky outside was rubbed away. So a trip back to a famous trout stream was soon arranged. The road that they traveled was new and rough, and when the stage that evening set them down at the door of the humble home of a small but hospitable farmer, a place where the writer has spent many a pleasant night after a good day's sport, the young cockney was fatigued, and grumblingly compared the accommodations to those of the small inns along the Thames, you know. "This blasted country was not fit for a gentleman to come into, you know." He expressed a desire to retire early in the evening to his sleeping apartment; so he was given a tallow dip for a light and directed to a small room in the chamber, which he grumblingly declared to be "a regular dog kennel of a hole, you know;" but when he placed his boots outside his room door to be blacked, Uncle Peter drew a line at this action and made use of them in lieu of a sloop bucket. At the first peep of daybreak the young fellow was awakened and told to hurry and dress and be outside, for it's the early rod that kills many a fine trout. "A dem beastly hour to arise," said the young cockney; "the trout at home never rise to a fly until the mist is off the water, you know." He hastily dressed, opened the door, and poising on one foot, he caught hold of the straps of a boot and slipped the upraised foot into it—slosh. This was followed by a shout that sounded very much like an oath and exclamation. But we had best drop the curtain and let the reader imagine what followed, and return to our favorite fly.

When this fly was introduced to the trade it was called the Montreal or Canada fly, but usually the Montreal fly. I have I believe killed far more and larger trout with this fly than with all others put together. I invariably use three flies, with the Montreal as a stretcher, and use various other kinds for droppers as the water and season require. Bro. E. B. Hodge of the N. H. Fish Commission, who is an old companion of mine, I presume remembers well the big trout (my largest) that I killed on this fly in Hopp's Pond, a small body of water situated near Mount Orford. This pond was once celebrated for its large trout; but alas, its glories have departed forever, for some contemptible vagabond has stocked it with pickerel. As I now write my thoughts go back to years long past when Bro. Hodge and the Montreal fly were intimately associated in many a trouting expedition. The catch that we made one afternoon was thirty that weighed forty pounds, at Lake Nick, where H. had a severe headache which spoiled his appetite for the fish which the writer so nicely broiled, but which did not prevent him from casting a fly while the trout were on the feed. It was there that the "big one" came out of the weeds and tried to eat up the two and a half pound fish that H. had hooked and was playing.

I afterward struck that big fellow and he turned tail to and dove into the weeds in spite of any strain that I could bring to bear on him with my Norris rod, and in those weeds he remained until he broke or rubbed off the casting line. Then, again, my thoughts delightfully live over again

the pleasures of that morning at that beautiful stretch of water below the old mill near Megantic, where we waded down stream for a short distance and filled our baskets to overflowing with half-pound trout. It was there that we saw the trout jumping and trying to follow up a stream of water that came pouring out from an auger-hole in the side of the flume of the old mill. Some did succeed in going through the hole into the flume, but where one succeeded, many shot out of the slender thread of water and struck against the planking and fell back again into the pool below. Then came the red-letter day—that day in June in the Chaudière rapids at the mouth of Lake Megantic, where we caught one hundred and eighty trout, not one weighing less than half a pound, and from that up to three pounds each. Our individual scores stood at an even ninety each.

I also remember with a smile how Bro. H., the next morning as we were breaking camp, stole out to the river's side with rod in hand, to catch another fish, so as to go out of the wilderness one ahead, and when given his choice either to unjoint and repack his rod, or take a ducking then and there, he took apart his rod but at the same time emphatically denied our ability to duck one side of him. Ah, H. you then forgot the little bout in the camp by the still-water of the salmon river where we were deer hunting, when a "hip-lop" stood not the writer's but another's head in the cook's pan of baked beans, while the heels belonging to the individual who owned that head were kicking out a jig up near the roof of the camp. That was how many years ago? Well, well, how time flies. Though its flight destroys the elasticity and comeliness of the body and brings whitened threads among the brown, may it never change the youthfulness of our spirits, and our love and appreciation for our old and tried friends, and for the gentle art; and neither may it change the colors of my old love, the Montreal fly, body reddened with golden tinsel, hackle assorted scarlet and ginger with light gray mallard wings. STANSTEAD.

MONTREAL, Canada.

LAKE ERIK BASS GROUNDS.—The Dayton (O.) *Journal* reports: "The Dayton party of anglers, with fair weather, will be bass fishing in East Bay on Saturday, May 15, the day that the open season begins in Canada waters. Veteran Valentine Winters, with Rufus J. King as his boat companion, heads the list, the party being paired as follows: Commodore Cooper and G. Shepherd, Captain and Dr. Greenleaf, of the U. S. A.; Major Bickham and Hon. E. Schults, Benj. F. Kuhns and Hon. John W. Turner, N. Mory and Bert C. Mory, Ed. Best and George Knecht. Dr. McCormick writes that the steamer Louise is now making daily trips, except Saturdays, that frogs' legs are ripe, mushrooms due, gulls are on, and that 'Piscatoria' is open for any and all Dayton gentlemen who may desire to accompany the anglers. Edward Hazzard, of the *Dramatic News*, of New York, and friend, have registered for the season; Hon. J. B. Battelle, of Toledo, has his kit packed for Pelee, and Dr. O. W. Nixon, of the Chicago *Inter-Ocean*, will be there; and Alex. Starbuck and his veteran companion, Wesley Cameron, and Dr. W. W. Dawson, of Cincinnati; Colonel Wallace, of Indianapolis, and Judge Goode and friend, of Springfield, and twenty or more other anglers have their baggage checked for Pelee. The Pelee Club—Gen. Sheridan, Robert T. Lincoln and twenty other gentlemen, have chartered the steamer American Eagle, and will occupy their club house at Sheridan Point, Pelee, next Sunday. The Kentucky party that always locates at Smith's Point are en route. Colonel Len. A. Harris and several others of the Cuvier Club, of Cincinnati, are already enjoying fishing at Long Point and Gull Island reefs, off Kelley's Island, and are to be largely reinforced this week. Kelley Island waters are favorites of John Hardy, of Dayton, and Walter Halldeman, of the Louisville *Courier-Journal*. The Leffel party, of Springfield, and friends from Cleveland, have chartered the steam yacht Henry Douglass, and with Put-in-Bay as headquarters, will fish at North and Middle Bass islands, and run over to Pelee for big catches. Joseph C. Peirce, of Dayton, and probably others will go to Put-in-Bay."

THE CLARION.—The Clarion, Pa., Fish and Game Protective Association, of which Mr. F. M. Arnold is President, has been prosecuting the dynamite fiends. The *Jacksonian* of that town reports: "On Monday last Daniel Steiner, of Scotch Hill, had a hearing before Esq. Thompson, upon a charge being one of a party of dynamiters who placed explosives in the Clarion River for the purpose of killing fish. The offense was committed on the 19th of April, and was clearly proven, no defense being made. The justice found in accordance with the facts and imposed a fine of \$50 and the costs of prosecution on the defendant, which he paid, the aggregate being \$65.60. Warrants are out for the arrest of two other members of the party, E. D. Steiner and John McClelland, who will doubtless be similarly dealt with when apprehended. The law against placing explosives of any kind in any of the waters of this Commonwealth is very clear and explicit, and the Clarion Fish and Game Association is determined to bring all violators to punishment. In the instance noted above, the witnesses testified that after the clearing of the water it was found that the bottom of the river at that point was white with dead fish. Take in connection with this fact the millions of little fish, no larger than "wrigglers," with which the river abounds at this season, that must have also been destroyed, to say nothing of the eggs in the vicinity—and the destruction of the finny tribe caused by one of these explosions is beyond computation. There is no reason why the Clarion should not be one of the best fishing streams in this section of the State, if the laws are complied with, and it is proposed that respect for the protective enactments shall be strictly enforced."

NEW JERSEY LAWS.—About twenty bills affecting the game and fish laws, some good, some bad and others radically wrong, were presented for passage in both branches of the Legislature of this State just adjourned. But few of them passed, however; among those which did was Senate 113, a righteous good bill for the protection of stocked waters. It provides that no person or persons or corporations shall place in any fresh water stream, lake or pond, any lime or other deleterious substance, or any drug or medicated bait, with intent thereby to injure, poison or catch fish, nor place in or allow to flow or be discharged into any lake, pond or stream stocked with or inhabited by trout, bass, pickerel, pike, sunfish or perch, any drug, acid, gas tar or any deleterious substance whatever which will kill or destroy said fish. Other bills passed opens the season for catching black bass with hook and line on May 30 and closes it on Dec. 1 in each year; prohibits the catching or killing of black bass less than seven inches in length, or trout less than six inches in length.—*Plainfield Constitutionalist*.

THE PRIVILEGED CLASSES.—Central Lake, Mich., May 6. —In the neighborhood of the ponds and brooks, I have noted a goodly crop of fish-spears. I am disposed to think that the particular industry of which these are the token, is likely to languish in this region before long. Even now, those that follow it are conscious that they do so by sufferance, and though the loud-mouthed among them say that all fish protective legislation is only for the benefit of tourists, and that they will spear as long as they like; it is a fact that there are fewer jack-lights on the lakes than in any previous spring for some years, and one or two prosecutions for violation of existing statutes will practically put an end to the spearing. The gill-nets will still be used, but only for a time, and I think that our waters will yet be restocked with fish in abundance for all. It is comical to hear the netters and spearmen talk of legislation for the benefit of "privileged classes." As I see it, they themselves are the ones who claim exceptional privileges, and by their exercise in defiance of law, prevent those of us who desire nothing more than equal rights with all, from even securing enough of fish for an occasional meal, to say nothing of the sport. For several years I have told these gentry that the end of these things was not far distant, and behold, it cometh, in the near future. —KEELPIE.

TROUT NEAR NEW YORK.—I am somewhat of a sportsman and can readily say that in all my experience I have never before indulged in such sport as during the past week in Sullivan county, N. Y. I took the train at Weehawken for Fallsburgh Station, where Uncle John Waldorf met me, and drove to his Woodbourne House, at Woodbourne. The first day I fished three miles of the Neversink River, and the result was 19 pounds of brook trout ranging from $\frac{1}{2}$ to $1\frac{1}{2}$ pounds. The second day I fished over the same ground and realized a like result, and on the third day I tried a smaller stream with flattering success. I am only one among many who has met with the best of luck on this popular trout stream, and I would advise any person in search of first-class trout fishing to make arrangements with Uncle John.—A SPORTSMAN.

CANADIAN SALMON RIVERS.—*Editor Forest and Stream:* With reference to the paragraph, "Canadian Salmon Rivers," issued in your edition of April 8 last, I beg to remark that your assertion, as regards the rivers of this Province, is far from being correct, as almost all, if not all, the salmon rivers of some importance are under private control (see accompanying report, page 130); and it is expected, from the demand for more fishing privileges, that other rivers not hitherto sought after will be taken up, improved and protected. So I hope you will make, in your next edition, the necessary remarks and corrections concerning same.—W. W. LYNCH, Commissioner of Crown Land, P. Q.

THE ENGLISH ANGLING TOURNAMENT.—The sixth international *Fishing Gazette* fly and bait casting tournament will be held on June 5, on the grounds of W. Cuard, Esq., Orleans House, Twickenham, within 150 yards of the famous Twickenham ferry. The tournament will be, as before, for the benefit of the Angler's Benevolent Society. The prize list and programme is not yet published. Upon a payment of ten shillings any fishing tackle maker will be allowed to exhibit and sell his stock upon the grounds.

THE SUSSEX ANGLERS' CLUB. T. S. Morrell, Secretary, Newark, N. J., proposes to take up, as its means allow, the numerous bass and pickerel waters within ten miles of Deckertown, N. J. The club offers very desirable advantages to New York city anglers who want fishing near at hand. Properly managed, such a scheme as this ought to insure an abundance of first-class and sure fishing.

EAGLE'S NEST. Stamford, Delaware County, N. Y., May 17.—A. S. Churchill, Esq., just brought me to my sick chamber a speckled trout 14 inches long and 5 inches wide at front fin; weight, $1\frac{1}{2}$ pounds. It was caught by his little grandson in Spring Brook, within three rods of his cottage in the village of Stamford. The brook is alive with fish, but few are so large.—NED BUNTLINE.

CANADA.—A good fishing resort, in a comparatively new country, is Gurrie's Hotel, at Lake St. Joseph, Canada, an hour's ride from Quebec. Mr. Adam Watters and son, of that city, one afternoon last season, caught there 19 lake trout, weighing 157 pounds 6 ounces. Sportsmen in Canada can be fitted out with supplies of all kinds by Mr. Watters. See advertisements in other columns.

THE NIPISSING.—Cobourg, Ont., May 13.—Will "B. and H.," who signs the article "Fishing at Nipissing" in your last number, give me further information about deer and partridge shooting, fishing and best month in which to visit Trout Lake. Would I get any lake trout in September and what would be the best bait?—W.

Fishculture.

FISHCULTURE—A PRACTICAL ART.

BY JOHN H. BISSELL.

[Read before the American Fisheries Society.]

I DO not forget, gentlemen of the American Fisheries Society, that I am but a student in the craft which we profess, and for the encouragement of which this society exists; nor that many of you have grown gray in this honorable, nay, may I not also say patriotic, service; and so I should be sitting at the feet of some piscicultural Gamaliel, instead of standing before you as an essayist, but for the summons of your committee which left me no room for excuses or refusal. A younger generation is now coming upon the field to take its part in carrying forward fishculture, to apply the precious stores of knowledge, which have been laid up by the practical observation and scientific research of the past twenty-five years, to the practical solution of some very important economic questions that are beginning to clamor loudly for solution.

The question most urgent just now is not, can fishes be artificially hatched and reared, and acclimated in alien waters, but can the fisheries of this country now be saved? That the men of whom this question is being asked are the members of this society, once called "Piscicultural," may not improperly be regarded as evidence of the ability with which the elder generation, the pioneers of fishculture, have done their work, as well as of the value of their work and the appreciation in which it is justly held by the people of this country.

At former meetings of the society you have been favored by the eloquent speeches of statesmen who judged rightly that

fishculture was worthy the statesmen's consideration.* You have been honored by papers and addresses from men of your own number who have won distinction by knightly deeds—no less knightly and honorable because won in the unromantic armor of waterproof coats and rubber boots—in conflict for the secrets of nature, wresting from nature's willing hands the knowledge that practical men have been gathering and storing up against the day when the millions that are peopling and are to people this continent, shall cry out for more and better and cheaper food. You all know the men to whom I refer, so there is no need of mention of their names. I know them, not by personal acquaintance and familiar discourse, but none the less really, through their writings and experiments, which have made it possible for men of the class to which I belong to accomplish something for the States which have honored us with the oversight of their fishing interests. Without the knowledge which has been gained and freely disseminated by these intelligent and devoted men the fishery establishments of many of the States would have no existence, or their officers no reasonable and sufficient answer to make to their State governments when asked, as they so frequently are, "Can fishculture do anything worth the expense for the food supply of the people of this State?" Have we then any such answer to make? That we have; that the answer is reasonable and sufficient I shall try briefly to show. While we have not learned all there is to know about the culture of fishes and artificial propagation of them, enough is known both scientifically and experimentally to place the practical art of fishculture beyond the domain of mere curious research, and make it a useful, and to the same extent, a necessary department of the public business. To this practical aspect of fishculture I invite your attention. In using the expression "fishculture" I mean to be understood as including artificial propagation of fish and the protection of them until they are marketable.

Consideration of fishculture as a department of the public business is growing every year to greater prominence, particularly in the States bordering upon the sea and the Great Lakes. Of course I only profess to speak with accuracy about the condition, or needs, of the fisheries of my own State—Michigan; but, the state of affairs there is in some measure analogous to the circumstances of other States, and the subject from my point of view may prove of more than merely local interest.

Are our fisheries worth saving?

Michigan has a coast line of more than 2,000 miles in length upon the Great Lakes and their connecting rivers by actual measurement upon the Government charts. Its fisheries produce annually over 13,000 tons of food, the value of which is something over \$800,000 at first cost. The capital invested in the prosecution of this industry is about \$1,200,000, it gives employment to 1,800 men, which means that over 7,000 people are dependent upon the prosecution of the fisheries for their living. The pound nets used in this industry placed end on end will stretch 200 miles, the gill-nets placed end on end measure 1,588,852 fathoms—over 1,500 miles.

From this brief statement it appears that Michigan has industrial fisheries that are worth caring for. A few additional facts will show that they need care. Forty years ago at one of the seine fisheries on Detroit River the number of whitefish constituting a fair catch was from 90,000 to 115,000 fish, averaging in size about four pounds. That fishery has been abandoned for more than fifteen years, and the last vestige of docks, houses and pounds have rotted away. Another fishery having as fine a plant as any on the lakes, about nine miles below Detroit, as late as the fall of 1883 had over 12,000 whitefish, which was thought the poorest catch ever known. In 1884 at the same fishery the total of whitefish was 3,400, and for the season of 1885 less than 2,000 whitefish were taken there by actual count. This we know, for we bought and handled the entire catch to take the eggs for the State hatcheries. At many points on Lake Michigan hundreds of thousands of whitefish under one pound in weight, one, two, or three years old, which have been planted, have been caught, shipped to market when worthless, or thrown upon the shore to rot as not worth handling, or salted and sold as herring. Such complaints have come to us by the fishermen themselves and by nearly every dealer who handles Michigan fish.

But there is not space here and now to multiply examples to prove, and I therefore content myself with stating the facts very generally. In Michigan waters every year the area of fishing operations is greatly extended; miles of ground once productive are abandoned; the average size of whitefish is gradually growing less; the price is gradually getting higher in the market; and while some large firms are getting fairly profitable returns, the fishermen as a class are getting poorer; where formerly the nets were served by sailboats and row-boats, steamboats are fast coming into common use; the demand for fish is increasing steadily as population increases; the total supply is comparatively stationary or falling below the increasing demand; and all this means that the fisheries of our lakes are fast becoming exhausted and ruined. These facts suggest some pertinent inquiries, just such as are being asked of the State Fish Commissioners by the representatives of the people every year. Has artificial propagation then been a failure? No, for it has not had a fair chance in several ways.

First—It has not been conducted upon a scale adequate to accomplish the results.

Where we are hatching about fifty millions of whitefish we need from six to eight times that number every year to restore the wasted and deserted grounds, as also to replenish and keep up the stock in others yet productive. Numerous early experiments were made of planting whitefish fry in interior lakes of various sizes, where we now know they will not thrive because the conditions of food and temperature are not favorable. This could not be known without trial. But it does not follow that the experiments should not have been tried. It was no waste of time or money. The lessons learned from such failures are perhaps more valuable than constant successes. There are large and deep lakes in the interior of Michigan and other States where the whitefish are indigenous. In such lakes they can and should be grown to the utmost capacity of the food supply. Such lakes we have in Michigan, and we are planting them now as preserves from which to draw a future stock of breeding fish to furnish eggs for keeping up the supply for the industrial fisheries of the Great Lakes.

There are many localities on the Great Lakes where the planting of whitefish has resulted in the appearance of vast schools of small fish coming in upon the inshore feeding grounds during the summer months at points where that phenomenon had never before occurred within the memory of the oldest fisherman. That they were the planted fish is beyond question, as it is not doubted by the practical fisherman and others who have examined them, that these young fish are identical with the Lake Erie fish, that being the source whence all our ova and almost all of that used by the U. S. Commission are taken.

Second—Artificial propagation has not had a chance in point of time.

It is only within the first few years of the second decade of its existence—say from 1882 or '83—that the practical operations of fishculture have been anything more than the merest experiments. In my own State it is only within that time that we have ever hatched and planted over 15,000,000 of whitefish in any one year. The same period will cover also the most extensive operations of the U. S. Commission in this direction. The force of this point will be appreciated when it is understood that from our present knowledge we have no reason to

*Unless the statesmen of this generation have lost the art of wise and wholesome statecraft, we shall hear from them still further on this subject, if not in our deliberations, yet more potently in the State capitols and in the halls of Congress.

expect important results from these plants before the expiration of four, I think probably five, possibly six years, from the time of planting. Operations during the first decade were, as I have said, only experiments, and they were successful beyond anything that we could in reason expect. In summoning this practical art to the judgment hall it must not be overlooked that the ruin caused by wasteful and unconscionable fishing methods, which it is called upon to repair, has been going on for thirty or forty years. And it is always more difficult to cure than to prevent disease, whether physical, political, or economic.

Again, fishculture has not had a fair chance with us, and I am informed the same is true of almost all the States, because we have lacked proper municipal regulation of the fishing industry.

It is not enough the State Commissioners should be able, at very moderate cost, to hatch and release in the lakes enough young fish to take the place of adults captured and marketed. The young fish so hatched and released in the waters must be protected until they come to maturity and are marketable; otherwise the wasteful fishing which has once depleted the waters stocked by nature will do the same thing, only more surely and speedily for the waters replenished artificially.

So the two things must go together. Artificial propagation cannot do it alone; municipal regulation cannot do it alone, within a period that will avail anything for one generation, possibly not even then. The two things are mutually dependent conditions, they must concur to assure valuable or lasting success. In the combinations of these two conditions we have the complete definition of the *practical art of fishculture*.

There is not time here to go minutely into the facts nor the arguments which logically flow from them to support the necessity for proper inspection or regulation.

I can only point out generally that municipal regulation, to be of value in saving or extending the operations of the industrial fisheries of the great lakes, must cover these points, namely:

- The sizes of the meshes of the nets to prevent the destruction of immature fish.
- Market restrictions as to the size at which various kind of fish may be handled or sold.
- Prohibition of inshore fishing during the season or at the points when the young fish are running in to feed.
- Discretionary authority to allow the use of nets below standard size at certain times, in certain localities, for certain kinds of fish.
- The demarcation of spawning grounds and their absolute rest from fishing at the spawning season; or, if that is impracticable, a "close season" at spawning time.
- Inspectors and wardens of the fisheries with ample means and powers to enforce all regulations, whether of apparatus, fishing operations, packing or marketing.
- A reasonable and equitable system of license which will furnish the means to pay the cost of inspection and regulation, and also of replenishing and keeping up the stock by artificial propagation.

There is one more requisite which cannot be provided by statute law, the spread of reliable information of our purposes and operations among the fishermen and fishing communities, which will create a healthy public opinion in support of the laws and their strict and just enforcement.

It has been urged that this whole business of fishery regulation should be undertaken by the Federal Government, so far at least as the fisheries of the Great Lakes are concerned. Is there any reason why the Federal Government should undertake the establishment and enforcement of fishery regulations in the States bordering the Great Lakes that does not apply with equal force to the obligation of assuming the burden of the other department, that of restocking and maintaining the supplies of fish in the same waters?

The reasons for this course or the desirability of it are not to my mind clear. The subject of fishery regulation is one, even if it were a new and open question, which seems from the very necessities of the case to be so local, domestic and municipal in its character as to fall naturally within the police power of the several States, and not within any defined powers of the Federal jurisdiction, legislative or judicial. But it is no longer an open question. It has been passed upon by the courts of last resort in almost all the States, as well as by the Supreme Court of the United States. And this view seems to have been adopted by all the States that have established fishery regulations, however meagre and insufficient, as well as to have been acquiesced in by the United States Congress by a century of silence.

But what can the practical art of fishculture as above defined (although but briefly and imperfectly outlined) do for the fisheries of the Great Lakes? What promise does it give which will warrant the expenditure of public funds in its prosecution? I hardly need to make answer before this assembly of its disciples, or rather its discoverers; but that some echo, however faint, of these questions and the answer, may possibly reach the dull ears of our people, and their representatives who make the laws and provide the means, and who are charged by the law of the land with the responsibility of preserving the public weal, let it be said without hesitation. All barren waters may be made productive again! The ruin of the great industrial fisheries of these great public domains may be arrested! The fisheries that produced thirteen thousand tons of food in 1855, may be brought up to the production of thirty, and then fifty thousand tons of wholesome nutritious food within the reach of all men! The money value in yearly product may be increased from one to five millions of dollars, and contribute no mean share to the prosperity of a great State and the well-being of its citizens.

DETROIT, Mich.

FISH FOR THE UPPER HUDSON.—On April 28, 1886, the fry of 30,000 lake trout, 20,000 Penobscot salmon and 8,000 brown or European trout reached Glens Falls, N. Y., from the Cold Spring Harbor station. These fry were from one-half to one and one-half inches in length, and had made the journey with very slight loss. The lake trout were planted in Lake George, being the first of this kind brought to this locality, at a place called the Calf Pen, opposite Dome Island, where there is the deepest water of the lake. The brown trout fry came from spawn presented to Mr. E. G. Blackford and Mr. Fred Mather by the German Fishery Association, and are the first of their species planted in this vicinity, being put in the Clendon Brook. This species is common in suitable European trout streams, where it has attained the weight of sixteen pounds. It is said to grow faster and be more hardy than our native trout. The salmon also were planted in Clendon Brook, from which it is hoped they will stock the Hudson River. This is the third consignment of salmon to the Glendon Brook in three consecutive years, and makes about 140,000 of this fish that have been planted there; and it is hoped that some of the earlier plantings will return this year for the purpose of spawning. —*Glens Falls Republican*, May 4, 1886.

THE NEW YORK FISH COMMISSION.—The Supply bill, as passed by both houses of the New York Legislature, has been sent to Governor Hill, and he has vetoed some items. Among these are the following: "For the purchase of land adjacent to the Caledonia Fish Hatchery, \$3,000. The Appropriation bill contains an item of \$26,000 for fisheries, which should be sufficient. For establishing a fish hatching station in Jefferson county, \$4,000. Objections same as above."

A SURPLUS OF OVER \$2,000,000 is the solid guaranty offered by the Travelers of Hartford, Conn., that all just claims will be paid in full, as they always have been. —*Adv.*

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22.—Eighteenth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

May 25, 26 and 27.—First Dog Show of the Ninth Regiment, Wilkes-Barre, Pa. W. H. Tuck, Secretary, Wilkes-Barre, Pa.

July 30, 31, 22 and 23.—Milwaukee Dog Show. John D. Olcott, Manager, Milwaukee, Wis.

Sept. 14, 15, 16 and 17.—First fall dog show of the New Jersey Kennel Club, Waverly, N. J. A. P. Vredenburg, secretary, Bergen Point, N. J.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2892, New York. Number of entries already printed 3689.

EASTERN FIELD TRIALS DERBY ENTRIES.

FOLLOWING is a complete list of the entries for the eighth annual Derby of the Eastern Field Trials Club, to be run at High Point, N. C., commencing Nov. 22. All were whelped in 1885.

ENGLISH SETTERS.

PAXTAUG (T. W. Seiler and G. W. Porter, Pittsburgh, Pa.)—Liver and tan dog, May 9 (Count Noble—Fate Gladstone).
SWATARA (T. W. Seiler and G. W. Porter, Pittsburgh, Pa.)—Black, white and tan dog, May 9 (Count Noble—Fate Gladstone).

NOBE (James Verner, Pittsburgh, Pa.)—Black, white and tan dog, Feb. 23 (Count Noble—Hazel).
FRED W. (Sanborn Kennels, Pittsburgh, Pa.)—Black, white and tan dog, Feb. 18 (Count Noble—Spark).

LIZZIE SAN ROY (W. C. Kennerly, White Post, Va.)—Orange and white bitch, July 27 (San Roy—Rosa).
GAY GLADSTONE (T. M. Brunson, Marietta, Ga.)—Black, white and tan dog, July 22 (Gladstone—Miss Clifton).

NANTAHALA (J. O. H. Denny, Pittsburgh, Pa.)—Black, white and tan bitch, March 26 (San Roy—Drane's Cora).
MACBETH (Ramapo Kennels, Mahwah, N. J.)—Orange and white dog, July 1 (Clifford—Donner's Bessie).

LADY MACBETH (Ramapo Kennels, Mahwah, N. J.)—Blue belton bitch, July 1 (Clifford—Donner's Bessie).
LORD CLIFFORD (Ramapo Kennels, Mahwah, N. J.)—Black and white dog, July 1 (Clifford—Donner's Bessie).

RANGER IV (Ramapo Kennels, Mahwah, N. J.)—Orange and white dog, July 1 (Clifford—Donner's Bessie).
BREEZE GLADSTONE (W. A. Buckingham, Norwich, Conn.)—Black and white dog, June 27 (Gladstone—Sue).

BONDHU WIND'EM (J. C. Higgins, Delaware City, Del.)—Black, white and tan dog, Feb. 4 (Dashing Bondhu—Nora Wind'em).

BELLE WIND'EM (J. C. Higgins, Delaware City, Del.)—Black and white bitch, June 19 (Rebel Wind'em—June).
BLUE PRINCE (Pittsburgh Kennels, Pittsburgh, Pa.)—Black, white and tan dog, Jan. 11 (Count Gladstone—Queen Laverack).

ROLICK B. (Pittsburgh Kennels, Pittsburgh, Pa.)—Black, white and tan dog, Feb. 20 (Royal Ranger—Kit Killbird).
SPARKLE (Pittsburgh Kennels, Pittsburgh, Pa.)—Black, white and tan bitch, Feb. 20 (Royal Ranger—Kit Killbird).

DASHING QUEEN (Pittsburgh Kennels, Pittsburgh, Pa.)—Black, white and tan bitch, Aug. 37 (Dashing Noble—Queen Laverack).

LA BELLE HELENE (Pittsburgh Kennels, Pittsburgh, Pa.)—Black, white and tan bitch, Jan. 11 (Count Gladstone—Queen Laverack).

DAN NOBLE (Pittsburgh Kennels, Pittsburgh, Pa.)—Lemon belton dog, June 15 (Count Noble—Lewis's Nelly).

DAISY QUEEN II. (Pittsburgh Kennels, Pittsburgh, Pa.)—Black, white and tan bitch, Feb. 21 (Royal Ranger—Daisy Queen).

MAIDA III. (Dr. S. Fleet Speir, Brooklyn, N. Y.)—Black, white and tan bitch (Marquis de Correz—Maida II.).

EIGHMIE (Dr. S. Fleet Speir, Brooklyn, N. Y.)—Black and tan bitch (Marquis de Correz—Fan).

RUBICON (B. M. Stephenson, La Grange, Tenn.)—Black, white and tan dog, Feb. 2 (Ben Hill—Zoe).

DEL SUR (California Kennels, Sacramento, Cal.)—Black, white and tan dog, Aug. 30 (Gladstone—Frounce).

TALLEYRAH (Wm. Bowdye, Memphis, Tenn.)—Black, white and tan dog, June 1 (Paul Gladstone—Lady Rake).

BEN HUR (C. P. Stewart, Memphis, Tenn.)—Black, white and tan dog, May 25 (Paul Gladstone—Lottie).

LEO GLADSTONE (W. B. Gates, Memphis, Tenn.)—Black, white and tan dog, April 21 (Gladstone—Carrie J.).

CASSIO (Memphis & Aventura Kennels, Memphis, Tenn.)—Black, white and tan dog, April 28 (Count Noble—Lizzie Hopkins).

NAT GOODWIN (Memphis & Aventura Kennels, Memphis, Tenn.)—Black, white and tan dog, June 1 (Roderigo—Bo-Peep).

CHANCE (Memphis & Aventura Kennels, Memphis, Tenn.)—Black, white and tan dog, June 1 (Roderigo—Bo-Peep).

DUKE OF BUCKINGHAM (Memphis & Aventura Kennels, Memphis, Tenn.)—Black, white and tan dog, March 17 (Mingo—Twin Maud).

DUKE OF ORLEANS (Memphis & Aventura Kennels, Memphis, Tenn.)—Black, white and tan dog, March 17 (Mingo—Twin Maud).

ALLIE JAMES (Memphis & Aventura Kennels, Memphis, Tenn.)—Black, white and tan bitch, March 17 (Mingo—Twin Maud).

JEAN VAL JEAN (Memphis & Aventura Kennels, Memphis, Tenn.)—Black, white and tan dog, March 17 (Mingo—Twin Maud).

PURITANA (H. B. Duryea, New York) —Black and white bitch, July 1 (Royal Sultan—Queen Bess).

MISS ELISE (E. F. Thomas, Hoboken, N. J.)—Black, white and tan bitch, July 29 (Count Noble—Ruby).

RODREKA (Dr. Jas. N. MacIn, Keeling, Tenn.)—Black, white and tan bitch, Oct. 26 (Roderigo—Gem).

LITTLE NELL (L. B. McFarland, Memphis, Tenn.)—Black, white and tan bitch, Feb. 21 (Stattle—Topsy).

PRINCESS FLIRT (Ramapo Kennels, Mahwah, N. J.)—Black, white and tan bitch, April 15 (Clifford—Von Lengerke's Donna).

SCOUT (R. J. Crawford, Winston, N. C.)—Black and tan dog, Jan. 16 (Jumbo—Nell).

CAST OFF (Geo. T. Leach, New York)—Orange belton dog, (Clifford—Donner's Bessie).

PRINCE DASH (J. von Lengerke, Hoboken, N. J.)—Black and white dog, April 15 (Clifford—Donna).

CAPPEL G. (L. Shuster, Jr., Philadelphia, Pa.)—Black, white and tan dog, Aug. 16 (Gladstone—Cornelia).

CORNELIA G. (L. Shuster, Jr., Philadelphia, Pa.)—Black, white and tan bitch, Aug. 16 (Gladstone—Cornelia).

KID (W. A. De Witt, Pelham Manor, N. Y.)—Black and tan dog, Feb. 26 (Sprain—Gypsy).

BOR H. (Dr. R. J. Hampton, Athens, Ga.)—Black and white dog, March 31 (Count Noble—Belle Boyd).

CAN CAN (Dr. R. J. Hampton, Athens, Ga.)—Black, white and tan bitch, March 31 (Count Noble—Belle Boyd).

BAPTA (John Hunter, New York)—Black and white bitch, Aug. — (Sam—Brick).

BIRD (John Hunter, New York)—Black and white bitch, Aug. — (Sam—Brick).

PRINCE ROYAL (R. T. Kennedy, Pittsburgh, Pa.)—Black and white dog, Feb. 22 (Royal Ranger—Daisy Queen).

DON PETREL (Blackstone Kennels, Tarrytown, N. Y.)—Black, white and tan dog, — (Don Juan—Petrel III.).

FOAM (Blackstone Kennels, Tarrytown, N. Y.)—Black and white bitch, Aug. 7 (Foreman—Grace B.).

FOREMAN'S LASS (C. Fred Crawford, Pawtucket, R. I.)—Black, white and tan bitch, Aug. 7 (Foreman—Grace B.).

FOREMOST (Chas. Copeland, Seymour, Conn.)—Black and white dog, Aug. 7 (Foreman—Grace B.).

FOREWARD (Chas. Copeland, Seymour, Conn.)—Black, white and tan bitch, Aug. 7 (Foreman—Grace B.).

MAC C. (B. F. Wilson, Pittsburgh, Pa.)—Black, white and tan dog, June 26 (Count Noble—Glady's).

LUKE ROY (H. H. Matlock, Riceville, Tenn.)—Black, white and tan dog, June 1 (San Roy—Jennie).

FAWN II. (W. B. Stafford, Treuton, Tenn.)—Lemon and white bitch, July 14 (Paul Gladstone—Lady C.).

MAVIS (J. S. Clark, New Brunswick, N. J.)—Black, white and tan bitch, March 1 (Gladstone—Lavalette).

NANCY BELLE (W. H. Colcord, Chicago, Ill.)—Blue belton bitch, June 9 (Glen Rock—Countess Flirt).

PATIENCE (W. H. Colcord, Chicago, Ill.)—Blue belton bitch, Aug. 4 (Spot Noble—Medora Gladstone).

UNNAMED (H. Hartley, Pittsburgh, Pa.)—Black and white dog, — (champion Sting—Novelty).

UNNAMED (H. Hartley, Pittsburgh, Pa.)—Black and white bitch, — (champion Sting—Novelty).

IRISH SETTERS.

MADCAP (Claire-Reeta Kennels, Palmyra, O.)—Bitch, June 18 (Glencho—Reeta).

CLAIRE-REETA (Claire-Reeta Kennels, Palmyra, O.)—Bitch, June 18 (Glencho—Reeta).

MAC GINNESS (C. J. Stewart, Jamaica, L. I.)—Dog, Aug. 30 (Shipman's Tom—Meg).

RODMAN (C. J. Stewart, Jamaica, L. I.)—Dog, Aug. 30 (Tom—Meg).

POINTERS.

RAPID DON (W. C. Thompson, Butler, Pa.)—Lemon and white dog, Aug. 22 (Vandevor's Don—Nellie Bird).

NETTIE C. (W. C. Thompson, Butler, Pa.)—Lemon and white bitch, July 30 (Meteor—Starr's Flirt).

DOLON (John S. Wise, Richmond, Va.)—Liver and white dog, May 17 (Meteor—Beulah).

MAJORITY (F. R. Hitchcock, New York)—Liver and white dog, Oct. 3 (Tammany—Modesty).

PENELOPE (F. R. Hitchcock, New York)—Lemon and white bitch, June 26 (Bang Bang—Pocahontas).

QUEEN FAN (F. R. Hitchcock, New York)—Liver and white bitch, March 1 (Bang Bang—Fan Fan).

HECTOR (F. R. Hitchcock, New York)—Black and white dog, June 20 (Priam—Hops).

CASSANDRA (F. R. Hitchcock, New York)—Liver and white bitch, June 20 (Priam—Hops).

SPRINGBOK (Capt. C. E. McMurdo, Charlottesville, Va.)—Liver and white dog, June 10 (Mainspring—Curfew).

SELDON (E. H. Haight, Allaire, N. J.)—Liver and white bitch, March 20 (Booth—Tuck).

REX (Geo. T. Wisner, Goshen, N. Y.)—Lemon and white dog, June 26 (Bang Bang—Pocahontas).

RAPIDAN (J. M. White, Newton, N. C.)—Liver and white dog, July 6 (Miter—Fleada).

METEOR'S MAID (Royal Robinson, Indianapolis, Ind.)—Liver and white bitch, March 31 (Meteor—Dee).

HIMALAYA (Neversink Lodge Kennels, Gnyard, N. Y.)—Liver and white bitch, June 6 (Tammany—Jilt).

METEOR'S BELLE (Col. W. E. Hughes, Dallas, Tex.)—Liver and white bitch, May 18 (Meteor—Beta).

DILLSEY (Col. W. E. Hughes, Dallas, Tex.)—Liver and white bitch, March 31 (Meteor—Dee).

MAXIMUS (Col. W. E. Hughes, Dallas, Tex.)—Liver and white dog, July 31 (Maxim—Flash III.).

MINORITY (C. H. Odell, New York)—Liver and white dog, Oct. 3 (Tammany—Modesty).

FLY (James P. Swain, Jr., Bronxville, N. Y.)—Lemon and white bitch, Jan. 29 (Rush—Eria).

BOB (James P. Swain, Jr., Bronxville, N. Y.)—Lemon and white dog, June 5 (Rush—Nan).

JUNO (James P. Swain, Jr., Bronxville, N. Y.)—Lemon and white bitch, June 5 (Rush—Nan).

RUE II. (Bayard Thayer, Boston, Mass.)—Lemon and white bitch, May 22 (Bang Bang—Rue).

RUTH BANG (Bayard Thayer, Boston, Mass.)—Lemon and white bitch, May 22 (Bang Bang—Rue).

RAPID B. (Bayard Thayer, Boston, Mass.)—Lemon and white dog, May 22 (Bang Bang—Rue).

CONSOLATION (C. H. Odell, New York)—Lemon and white dog, Jan. 29 (Bang Bang—Grace III.).

NATIONAL FIELD TRIALS DERBY ENTRIES.

FOLLOWING is a list of the entries for the eighth annual Derby of the National Field Trials Association, to be run at Grand Junction, Tenn., in December.

ENGLISH SETTERS.

BEE GLADSTONE (John Drees, Little Rock, Ark.)—Black, white and tan bitch, March 28 (Paul Gladstone—Busy Bee).

PENN (F. A. Harrison, Lexington, Ky.)—Lemon and white dog, March 17 (Maxwell—June II.).

DEL SUR (C. N. Post and G. W. Watson, Sacramento, Cal.)—Black, white and tan dog, Aug. 30 (Gladstone—Frounce).

DOR (General W. B. Shattuck, Cincinnati, O.)—Black, white and tan bitch, Sept. 25 (Gladstone—Dido II.).

FAWN II. (W. B. Stafford, Trenton, Tenn.)—White and lemon bitch, July 14 (Paul Gladstone—Lady C.).

DAREALL (Geo. H. Laughton, Grand Crossing, Ill.)—Black and white dog, May 21 (Doncaster—May Queen).

MISS ALICE (Geo. H. Laughton, Grand Crossing, Ill.)—Black, white and tan bitch, May 21 (Doncaster—May Queen).

RUBICON (B. M. Stephenson, La Grange, Tenn.)—White, black and tan dog, Feb. 2 (Ben Hill—Zoe).

KATRINA (B. M. Stephenson, La Grange, Tenn.)—Black and white bitch, Feb. 2 (Ben Hill—Zoe).

LADY PAULINE (B. F. Stephenson, La Grange, Tenn.)—White, black and tan bitch, July 14 (Paul Gladstone—Lady C.).

WANDA (B. M. Stephenson, La Grange, Tenn.)—White, black and tan bitch, June 11 (Don Nilsson—Lady C.).

DANTE (E. S. Gay, Atlanta, Ga.)—White, black and tan dog, July 22 (Gladstone—Miss Clifton).

RODREKA (Dr. J. N. MacIn, Keeling, Tenn.)—White, black and tan bitch, Oct. 26 (Roderigo—Gem).

FANNIE GLADSTONE (J. M. Fronefield, General Wayne, Pa.)—Orange and white bitch, Aug. 30 (Gladstone—Frounce).

GAMBLER (J. W. Murnan, Keeling, Tenn.)—Black, white and tan dog, March 18 (Sportsman—Gem).

GLAD (J. W. Murnan, Keeling, Tenn.)—Black, white and tan bitch, Aug. 30 (Gladstone—Flounce).

QUEEN VICTORIA (Dr. G. G. Ware, Stanton, Tenn.)—Black and white bitch, April 21 (Gladstone's Boy—Maud W.).

LUCK (Dr. G. G. Ware, Stanton, Tenn.)—Lemon and white dog, June 15 (Gladstone's Boy—Leora).

DEAN SWIFT (Dr. G. G. Ware, Stanton, Tenn.)—Black, white and tan dog, Sept. 18 (Gladstone's Boy—Grammy).

COUNT HARRY (Geo. Waddington)—Lemon and white dog, March 28 (Count Noble—Saula).

BLACK AND TAN SETTERS.

DIANA II. (G. D. Huling and W. A. Alderson)—Bitch, April 14 (Argus—Diana).

LADY MALCOLM (J. T. Thorpe)—Bitch, July 23 (Malcolm—Dream IV.).

IRISH SETTERS.

BRUSH, JR. (G. D. DeHart)—Dog, March 8 (Brush—Lorraine).

JACK (H. P. Dillon)—Dog, April — (Joe—Queen Bess).

TRIX (W. A. Pierce)—Bitch, April — (Joe—Queen Bess).

POINTERS.

METEOR BELLE (Col. W. E. Hughes)—Liver and white bitch, May 18 (Meteor—Beta).

MAXIMUS (J. N. Simpson)—Liver and white dog, July 31 (Maxim—Flash III.).

DILLSEY (J. N. Simpson)—Liver and white bitch, March 31 (Meteor—Dee).

TRAVELER (J. W. Blythe)—Liver and white dog, March 31 (Meteor—Dee).

TANSEY (J. W. Blythe)—Liver and white bitch, March 31 (Meteor—Dee).

SPRING (R. M. Huchings)—Liver and white dog, June 10 (Mainspring—Curfew).

VANITY FAIR (R. M. Huchings)—Lemon and white bitch, April 14 (Bang Bang—Bellona).

VANDAL (E. F. Stoddard)—White and liver dog, May 14 (Drake—Vanity).

LADY JUNE (E. F. Stoddard)—Liver and white bitch, March 31 (Meteor—Dee).

MIGNON (J. W. Munson)—Liver and white dog, March 31 (Meteor—Dee).

MISS WOODFORD (J. W. Munson)—Liver and white bitch, June 25 (Robert le Diable—Belle Faust).

YUM YUM (Paul Francke)—Liver and white bitch, June 10 (Mainspring—Curfew).

SIR ANTHONY (H. H. Farnham)—Black and white dog, Nov. 18 (Graphic—Zitta).

MAY F. (H. H. Farnham)—Liver and white bitch, Nov. 18 (Graphic—Zitta).

MIKADO (F. F. Harris)—Liver and white dog, Nov. 18 (Graphic—Zitta).

BELLE OF WOODFORDS (F. F. Harris)—Liver and white bitch, Nov. 18 (Graphic—Zitta).

BEAU OF PORTLAND (F. F. Harris)—Liver and white dog, Nov. 18 (Graphic—Zitta).

TRANSIT (J. W. Blythe)—Liver and white dog, March 31 (Meteor—Dee).

MECKNESS (J. N. Macklin)—Liver and white dog, June 25 (Robert le Diable—Belle Faust).

CONSOLATION (Chas. H. Odell)—Lemon and white dog, March 28 (Bang Bang—Grace III.).

THE ENGLISH FIELD TRIALS.

THE National Field Trials were held at Shrewsbury, Eng., commencing Tuesday, April 20. Following is a summary of the several events:

POINTER PUPPY STAKES.

First, F. Lowe's liver and white Duke of Hessen, 11mos. (Luck of Hessen—Blarney); second, C. H. Beck's liver and white Rapid Ben, 15mos. (Naso of Kippen—Venus of Braunfels); equal third, A. Richard's orange and white Lolo, 14mos. (Drake II.—Fairy); and Barclay Field's liver and white Busy IV., 13mos. (Young Dick—Belle of Bow).

SETTER PUPPY STAKES.

First, C. Wace's lemon and white Sandy, 12mos. (Bluecoat Boy—Minnie); second, J. H. Platt's black, white and tan Brave Prince, 15mos. (Brave Tom—Bonny Bevis); third, Elias Bishop's lemon and white Royal Dash, 11mos. (Royal Prince—Nellie).

Acton Reynald Stakes for all-aged pointers and setters, eight pointers and four setters. D. R. Scratton's liver and white pointer Hero, 5yrs. (Bang—Hebe), won first in pointers and prize for best of either breed; H. Lonsdale's black and white setter Jovial won first in setters, and M. A. Richard's black, white and tan setter Rose, 3yrs. (Diamond—Minnie) won second.

CLOVERLY STAKES.

Pointer and setter braces, George Pilkington's liver and white London, 2yrs. (Lake—Dingle) and liver and white Larkspur, 2yrs. (Lake—Dingle), won first in pointers and prize for best of either breed. Mr. Heywood-Lonsdale's liver and white Bruce, 2yrs. (Baron—Norah) and black and white Jovial, 2yrs. (Baron—Joan) won in setters, and Prince Solms's liver and white Naso of Kippen, 4yrs. (Naso II.—La Vole) and liver and white Jilt of Braunfels, 4yrs. (Darwin—Young Jilt), pointers, won second.

The Kennel Club Field Trials were held near Holyhead, the first week in May. The Derby had a hundred and twenty-seven nominations, with sixteen starters. Rapid Ben, winner of second in the National Pointer Puppy Stake the week previous, won the stake, Prince Solms's liver and white pointer bitch Lady of the Reid, 12mos. (Sir Naso—Hertha), winning second.

ALL-AGED STAKES.

There were thirteen entries in this stake—eight pointers and five setters. The stake was won by M. A. Richard's setter Rose, winner of second in the Acton Reynald Stake the previous week. Second, Sir T. B. Lennard's liver and white pointer dog Polites (Priam—Duchess). Third, R. G. Mawson's lemon and white pointer bitch Quill's Baby (Prior—Quits II.).

IRISH WATER SPANIEL SPECIALS AT CLEVELAND.

—La Salle, Ill., May 9.—*Editor Forest and Stream:* Upon looking over your very excellent report of Cleveland show I was very much pleased with it. But I must ask you to kindly make one correction for me. It is this. In your account of specials you mention that Patsy O'Connor won the special for best Irish water spaniel bred in America. I am pleased to say that it was my Count Bendigo that should get the credit for that honor. My Little Sioux beat Patsy for best dog or bitch in open class.—T. DONOGHUE.

THE ST. LOUIS DOG SHOW.

[Special Dispatch to Forest and Stream.]

ST. LOUIS, Mo., May 19, 1886.
THE dog show opened yesterday at the Exposition Building with fine weather. The attendance has been very good. The entries number 381 and nearly all of them are present. The average quality of the dogs in the sporting classes is good. Following is a list of the awards up to noon to-day:

AWARDS.

POINTERS.—LARGE—CHAMPION—Dog: Absent.—OPEN—Dogs: 1st, C. T. Engel's Young Meteor; 2d, Gypsy; 3d, Sweep. Very high com., Drake. High com., Bow Faust. Bitches: 1st, St. Louis Kennel Club's Belle Faust; 2d, Vixen; 3d, Nellie. High com., Bessie Hawkins. Com., Blackbird and Jessie.—UNDER 35 LBS.—CHAMPION—Dog: Robin Adair. COCKER SPANIELS.—CHAMPION—No entries.—OPEN—Dogs: 1st, Keno; 2d, Prince Olio. Very high com., Colonel Mac. Bitches: 1st, Vio; 2d, Blu; Silk. Puppies: 1st, Black Donald; 2d, Fanchon. Very high com., Count Leo.

SPECIAL.

THE NEW YORK SHOW.

Editor Forest and Stream:

In your report of the New York show you do me a grave injustice. You are well aware that I never complain of criticism by newspaper reporters, and if opinions differ as to merits of dogs, why should not the press reporter differ from the judge as to the awards? That is all right, and I am content to allow all reasonable freedom in showing up what is thought to be my mistakes. I always, however, reserve to myself the right to consider my judgment at least as likely to be correct as that of the reporter, owing to the more favorable means of comparison a judge possesses over an onlooker. But I will not allow a slander on my character, or motives other than those of an honorable man to be imputed to me with impunity. Disappointed exhibitors are only too ready to seize any excuse for finding fault with a judge's unpalatable judgments, and I regret that your reporter should aid and abet them in the cry that I awarded prizes at random in my hurry to get through quickly.

Had your reporter been in my ring and seen me doing my work, he would never have perpetrated such a slander. I positively affirm that my awards were as deliberately and coolly made and represent my clearest judgment just as much as if I had studied each class for a week. The only hurry there was, was that of getting the dogs in and out of the ring. You may criticize my judgments, but pray don't impute motives. You owe me an apology. J. F. KIRK.

TOBAGO, May 15, 1886.

[As Mr. Kirk disclaims having hurried through his classes and awarded the prizes at random, we cheerfully tender him an apology for making the assertion. We wrote as we did, believing that this was the only possible excuse he had for placing some of the dogs as he did. We sincerely regret to learn from him that the awards were the result of his deliberate judgment.]

THE WILKESBARRE DOG SHOW.—Wilkensbarre, May 10.

—*Editor Forest and Stream:* The committee having charge of the Wilkesbarre bench show have decided to offer two special prizes of \$25 each, to the best kennel of four sporting and non-sporting dogs respectively. A mistake in proof reading has done us much injury in St. Bernard classes. The prizes for St. Bernards should be \$10 for first and \$5 for second prizes, instead of \$7 and \$4, as in premium list. All express companies will return dogs free of charge. Full power will be given the judge to award such prizes as he thinks fit in the miscellaneous classes. The object for which this show is given appeals to all military men, the receipts going to the fund to build an armory for the Ninth Regiment; and further than that, if the show is reasonably successful it will result in the formation of a kennel club here, and an increased demand for good dogs of all breeds throughout this entire section.—W. H. TUCK, Secretary.

BEAGLE AWARDS AT THE CLEVELAND SHOW.—

Wrightsville, Pa., May 15.—*Editor Forest and Stream:* In your list of awards of the special prizes at the Cleveland show you wrongly gave my Fairy as the winner of the two special prizes offered for the best beagle bitch in open class. These prizes were awarded to my bitch Dot (Bannerman—Floss). Your list of the awards in the beagle classes is further incomplete, as you passed over the open bitch class (over 12 inches) entirely. The awards in this class were as follows: Open, over 12 inches—Bitches: 1st, A. C. Krueger's Dot; 2d, E. E. Shaner's Piney. Very high com., Mrs. Geo. H. Hill's Minnie. High com., A. C. Krueger's Millie and E. E. Shaner's Queen Bird. Com., A. C. Krueger's Maida and C. W. Fromm's Stella.—A. C. KRUEGER.

SMOTHERED.—Portland, Me., May 10.—*Editor Forest and Stream:* It grieves me to announce the death of my two pointer puppies, Mikado and Belle of Woodford's, by Graphic out of Zitta. The puppies were smothered while en route to the New York bench show. Their loss can only be attributed to gross negligence on the part of the express messenger between Portland and Boston, as we learn that they were received for as dead at Albany, and we have reason to believe were smothered directly after leaving Portland. The brace—as is usually the case—were the pick of the litter, and were to have gone from New York to Virginia to be trained for the field trials. They were entered in the Western Derby, and I had every reason to believe would have made a splendid brace of field dogs.—F. F. HARRIS.

WHAT THEY THINK OF THE "RECORD."—La Salle, Ill.—I have received the "Kennel Register and Account Book for Breeders," and I can assure you I am more than pleased with it. If I had known it was such a valuable book, you may be sure I would never have been without it so long. It is just what breeders want, and I cannot see where it could possibly be improved. Every breeder should have it.—T. DONOGHUE. [Specimen pages sent free on application.]

SPECIAL PRIZES AT NEW YORK.—The following awards of special prizes at the New York dog show are additional to those published last week: Best greyhound (two) W. H. Huntington's Louise; best brace, same owner's Harlequin and Louise. Best bulldog, J. E. Thayer's Bellissima. Best King Charles spaniel, J. Marriott's Clifton Belle.

DOLLY.—Burr Hollis of Wellsville, N. Y., who has had the misfortune to lose his hotel by fire, sends us a touching account of the death of his black and tan terrier, Dolly. The dog, having run back into the burning building, was seen on the piazza of the second floor, where she set up a cry almost human. One of the firemen turned the hose on to her, to keep her from burning, until a ladder could be brought for her rescue; but when the stream struck her she ran to the end of the piazza, leaped off into the flame, and with a piteous cry disappeared.

DEATH OF MEERSBROOK MODEL.—*Editor Forest and Stream.* Last Sunday I had the misfortune to lose the best fox-terrier in my kennels, Meersbrook Model. She was killed by a huge mongrel cur which suddenly pounced upon her, killing her instantly. Although never shown in this country, her record abroad was a brilliant one. This is the second terrier I have lost in the same way, Raby Tyrant being killed by my deerhounds.—JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

KENNEL NOTES.—A number of Kennel Notes recently received have been lost. Correspondents who may have sent Notes which have not appeared are requested to repeat them.

Irish setter bitch Florida (Chief—Raab's Becky) to his Tim (Biz—Hazel), Jan. 23. **Petty—Tim.** Max Wenzel's (Hoboken, N. J.) Irish setter bitch Petty (Chief—Doe) to his Tim (Biz—Hazel), April 24. **Trinket—Bannerman.** A. C. Krueger's (Wrightsville, Pa.) beagle bitch Trinket (Flute—Queen) to his Bannerman (Marchboy—Dewdrop), March 20. **Kitty—Bannerman.** A. C. Krueger's (Wrightsville, Pa.) beagle bitch Kitty (Flute—Bunnie) to his Bannerman (Marchboy—Dewdrop), March 9. **Dot—Cameron's Racket.** A. C. Krueger's (Wrightsville, Pa.) beagle bitch Dot (Bannerman—Floss) to his Cameron's Racket (Rally—Louise), April 10. **Mignon—Kiddewink.** Mignon Kennels' (Cortland, N. Y.) cocker spaniel bitch Mignon (Dart—Daisy I.) to their Kiddewink (Gloss—Nipper), April 11. **Victress II.—Bannerman.** P. Carmen's (Wrightsville, Pa.) beagle bitch Victress II. (Ringwood—Victress) to A. C. Krueger's Bannerman (Marchboy—Dewdrop), March 18. **Rebelle—Dashing Rover.** W. Henry Colquhoun's (Richmond, Va.) English setter bitch Rebelle (A. K. R. 2004) to T. F. Taylor's Dashing Rover (Dash II.—Norman), April 10. **Black Duke—King Coal.** Chas. F. Hamilton's (Philadelphia, Pa.) cocker spaniel bitch Black Duke (Cotney's Rover, Jr.—Jeffert's Rose) to American Cocker Kennels' King Coal (A.K.R. 2585), April 15. **Countess—Nemours.** B. F. Seitzer's (Dayton, O.) basset hound Countess (Nero—Zata) to Maitland Kennels' Nemours, April 14. **Wallace—Prince.** B. F. Seitzer's (Dayton, O.) dachshund bitch Wallace (Waldman K.—Fraulien Waldeck) to his Prince, April 3. **Actress—Planet.** B. F. Seitzer's (Dayton, O.) pointer bitch Actress (Brahm—Splaw) to his Planet (Meier—Accident), April 1. **Romp—Planet.** B. F. Seitzer's (Dayton, O.) pointer bitch Romp (Croxeth—Lass) to his Planet (Meteor—Accident), March 31. **Lass—Planet.** B. F. Seitzer's (Dayton, O.) pointer bitch Lass (Sleford—Dawn) to his Planet (Meteor—Accident), March 25. **Lady Croxeth—Planet.** B. F. Seitzer's (Dayton, O.) pointer bitch Lady Croxeth (Croxeth—Lass) to his Planet (Meteor—Accident). **Laurette—Stableford Joe.** F. Hoey's (Long Branch, N. J.) fox-terrier bitch Laurette (Spice—Olive) to his Stableford Joe (Corinthian—Jenny), May 11. **Gipsy—Jack.** A. M. Gerry's (South Paris, Me.) foxhound bitch Gipsy (Dixie—Ringlet) to his Jack (Dime—Fan), May 10. **Linda—Glen Rock.** E. W. Jester's (St. George's, Del.) English setter bitch Linda (Emperor Fred—Cecelia D.) to his Glen Rock (A.K.R. 1616). **Calypto—Nevison.** Clayton E. Bailey's (Jamestown, N. Y.) mastiff bitch Calypto (A.K.R. 1498) to Chas. H. Mason's Nevison, April 23. **Nell of Efford—Bracket.** Graphic Kennels' (Jersey City, N. J.) pointer bitch Nell of Efford (Don Juan—Rex's Kate) to their Bracket (Graphic—Bloomo), May 10 and 12. **Lue—Graphic.** H. P. Dorch's (Goldsborough) pointer bitch Lue (Bow—Jaunty) to Graphic Kennels' Graphic, May 8. **Pebble—Red Gladstone.** M. M. MacMillan's (Mahanoy City, Pa.) Lancashire bitch Pebble (Coulton's Long—Maple) to G. F. Clark's Rex Gladstone (Royal Gladstone—Mollie Druid), May 10. **Countess Wind'em—Red Gladstone.** G. F. Clark's (St. George's, Del.) setter bitch Countess Wind'em (Roderick II.—Jennie) to his Rex Gladstone (Royal Gladstone—Mollie Druid), May 14. **Elsa—Bobbie Burns.** James Rae's (Buffalo, N. Y.) Dandie Dinmont bitch Elsa (A.K.R. 2808) to his Bobbie Burns (A.K.R. 2897), May 2.

WHELPS.

Notes must be sent on the Prepared Blanks.

Lady Edgecomb. Lothian Kennels' (Stepney, Conn.) collie bitch Lady Edgecomb, May 4, seven (one dog), by E. J. Hawley's Oscar II. (Oscar—Fannie). **Bess.** C. J. Moffit's (Garfield, N. Y.) Gordon setter bitch Bess (Grant—Nellie), April 13, eight (five dogs), by E. B. Dusenbury's Bramble (Athen's Glen—Gypsy). **Janet.** California Kennels' (Sacramento, Cal.) Llewellyn setter bitch Janet (Count Noble—Dashing Novice), April 19, eight (two dogs), by their Harold (Ch—Gem). **Gyp.** Philip D. Hart's (Brantford, Ont.) Gordon setter bitch Gyp (Jack—Gup), March 24, eight (six dogs), by Glover's Turk (Dash—Belle). **Bertha.** Mill Brook Kennels' (Bergenfield, N. J.) St. Bernard bitch Bertha (Bruno—Elsa), May 11, twelve (eight dogs), by their Verone (Rex—Alma). **Myrtle.** Mill Brook Kennels' (Bergenfield, N. J.) collie bitch Myrtle (Robin Adair—Lassie), May 12, nine (seven dogs), by M. Denn's brack (Gyle—Saffell). **Glen.** Theodore Potter's (Glendale, O.) English setter bitch Glen (A.K.R. 1953), May 11, twelve (seven dogs), by J. Overman's Count Gladstone (Gladstone—Lella). **Queenie.** Coughnura Medicine Co.'s (Eau Claire, Wis.) English setter bitch Queenie (A.K.R. 3051), April 28, eleven (five dogs), by King Noble. **Nell.** Wm. J. Geary's (South Boston, Mass.) Gordon setter bitch Nell (Jack—Daisy), April 23, seven dogs, by Dr. Estabrook's Sport Kent II.—Dinah; one since dead.

Devonshire Queen. Floyd Vail's (Jersey City, N. J.) pointer bitch Devonshire Queen (A.K.R. 3127), May 15, nine (seven dogs), by C. J. E. Ball's imported Nick of Naso (Naso II., E. 8, 123)—Pettigo, E. 15, 173).

Pauline Markham. Chas. H. Baker's (Boston, Mass.) cocker spaniel bitch Pauline Markham (Obo II., A. K. R. 432)—Hornell Ruby, A. K. R. 67, April 20, six (three dogs), by Hornell Spaniel Club's Black Silk.

SALES.

Roy Gladstone. Lemon and white setter dog, whelped Dec. 21, 1885, by Raybel out of Little Fraud, by G. F. Clark, St. George's, Del., to E. W. Jester, same place.

Merry Legs. Liver and white ticked pointer bitch, whelped Feb. 18, 1885, by Graphic out of Bloomo, by Graphic Kennels, Jersey City, N. J., to O. N. Donner, Coosau, S. C.

Burke II. White, liver and tan English setter dog, whelped May 30, 1881 (A.K.R. 2558), by L. Gardner, Mr. Vernon, N. Y., to Elm Grove Kennels, South Norwalk, Conn.

Linda. Black, white and tan English setter bitch, whelped August, 1882, by Emperor Fred out of Cecelia D., by E. W. Jester, St. George's, Del., to S. B. Duryea, Brooklyn, N. Y.

Glen Obo. Black, white and tan English setter bitch, whelped Feb. 13, 1886, by Glen Rock (A. K. R. 1616) out of Dashing Belle (A.K.R. 814), by E. W. Jester, St. George's, Del., to W. F. Milford, Cornwall, N. Y.

Glen Noble. Black, white and tan English setter dog, whelped Feb. 13, 1886, by Glen Rock (A. K. R. 1616) out of Dashing Belle (A.K.R. 814), by E. W. Jester, St. George's, Del., to Jefferson Cooper, Pearl River, N. Y.

Little Boy Blue. Blue belton English setter dog, whelped Aug. 16, 1885, by Glen Rock (A.K.R. 1616) out of Dashing Belle (A.K.R. 814), by E. W. Jester, St. George's, Del., to Miss M. Bullard, Dedham, Mass.

Leo. Black cocker spaniel dog, whelped March 9, 1885, by Obo II. (A.K.R. 432) out of Topsy B. (A.K.R. 3317), by Fred Bollett, Brooklyn, N. Y., to Peter Stillwagon, same place.

Topsy B. Black cocker spaniel bitch, whelped Oct. 18, 1884 (A.K.R. 3317), by Fred Bollett, Brooklyn, N. Y., to Dr. W. W. Smith, same place.

May Ranger. Liver, white and ticked pointer bitch, whelped May 26, 1885, by Ranger Croxeth (A.K.R. 1017) out of Fanny Faust (A.R. 1041), by S. B. Duley, Rosendale, Wis., to Amory R. Starr, Marshall, Tex.

Tie. White French poodle bitch, whelped Jan. 9, 1886, by Alva out of Lillie, by Henry C. Burdick, Springfield, Mass., to Fred W. Grimes, Mansfield, Conn.

Lothian Queen. Sable collie bitch, whelped Nov. 15, 1885, by Montrose (A.K.R. 801) out of imported Tibbie (A.K.R. 2825), by C. E. Osborne, Stepey, Conn., to Miss F. S. Adam, New York.

Alladdin. Sable and white collie dog, whelped Nov. 15, 1885, by Montrose (A.K.R. 801) out of imported Tibbie (A.K.R. 2825), by Lothian Kennels, Stepey, Conn., to D. Nicholson, Hillsdale, N. Y.

Beauséant. Lemon and white and ticked pointer dog, whelped Jan. 18, 1885, by Beaufort out of Lady Maud, by Surrey Kennels, Elliott City, Md., to Dr. H. G. Preston, Brooklyn, N. Y.

Bob. White, black and tan beagle dog, whelped April 6, 1885, by Bannerman out of Silk II., by E. E. Shaner, Pittsburgh, Pa., to John Sheridan, same place.

Queen Bird. White, black and tan beagle bitch, whelped March 26, 1885 (A.K.R. 3190), by E. E. Shaner, Pittsburgh, Pa., to A. C. Krueger, Wrightsville, Pa.

Piney. White and tan beagle bitch, whelped Nov. 28, 1884 (A.K.R. 3486), by E. E. Shaner, Pittsburgh, Pa., to A. C. Krueger, Wrightsville, Pa.

Maida II. White, black and tan beagle bitch, whelped May 6, 1885, by Ringwood out of Maida, by E. E. Shaner, Pittsburgh, Pa., to Chas. Richardson, Allegheny City, Pa.

Driver. White, black and tan beagle dog, whelped April 13, 1885 (A.K.R. 3538), by E. E. Shaner, Pittsburgh, Pa., to P. Kaschenbach, Wilkesbarre, Pa.

St. Maurice. Rough coated St. Bernard dog (A.K.R. 3029), by Hospi-Kennels, Arlington, N. J., to Geo. Lissiguelo, Plainfield, N. J.

Toby's Lion. St. Bernard dog, age not given, by Otto II. (A.K.R. 2480) out of Kalmia (A.K.R. 2481), by Coughnura Medicine Co., Eau Claire, Wis., to A. B. Ricketson, Milwaukee, Wis.

Doc. Solid black cocker spaniel dog, whelped June 15, 1885, by Young Obo (A.K.R. 861) out of Rose Obo (A.K.R. 1204), by Arthur B. Treat, New Haven, Conn., to Wm. West, Camden, N. J.

Unc. Red Irish setter dog, whelped Oct. 15, 1885, by Guess out of Ino, by F. L. & C. G. Weston, Boston, Mass., to Dr. R. A. Kingman, same place.

Uno. Red Irish setter dog, whelped Oct. 15, 1885, by Guess out of Ino, by F. L. & C. G. Weston, Boston, Mass., to Clas. Poor, Peabody, Mass.

Nippy. Chestnut and tan cocker spaniel bitch, whelped April 13, 1885, by Both II. out of Mignon, by Mignon Kennels, Cortland, N. Y., to Russell Hotchkiss, New Haven, Conn.

Gretchen. Black cocker spaniel bitch, whelped Jan. 4, 1886, by Eustace's Mack out of imported Fannie, by Ideal Kennels, New Haven, Conn., to J. E. White, same place.

Katrina. Black cocker spaniel bitch, whelped Jan. 4, 1886, by Eustace's Mack out of imported Fannie, by Ideal Kennels, New Haven, Conn., to G. Fred Farnham, same place.

Maida II. White, black and tan beagle bitch, whelped May 6, 1885, by Ringwood out of Maida, by A. C. Krueger, Wrightsville, Pa., to E. E. Shaner, Pittsburgh, Pa.

Guess—Ino whelps. Red Irish setters, whelped Oct. 15, 1885, by F. L. & C. G. Weston, Boston, Mass., a bitch to Wm. S. Abbott, Peabody, Mass., and a dog to Wm. F. Gunn, Salem, Mass.

Bannerman—Queen whelps. Beagles, whelped Jan. 23, 1886, by A. C. Krueger, Wrightsville, Pa., a dog to Emery Williams, Dayton, Wash. Ter.; a dog to Fremont Crandell, Lindsay, Ont., and a bitch to Dr. Henry B. Nicol, Cookstown, Ont.

Bannerman—Victress whelp. Beagle bitch, whelped Dec. 29, 1885, by A. C. Krueger, Wrightsville, Pa., to Emery Williams, Dayton, Wash. Ter.

Obo II. (A.K.R. 432)—Topsy B. (A.K.R. 3317) whelps. Black cocker spaniels, whelped March 9, 1885, by Fred Bollett, Brooklyn, N. Y., three dogs to Dr. W. W. Smith, same place.

Elcho, Jr.—Meg whelp. Red Irish setter bitch, whelped October, 1885, by Dr. Wm. Jarvis, Claremont, N. H., to J. H. Conklin, New York.

Obo II.—Dart whelps. Black cocker spaniels, whelped Aug. 29, 1885, by P. Cullen, Salmon Falls, N. H., a dog to C. C. Davol, Warren, R. I., and a dog and bitch to W. D. Armstrong, Waterbury, Conn.

Bannerman—Editor Forest and Stream. Owing to a misunderstanding in the conditions of the sale of the beagle Bannerman, the sale has been declared off, and the dog remains, as heretofore, the property of A. C. Krueger, of Wrightsville, Pa.—W. STEWART DIFENDERFER (Baltimore, Md., May 15).

PRESENTATIONS.

Diana. White, black and tan English setter (A.K.R. 1455), by Sam'l Huntington, Plainfield, N. J., to Charles S. Pelham Clinton, New York.

Zeacrol. Lemon and white pointer dog, whelped June 28, 1885, by Beaufort out of Lady Maud, by Surrey Kennels, Elliott City, Md., to Dr. T. B. Owings, same place.

DEATHS.

Peggy. Red Irish setter bitch, whelped Aug. 1, 1885 (Sul-l-a-Mor—Nora), owned by W. N. Woodruff, West Newton, Mass., May 11, from distemper.

Rifle and Trap Shooting.

RANGE AND GALLERY.

HAVERHILL (MASS.) RIFLE CLUB. May 15, telegraph match with the Arlington Heights Rifle Club; 6 men, 10 shots each, 200yds., off-hand, standard target:

SPRINGFIELD, Mass.—The Schuetzen Verein will hold a four days' rifle tournament July 6, 7, 8 and 9, where upward of \$3,000 will be offered in prizes.

JAMESTOWN, N. Y., May 15.—In a club team match yesterday, 200yds., off-hand, Creedmoor target, the following scores were made, some of the men being new in the business:

Hazelline's Team	Burns's Team
Hazelline	5455555555—47
Norton	544454455—45
Kapple	544454455—43
Haycock	445544445—43
Givoe	435444354—40
Jones	34453443—38
Ward	445444238—37
Fenton	34433443—35
Love	33344434—32

WASHINGTON RIFLE CLUB. May 12.—Creedmoor target, 200yds., off-hand. After shooting off ties the prizes were awarded: First to C. Heinel, Sr., second to J. Newman, third to W. F. Seeds, fourth to H. B. Seeds. The following is the score in full:

C Heinel, Sr.	44455—22	U Fuller	4254—19
W A Bacon	35553—21	II A Heinel	44434—19
J Newman	35544—21	II B Seeds	44344—19
W C Seeds	44545—20	J R D Seeds	44334—18
W F Seeds	44444—20	J E Seeds	33444—18
I W Seeds	444—19	J Newman	44033—13

Second match, Massachusetts target, 200yds., off-hand, prizes distributed as follows: First to W. F. Seeds, second to W. C. Seeds, third to H. A. Heinel, fourth to C. Heinel, Sr., and fifth to C. Carleton. The full score is as follows:

W F Seeds, Bal.	8	9	11	10	11—49
W C Seeds, Win	10	10	11	10	8—49
H A Heinel, Win	9	9	7	11	10—46

At Marblehead, Mr. Eddy, who has bought out Mr. Keating, has finished about a dozen boats, and is busy with repairs and fitting out a large number of boats. Mr. Eddy has on hand a very good model of a keel boat, somewhat similar to the well known Witch, built by him. The new boat is larger, 25x10ft. on waterline, about 30ft. over all and 6ft. draft, and is one of the best models of the type we have ever seen about Boston. At Marblehead Mr. Billow is also building a small keel cutter of about 31ft. waterline for J. R. Rhodes, owner of the keel boat, Caprice, and is building for the Forest and Stream some of the boats which are Witch, Caprice, Carmelita and a number of other boats, while some are already afloat, and under the management of the new Corinthian Y. C., the season promises to be a very lively one.

CRUISE OF THE COOT.

XXIII.

IN the narrower reaches of the creeks connecting with the canals, the one thing to be dreaded is the appearance of a timber raft in tow. These rafts, which are made up in North Carolina, are of great length, and in the turns of the creeks swing from shore to shore, grunting along one bank first and then over to the other. Whichever side of the raft you choose, there is a chance of getting squeezed between it and the bank, as the towing steamer has no control over its long tail. The Coot escaped the quandary by sheering into a small cove and holding on to the bushes upon one occasion, and in another following her own judgment in opposition to the signals from the pilot of a towing steamer. His raft edged across stream in response to the wind blowing, and had I followed the pilot's injunctions to keep to leeward, the Coot would have been badly nipped between the logs and a dyke of oyster shells and rock.

Although the banks of swamp-lined creeks are generally abrupt, except off projecting points, it is not safe to approach them in strange waters on account of enlarged tree stumps and sunken trunks. "Look out for stumps, captain" is a common injunction when a native wishes to show his friendly regard. The stump even figures on the charts in the mouth of the Scuppernon River right in the fairway of 12ft. Logs adrift from the tows, with one end shot into the mud and the other barely discernible above water are frequently encountered as well as much drifting rubbish, so that a watchful eye ahead is at all times necessary. Creeks leading through marshes are invariably deep and bold, often deeper than the main body into which they flow, and frequently obstructed by a narrow bar. In unbuoyed regions, the natives generally have stakes planted to guide into harbor where the channel is tortuous. The greatest nuisance in Albemarle and Pamlico Sounds is the mass of old pound net stakes reaching far off shore into the deepest water, obliging a small boat to give points a wide berth and forfeit the benefits of a weather shore. The whole heath is a confusion of stakes, and where the nets or "leads" are spread, the yachtsman is obliged to pick his way through certain openings marked by bush-headed stakes unless he proposes

to endanger the nets by driving over them and exciting the wrath of the fishermen. Local boats of little draft pass over the leads anywhere by crushing them under without harm. A native tried this once with the Coot after tricing up the centerboard, with the result that the boat got hung up on the net for half an hour and open war was threatened by the fishermen. Hugging the shore at night is also impracticable.

A strong westerly breeze was on hand to blow the Coot through the ten-mile canal connecting the headwaters of the Elizabeth with those of North Landing River. The lock tender had the gate open and quickly dropped the boat the few feet down to the canal level. This lock, which is granite-faced, 340ft. long and 40ft. wide, is the only one on the route south. Seven feet can be carried clear through the various links in the chain connecting Albemarle and Chesapeake, whereby some 1,800 miles of navigable interior waters have been brought within direct reach of Norfolk, Baltimore and northern markets.

In 1818 the famous Dismal Swamp canal was cut into the heart of the great swamp to open its vast wealth in pine timber to the world. The son of the projector of this work, Marshall Parks, Jr., conceived and executed the new line of communication with the South, the invaluable results of which are now fully demonstrated in the fresh vigor and growth of North Carolina's lowlands. The new canal was excavated entirely by steam power, the dirt being thrown up on each side. It runs almost due east and west, averages 80ft. in width and is excellently maintained. Owing to the high banks and trees it was rather slow work getting through in the Coot, despite the strong wind blowing. Four hours were occupied in the transit and an endless amount of jibing made it a matter for congratulation when the North Landing bridge hove in sight and the inspector's pass was delivered to the bridge tender, who poked out a long pole with a slit in the end into which the document was inserted.

Beyond the bridge there are two miles of crooked creek and then some broader reaches. Four miles down the creek forked into two branches, equally attractive, and not being certain which one to take the Coot was brought to an anchor as the evening shades began to fall. The traffic up and down one branch soon settled the question

as to which to follow next morning. It is well to show an anchor light, even in unpretentious looking creeks, which apparently can lead to nowhere in particular. Usually there is a fine country back of the fringe of swamp and marsh and the universal propeller is certain to come poking up the creek to a landing higher up when least expected.

Underway early next day in a squally southwester. Tied down two reefs as the blasts came across the marshes and through gaps in the trees with sudden energy. Passed the steam yacht Ibis, of Boston, bound north, and also a tow of six schooners, among them a yacht whose name could not be made out, having hands full attending to the Coot. An hour later, as the river broadened, the wind steadied and reefs were shaken out. It was ten miles to the first beacon in Upper Currituck, located at the confluence of a small stream called Blackwater, like a good many others. The river wound about through swamp and marsh in many coils, doubling back upon itself in over-hand hitches, till you lost all bearings. Somehow the wind was invariably ahead, so that the whole distance was a dead beat through hard puffs, which compelled a good deal of heaving and slack sheet. The last three miles were contortions through marshes as far as the eye could reach, with a bluish frame of trees upon the horizon. The only settlements passed were a patch of sandy bottom with an apology for a ranch, appropriately called "station farm," and the town of Pungo Ferry. A town it appears on the maps, in fact it is a half decayed landing, a shanty and a corduroy road leading into the interior. On the opposite side is an attempt at permanent residence, probably by the ferryman. A house has been built upon blocks in a half-flooded bit of sand not half an acre in extent. Upon this modest holding there was a chicken coop, a pig, and a cur, and the stalks of some corn. If you were to travel the world over a more miserable and unfit place of abode could not be found, yet here in abject poverty without a ray of hope in life, somebody was eking out an existence. Perhaps a severe case of "Home, sweet home." The ferry consists of a flatboat and rope across the river. By these the town can be identified, with the gratifying knowledge that two miles more will see you into open water.

When Currituck was espied it was blowing strong from south, with a short, steep, foam-crested sea. As this would require beating down to the Coinjock cut-off into North River, the Coot could not attempt the task so late in the day, and was turned into the Blackwater for a harbor instead. There are 14ft. near the mouth, and propellers steam up two miles and a half to a bridge, where there is a small settlement and store.

At the junction of the Blackwater, North Landing River and the head of Currituck stands the first of a series of gas beacons erected by the canal company as guides to the excavated channel down Currituck to the Coinjock cut-off. The greater part of Currituck has 5ft., with 3ft. spots, but the made channel has about 8ft. It is accurately marked by closely-spaced bushes and red buoys. A large vessel must hug these for best water and cannot beat down. It is usual, therefore, to tow clear through to North River, a distance of sixty miles from Norfolk. The gas beacons are an institution. There are eight in the fifteen miles from North Landing River to the Coinjock cut-off. They are miniature lighthouses, automatic in action, requiring attention once a week. Three cylinders, about 20ft. high, contain the gas, which is led into a regular Fresnel lens on top. These give forth a bright, steady light. Being painted black or red, the beacons also serve by day to show on which side they should be left. No charts exist of the Upper Currituck, except a sketch supplied by the canal company, hence my aversion to beating down the shoal water against a high sea.

Hardly had a pipe been lit after the Coot's sail was stowed, when a curious concern hove in sight pulling down the Blackwater. It proved to be a long narrow skiff, loaded with all manner of traps, nets, shooting and fishing implements, and assorted booty of the chase. When alongside, Mr. E. S. Evans, the proprietor of the multitudinous outfit, volunteered information about the alleged country round about, most of which was under water. "Was he fishing?" "No." "Shooting, of course?" "No, he was just furrin' a bit." That is to say he was making the rounds of sundry traps in the marshes, from which he collected the ensnared muskrats and coon. Mr. Evans smiled as he mentioned the last-named character as an object of the chase. "The marshes are full of them; we nail the skins on a board to dry and then ship to Norfolk where they realize about fifteen cents apiece. Later in the season we go turtling." And therewith Mr. Evans cast an envious glance at the Coot and continued: "Now with such a boat as that, there's a fortune in turtles. You see, we set a lot of traps about the marshes, and every day collect the turtles, sometimes twenty in a trap. But we have no boat in which to camp, and must pull for home

every day. We have no funds to start with, and so the rich harvest slips by." A turtle trap, as I found out, is much like an eel basket. Two barrel hoops serve to distend the funnel-like ends of a net, which lead through small apertures into a cylindrical middle in which the bait is hung. Once in, the turtle cannot reach the small hole outward, but climbs to the top of the net for air. Hence they must be set between stakes several inches clear of the water. If the wind piles up the water higher than the net the confined turtles drown. Mr. Evans had a high opinion of the business. Some Africans from Core Sound had come up and caught \$75 the first night, when the natives drove them off as foreigners. An unwritten law in this part of the world consigns the game to the inhabitants of the region and strangers are promptly resisted. Thus Mr. Evans was originally from Powell's Point, about twenty miles below, but in the eyes of the Blackwater people he might have come from the South Pole. So he had no business to capture the food from under the nose of the Blackwaters. Mr. Evans knew no such law on the statute books, but being wise in his generation, quietly rented a small ranch up the river, and becoming "one of us" saved his nets from surreptitious attack. His capital was invested in four nets, valued at \$1.50 each, with proportionately modest returns. If he had a boat like the Coot and thirty nets, a fortune was certain to come unbidden, always supposing the turtles to do the right thing by him. Thus we calculated the number of turtles upon his allegations, the number of pounds total and the equivalent in dollars and cents, until appalling riches were heaped up, and the only remaining difficulty was how to spend so much money. There seemed to be millions in it. But the turtles had not signed the contract yet, and that is probably where the glittering calculation was a little shaky. Remembering also that one turtle in hand was worth two in the marsh, I escaped making a fortune by sticking to the cruise of the Coot, and promising Mr. Evans to entertain the subject when we again met.

Snappers and terrapins bring ten cents per pound in May, and down to three cents as they become more plentiful. They are stored in barrels for shipment and kept in condition a long time. Mr. Evans had experienced one of ten pounds weight, keeping him without food for thirty days, at a loss of only half a pound, accounted for

by "drying up." The fish caught include perch, mullet, chub or wild-mouthed bass, all being plentiful. According to Mr. Evans no big fowl were to be got above the lower Currituck, and even there they were becoming very shy and scarcer every year, except in the "Yankee marshes," as the holding of Northern shooting clubs are termed. In spite of strict game laws, the natives hunt by night and "fire light," the ducks, so they give Currituck the go by and winter in Core Sound in great numbers. On the "Yankee marshes" proper protection is extended and shooting is still good. At the time of my visit several cases were pending in Currituck court against offenders and trespassers. These proceedings by the Northern club men are viewed with favor by the better native element, who realize that it is high time that laws were enforced if Currituck wildfowling is not to become a thing of the past.

A stiff northerly wind bowled the Coot down Currituck, holding her own with a propeller bound South. Beacon after beacon was made and passed. Once the boat was sheered away from the line of buoys, but the breaking of the sea in her wake was a warning against shoal water, after which the marks were kept close aboard. Fifteen miles being run off, the boat steered up Coijock Bay to the short-cut canal of five miles' length. This is a wide cut and can be sailed without much trouble. Half way along there is a swampy area, some stores and a few houses on high ground, known as the village of Coijock. A good deal of timber is got from the neighboring forests. The drawbridge was opened by a kick and the usual questions put to the Coot as she sailed on toward the North River.

The exit from the canal is marked by a white gas beacon at the head of a fine, broad reach, with 12 ft. of water. With a following wind the Coot rapidly sped down river, several eddies of constantly varying water being finally into the lower reach, and on the river where it assumes the aspect of a small sea, seven miles long and three wide. A second white gas beacon here marks the termination of the canal company's supervision and the Government chart of Albemarle waters commences. Holding the western side, the Coot ran down to Broad Creek, turned half a mile up the mouth and came to anchor in 15 ft. off a landing and empty house set upon logs in the marsh. On the bar of this creek there is 6 ft.

C. P. K.

INTERNATIONAL RACING AND THE Y. R. A. RULE.

THE issue of the Field of May 1, contains an illustration of the Queen's Cup, won by the Arrow in 1852 and lately offered by its owner, Mr. Tankerville Chamberlayne, as an international challenge cup for American yachts; in connection with which is the following suggestive editorial on "British and American Yachts": "The fact that the Queen's Cup was offered by Mr. Tankerville Chamberlayne, announcing the fact that he offered the Queen's Cup, won by the cutter yacht Arrow in his father's time from the schooner America in 1852, as a challenge cup open to American sloops. We believe no response has been made to that offer; but that the trophy is one which might well be coveted can be realized from the engraving we this week publish of it. Perhaps, if the Galatea wins the cup held by the New York Yacht Club, the challenge might be taken up, as the Americans are certain to make an attempt to regain possession of a prize they have held for the long period of thirty years. We cannot avoid admiring the chivalrous spirit which prompted Mr. Chamberlayne to make such an offer, but it may well be doubted if Arrow is capable of making anything like a stubborn defense should an American yacht of the Puritan type essay to win the trophy. However, Mr. Chamberlayne has hinted that in case of a challenge he will make an effort, by fitting alterations, to make the Arrow for possible success in such a contest. It is to be hoped that the cup. After all, she is more of the type likely to be successful against American yachts than a Galatea; but of course in her present condition comparison with Galatea or any of the other cracks is out of the question. So far as the prospects of Galatea go in undertaking the task in which Cambria, Livonia and Genesta have already failed, there is every reason to believe that the alterations which have been made in her ballasting and sparring have vastly improved her, and may succeed in making her a match for the large centerboarders which will be opposed to her in the cup races. That Galatea can be made a better boat on the wind than she was last year there is not much doubt, and, should she win the cup, the act will give a great lift to British yachting. Galatea makes the essay, it is understood, on her own merits, and not as the "champion British enter," although there is a chance for her to achieve that distinction, if she succeeds in defeating Irex before she leaves for New York. However this may be, we are certain that everyone interested in yacht racing will be proud of the prize. Lieut. Hunt has taken to render his cutter a fit representative of British yachts."

Should she be fortunate enough to be victorious, her success may possibly have some effect on American yacht design; for it is by no means certain, although they have accepted the cutter rig, that they have yet agreed on which is the best type of hull by the "compromise" which was so successful last year against the Genesta. We doubt not that this would be made very manifest, if, say, Puritan undertook to match the Genesta in the head sea. The Genesta's beam is 24 ft. 6 in., but a cutter of Genesta's length, but with about eighteen inches or two feet more beam, could be designed to beat the existing Genesta in any kind of sea; but the attempt is not likely to be made under the present Y. R. A. tonnage rule. On the other hand, that vessels like Genesta, Irex, or Galatea are fearfully handicapped when matched against others of the Puritan type, there cannot be the least doubt; but it is some consolation to note that, owing to the gradual adoption of the length and sail area rule of measurement by the clubs, a type of yacht may come into existence which will be on more equal terms with those of America. There seems to be every indication that international contests will in future be more frequent, and while there seems no necessity for altering our systems of rating, every thing should be done to encourage experiment and produce a type of yacht which is, at least, the equal for match sailing of the yachts of any other nation. We hardly think this will be done by making yachts exclusively for the B. G. class, as most of these classes are, and admirably as they have served a purpose for which they were intended.

It is certain, if the Americans continue to use the length and sail area rule, and if we confine all our races for the A class on this side of the Atlantic to a rating by the Y. R. A. tonnage rule, the Americans will be always a little ahead of us for match sailing in ordinary summer weather. We may still beat them in a heavy wind and sea to windward, and, in modern times, in the large centerboarders which have the only type which could do such a thing, there would be some reason for adhering to that type; but that is not actually the case. The comparative success of the Jullanar in 1877 and the following year no doubt opened our eyes as to what could be done under the Y. R. A. tonnage rule; but it was never proved that a yacht of one hundred feet load line and of greater beam than Jullanar could not be designed to beat her. In short, all her competitors with Florida, as she has been known, in the yacht of the same beam, but thirteen feet longer, would prove the best boat in any kind of weather; but for such a yacht to succeed in match sailing the Y. R. A. tonnage rule would require to be suspended, in order to have a classification by length, to render the comparison crucial between a hundred feet Jullanar and a hundred feet Florida.

We have many times asserted that the establishing of fixed tonnage classes had a very prejudicial effect on racing between yachts of different sizes, and under this we are inclined to give our classification by length, such as the Royal Victoria Yacht Club experimented with some thirty years ago, would have a beneficial effect on yacht racing. The classes might be ninety feet, seventy feet, fifty-five feet, forty-five feet, thirty-five feet, thirty feet, and twenty feet, or some other similar arrangement with sail tons rating; or, if preferred, a rating by Y. R. A. tons. There is no doubt that the absence of any restriction on length in the classes had the inevitable effect of bringing about the extinction of competition, and perhaps the greatest possible length for any given tonnage had been resorted to. The owners of old yachts, which by comparison were shorter than the last vessel built, "hoisted the broom," and men who were inclined to build, said "What's the use, when our turn to be outbuilt will surely come next year?" It is much to be deplored, no doubt, as at one time the racing in the forty tons and twenty tons classes was the strong feature at every regatta; and, as before said, we think it might have been preserved had there been a restriction for length in each class.

The fact that so many men now build steam yachts will to a very considerable extent alter in their altered—our yacht racing; but the love of match sailing is as strong as ever, and the sport was never more popular. It would have been considered rash if any one in America had prophesied in 1884 that two years hence American yachtsmen would build four large centerboard cutters with heavy lead keels. Steam is being rapidly introduced there, and yacht racing had been almost entirely confined to sloops mostly under 60 ft. loadline and yet men were come forward and build heavier one-masted vessels than were ever previously known in America. We all recollect the schooner Power which set in here after the appearance of America in 1851, and how for years the Julia and the Arrow figured as the "big cutters;" then, after about sixteen years, in rapid succession: Oimaya, Condor, Seabird, Rose of Devon, Kriemhilda, Cythera, Vol au Vent, Formosa, Samena, Vandana; and then the existing five quartette, made up of Irex, Genesta, Galatea and Marjorie; and if these should prove to be the last of their race, there is no reason why their place should not be occupied, in no distant date, by an equally famous set of vessels for match sailing."

It is hardly necessary to say that the reason why Mr. Chamberlayne's challenge has not been accepted is that Puritan may be

called on to defend the cup again, and outside of the four of her class we have no yachts to send. Even if our old sloop class, the 70-footers, had not almost disappeared, there would be none of them foolish enough to risk a transatlantic passage, and we must look to the "large cutters" with heavy lead keels" to cross for this cup in some future season.

In spite of the very low estimate of Galatea's power which is prevalent here, and the widespread belief that she will not cross, it is certain that she will be here in good time, barring accident; and will make a most formidable antagonist in her improved condition. It must be owned that with four boats built to beat her under a rule for which she was never designed, the chances are very much against her, but the main issue is not affected by the Y. R. A. or New York rules. What American, and indeed British yachtsmen wish to see finally settled is whether the modern British racer of six beams is as fast as a wider boat. In length of waterline, proportionate sail area, and weight and position of ballast, Mayflower and the Atlantic of one type, and Galatea of the other, are on as even a basis as can be had, and the result of a fair contest between them will no doubt be conclusive.

Gal Genesta won by ever so small a margin last year we should have had about by this time a fleet of extreme boats of all sizes, and should Galatea score a decisive victory this year it would set the tide the same way. As it was, we have a promising family of little Puritans now heading sail in various places, and a second victory for the class will secure its adoption here as the national type.

As foreshadowed in the above article, the Y. R. A. rule has not only reached its limit, but in the event of a second defeat it must be tossed overboard entirely and a rule similar to the New York will be the only one left. The club boats will do as known, very well, and that they have many admirable qualities generally admitted, but what an Irex or Genesta with only a little more beam will do is not known and never can be under the present rule, though the performance of some of the cracks of the last half dozen seasons gives good ground for a surmise. It is perfectly evident to-day that from 1880 to 1885 the America Cup was easily in reach of any first class cutter, but that might have come after it. With the immense superiority of the modern equipment of our fleet, all our fleet, an opportunity was offered to the British yachtsman which he will not soon see again, and which he carefully neglected.

Had Samena crossed in 1881 or 1882 when we were still firm in our belief in old fallacies, she might have swept the field, or had Marjorie followed Madec with the same canny Scot on her deck, she might have done more with Grace, Mischief and Fanny than Madge did with the small ones. Neither came, and with the adoption of longer and lighter rigs, and heavier keels, our fleet actually passed away. Galatea's chances are small to-day compared with what they once were, but she may even yet bring confusion to her opponents. The margin between Puritan and Genesta, though all on the side of the former, was not one on which to base an absolute certainty, and while the chances are that one of the present four will outdo Puritan's record of last year, there is just as good reason to believe that Galatea will excel Genesta. Should the American yacht win, it will be a great triumph, but of late the confidence we have in our boat, and under her present rule England has no chance of winning the Cup. Should Galatea win either by merit in ordinary weather or by drowning the centerboard in a sea-way, we have still a trump to play in the deep and moderately narrow cutter, either keel or board, say of 85 by 18 ft. a type which is barred abroad by the Y. R. A. rule. For many years a blind conservatism and a slavish devotion to ancient traditions on our part offered every opportunity to the modern British yacht, but of late the confidence we have in our boat, and under her present rule England has no chance of winning the Cup. The annual contest of the Royal Canoe Challenge Cup was viewed with additional interest as aspirants for international honors figured among the entries to the Mr. W. Powell's new Nautilus and Mr. E. B. Twedden's Pearl of 1885. There were three other competitors, but the affair was virtually a match between the two craft named, and a splendid struggle it was. Saturday was beautifully fine, but early in the afternoon the breezes on Hendon Lake were very gusty, puffs hard enough for a reef and the faintest of zephyrs alternating. At the outset of the race this breeze was so strong that the traveling volley capped the one which preceded it. The Pearl of 1883 under a new name, the Minnie, was the first to start, and she was a credit to the designer. At the close of the race the breeze was, however, true and steady, and the result was a thoroughly reliable test of merit of the two boats. The Nautilus won by 58 sec., and it may be said that she is the fastest craft on a wind that has yet been built. On the other hand, the Pearl is the better traveler with an easy sheet and also at dead running; yet this superiority may be due to her having wider wings than the Nautilus. As a matter of fact, the latter is a fast boat, from a design of her owner's, and it may be said that she is quite a new race. The Nautilus, on the other hand, after the body show the least hollow while the hull is in the water, and the sail spread less by comparison to the most successful racing canoes that have figured in past Challenge Cup contests. Judged by results, the alteration of shape has been a forward move, at least, so far as sailing over smooth water with a full whole sail breeze, and, although the Nautilus has not yet given a taste of her speed, it is a fair bet that she will do so. As a matter of fact, the only reason to doubt her ability to do so is the fact that, sailing in a breeze, a nice singing breeze should be just her hand writing. Mr. E. B. Powell sailed her to perfection, and, although Mr. Twedden is an able man in these toy craft, when it comes to a turn about rame and

close fiddling it is rose nobles to dimes on the "crew" of the Nautilus. It may be remarked that on the Saturday preceding the Nautilus beat the Pearl under very similar conditions of weather in an equally decisive way, and she may therefore be regarded as the crack of the Royal C. C."

BROOKLYN C. C. SECOND CHALLENGE CUP RACE.—On May 15 the second race for the Brooklyn C. C. challenge cup was sailed, Minx being the challenging boat. A new course has been permanently buoyed off Bay Ridge, where the club have now a permanent location in the Atlantic Y. C. Basin, the course being triangular, half a mile on each side. The wind was unsteady and squally from south-east, with rain toward the latter part. The entries were: Guenn, Wm. Whitlock, holder; Minx, M. V. Brokaw, challenger; Tip Top, R. J. Wilkin; Evangeline, C. V. R. Schuyler. A tug followed the race with the time-keeper. With a free wind Minx led at first turn. Hauled on the wind on the second leg Guenn pulled up, but soon carried away the jaw of her boom, and had to retire. At the second mark Minx led, with Evangeline second and Tip Top third, the latter withdrawing after the first round. Evangeline finally finished first, but not being sailed by her owner she could not take the cup, which goes to Minx. Juanita, Mr. Sinclair, sailed over with the races, but being outside the limits, 18x43, she could not compete for the cup.

THE A. C. A. TROPHY.—*Editor Forest and Stream:* I beg to acknowledge further contributions to the A. C. A. international challenge cup fund as follows: *Outing*, New York; A. C. Clerihew, J. F. L. Canon, F. M. Turner, Edward Pitt, Neil McLean, E. P. Comstock, C. H. Law, Brockville C. C.; Dr. A. G. Gerster, New York; John Henry Hull, Brooklyn; D. B. Platt, Rochester; C. V. A. Decker, Rondout; S. J. Loewenthal, New York; J. L. Kerr, Toronto; Henry K. Wicksteed, Port Arthur, Ont., each \$1.00; Henry Stanton, New York, \$5.00; total, \$30.00. Previously acknowledged, \$184.00. Total to date, \$204.00. Estimated cost of cup, \$350.00.—WILLIAM WHITLOCK, Chairman, 37 West Twenty-second street, New York.

CLUB MEASURERS—PRIZE FLAGS.—Oswego, N. Y., May 10.—*Editor Forest and Stream:* The Regatta Committee desire, through your paper, to call the attention of all canoe clubs to the fact that very few of them have sent in the names of their official measurers. As it is desirable to save time and trouble at our meet in August by having canoes measured beforehand, I have to request measurers who have blanks to send me the measurements of all A. C. A. canoes in their clubs. Those not having blanks will be furnished them upon application to me. I desire also to call the attention of all canoeists or those interested in canoeing to the fact that we have not had as liberal a response to our request for flags to be given as prizes as was expected.—J. B. McMURRICH, Chairman Reg. Com. 1886.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

W. H. C., Richmond, Va.—We have no picture of the dog mentioned.

S. M., Brooklyn.—There is much game and fish in the Puget Sound country. There are no hostile Indians there.

H. C. M.—Jacking deer in New York State is permitted in season. The Governor has signed the bill permitting hounding.

O. E. B., Fall River, Mass.—We do not know of any dealer in feathers for fly making. The tackle men, no doubt, get their supplies from various sources. Some are obtained from dealers in game.

H. J. B., Hamilton, Canada.—Can you inform me how salmon roe is kept preserved or made up for use as a bait for fishing? It is (or used to be) for sale in England, but I am not aware that it can be procured in this country. Ans. It is not on sale in America and is

not used that we know of. We think it is merely salted. Its use in England is looked upon as a species of poaching.

C. P. R.—I have a pair of puppies which I am determined to break myself this fall. What work would you recommend me to get from which to get advice and points? Ans. Hammond's "Training vs. Breaking" is the best book.

W. H. B., Gloversville, N. Y.—What is the best way to keep trout for two or three days while in the wood without ice? Ans. Clean them and wipe them dry and sprinkle them inside and out with either coffee, sugar, or pepper, or a mixture of all. Wrap each fish separately and keep in the coolest place.

READER, Pleasantville, Pa.—Please inform me when is the proper time to dock a setter's tail to avoid being whipped off in brush shooting? Ans. A setter's tail should never be docked unless absolutely necessary to save the animal from suffering. In such case it may be done at any time.

J. E. J., Waterbury, Conn.—You should visit some fishery where trout are raised and see the ponds. Go to Plymouth, Mass., to Plymouth, N. H., or to the New York State hatchery at Cold Spring Harbor, Long Island. In this way you can learn more than in any other. We can send you "Domesticated Trout," by L. Stone, for \$2, or "Practical Trout Culture," by Dr. Slack, for \$1.

M. M. C., Corning, N. Y.—What is the best-sized hook to have trout flies tied on, the flies to be used in streams of Northern Pennsylvania and Southern New York, for trout one-quarter to one pound weight? Ans. This is, within certain limits, a question of taste or judgment. Most anglers prefer a hook as large as a No. 4 sprat, and a few like them as small as a No. 12. A medium would be a No. 6 or a No. 8. We like to use small hooks, and if the water is clear enough to permit a small fly to be seen, they are most killing on many streams. A general rule is large flies for Maine and small ones for New York; but many Adirondack fishermen use large flies, and believe them to be the most killing.

T. S. VAN DYKE.

PRICE, POSTPAID, \$2.00.

FOREST AND STREAM PUBLISHING CO.,

39 Park Row, New York.

The St. Lawrence Gang.

This cut shows No. 1-0 (or Black Bass size) with living Minnow attached.
MANUFACTURED IN ALL SIZES FROM No. 5-0 TO No. 4, SUITABLE FOR

Muskallonge, Pickerel, Black Bass, Lake Trout, Etc., Etc.

All have patent treble hook with baiting needle, adjustable lip hook and treble swivel, and best silk metal wound gimp. This is the most ingenious invention and radical improvement in trolling tackle yet made. Its manifest superiority to all gangs now in use is evident to every expert angler. A few of its peculiar excellences are:—It is the only gang on which a bait can live. It is the only gang which can be adjusted to any sized minnow instantly and perfectly. It is not only the simplest but also the strongest gang made. It does not scare away the big and wary fish by a long array of treble hooks. The treble swivel insures perfect revolution of bait and reduces to the lowest possible point the liability of kinking the line. If your dealer does not keep our goods in stock, or will not order them for you, send 50 cents for our 128-page folio illustrated catalogue.

ABBEE & IMBRIE, Manufacturers of Every Description of Fine Fishing Tackle,
18 Vesey Street (Fourth door from the Astor House), New York.

JAS. F. MARSTERS, 55 COURT STREET, BROOKLYN. Fine Fishing Tackle.

We have everything in Fishing Tackle for the successful capture of Salmon and Trout in Canadian waters. American anglers can obtain their complete outfit from us far below New York prices. Spliced Salmon and Trout Rods a specialty. Salmon and Trout Rods made to order and repaired. W. W. Greener's Guns, Eley Bros. Ammunition, Curtis and Harvey's Diamond Grain Powder, Clay Pigeons, Blackbirds, Glass Balls, Traps and all kinds of sporting goods. Send stamp for 42-page illustrated catalogue.
T. W. BOYD & SON, 1641 Notre Dame st., Montreal, Canada.

FISHING RODS

Brother angler, do you want to know where to purchase a fine hand-made fishing rod, with numerous improvements not found in any other rod manufactured, and at a lower price than a machine rod can be purchased? Send for price list containing hints in selecting a rod.

EDWARD SMITH,
Pittsford, Rutland Co., Vt.

"Murcia" Silk Worm Gut.

FISHING AND SURGICAL USE.

In lots to suit, all grades and lengths, "Extra Heavy" to "Extra Fine." Assorted thousands, ten different grades, including "Extra Long," put up for country trade and clubs. Prices, \$5 to \$15 per 1,000. Assorted thousands, \$7.50. Address LATASA & CO., P. O. Box 2,708, Washington Building, N. Y.

WHITE BLACKING. WHAT IS IT? It is the best Harness and Carriage Top Dressing made and also the cheapest and easiest to use, when applied according to directions. It cleans, oils, softens and preserves harness, bringing out its original color as when new, in one operation. S. STONE, Sole Ag't. S. O. BRIGHAM, Manager, 27 Park Place, N. Y.

The Open Shot Regulator.

Good for 10 or 40 yds.

WINANS & WOODEN,
97 West Kinney st., Newark, N. J.

Send bore of gun for sample.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With Numerous Plates and Illustrations.

C. P. KUNHARDT.
Cloth, 370 pages of type and illustrations, and 70 plates. Size of page, 14 1/2 x 12 1/2. Price \$7.00.

FOR SALE BY THE
FOREST AND STREAM PUBLISHING CO.,
39 Park Row, New York.

Dickerman Pat. Hammerless Single-Barrel Shotgun.

DESIGNED ESPECIALLY FOR
TRAP SHOOTING.

12-GAUGE NOW READY.

Weight 6 1/2 to 7 lbs.

Warranted to throw 300
No. 8 shot in 30-inch circle
at 33 yards.

All Modern Improvements.

Automatic Safety Pistol Grip, Double Bolt, Rubber Butt Plate, Full Choke, Blued Frame, with Twist, Laminated or Damascus Barrels.

The Top Snap is utilized as the lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the guard, locking the latter firmly into the bent of the hammer. The Safety Button is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the **Finest Single Gun Made.** INTERCHANGEABLE RIFLE BARRELS of ALL CALIBERS furnished for these guns if desired. SEND FOR CIRCULAR.

Manufactured by **THE STRONG FIRE ARMS CO., New Haven, Conn., U. S. A.**

STRAIGHT CUT CIGARETTES.

People of refined taste who desire exceptionally fine cigarettes should use only our Straight Cut, put up in satin packets and boxes of 10s, 20s, 50s and 100s.

14 First Prize Medals.

Fixed Ammunition for Shotguns.

TATHAM & BROS., Eastern Agents,

82 Beekman Street, New York City.

PERFECTION AT LAST.

THE BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a perfect Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

Prices in Sheep Skin.

108 Madison St., Chicago, Ill.

The Spalding Hammered Bait.

Size No. 8; Nos. 7 and 8, 65 cts. each; Nos. 9 and 10, 75 cts. each. Gold Plate, 50 cts. extra.
 Made in Ten Sizes. Prices in silver plate: Nos. 1, 2, 3, 4, 5 and 6, 50 cts. each; Nos. 7 and 8, 65 cts. each; Nos. 9 and 10, 75 cts. each. Gold Plate, 50 cts. extra.
 MESSRS. A. G. SPALDING & BROS., CHICAGO, ILL.: "Hammered" Spoon Bait at Gogebic Lake, where, from the excitement—agreeably at your request—the trout spoon becomes almost a sine qua non at such times when the bass refuse to take the fly. The "Hammered" Bait is a happy idea, for it is hardly possible to devise a more attractive lure, as all who have used it can affirm. It is well and carefully made, has good, strong hooks, and well deserves the great popularity it has so soon acquired.
 J. A. HENSHALL.

ADAM WATTERS,

Wholesale and Retail

Tea Dealer, Wine & Spirit Merchant.

No. 22 Fabrique Street,

QUEBEC.

Fishing and Hunting Parties furnished with everything necessary for the woods on the shortest notice.

GOLD MEDAL, PARIS, 1878.

BAKER'S Breakfast Cocoa.

Warranted absolutely pure Cocoa, from which the excess of Oil has been removed. It has three times the strength of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, costing less than one cent a cup. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labelled thus: JAMES EPPS & CO., Homoeopathic Chemists, London, England.

HANNAFORD Ventilated RUBBER BOOTS.

The only boots made that WILL NOT sweat or chill the feet. WILL KEEP the feet dry and warm. These boots have been in use for two seasons, and given entire satisfaction. Hundreds testify that they can be worn with comfort.

Will be sent C.O.D. Ask your dealer for them, or send for circular.

HANNAFORD VENTILATED BOOT CO.

79 Milk Street, Boston.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price \$1.00.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

The Kennel

FOR SALE, A NUMBER OF WELL BRED AND well broken pointers and setters, also dog boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept 22, '11

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, MAY 27, 1886.

VOL. XXVI.—No. 18.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications,

ANSWERS TO CORRESPONDENTS.

THE CURSE OF POLITICS.

THE land is cursed with politicians as the frogs covered Egypt. The malignant plague poisons all branches of the public service, from the polluted fountainhead of legislation down through the entire system of the law's execution. It is a shame and a disgrace that in any part of this country a branch of legislation apparently so disconnected with politics as that providing for the due protection of the wild game in the woods and the fishes in the waters should be hampered and botched by political schemers, traders and tricksters. This is the condition of affairs in more than one State, but nowhere is the system more rotten than in New York. The Legislature which has just adjourned, whereupon the people breathe more freely, gave striking evidence of how the public welfare is deliberately ignored, in order that bargains and deals may succeed.

Take, for example, the course of Assemblymen Erwin and Tuck, of St. Lawrence county, with respect to the deer hounding bill. These two politicians understood perfectly well what their constituents wished and expected of them in the matter. The people of St. Lawrence were overwhelmingly in support of the anti-hounding law, not for their own county alone, but for the entire Adirondack region. Yet because of the exigency of political shifts, Erwin and Tuck, while openly advocating the retention of the general anti-hounding law, were secretly against it, and used their active influence to secure its repeal. They reasoned that it was better that all the deer should perish than that their man should fail of his berth in the United States Senate. A pretty pass it is when the deer in the forests are at the mercy both of the clubs of bloodthirsty physicians and the entangling wires of truckling politicians.

If the laws are determined by political deals, no less is the execution of them hindered by like influences. The New York system of game protectors is only another series of spokes in the machine wheel. We understand that the only consideration entertained by the Governor of a candidate's fitness for a game protectorship, in the appointments of 1886, will be of a political nature. The heeler who has "the pull" will get the appointment. The entire machinery of game protection is to be prostituted to advance a politician's individual wifings after place.

There is some consolation for the failure of the bill to

provide for the appointment by the Governor of a superintendent of game protectors. The value of that office would have depended altogether upon the character of the man appointed to fill it. So far as may be inferred from the nature of other appointments, there is every reason to believe that Gov. Hill would have regarded the new office only as a rivet to securely fasten the game protector wheel of the machine; and instead of having a person fitted by his natural tastes and interest in game to acceptably discharge the duties of the place, we should have been saddled with another political tool, not to enforce the game protective laws, but as a heeler to boss his subordinate heelers.

When political dickerings rule the hour, it is folly to expect other than clumsy and pernicious legislation with respect to game and fish, or to hope for satisfactory execution of the laws.

THE VEST PARK BILL.

THE Senate Committee on Territories has reported, substantially without change, the Park bill recommended by Senator Manderson and commented on in these columns a few weeks ago. To-day we print the full text of this bill, so that our readers may see just what it proposes. Its main points were summarized in our issue of May 6, and we need say little more upon the subject here except to urge upon Congress prompt and favorable action upon the measure. The bill is in many respects a good one, and, needless to say, is a great improvement on the present absence of any law whatever. The most important feature of the new law is the increase in the size of the reservation, and after that come perhaps the provisions which relate to the Superintendent and the Park police and their powers in the matter of making arrests. The absurdity of appointing police without giving them the power to arrest, without warrant, persons taken in the act of violating the law or the regulations, has always been obvious, and has rendered vain the best intentions of the assistant superintendents.

The bill also settles the question of the jurisdiction over the Park, a matter about which there never should have been any dispute, but which has been in doubt ever since the reservation was set aside in 1872. The subject was recently brought prominently before the public by the action of the Territory of Wyoming in claiming this jurisdiction. There should be no more question about this matter than there is with regard to any United States fort.

It may be said of this bill that while it leaves much to be desired, it is, so far as it goes, a measure deserving hearty approval. The benefits which it will confer on the reservation and so on the whole people are positive and unquestioned. Its faults are minor ones and such as can be overcome by careful and honest officials, working in accordance with the spirit rather than the letter of the law. Thus, while it is by no means perfect, it is an earnest of far better government for the Park, and as such it is to be hoped that it may receive the approval of Congress and become a law.

CORRECTION.—Through an error in the transmission of our despatches from the West last week a statement was made in these columns which was inexact. We spoke of the sale of the property of the National Park Improvement Company at Evanston, Wyoming. As a matter of fact the sale covered the great hotel at the Mammoth Hot Springs. The Improvement Company, therefore, still own a considerable amount of property within the Park, consisting of hotels at different points with leases for ten years from 1893 for the grounds on which they stand, or should stand, large quantities of supplies and tent properties, and as it is believed, franchises.

LINGERING SUPERSTITIONS.

THE sun of the nineteenth century is thought to shine with more effulgence than older suns, and more brightly upon certain favored portions of the North American continent than elsewhere on all the revolving globe; but its most direct rays have not chased out the superstition which lingers in spite of the materialistic spirit of the times. Odd phases of belief, survivals of old-time notions, crop out here and there, and one need not go far from home to find them.

The yachting men are preparing for the coming renewal of international contention for the championship of the Atlantic. Four boats are in course of fitting out for the trial races, the Puritan, the Priscilla, the Mayflower and the Atlantic. The customary method of determining the relative fitness of each would be by practical test in trial races; but along comes a genius who writes to the *World* that the Atlantic is already out of the race, for her name bodes no good,

Craft named after any one of the oceans, says this wise-acre, are bound to be ill-starred; witness the fate of the Collins line of steamships, all having borne ocean names. Other superstitious wights are earnest in the declaration that the Mayflower is also foredoomed to disaster, for at the launch she stuck in the mud, and that no boat that does this can ever be successful is one of the tenets of the knowing men of the sea. The brain of the average sea goer is as full of curious superstitions as ever a topsail of wind; and though the landman affects to ridicule sailors' superstitions, he is prone to indulge in his own dreams of the uncanny and gruesome. His stock of common sense is just about large enough to suffice for the ordinary familiar happenings of every-day life; but let him suddenly encounter some extraordinary manifestation of nature or some extraordinary action of a harmless bird, and he immediately puts away his philosophy and falls back on superstition.

In the neighborhood of Athens, N. Y., a short time ago, several persons driving on a lonely road encountered a ruffed grouse, which in the simplicity of its heart attempted to make friends with them. They naturally whipped up their horses and fled in superstitious fear from what they were pleased to term a "spook" grouse. A dozen men put to flight by a bird! And yet the author of "The One-Eyed Grouse of Maple Run," after pursuing that feathered spectre, confesses "A strange, unearthly feeling of awe crept over me, my hair commenced to rise, my knees knocked together, and I felt that I was indeed in the presence of something supernatural."

The daily papers are constantly chronicling the obedience of men and women to the superstitious maxims of old saws; as the other day a Newark man, bitten by a dog thought to be mad, took pains to secure some of the brute's hair and apply it to the wound, for "the hair of the dog is good for the bite." The boycotted Widow Gray in New York city entertained a stray black cat, being firmly convinced that the feline brought luck; and for luck, too, did not a Georgia political enthusiast send to Cleveland a potent rabbit's foot?

DYNAMITE FISHING.

THE practice of fishing with dynamite cartridges appears to be on the increase. It is confined to no special locality, but is naturally most prevalent in mining sections, where the use of dynamite is familiar. Western Pennsylvania is especially cursed with dynamite fishermen, and there are sections in Nevada and California where no one pretends to catch fish in any other manner. The use of dynamite for this purpose is generally forbidden by the statutes, but such laws are in effect dead letters unless the sentiment of the community supports them.

It is very difficult to detect and punish the dynamiters, since their neighbors are content to eat the fish without asking any foolish questions about the legal or illegal mode of capture. A dynamiting excursion is not an affair altogether void of excitement. The usual method is to sink the cartridge in the water and then, from a safe distance, explode it by means of an electric wire. There is an ever attendant possibility that the cartridge may go off while in the boat or in the hands of the fisherman, in which event he is with more or less celerity blown to kingdom come.

The press dispatches yesterday reported the deaths of two men in Western Pennsylvania who were last Sunday dismembered by the premature explosion of a cartridge.

The effect of dynamite fishing is particularly baneful because it destroys not only the large fish fit for food, but all fish, large and small. It cleans out all the fish, annihilates the stock, and utterly destroys the fruitfulness of the water.

NATURAL HISTORY ON THE FISH HOOK.—In default of luck, the contemplative angler may find solace, profit and pleasure in study of the animated lure on his hook. How wonderfully wrought is the wriggling worm is told in entertaining fashion by a contributor in another column.

THE MAINE SALMON ANGLING is attracting great attention in New England. The people of the neighborhood who are reaping some of the profits are naturally much elated over the great run of fish. Such an occurrence is worth a whole volume of argument in favor of fishculture.

THE HOLYOKE SHAD FISHING.—Mr. Thos. Chalmers, of Holyoke, Mass., advises us that the fly-fishing for shad is over. The net has been put in place, and the angler must look elsewhere for his shad.

The Sportsman Tourist.

DAYS WITH THE BARMECIDE CLUB.

II.

WHOEVER first selected this site for a camping ground knew whereof he selected. Whoever built this shanty, comfortable to the last degree, was an expert with the axe, for every stick is cut and placed where it will do the most good and every sheet of bark overlaps its rear neighbor as shingles on a house, and you can confidently rely on its power to shed water where it will not annoy you. It may have architectural deformities, but it would surely please the eye of an artist or angler.

Just a few rods back of the shanty is a leaky spring, hidden among moss-covered boulders, which drops, drops, drops its never-failing supply, cold and pure, into the crystal pool below, which in its turn adds its mite to the lake, where one can take a delicious header without being obliged to incur the limbs with a blouse and a pair of overalls.

To the east and among the trees rise beetling cliffs, from out of whose seams and niches grasses and flowers are peeping, determined to secure a high average of sunlight and air to stand them in lieu of their limited allowance of moisture and fertility. At the foot of these cliffs and among the huge masses of stone which had fallen were small caves, which, gathering much of the summer rain, retained it until the frosts of winter gave a supply of ice ample for our present wants. From the shanty to the lake the trees and underbrush had been cleared out, giving an unobstructed view across the great water mirror to the undulating line of hills beyond, and though the place is not invested with any historic or legendary associations, yet to searchers for quiet, to the angler for his sport, it fills every requirement.

Early morning found us scattered over the lake, Roy near the outlet, Glen under the shadow of the mountain opposite camp, and Storm off Fritz Island. But some potent power was against us; the wind or the clouds or the whiffs his-name. Probably the former. It seemed a sympathetic sort of a wind. It came quiet and lamb-like, as though it had no desire to interrupt the angling proceedings, which it could easily have done by simply losing all holds, but it nevertheless gave us fair warning after its fashion that we might better vacate for the morning. It did not wish to harm nor annoy us, but on the other hand there was a limit to its amiability, which we had better not transcend; and we soon realized the fact that we might as well angle for sturgeon in a smelling bottle.

Through the influence of the east wind, no doubt, there was an unanimity regarding taking hold, which was very decidedly adverse to our interests; and Glen and Storm returned to camp pretty much in the predicament of old Mother Hubbard; and though the certainty of failure was prosaic enough, still, like the beggar of the Barmecide, we take our medicine smilingly as though all the fishes' favors had been strewn with royal prodigality; and await dinner for Roy's return. The coffee was hissing at the spuds, the bacon and biscuits warming up beside the stewing fruit and waiting for Roy, who came back empty-handed.

"Boys, this is not one of my days, how have you fellows found it?"

"Not enough to address a letter to. Trout are practically scarcer than hen's teeth."

"I haven't had a rise this morning, and speaking about hen's teeth reminds me of what a young lady cousin once remarked to an aunt of mine. My aunt was speaking of a certain dentist in town, and said she would not have him pull a tooth for one of her old hens. 'Why, Aunt Laura,' says my cousin, 'I didn't know that hens had teeth.'"

"That reminds me of Captain Scott's coon story, which I was once telling to a young friend fresh from college. Of course you are familiar with the well-known story, but when I had finished telling it my young collegian innocently remarked, 'Well, I never knew before that coons could talk.'"

"What does that remind you of, Storm?"

"I think I complain as little as any person in the world, and

"Come deaf or come blind or come cripple,
Or come any one o' them a'."

I don't believe I would murmur; but this morning's sport—and I call it sport understand—reminds me of the beautiful lines of Tennyson:

"And the handsome trout dart down
To their shelter beneath some rock,
But oh, for the sight of a trout on the feed,
And the sound of a trout on the flop."

Or, as Rabelais would say, 'J'ai le suila teausau de viessu etait.'"

From certain standpoints of view this was an inauspicious opening. The fisherman would have inclined to grumbling, while the angler accepts the situation as a matter of course. To him every day of outing is replete with attractions of some kind, and though his creel be empty, perhaps some hidden secret of woods or waters has been revealed to him, or he has gained in strength of body or mental invigoration, or else gathered a certain kind of experience which, if never of practical value, may furnish a pleasant retrospection. We play billiards, whist and chess when we are in the mood, but we angle at every legal opportunity. There is no day in the season save the Sabbath that is too unpropitious. "Dinner, dinner," says the cook, so down we sat,

And to our viands fell not seemingly,
But with the keen dispatch of real hunger;

and guide found that his carefully prepared dinner was fully appreciated, for we made a clean sweep. Dinner looked as though it had been trying to pass a locomotive on the same track. We came back with good appetites and spent the afternoon in making some improvements in camp.

We built an outdoor cooking range, or perhaps it might more properly be called an underground cooking range, and we found it by far the best and most convenient ever introduced, at least for pleasant weather cooking. It can be made in less than ten minutes on an average. It is simply a hole in the ground about seven or eight inches deep, one foot wide and three feet long. The fire is built in this hole, and in a few minutes you can have a fine bed of coals, which can be replenished as needed from your camp fire or by the addition of any small chips which are handy. The dishes while cooking are supported by iron bars long enough to reach across the range, say fourteen or fifteen inches. About four of these bars are sufficient for all one wishes to cook at one time, as they will support half a dozen different dishes

and add no material weight to the kit, and on a pinch might perhaps be dispensed with. This range requires but little wood and then only the smallest chips, as there is no waste of fire and every degree of heat can be utilized.

Dishes are not required to be continually watched, as there is no more danger of their tipping over than there would be on a Charter Oak stove, and no matter how hard the wind may be blowing there are no wild unmanageable flames to contend with, as they are confined, and besides as you have no side logs to burn away and perhaps dump a mess of trout or a pot of coffee into the fire, you will have one care less.

Toward evening Roy tried the outlet of the lake, and returned with trout enough for our supper and breakfast. Meanwhile Storm superintended the bean business, following the directions in "Woodcraft." Was it a success? Oh those beans. Yes, as four hungry men can testify. Boston can't beat it, Mr. "Nessmuk."

One Monday morning a country girl wrote a letter to her sweetheart something like this:

MONDAY MORNING, 6 o'clock.
Dear George—Ma has just called me, and I am wondering if you love me as much as you did at twelve o'clock last night, when we kissed each other good-night at the gate. Oh, if I only knew for certain that you did, George, dear, you don't know how it would encourage me to go down and tackle them cold beans for breakfast. Yours, AMANDA.

You can accept it as an assured fact that Amanda's maid didn't know how to handle the bean question as Mr. "Nessmuk" does, else her daughter would not have required the stimulus of George's love to assist her in tackling her breakfast.

As the gray of twilight slowly turned darker and darker and night came tripping on with noiseless feet, the fireflies commenced their brilliant dance, striking their lucifers at every step, as if they feared to lose the time and tune. The moon with its stronger light was paling the stars and silvering the edge of the ripples, which chase each other with monotonous murmurings. The mountain across the lake looms up vague and indistinct in the moonlight, and the great pines on its summit silhouetted against the sky assumed fantastic forms. The birch logs on our fire sizzled and snapped and the dashing flames cast long lines of restless radiance far out on the water. The shrill cadence of the crickets, the humorous concert of the owls, the friendly croaking of the sociable frogs, the distant gushing sound of the falls all tell us it is good to be here, for this makes old hearts young again and young hearts rejoice. MILLARD.

CHEYENNE, WYOMING.

THE MUSKOKA COUNTRY.

FIRST PAPER.

THE maxim has become fully established that no one should go near the water till he has learned how to swim. Following the same course of reasoning, no one should ever fish in waters that are strange to him, or if he does he loses a deal of pleasure. The greatest delight in hearing a fine opera is that which grows out of having heard it before, and the highest enjoyment in a fishing trip comes from retracing the course of last year (and haply the year before), living over the former contests and successes, reviving scores of pleasant reminiscences, whose impalpable shapes have haunted the air and waited for your coming. A favorite fishing ground revisited is like a last year's suit, already adjusted to your figure; like a friend who lends you money when your credit in bank has gone; and when you can nurse that mild but comfortable feeling of superiority that comes from you introducing some fellow fisherman to your chosen resort, your cup of bliss is indeed full. And with all these conditions favorable we began last August to arrange for our annual "farewell" trip to the Muskoka country.

Detroit, as usual, was our port of final departure. There is quite a convenience in making a double start on a fishing expedition. After you have pulled yourself together and cut loose from the five hundred "last things" that require attention, it is a great comfort to stop just beyond the clutches of the butcher and baker and the man with a little bill, and take a full breath and an account of your kit. For no matter how carefully you may have replenished your stock, in the hurry of departure there is always something overlooked or omitted. This time it was only a few yards of heavy braided sash cord (for maskallonge stringers) and a spool of No. 22 copper wire. The uses of the latter are numerous, the most important being to make leaders for maskallonge fishing. And he who has added to it two spools of button-hole silk, a bit of shoemaker's wax, a fine half-round file and a small pair of pliers, laughs at calamity.

Our route this time lay over the Great Western division of the Grand Trunk Railway from Detroit to Toronto, via Hamilton, and as it gave us a daylight ride over some of the finest country in the Province of Ontario, we were not sorry for having chosen it. Not the least attractive feature of the landscape is the constant succession of rapid streams which come tumbling across the track at frequent intervals. The descent from Lake Huron to the level of Lake Erie is quite marked, and as the road crosses the water shed at an approximate right angle, the effect on the view is very pleasing. All the towns along the route have a conservative, yet prosperous look, and the long-settled farms of Lower Ontario will compare favorably with the best agricultural portions of the States.

Arriving at Toronto in the evening, we found that the great annual Agricultural and Mechanical Exposition was trembling on the verge of culmination, and that the farmers and country storekeepers and officials, with their wives, daughters and sweethearts (not forgetting the volunteer companies of Her Majesty's horse), had come in and overflowed the town. And we, who had heretofore regarded Toronto as having been built especially for our benefit, wandered disconsolately from hostelry to hostelry till at the fifth (in grade as well as number) we sank to rest upon a melancholy bed, and in the morning were summoned to a breakfast whose meagerness would delight even the frugal soul of "Nessmuk."

But when we safely landed on the morning train of the Northern & Northwestern Railway for Muskoka wharf, all these things were as though they had never been. For when we are fairly under way on the N. & N., with its baggage checks in our pockets and the conductor's "trip slip" in our hats, then and not till then are we saturated with the conviction that we are fairly and finally "en route," and that everybody on the line from this onward is a sympathizing well-wisher, who is not only willing we should have a good time but will help us if he can.

Why is it that tourists, hunters and fishermen in traveling gravitate together? Possibly aside from the subtle and mys-

in Canada is that you can pick out a man from "the States" half way across a "concession," as the Canucks have it. Suffice it to say, we had not been in the car fifteen minutes till we drifted against a man who had just been to Maskallonge Lake the week before, and who, with his partner and guide, had killed a black bear. The story of the conflict was graphically told, and with various side excursions into kindred topics, served to while away the morning hour very pleasantly. At Rosseau the next day we met the "partner" and were favored with his version of the death of bruin, and a few days later with a modified and reconstructed version as detailed by the guide. We did not obtain the story of the bear for obvious reasons. But I venture to remark that if these three stories could be printed in parallel columns they would afford entertaining and by no means monotonous reading. It developed, however, that while one gentleman was armed with a .47-caliber 65-280 rifle that threw an indefinite number of balls at an incredible velocity (and low trajectory) the weapon got out of order at the critical moment and the fatal missile came from a shotgun. Isn't there danger that our repeating rifles maybe made too effective?

All along Muskoka and Rosseau lakes as the little steamer plunged her way northward that afternoon, we found the summer boarders at Beaumaris, Port Carling, Windemere and other points packing up their effects and preparing for their homeward journeys. JAY BEBE.

TOLEDO, O., April 27.

DEATH OF BURR H. POLK.

ONCE more has been had before to say something of the more than formal relation existing between the FOREST AND STREAM and many of its correspondents. Here and there, in every State of the Union, are men whom the editors have never personally met, yet have learned to esteem with a regard like that which comes of long friendship; and when, now and again, in place of the familiar hand, comes a letter written by another, announcing the death of such a one, the message is received as would be that of the loss of a familiar friend. With such regret have we learned of the death of Col. Burr H. Polk, at his home in Lincoln, Nebraska, May 15. Mr. Polk's name is familiar to the readers of this journal as the author of a number of brightly written sketches of sport and adventure in Mississippi, and in more recent years the West. These papers were characteristic chiefly by reason of the all pervading and abounding good humor and philosophy which triumphed over every disadvantage and drawback, and found pleasure where others might have sulked in the doldrums. The following appreciative estimate of Col. Polk's character is extracted from a Lincoln paper:

"For several years Col. Polk has been an honored citizen of Lincoln, and the unexpected intelligence of his death will bring pain to all who knew him. He was a modest and unobtrusive man and few persons knew him intimately. But those uniformly regarded him with a feeling of affection like that of close kinship. He was a man of ability. As a business man he combined enterprise and conservatism in a happy and successful manner. He had accumulated a handsome competence and had laid his plans for a life of healthful leisure. His word was always as good as his bond. Social and kind-hearted, without a particle of malice or envy or hardness in his composition, liberal to the core in word and deed, there are few such men, and the loss of one is severely felt."

"Col. Polk was born at Taylorsville, Ky., January 15, 1835. He obtained a liberal education and had embarked upon the practice of law at Princeton, Ky., when he married Miss Eliza A. Montgomery, at Petersburg, Ind., March 2, 1853. He continued to make Princeton his home. In September, 1861, he entered the army as captain in the Thirty-third Indiana regiment, serving with the regiment through all the arduous campaigns in which it took part until April 23, 1864, when he was promoted to be adjutant general with the rank of major. In all capacities he was distinguished for coolness and courage, and was twice brevetted for gallantry on the field, the last commission being that of colonel and bearing date of March 13, 1865."

"At the conclusion of hostilities Col. Polk was offered a first lieutenantcy in the regular army, but he preferred—although he had developed a strong personal military feeling—to take up a life that would be more agreeable to his family. In 1868 he removed to Vicksburg, Miss., and engaged in business of various kinds, cotton factoring, contracting and other extensive operations. In these a brother shared and the ventures were quite successful. He also served a term as mayor of Vicksburg by appointment from the governor of the State."

"Having acquired what he deemed an ample fortune for his liberal but not extravagant taste, Col. Polk resolved some six years ago to abandon active business and lead a retired life, devoted to his family and friends and such pursuits as were adapted to simple enjoyments. He came to Lincoln shortly afterward and bought a charming residence on L street in the most desirable portion of the city. He was soon surrounded by a congenial circle of friends. But the seeds of disease had been sown in his system, and as long as two years ago he discovered that his heart was affected. All was done that could be, but nothing availed. He sank steadily into further weakness, and when he reached home a few days ago from spending the winter in the South, he was compelled to take his bed. The end came speedily, and yesterday morning at 9 o'clock he died. He was in full possession of his faculties to the very last and met his end with undisturbed composure."

"Col. Polk's estimable wife and three children survive him. It is hardly possible to state the personal character of Col. Polk without the appearance of fulsome eulogy. He was honest, brave, true, modest, genial, able and whole-souled. All these in a practical, unromantic way that the casual eye might not see, but none the less actually. There are men who might be more widely missed, but none whose departure would cause a deeper heartache."

Mr. T. G. Dabney, of Memphis, Tenn., writes: "Col. Polk was a sportsman in the truest sense, a thorough gentleman, always mindful of the courtesies due between sportsmen, and a whole-souled companion in the field. Col. Polk's career as a sportsman presented the unusual spectacle of a man who had never handled a gun until after he was forty years old, and who then took it up, and by persistent and systematic effort characteristic of the man, soon became a very expert wing shot and skillful sportsman. He was a fluent and very interesting writer, the author of a book entitled, 'The Great American Caravan,' detailing the experience of a party of American tourists in Europe; and also of many interesting communications to FOREST AND STREAM, over the signature B. H. P. Col. Polk died of heart disease, from which trouble he had suffered for some months past, and which caused him, with much regret, to lay aside his gun during that time and content himself with reading of the exploits of others in the columns of his favorite journal, FOREST AND STREAM. His untimely death will be severely felt by a large circle of warm friends, and the fraternity of

Natural History.

EARTHWORMS.

THIS is the somewhat technical name for the same animals with which every one becomes acquainted in boyhood under the names of "fishworms" and "angleworms." I suppose they are called earthworms from the peculiar way in which they burrow their holes, namely, by swallowing the earth and passing it through their bodies. There is a popular notion, too, that these animals feed upon earth; this of course in its literal sense is quite erroneous; still it is true that they swallow earth, in which is decaying organic matter, for the food it contains, discharging it again from their bodies when the nutritious matter has been extracted. Everybody has noticed the coiled castings lying near their holes after a rain. I have never seen any explanation of the fact, but I suppose they come to the surface in time of a heavy rain, when their holes have become filled with water, to escape being drowned. The soil having become very wet, their burrows cave in, and the worms have to find their way to the surface by digging a new hole. Having arrived at the top they discharge from their bodies the earth they have swallowed on their way. It is often to be noticed, too, when the ground has been thoroughly wet, that large numbers of them lie on the surface in a stupid, inactive condition, or sometimes quite dead. I think the explanation of this is that the ground is so saturated with water that they are unable to live in it, and being exposed to the air and rain at the surface they are rendered partially insensible or, under sufficiently severe exposure, quite dead.

Probably earthworms come to the surface regularly at night time. I have often seen a brood of ducks go out in the early evening to feed upon them. I am inclined to think that toads make a diet of them too at this time. At any rate their near relations, the frogs, eat them with apparent relish. Another animal said to make them a considerable part of its diet is the mole; this creature uses his sharp-pointed nose to some purpose here, for he burrows into their holes and devours the worms in their own retreat. He is credited with thus serving a useful purpose in stirring up the soil.

The earthworms themselves live chiefly, if not entirely, upon vegetable food. Their object in coming to the surface at night is to obtain food. They are said to cautiously extend a part of their body out of the holes, move it about in search of a leaf or twig and, having found one, draw it after them into their burrows. In this way they lay up a store of food, eating it when it has undergone partial decomposition.

In structure, the earthworm, as any one can see from an examination, is made up of a large number of rings placed behind one another. Of these rings, in a large specimen there are not less than one hundred and fifty. The constrictions where the rings unite are continued inward to form septa, so that the body of the worm is made up of a series of chambers corresponding in number to the rings. The chambers, of course, communicate with one another internally. The most anterior ring is an incomplete one, being only a half ring and forming the upper lip. All the others are complete. The mouth, situated under the upper lip in the second ring, opens into a pretty capacious chamber, called the buccal pouch. This pouch is reversible; by turning it inside out, the animal can not only empty it of objectionable matter it may have swallowed, but perhaps use it also as a sucking organ. By passing the fingers forward along the anterior part of the body, a worm may be made to evert its pouch. This organ opens posteriorly into a tube which runs straight through the body, terminating in the last ring. This tube, of course, is the digestive or alimentary canal. It expands in the anterior region of the body, into an organ corresponding to the stomach of the higher animals, and it also has opening into it the duct of a large organ which performs the office of a liver. The alimentary canal can readily be seen through the skin of a worm, appearing as a dark line.

The back or dorsal surface of an earthworm can always be readily distinguished from its ventral surface by the difference in color between the two; the dorsal surface being brownish red, the ventral a paler hue. Every one must have noticed, too, that the body of an earthworm shows iridescence or play of colors. This is due to the peculiar microscopical structure of a thin cuticle which covers over the entire body of the animal like a sheath. If a worm be placed in alcohol and left a few hours, this cuticle can be peeled off. A piece of it placed under the microscope will then show the cause of the play of colors. It will be seen to be marked by rows of fine lines, which in fact are minute parallel ridges. The rays of light falling upon these ridges and being reflected from them are broken up into their component colors and thus the iridescence produced. A proof of this is that when the worm is stretched the play of colors is interfered with, the explanation being that the stretching causes the ridges to be flattened out. The cuticle, which forms the sheath, consists of a material closely resembling horn in its physical properties. Its office is undoubtedly the protection of the soft muscular parts.

In a good sized specimen one can usually readily see in the dorsal surface, lying above the digestive tube, a narrow red thread. By careful watching this thread may be seen to rhythmically enlarge and contract. It is, in fact, a blood-vessel and it is by its alternate expansions and contractions that the blood is circulated through the body. The worm has no heart or at least no more than what is represented by this blood-vessel. Besides this dorsal vessel there are others connected with it and supplying all parts of the body. Not to go too much into detail I will only say that besides the blood in these vessels there is another white fluid in the general cavity of the body sometimes spoken of as blood. Curiously enough this latter fluid is always the home of one or more species of microscopic animal parasites. There are few animals, indeed, that are not the unwilling hosts of some degraded creatures that maintain life only by preying on that of another.

If an earthworm be gently drawn through the fingers from the head to the tail the ventral surface will be found to offer a slight resistance. This is due to the presence of short stiff bristles, called setae, which serve as organs of locomotion. In a large specimen they can readily be seen. They are arranged in four double rows running parallel along nearly the whole length of the body. The outer double rows are just below the line where the brownish-red back surface fades into the paler ventral surface; the inner rows are one on each side of the middle line of the body. Except the first three or four

rings of the head and the last one of the tail, each is provided with four pairs of these bristles, so that in a full grown worm of 150 rings there are between eleven and twelve hundred walking organs. Each bristle has muscle attached to it, by the contraction of which it is made to move forward and backward, and thus the progression of the worm effected. However, the animal is not entirely dependent upon these organs for locomotion. On level surfaces progression is effected chiefly by serpentine movements produced by the contractions of strong lateral muscles. It is when the worm climbs inclined and perpendicular surfaces that the bristles come into play. That they are able to climb at such angles is shown by the fact that they are often found in situations which they could only have reached by ascending steeply inclined surfaces. Of course, I am here leaving entirely out of account their ability to climb perpendicularly in their holes.

There is a popular notion that earthworms possess a remarkable power of resisting mutilation; that a worm may be cut into pieces and each piece will grow into a new worm. It is quite true that this animal is able to suffer the removal of the posterior part of its body without any apparent permanent injury, but it is equally certain that if the anterior portion be cut off both parts perish. In the anterior third of the body are situated all the principal vital organs, the stomach, liver, "brain" and reproductive organs. It is certainly not to be supposed that a part of the body deprived of these organs could maintain life. Probably any portion of the body posterior to these organs can be removed without destroying the life of the anterior part.

I have just referred to the "brain" of the earthworm. It is at least true that this humble animal possesses an organ which is fairly comparable to the one which is highest and chiefest in the more advanced members of the animal kingdom. It consists of two small oval-shaped masses of nerve matter situated in about the fourth or fifth ring above the alimentary canal. Each one gives off a nerve cord which, encircling the alimentary tube, unite below in a ganglion from which nerve cords are again given off to supply all parts of the body. From the fact of its possession of a fairly well developed nervous system it may safely be reasoned that it gives the creature some pain when the sharp-pointed hook is passed through its body.

The organs of respiration in the earthworm are very curious. In each segment or ring is a pair of organs which, for want of a better name, are simply called segmental organs. They consist of greatly twisted tubes, one end of each of

which opens interiorly in the general body cavity, and the other communicates with the external world through a pore in the skin and cuticle. The microscope shows that these tubes are lined with vibrating cilia and it is believed that by their action currents of air and possibly water are made to pass in and out of the body. In this way they are thought to serve an office similar to that of the lungs in the higher animals.

Earthworms have no organs of vision, yet it is quite certain they are susceptible to light impressions. A simple experiment proves this. If some worms be placed in a pot of earth and taken into a dark room, after a time they would come to the surface. If a bright light be then brought near them they will speedily hide in the earth. It is thought that the head region alone is susceptible to these impressions. It is probable that from the two main nerve-masses, nerves are given off to this part of the body which, in an imperfect way, perform the office of the optic nerves in the higher animals. As to the sense of hearing, these animals appear to be perfectly deaf. They seem to take no notice of the loudest noises made in their vicinity. It is true that if one stamps on the ground near them they hastily retreat, but they are undoubtedly made aware of the jar through the sense of touch rather than that of hearing. Their dullness in seeing and hearing is partially made good by their extreme susceptibility to touch. They are very sensitive to contact in every part of their bodies.

An interesting fact about these worms is that while each animal is bi-sexual, producing both the male and female reproductive elements, it is still necessary for fecundation that two worms shall come together. A German naturalist, Von Hensen, who has made these animals a subject of long study, says that pairing takes place in the night time in the months of July and August. The worms cling to each other by means of the thick saddle-shaped portion of skin situated about a third of the way back from the anterior end of the body. The young earthworm at birth is like an old one except that it is much smaller and consists of fewer rings. It grows not only by the rings increasing in size, but also by the addition of new ones. I do not remember to have seen any statement as to their length of life.

There are quite a number of species of earthworms, the most noticeable differences being those of size and color. There is one European species which attains a length of a

foot and a half and is as large around as a man's little finger. As far as I know, earthworms are found in all temperate and tropical regions.

At the approach of winter they go deep into their holes and, passing into a dormant condition, remain until they feel the warmth of the spring sun. According to the observer whom I have quoted above, their holes are sometimes six feet deep. The deepest part is set with small stones, about as large as a pin's head, which are placed there by the worm itself, and when such stones cannot be found small seeds are used. "The delicate rootlets of plants also often run through the whole length of the holes, forming beautiful webs along the walls."

It was thought by Darwin that these worms perform a very important work in maintaining the fertility of the soil. He calculates that "in many parts of England a weight of more than ten tons of dry earth annually passes through their bodies and is brought to the surface on each acre of land." When it is remembered that the growth of plants is dependent upon the supply of nitrogen contained in the surface soil, and that when this element has been used up the soil can regain it only by lying idle for a while, it is seen how important an office these worms serve in bringing to the surface the rich subsoil and allowing the exhausted surface soil to regain fertility. Besides this, it is probable that all soils, even dry, sandy ones, are enriched by being passed through their bodies. Then there is the fact that, by their constant burrowing, the soil is rendered loose and porous, so that air and water can get at the roots of plants. Darwin said, "It may be doubted whether there are many other animals which have played so important a part in the history of the world as have these lowly-organized creatures."

JAMES STOLLER.

THE AUDUBON SOCIETY.

THE following account of the Smith College Audubon Society was written by one of the lady professors of the College for the *Rutland Herald*. It is in itself interesting and is of value also as giving excellent suggestions for the work of local Audubon everywhere:

"About two months ago a few of the students of Smith College felt that the time had come for some definite expression of the interest that had long been felt in the cause of our native birds and for some organized effort for their protection. The history of the various conferences, committees and meetings that resulted is not necessary; it is enough to say that the students decided to form a Smith College branch of the AUDUBON SOCIETY.

"Enthusiasm for so righteous a cause could not but be forthcoming and in abundance, but zeal should be according to knowledge, which was conspicuously lacking. With the best wills in the world, it soon became clear to the directors of the society that only the merest beginning had been accomplished, when two-thirds of the students had given up wearing birds on their bonnets, that the practical and theoretical bearings of the subject are by no means easy to get, for unless one is near an ornithologist or a good collection, it is very difficult to find out much about birds.

"In view of these facts a careful subdivision of work was clearly necessary to success. At the regular meetings of the society, to be held once a month, the information of the members will be constantly increased by lectures from men who have given time and skill to the study of everything connected with birds—from their habits to the ethics of their treatment by man—by papers setting forth the results of investigation or collation on the part of members themselves, by the reports of the field work done among the members. These regular meetings are thus to serve a double purpose, in spurring the members on to new efforts and in recording what has been accomplished.

"A committee has been formed, to serve for one year, having in charge the careful oversight of these meetings and the making up of their programmes. They also appoint other committees to take charge of the field work which is organized, in general, as follows: Three parties are to set out from the college on different days of the week, due notice of the hour and destination being posted in some designated part of the building. Each party is to be under the guidance of a person sufficiently experienced in field work to be of practical assistance to the beginners who may join the expedition. The work will consist of observation of birds, efforts to learn their habits, song and distinguishing marks, of the practical study of botany and meteorology, and in short of that careful, discriminating tracing of nature's workings that makes vital the dead words of text-book information.

"The leaders of these parties will at first be obliged to instruct somewhat larger audiences than are convenient, but it is believed that as the information is diffused, the parties can break up into smaller groups, helping out their knowledge by the use of keys and text books and gaining much more freedom as regards time and strength. The leaders of the parties will also teach the members efficient ways of recording their observation and will see that the work is put into proper shape for report to the society.

"The main committee will have charge of whatever work may seem practicable in the way of interesting the public in any of the aspects of their subject. The circulars of the AUDUBON SOCIETY, of the American Ornithologists' Union, the numbers of *FOREST AND STREAM*, are fast enlightening people's minds; but there remains a wide field for local societies in interesting the children of public and private schools, in teaching them to hunt birds 'without a gun,' in making them increasingly intelligent and merciful. The committee hopes to be greatly aided in its efforts by the occasional presence of specialists who will accompany the parties and direct their observation. With all these aids the work will go on slowly at first, but it is believed that the patience and industry will yield even richer returns here than in their work."

SMITH COLLEGE, Northampton, Mass., May 18.

ONE FOOL COMMENDS ANOTHER.—The Lake Charles (La.) *Echo* says: "Mr. R. A. Sibley, of Edgerly, is shipping about 2,500 bird skins per month to Newark, N. J. This is an industry which has lately been inaugurated in these parts, and promises to be of some importance. Mr. Sibley ships the skins of the jay, lark, snipe, crane hawk, owl, black and other birds. The prices range from 5 to 12½ cents each. Our readers are aware that of late years bird feathers are being used much more than formerly for trimming purposes, hence the increased demand. As these birds are very destructive to the rice crops in injuring the stands, it is not such wanton waste as it would be were they killed alone for their plumes."

DEATH OF THE "SPOOK" GROUSE.—Toledo, O., May 3.—*Editor Forest and Stream:* With much regret I am compelled to announce the death of the famous "spook grouse" of Athens, Greco county, New York. Mr. Brady, its owner, kindly consented to loan me the bird, which he sent by express on the 27th ult., and he arrived in Toledo the evening of the day following. The bird appeared sleepy and stupid on arrival, but the following morning was placed in an outdoor coop, where he still appeared to feel dull and sluggish. The next morning, Friday, on going out to the coop I found him (I think it was a male) lying on his back dead, having been in my hands alive barely twenty-four hours. The body was returned to Mr. Brady with the request that he would send to you for examination. While I deeply regret that the bird died on my hands, he did not seem in good health when received, and his head had a wound on top not fully healed, indicating some previous confinement. He weighed at death but fifteen ounces, and was so thin that the skin had worn off the point of the breast bone. I am very anxious to ascertain, if possible, the cause of the bird's death. I cannot think it possible he died through anything occurring in the short time I had him.—JAY BEBE.

CENTRAL LAKE, Mich.—House wrens appeared on the 15th of May.—KEELIE.

INVEIGLING A GOBBLER.

Editor Forest and Stream:

I wrote you a short time ago of my intended wild gobbler hunt. Well, I went; and before me as I write lies a trophy of which any hunter might be proud—a heavy nine-inch beard and a tuft of feathers whose matchless sheen of bronze and black and green and gold and blue and flame, would make the proudest bronze gobbler in America ashamed of himself. I have killed wild turkeys in different parts of the South and West, but have never seen any whose plumage would at all compare with that of several old gobblers it was my good fortune to kill in the valley of the Tennessee River in north Alabama. Two in particular, killed near the same place, but at intervals of several years, had plumage of indescribable brilliancy and beauty. They perhaps belonged to the same family. I will send you a specimen of the feathers plucked from different parts of the body of my last victim, that you may form some idea of the wonderful richness of his plumage. From boyhood a wild gobbler hunt in the early spring time has been to me the very highest type of sporting pleasure.

Often when a boy, more than thirty years ago, down on the banks of the Tombigbee, have I rolled out of a comfortable bed an hour before daylight and hied me away in the depths of the deep tangled forests, the favorite haunts of my game, to there await the coming dawn. All nature is still, but the air is perfumed with the odor of the bursting leaves and flowers, and it is a pleasure to commune with nature in such an hour. But I mean business, and with ears strained to catch every sound, I watch the stars grow paler, indicative of the approaching daylight. Presently the redbird whistles his matin note and I know the dawn has come. How eagerly I listen now, for I know full well that if an old gobbler is within a mile of me it is time he were beginning to make his morning salutations to the rising sun. I love music, but I had rather hear the thrilling notes of an old wild gobbler, as from the top of some giant oak, deep down in the forest, he heralds the dawn of day with his exultant gobble, than to listen to the best orchestra in America. Ah, how they make the blood leap in the veins of a hunter. He knows the nature of his game, and he also knows right well that in order to bring him to bag, the best skill of which he is possessed must be brought into play.

Wild gobbler hunting is a science, and to be successfully followed requires skill, patience and experience. They are perhaps the wariest of all the American game birds, quick of sight and hearing, forever suspicious of danger, and always on the alert; it is an accident if you stumble on one, and an inexperienced hunter is wasting time in attempting his capture with the "arts deceptive," especially if he tries his winning ways" on one that has once been fooled and shot at. The very difficulty of his capture makes him the worthier prize, and the wariness of the game stimulates the ambition of the sportsman. There is one thing that adds greatly to the enjoyment of gobbler hunting in the early spring. They are comparatively local in their habits, and their gobbling in the mornings, before leaving their roosts, can be heard at long distances. Their whereabouts can thus be readily ascertained, and the hunter is not left in doubt as to the presence of his game, and when once located it becomes purely a question of skill as to whether he succeeds or not.

Old gobblers are inclined to be solitary in their habits, generally roosting alone, but in the neighborhood of the hens. The main point of advantage is secured by getting near their roosting tree before they leave the roost, which they rarely do until after sunrise. It is a dangerous operation to attempt to approach one on the roost after daylight. His quick eyes and ears will almost invariably detect your approach, and when he does he does not stand on the order of his going, nor waste any time in arranging his toilette before he puts a half mile of forest between you and himself. The skillful hunter will select a place about two hundred yards distant, and after his nerves are quiet, will give a gentle yelp or two with his call just loud enough for his gobbliness to hear. He will let you know he hears you, for in a moment he will answer with a lustier gobble, and if your ears are good you will hear the roaring bur-r-r-r of his wings as he struts upon the limb. Look out now, for unless he has been hunted and fooled before, you will hear him launch his ponderous body from the limb and he will strike the ground very near your hiding place. If you are too near his tree he will most probably fly past you, and unless you are a quick wing shot or you are well concealed your chances are gone. I have lost several splendid old fellows in this way. If he is roosting with hens, or if he gets with hens before he answers your call, your chances to entice him away are slim. The hens seem jealous of his attentions, and nine times in ten will lead him off in another direction.

But the hardest customer to deal with is an old gobbler

who has been fooled a time or two and shot at. To his dying day he will bank largely on discretion. To him gallantry henceforth becomes a secondary consideration. He will answer your call, but will march off in an opposite direction, gobbling as he goes, as much as to say to the supposed hen, if you would like to see me you can follow me. Or, as sometimes happens, he will quit gobbling and will make a circuit around you, and before you know it he has taken a view of you from the rear, and his put, put, put as he rapidly disappears notifies you that you have been outwitted.

The old gobbler that I brought to bag a few days ago was one whose education had not been neglected by local sportsmen, and I think I gave him a lesson myself once before that he had not forgotten. Myself and a friend had started out before daylight. The morning was calm and bright and balmy and beautiful. Everything was propitious. Standing in the deep, still forest when the first gray streaks of the morning light were struggling in the east with reluctant shadows of night, with ears intent, I caught the welcome sound of a gobble near a mile away. Off we started as fast as the circumstances would permit. But we were impeded by the tangled brush and by branches and sloughs of water, and our progress was slow. Every now and then I hear the notes of the old bird in the distance, and on we press. Plain and plainer come the sounds, and directly we are near enough to be cautious. The daylight is full upon us. My friend goes to the right and I to the left. We are going to take double chances on him. As I approach my place I hear him fly to the ground, some hundred and fifty yards away. The woods are very thick with vines and brush and logs, and one can see but a short distance. In a few minutes I venture a yelp or two on the call and the old fellow answers me with a lusty gobble, and I distinctly hear the strut of his wings. In a few minutes I yelp again. Another gobble answers, but further away, and I know now I have a wary old bird to deal with. I move up a little and bear further to the left, as he seems to be moving that way. Again I sound the elusive call of his mate. Ah! how he gobbles and struts in response. An old gobbler is like a man, in that he has a high regard for modesty and doesn't like an over-anxious sweetheart. So I deal cautiously and sparingly with my call. The old fellow is independent, however, and struts and gobbles as if to intimate that he had a whole harem of hens with him, and if the little lone hen out there in the bushes wanted any fun, she had better come up and join the majority. The little lone hen knew it would not do to attempt an approach, however, and discreetly kept in the background. She was a very modest hen. The old fellow got out of patience because she would not come to him, and started off, gobbling as he went, as much as to say, you can follow if you like. By a flank movement I managed to intercept his course, and creeping up behind an old fallen tree, whose upturned roots shielded me from his sight, I managed to get within a hundred yards of him as he passed. He was gobbling every few steps, so that the hen in the bushes might have no earthly excuse for being left. He was walking very deliberately, every few yards stopping to gobble and strut. I could just get a glimpse of him through the thick undergrowth as he moved along. Taking my call and giving a low yelp, and a few confidential clucks, indicating that the hen in the bushes was about as independent as he was, the old fellow became intensely excited. He got out of the notion of leaving altogether, and gobbled as if he would choke himself. But still he would not come. He then made a circuit around me, gobbling every few minutes. I could plainly hear the roar of his wings as he strutted, but the bushes were so thick I could not see him. Finally he stopped about seventy-five yards from me, as near as I could judge, and for ten or twenty minutes gobbled almost incessantly. That was the most unaccountably independent little hen turkey out there he had ever encountered. A careless little yelp, and a confidential cluck or two was all he could get for all his gobbling and strutting. Curiosity now began to get the better of his discretion and he advanced a few steps, but covered his position, like an old soldier, behind a large stump. He was within sixty yards of me, but for ten minutes he stood behind that stump and gobbled one time after another. He was very anxious now to see his sweetheart, but she was provokingly indifferent. At last he could stand it no longer. He would risk seeing her at all hazards, and with feathers drawn close to his body, and with sly and cautious tread, he advanced a few paces to the right of the stump and stepping up on a little mound began prying through the bushes in quest of the little hen that had manifested such indifference to his lordly attention. I was ready for him. My finger was on the trigger of my Colt's hammerless, and in a moment more the proud old bird fell backward from the little mound too dead to flutter. It had taken two hours of the best work I could do to bring him to bay; but when I stood over him and admired his grand proportions and the matchless beauty of his plumage I felt proud of my triumph and well repaid for my trouble. H. E. JONES.

NASRVILLE, Tenn.

WILDFOWL OF WESTERN STATES.

Editor Forest and Stream:

My article in your issue of Oct. 1, 1885 on wildfowl in domestication, having brought me inquiries from the East in regard to the identity and local and technical names of some of the species therein mentioned, I will submit to your readers a short description, from the hunter's standpoint, of each variety known to the West. In this I shall endeavor to confine myself to my own experience or that of my friends and those hunters whom I am personally acquainted with. As sportsman, hunter and amateur naturalist I have paid particular attention to the waterfowl of this section for many years, and while my field has been limited to the Illinois River and adjacent lakes and tributaries, yet those are as good hunting grounds as can be found in the West, and it is safe to say that any species of duck not met with there is not likely to be found within the Mississippi valley.

The impression seems to prevail among some sportsmen, and especially those in the Eastern States, that most varieties of ducks common along the seaboard are not found in the West, or at most but rarely. While this is true of the scoters, etc., it does not by any means apply to the majority of the more edible species; hence the division by some writers into the two classes, inland and seacoast, or fresh and salt water birds, is manifestly incorrect, as the two classes are found here in about equal abundance at the proper seasons. From a hunter's standpoint, I like Long's classification into deep and shoal water ducks better. The deep-water birds dive for food, while the shoal-water class feed on the surface, or where they can reach the bottom with their necks, which are consequently, as a rule, longer than those of the deep-water tribe.

Then the market shooters and game dealers have another

system of division by which canvasbacks, redheads, mallards and black mallards are known as "large ducks," but each quoted by its proper name; teal constitute a class by themselves, and all other kinds pass as "small ducks" although larger than, and many species nearly as palatable as teal, and bring the lowest price of any. There is a tolerably regular way of fixing prices in Chicago market, which runs about as follows: Canvasbacks are the highest priced (usually \$4.50 to \$6 per dozen), redheads next at one-half this price, plus twenty-five cents; mallards just half, then teal about fifty to seventy-five cents less than mallards, with "small ducks" ranging from one dollar to one dollar and seventy-five cents, but sometimes as low as sixty cents per dozen! It makes no difference what species the "small ducks" consist of, they may be fishy spoonbills or delicious widgeons, or heavy gray ducks, or a mixture of all kinds, yet their names are never given, nor would the average purchaser know any more about them if they were.

For the recognized common names, as well as the scientific nomenclature in the following list, I am indebted to the "Bulletin of the U. S. National Museum," published under direction of the Smithsonian Institution (No. 21, 1881). I presume no one will hesitate to acknowledge Mr. Ridgway and Prof. Baird as good authorities. After the technical names I give the various local and popular appellations, so far as known to me. For synonyms, description of plumage, etc., except what seems absolutely necessary, I must refer your readers to the standard works on ornithology. Within the limits of an article like this only the slightest notice of each species is practicable.

WHOOPIER CRANE (*Grus americana*).—This beautiful, large, snowy white bird with black wing-tips I think no longer visits sections this side the Mississippi River. Indeed it is not and never was very plenty anywhere. It has been a number of years since I heard of one being killed in this State. In common with the next species it is a grain-eating bird and not to be confounded with the white herons, which are here universally known as "white cranes." Its flesh is consequently excellent eating, but the species is virtually extinct so far as this section is concerned, and to kill one would be considered phenomenal. Specimens have been taken weighing as much as thirty pounds.

SANDHILL CRANE (*Grus canadensis*), occasionally called brown crane. Like the preceding, this bird has evidently taken a more western path in its migrations, although it has not altogether deserted the Illinois River route. Nearly every spring a few pass over this part of the country, but they rarely stop, even in the bottoms, and it is but seldom one is killed of late years. They always were more plenty than the whoopers, and I have heard old pioneers say that when they first came to the State, the prairies would sometimes be alive with them at the proper seasons. In the fall they sometimes did great damage to fields of corn which had been left standing for winter gathering. Now they do not seem to come in the fall at all, or if they do I fail to see or hear them, and I have heard their peculiar cry in the spring when the birds themselves were so high up as to be almost invisible. The sandhill weighs perhaps fifteen pounds or thereabouts and its flesh is preferred by some to that of the wild goose. Both the cranes roost about the water but do not feed there, preferring the fields.

TRUMPETER SWAN (*Olor buccinator*).—This king of waterfowl, though by no means common, yet occasionally visits the ponds, lakes and overflowed prairies along the Illinois, especially in the spring, and some seasons is really plenty considering the bird. A friend of mine of much practical experience as a market shooter of wildfowl, told me that only last spring there were more swans on the Sangamon bottom (a tributary of the Illinois) than he had seen for years, so they are not decreasing in numbers. Very few are killed, however, as they are hard to get a shot at and the hunters prefer to give their attention to the more certain and profitable business of duck shooting. This same hunter, while down South on a shooting trip a few winters ago, found a place in the "sunk lands of Arkansas" or New Madrid Swamps where swans were plenty (for them) and the opportunities for shots good, and his party killed quite a number without special effort. And none of your whistling swans (*Olor americanus*) such as you have on the Atlantic coast, not much bigger than an overgrown goose, but magnificent trumpeters, some of which he thinks would weigh near fifty pounds. It is a matter of record by some one (Audubon?) of a trumpeter that weighed thirty-eight pounds.

BLUE-WINGED GOOSE (*Chen caerulescens*).—Also known as the white-headed or blue goose, and by Western hunters called the bald brant. Some seasons these birds are remarkably plenty with us, sometimes alighting on the overflowed prairies and cornfields where the stalks are well broken down, again passing over without stopping. Yet comparatively few are killed, as duck shooting offers so much better prospects of success, and geese of all kinds are so low in price that the market-hunters seldom bother them unless they come in the way, and they are too wary for the novices to do much with. The species can be readily recognized by those who are unacquainted with it by its white head and upper part of neck, the amount of which varies, however, and does not seem dependent on either age or sex. The rest of the plumage is somewhat the color of a blue heron on the sides, deepening into a darker bluish brown on the back and breast. The scapulars and tertials are deep brown (nearly black) along the center, shading off into cream color at the edges, giving that part of the body a beautiful striped appearance. The young until of more than a year of age (just how old not known, as these birds do not breed in domestication) do not have the white neck and head, and the body is rather a paler blue in color, thus giving rise to the impression among the hunters that they are a different variety.

SNOW GOOSE (*Chen hyperboreus*).—Pure white, with black wing tips and known to our hunters as the white brant. This goose belongs to the same genus as the last described, and very much resembles it in form, habits, etc., and in all save color a description of one applies to the other. In fact, for a long time the blue goose was considered, even by naturalists, as only the immature young of the snow goose. Both kinds are more noisy than other species of geese, and generally travel in larger flocks and not so regular order, and mix indiscriminately in the same flock, whether feeding or traveling. One peculiarity they have in common is worthy of mention, viz., the formation of the bill. The mandibles appear as if they were separated along the edges (which are black in color), thus exposing the "teeth," and making it appear as though the bird was grinning. The young of the snow goose until of proper age is a sort of grizzly gray or grayish white in color, hence many hunters think this is still another species.

AMERICAN WHITE-FRONTED GOOSE (*Anser albifrons gambeli*).—This is the standard and universally known brant of

the West, the one which is always meant when no qualifying adjective is used, although occasionally it is called speckle-belly on account of the black patchy feathers on the breast. This bird, although frequently very plenty with us, I understand is rarely met with in the Eastern States. No one will have the least difficulty in identifying it, however, should they kill one, as they are very much like a tame goose in color, except the black on the breast. This ranges all the way from a few scattering feathers to nearly a solid black surface. There is also a narrow band of white feathers around the base of the bill, whence the name. There are more of these brant killed than both the other kinds put together, as they are more certain to stop with us than the others, and their habits are much more regular and free from eccentricity in this respect, resembling the

CANADA GOOSE (*Bernicla canadensis*), which is too well-known to require much notice. It is sufficient to state that these birds still visit us, though in no such numbers as in former years. They are not often hunted regularly, but only killed when chance opportunity offers while watching for ducks. This is the only species called "wild goose" by local hunters, all other varieties being known as brant here in the West, where the true brant is unknown. Some years ago my hunter friend of whom I have spoken, while shooting on Sangamon bottom, made a stand on a passway where geese were flying low to get protection by the timber from a driving blizzard, and succeeded in killing thirty-six in one day with a single barrel muzzle-loader, but then circumstances singularly favored him. Now one could not go out and count on getting a single goose with certainty, though when everything is favorable some hunters occasionally make reasonable bags yet.

HUTCHINS'S GOOSE (*Bernicla canadensis hutchinsi*).—Is not plenty, but some are killed. These birds are marked exactly like the regular wild goose (Canada), of which they are merely a race or variety, and not a distinct species, differing only in size, which is about that of the blue, snow and white-fronted species, all of which will average about six and a half pounds in weight, while the Canada ranges from less than ten up to fifteen or more, the average being about twelve. Hutchins's goose is included by hunters with all the other small species under the general appellation of "brant," being further distinguished by the eponym of "goose brant." My knowledge of this variety is limited, but I am half way inclined to believe that they are not even a distinct race of *canadensis*, as they gradually intergrade in size with the latter, and the dividing line can no more be drawn than it can be determined just when a pig becomes large enough to be called a hog.

Of the two other varieties, the white-cheeked goose (*B. canadensis leucoparia*) and the larger white-checked goose (*B. c. occidentalis*) I know nothing, and think it would take an expert to separate them from simple *canadensis* or *hutchinsi*. There is no more puzzling question presented to naturalists than this, in regard to the common wild goose. They are not able to say whether several species have become inextricably mixed by hybridization, or whether they are simply extreme variations of one and the same species. The latter view is the one generally accepted, and consequently they are approximately divided into the four races or varieties which I have named. There is some difference in the marking between *canadensis* and *hutchinsi* on the one hand and *leucoparia* and *occidentalis* on the other which I cannot take space now to notice, but they all intergrade, and the largest specimen in the Smithsonian Institution is as big as a half grown swan, while the smallest will stand underneath it and is no larger than a baldpate duck, yet with an unbroken series between, connecting the two. So much for the geese. In my next I will pay my respects to the ducks.

JUNES P. LEACH.

RUSHVILLE, Illinois.

DEVICES AGAINST MOSQUITOES.

Editor Forest and Stream:

Your London correspondent, "J. J. M.," in the last number of your paper recommends a muslin tent for protection against mosquitoes in an outing, and gives a method of making it.

This is unnecessary, particularly for this country. The outer who goes for a prolonged stay by lake or stream side or in the woods without an ordinary mosquito bar, as it is made in the United States, is a new and green hand, or fears the additional three pounds' weight in carries more than he values his peace and quietness at night. The ordinary bar with folding top, with ring for suspension, can be used inside or outside of an ordinary tent. I have found it necessary for solid comfort to see that it was well tucked in at the head and sides of the blankets, and that it be kept well away from the head and face. Uncivilized mosquitoes have long bills, and they insert them through the interstices of the bar if it is near blood. Since my first season's camping out on Lake Superior, many years ago, I have never been without a bar suspended from the tent pole. That season I realized the insecurity of a bar across the tent door, for it was not always practicable entirely to close all the openings at the bottom of the tent on rough or rocky ground. Since then I have never lost a night's sleep from mosquitoes.

The bar is no protection, however, from sandflies or "no-see-ems" and the black fly. But good judgment as to camping ground will in a measure be a security against the former, and the latter ceases its ravages at sunset. But to read or sketch with or without a bar where the black fly is numerous, without smoking in the daytime is impossible. I have found some preparations of "dope" the only resource, frequently in reading, fishing or on carries. Certainly without some of them there can be no such thing as loafing.

If there are such things as degrees in mosquitoes I reached the superlative once at Montreal Island, Lake Superior. We reached there one night in the twilight. Outside the bar the world was full of ravid ones. While they did not put the fire out, in spite of a dozen smudges, the guides could not cook supper, and we put up with coffee and hardtack. But inside the bar we were comfortable. We left at half past one the next morning, taking breakfast at Point of Mines. H.

MAY 22, 1886.

THE FIELD SPORTS CLUB of Havana, Cuba, is a new organization, established for the promotion of outdoor recreation and the protection and introduction of game. Protective laws have been secured, and being something new naturally provoke opposition from the classes accustomed to shoot in season and out of season. The Field Sports Club, however, proposes to see that the laws are respected, and some progress in this direction has already been made. It is the purpose of the club to introduce some new game to the island. They are now seeking communication with parties who can supply American game (other than quail) for restocking.

ARKANSAS GAME GROUNDS.—Clarendon, Ark., May 18.—There are very many squirrels here. We have no game law here except for ruffed grouse, quail, deer and turkey. The law on them was like locking the door after the horse was stolen; it came far too late. Many beautiful songsters are slaughtered by indolent negroes and other thoughtless persons just for "fun." Many sweet mocking birds are ruthlessly slaughtered just to see 'em "fall." The law protects buzzards, but not the sweetest of bird songsters. Quail are plentiful here. Very few deer and turkey. Bear tracks are plentiful on the "dump," an embankment thrown up a mile in length in the river bottom between here and Grand Prairie. But nobody hunts them here at this time of the year, as they are poor as a snake. Mr. Alf. Daniels, a hunter here, killed seven bears six miles from town up in Cache River bottom. (Cache and White River meet here). Mr. Bob Bobo, who lives opposite here in Mississippi, killed forty black bears last winter. His post-office address is Sunflower Landing, Bolivar county, Miss. Mr. Daniels kills all his bear with two .44 Colts revolvers. He wants no other bear gun, as it would be unhandy getting through the thick, heavy cane brakes. Mr. Bobo does his hunting with .44 repeating rifle. This is a sportsman's paradise from New Port, 150 miles above here, clear on down to New Orleans, La., especially so in the winter time, when ducks, geese and swan are plentiful from Indian Bay, forty miles below here, clear on to the mouth of White River, 150 miles. There is no human habitation except of rattlers, trappers and hunters. You can see there must be some good shooting. Of course, the prairie is thinly settled, but it is five to eight miles from White River.—CAVALIER.

TARGETS VS. GAME.—A somewhat noted rifle shot here, who has a number of badges and medals as proofs of his prowess at the targets, related an exploit, which he seems to enjoy telling as much as his hearers delight in his narration of it. Like Alexander, he was not content with owning the world of targets, his soul was possessed with a yearning to distinguish himself on game. Fired with this ambition, he shouldered his trusty repeater—fired with this ambition, he shouldered his trusty repeater—fired with this ambition, he shouldered his trusty repeater—and started for haunts where the deer family are known to abound. He had not proceeded far down an old corduroy road, ere a lordly buck stepped forth from the leafy wood on to the road, where he stood complacently eying his would-be slayer, with feelings in which curiosity was evidently predominant. The gallant hunter raised his deadly rifle, pressed the fatal trigger once, twice, thrice; in fact, kept on pressing it till his magazine was empty of some dozen shots. The "antlered monarch," no doubt wondering what all the racket was about, having satisfied his curiosity, quietly walked across the road into the forest and was seen no more. The dazed and breathless hunter stood glued to the spot, with wild eyes fixed on the place where the deer had been but was not, for some seconds, when his wits returned, and shouldering his rifle took the direct road home, where he recovered sufficiently by the next day to relate his experience; and it will be some time before the boys forget how "X." shot his first and last deer, for he declares that paper game is good enough for him, and hereafter he will attempt no harm to the wild wanderers of the woods.—C. J. T. (Detroit).

ABOLISH ALL SPRING SHOOTING.—*Editor Forest and Stream:* I have just received a letter from E. A. Jackson, a long Island gunner, concerning the new spring snipe law. He says: "The spring law is just the thing. It works well. Hundreds of snipe are seen daily. Yelpers are counted by fifties and hundreds, also robins and plovers are as gentle as chickens. I hope that the law will extend from here to Maine." Let us hope so, too.—J. W. JR.

COLEBROOK, N. H.—The ruffed grouse are more abundant than I have ever seen them in spring here. I cannot learn of the crust-hunters doing any harm on the headwaters of the Connecticut River this spring, unless words count after a hard day's snow-shoe tramping after deer that could distance them easily. Nature beats law.—NED NORTON.

THE NORWAY CUSTOM.—Out in Norway, Menominee county, Mich., when local bruin exploiters go for bear meat the sawmill steam whistles are set to blowing, and all the town turns out to make a din until the lost hunters, guided by the sound, find their way back again.

THE YELLOWSTONE PARK BILL.

A BILL

To amend sections twenty-four hundred and seventy-four and twenty-five hundred and seventy-five of the Revised Statutes of the United States, setting apart a certain tract of land lying near the headwaters of the Yellowstone River as a public park.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the boundaries of the Yellowstone National Park, as now fixed by section twenty-four hundred and seventy-four of the Revised Statutes, shall hereafter be as follows: Beginning at a point on the forty-fifth parallel of north latitude where said parallel is intersected by the western boundary of the Territory of Wyoming; thence due east to its point of intersection with the meridian of one hundred and ten degrees west longitude; thence due south five miles; thence due east to the meridian of one hundred and nine degrees and thirty minutes west longitude; thence due south along said meridian to the forty-fourth parallel of north latitude; thence due west along said parallel to its point of intersection with the west boundary of the Territory of Wyoming; thence due north along said boundary line to the place of beginning; and it shall be the duty of the Secretary of the Interior to cause an accurate survey to be made of the boundaries of said park as established by this act, said survey to be recorded in the office of the surveyor-general and Commissioner of the General Land Office of the United States, as provided by law.

Sec. 2. That the said park shall hereafter be under the sole and exclusive jurisdiction of the United States, and that all of the laws applicable to places under the sole and exclusive jurisdiction of the United States, except so far as modified by this act, shall be in full force and effect in said park. That nothing in this act shall be construed to forbid the service of any civil or criminal process of any court having jurisdiction in the county or district in which said park is now located, or may hereafter be located, in the said Territory of Wyoming. If any offense shall be committed in said Yellowstone Park, which offense is not prohibited or the punishment thereof is not specially provided for by any law of the United States, or by any regulation of the Secretary of the Interior as provided by this act, such offense shall be liable to and receive the same punishment as the laws of the Territory of Wyoming in force at the time of the commission of the offense may provide for a like offense in the said Territory; and no subsequent repeal of any such law of the Territory of Wyoming shall affect any prosecution for such offense committed within said park. All fugitives from justice taking refuge in said park shall be subjected to the same laws as the refugees from justice found in the Territory of Wyoming. If any violation of the laws or regulations of the Territory of Wyoming, the said park, for all the purposes of this act, shall remain and constitute a part of the third judicial district of said Territory; and the district court of the said judicial district, when exercising the jurisdiction of a district or circuit court of the United States, shall have jurisdiction of all felonies committed within said park.

Sec. 3. That all the territory embraced within the limits of the park as herein established shall be reserved and withdrawn from settlement, occupancy, or sale under the laws of the United States;

and dedicated and set apart as a public park or pleasure-ground for the benefit and enjoyment of the people of the United States; and said territory so set apart shall be under the control of the Secretary of the Interior, and subject to all the provisions of sections numbered twenty-four hundred and seventy-four and twenty-five hundred and seventy-five of the Revised Statutes of the United States, except as herein otherwise provided.

Sec. 4. That the Secretary of the Interior shall make and publish such rules and regulations as he may deem necessary and proper for the management and care of the park especially for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonderful objects within said park, and for the protection of the animals and birds found in the park, to prevent their capture or destruction. He shall cause all persons trespassing upon the park to be removed therefrom, and shall take all measures which he may think necessary to carry out the purposes of this act; and the Secretary of War is hereby directed to make such details of troops as the Secretary of the Interior, with the approval of the President, may require for the purpose of preventing trespassers or intruders from entering the park with the object of destroying the animals and birds thereof, or for other illegal purposes, and for removing such persons from the park.

Sec. 5. That all hunting or the killing, wounding, or capturing at any time, of any wild animal or bird, except dangerous animals when it is necessary to prevent them from destroying human life or inflicting an injury, is prohibited within the limits of said park; nor shall any fish be taken out of the waters of the park by means of seines, nets, traps, or by the use of drugs or any explosive substances or compounds, or in any other way than by hook and line. Any person willfully violating the provisions of this section shall be deemed guilty of a misdemeanor, and, upon conviction, shall be fined for each offense not less than twenty nor more than one hundred dollars, or by imprisonment not more than three months, or by both such fine and imprisonment. Possession within the said park of the dead bodies, or any part thereof, of any wild animal or bird shall be prima facie evidence that the person or persons having the same are guilty of violating this act. Any person or persons, or stage, express, or railroad company, receiving for transportation any of the said animals or birds, or the carcasses or skeletons thereof, or the skins of such animals, birds, or fish were killed or captured or taken from the park, shall be deemed guilty of a misdemeanor, and shall forfeit and pay for every such offense the sum of two hundred and fifty dollars, to be recovered by a proceeding in the nature of an information before any Territorial or United States district court within whose jurisdiction such offense was committed; or, when the offense is committed within the park, before the commissioner appointed by the district court of the United States for the Territory or district to institute and prosecute said proceeding in the name of the United States, the amount collected from the party offending to be paid into the Treasury of the United States.

Sec. 6. That the Secretary of the Interior may lease small portions of ground in the park, not exceeding ten acres in extent for each tract, for a period not exceeding ten years, to any one person or company at any one place, on which may be erected hotels and out-buildings, or exclusive privileges heretofore made or given in regard to the use of the public; but such lease shall not include any of the geysers or other objects of curiosity or interest in said park, or exclude the public from the free and convenient approach thereto, or include any ground within one-quarter of a mile of any of the geysers, the Yellowstone Falls, the Grand Canyon of the Yellowstone river, or within three hundred feet of the Mammoth Hot Springs; nor shall any hotel or other buildings be erected within the park until such lease shall be executed by the Secretary of the Interior; and all contracts, agreements, or exclusive privileges heretofore made or given in regard to said park, or any part thereof, inconsistent with this act, are hereby declared to be invalid; nor shall the Secretary of the Interior, in any lease which he may make and execute, grant any exclusive privileges within said park except upon the ground leased.

Sec. 7. That the President shall appoint, by and with the advice and consent of the Senate, a commissioner, learned in law, who shall reside in said park and who shall have jurisdiction to hear and act upon all complaints made by any and all violations of the law or of the rules and regulations made by the Secretary of the Interior, and the government of the park and the protection of the game and objects of interest therein. He shall have the power, upon sworn information, to issue process in the name of the United States, for the arrest of any person charged with the commission of any misdemeanor or within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. The said commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the park, and to summarily try the person so charged and, if found guilty, to fix the punishment as in the next section provided. A SPRING POEM.

NOW the adolescent homo
Seeks Lumbricus in the shade,
Toiling in paternal garden,
Deftly turning earth with spade,
While the Harporhynchus rufus
Chants his lay in yonder glade.

In this phrase I seek to tell you
That the boy is digging bait
For Salvelinus fontinalis
Near his father's garden gate,
Heedless if the school-bell ringeth
Or the teacher marks him late.

But I see that I've neglected
Adding foot notes to each term,
Hence I'll try to be explicit.
And call on science to affirm
That the Latin name Lumbricus
Is another word for worm.

Salvelinus fontinalis—
There is not the slightest doubt
Boys from Maine to California
All would join in mighty shout,
Laughing at your lack of knowledge,
If you don't know that's a trout.

And, likewise, the Harporhynchus,
Which is singing in the bush
While his mate is incubating,
Pouring fourth his soul in gush,
That's another patronymic
For our brown, our native, thrush.

Hence I only meant to tell you
In the plainest sort of terms,
That this is spring and thrushes sing
Mid nature's budding germs,
And boyish thought turns toward trout
And agile angle worms.

FRED MATHER.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—XIII.

THE rain grew certainly "had a skinner agin us," for when we got out late next morning the rain was coming down with a steady persistency that moved Ben and the skipper to retire behind old Dan's tent for another talking match, a necessary part of the camp work that we were somewhat accustomed to when occasion demanded, and it seemed that on this particular morning there never had been a time in camp when an exchange of views to ease our minds was more needed.

After breakfast the question was what to do with ourselves. We could not take the girls out to fish in such villainous, rough, rainy weather, and the only thing left for them was to take to the big tent and talk, read, suck maple sugar and pester the philosopher for lunch at irregular intervals, and brag of what they were going to do in the way of depleting the lake of fish when sunshiny days did come. Dan and Muller could sit humped up over the crib or checker board in one corner of the tent and never find out it was raining except when called at meal time. Jim and Mother Jim did not seem to be in pressing need of companionship or consolation aside from that found in each other (newly married people are generally afflicted that way), but what was to become of the two old loons, Hyper and the skipper?

After standing around the fire in our rubber coats for half an hour, "fust on one leg an' then on t'other," like geese on a frosty morning, dodging the smoke puffs and dis-cussin' the situation, I suggested as the only way to keep peace and quiet in camp, that we go a-fishing, and was utterly amazed when the old varmint said "he didn't feel very peert that day an' he b'leaved he wouldn't go out; he'd stay in camp an' make a little fun fur the gals to keep 'em from git'in' the blues, an' git a leetle better acquainted with Miss Annie."

It may be said that Miss Annie, a tall, stately young lady, unobtrusive and gentle in her ways, had come into camp almost a stranger, and for a day or two had seemed rather backward and diffident; but after a few days' contact with the "Jones family" had worn off a layer or two of her natural shyness and reserve, she was as full of life and fun as any of them and had become quite a favorite.

Old Ben had stood in great awe of her for several days, not having, as he said, "jest made up his mind how to size her up." But one morning he had arrived at a conclusion and paid her his highest compliment when he said with grave deliberation, "Tell ye what, Hickory, at first I was kinder afeard ov her, she 'peared so dignified and onsociable-like, but now the gals hev got her thawed out. I can notice a heap o' difference in her an' ye kin jest bet she's a hell-rackin' good gal an' don't ye forget it." After this he seemed easier in mind and was not so "feard" of her, and at the time he declined to go out fishing he and Miss Annie were the best of friends, indulging in frequent encounters of jesting wit, in which Hyper, with all his aptitude at quick retort, not infrequently suffered an inglorious defeat.

The girls were greatly pleased when they learned that Uncle Ben was not going a-fishing, for whenever he was in camp there was no lack of fun and good feeling; he kept them in great good humor, and laughing at his quaint sayings till they had the sideache. I did not catch the drift of the scheme the sly old fox had in mind when he played the "not a feelin' very peert" dodge to get me out of the way, but got ready to go alone—he knew I would go a-fishin' anyhow—however, I found it all out when I returned to camp in the evening. He even helped me pull the lightest of the boats up on the bank to tilt the water out of it, and half an hour later I was across the lake with bass rod and bucket of frogs drifting down shore, locating the likely-looking water to be fished when the weather cleared up and we could take the girls out. The rain stopped falling some time in the afternoon, but it did not improve the fishing much, and during the whole day I got but three big-mouthed bass, a couple of longsnouts and six or eight goggle-eyes which, when first hooked, put on as many airs as a two-pound bass. I had found three or four places, however, notably one a mile and a half perhaps below camp on the opposite side, that prom-

ised good sport when the weather settled and the fish took a notion to feed, and I pulled back in the evening quite satisfied over a well spent day.

When I had pulled the boat up on the bank and stood the rod on the lee side of the big popple, Miss Kit with measured step and mischief in her eye led me to the north end of the fly, and there on the philosopher's table lay a handsome trout a trifle over a foot in length, and then they all tittered and looked mysterious except old Ben who stood apart with a self-satisfied smirk on his face that made me feel like "teehing him up with a bresh," for I saw through his scheme of the morning without waiting for the story to be told. Here was the solution to his "not a feelin' very peert" when I wanted him to go out with me for a day's sport. The hyperbolical old varmint had hung around camp "entertainin' the gals" till the rain was over and then stolen off up the road to the stream near Alexander's and inveigled the third and last trout out of the pool from which I had taken the other two big ones, and now there the blessed old sinner stood with a quizzical grin making crows' feet at the corners of his eyes, looking so innocent that I was moved to join in the merriment and ask for the story of the capture.

"Ye see," he began, after lighting the brier root and coming to an anchor on a camp stool, "I knowed when I fooled ye this mornin' an' got ye off a-fishin' by yerself that ye wouldn't be back till night, an' after ye was gone I fooled 'round with the gals an' let on I was kinder out o' kilter—but I didn't miss my dinner, an' turned up fur lunch every time mind ye—till it quit rainin', an' then I jest slipped out o' camp with ole quintessence an' a box o' wurms an' hied off up the road to the little erick where ye ketched that red hoss t'other day. I didn't fool away any time a pickin' rozberries along the road; fur I 'lowed if I didn't ketch that trout ye'd staked a claim on in less'n five minutes after I dropped my hook in the water I'd go back to camp an' let on I'd only bin to the little branch jest over there in the woods where ye overtook me an' the schoolmaster. I kep' on till I got inside o' the field nigh the woods where you said the deep hole was, an' when I got where I could peep over an' see the water I stopped an' baited my hook mighty keferful, an' slippin' up soft as a cat walkin' on moss, I dropped it in above the big tree an' let it drift down to'ards the root, same as you did when ye ketched the first one.

"Before it got in two foot o' the tree, zip! come a streak o' greased lightnin' out from under the roots an' grabbed it, an' before a hungry houn' could a-swallered a fitch o' bacon I give ole quintessence a side flint an' landed that trout o' yourn ten foot back o' me on the grass.

"Ye see, it was all done so sudden like that I furgot to put in any scientific lies on him; but I reckon it's too late fur him to kick about it now, an' I hev an idea that he'll never find out but what he was knocked out o' that hole by a middlin'-sized yartquake.

"That was the only trout I was a-lookin' fur, an' I felt so ehuck full o' pure delight, as old Dan says, that I never thought o' fishin' another solitary second. I broke a twig an' strung Mister Sally-venus—or whatever that durned jaw-twistin' Latin name is that ye call 'em—on it, an' hitchin' the hook on to one o' the crossbars o' the reel and tightenin' up the line, I broke for camp so bilin' full o' glory an' laugh at outgeneralin' James Mackerel that I forgot to light my pipe.

"When I came to the little five-rail fence at the lower end o' the field I was a-rollin' so high that I stepped clean over it without teehin' a splinter, and when I got into the main road I reckon the steps I took wouldn't average more'n two to a rod till I elim' the fence back there by the woods in sight o' camp, an' then I slowed up considerable fur fear I'd git a-go-in' so fast down the grade that I couldn't stop when I came to the lake. When I got nigh the big tent I sneaked up an' poked the trout 'round in front where they could all see it an'—but I'm gittin' powerful dry talkin' so much; guess I'll go after a bucket o' fresh water, an' some o' the gals kin tell ye the rest."

"Yes," chimed in one of the girls as Ben started with the bucket, "We didn't know he was anywhere near until we heard him say, 'Hello in there! Gaze on that, will ye? James—Mackerel's—trout. What'll he say to that?'" And then they told how the old loon danced and hopped around the fire, with old "quintessence" and the fish held aloft in either hand, and from the description I imagined the performance was much after the manner of the ludicrous antics of a sandhill crane when in a hilarious mood.

The taking of that trout was a mine of fun for old Ben, and there is little doubt that not an angling friend of his but has since heard the story of how he "outgeneraled ole Kingfisher an' ketched his trout that he'd left in the deep hole to git ripe."

Kit and I fished the same stream a week after as far up as the deep hole, but got "nary nibble," much to Miss Kitty's disappointment, as she had evidently made up her mind to show her father a few tricks in trout fishing that he'd never heard of. Not even the big trout near the school house could be induced to show himself, although she spit on her bait in a manner that no susceptible and well-regulated trout might well resist, and fished for him with due diligence and great expectations for a good half hour, her paternal parent not far off meantime struggling under ninety-pound pressure of suppressed laugh at her earnestness, and the anxiety she seemed to be laboring under lest she would run out of charmed bait before his troutship found out she was fishing for him.

But the day was not without its pleasures after all. It was a big treat to her to "go trouting with papa," even though she "didn't stir a fin" (this was imparted to Bob with a patronizing air of superior attainments in the art gentle that would have floored an older angler than Bob), and her heart was made glad on the return to the boat, which we had left a short distance above Horton's Bay, with an apronful of rarely beautiful ferns, a wreath of "squaw vines" with their bright red berries, a bunch of wintergreen and a few sheets of "natural writing paper" peeled from a birch sapling near the water, to say nothing of a bouquet of wild flowers half the size of a camp kettle; and we pulled down to camp with the boat freighted with about as much happiness as it could well float under.

But once more has the tale of a trout caused a divergence from the trail.

As we sat around the big fire after supper talking over the day's events and listening to the sweet refrain of the multitudinous musquito, the first signs of a break in the weather appeared in the west and south, and by the time we were ready to beat a retreat from our enemy and seek refuge in the tents, numerous rifts in the slowly moving clouds disclosed patches of blue sky dotted here and there with a bright star blinking and smiling at us a promise of a fair morn.

HOW SILKWORM GUT IS MADE.

Editor Forest and Stream:

Silkworm gut being indispensable to the angler and to fishing tackle makers they will be interested to know how it is produced. I have not been in Spain before during what the Spaniards term the "gut harvest," the season when the worms are killed and drawn out into fishing gut. The worms are bred by the country people in their cottages or houses, which usually consists of two rooms or one floor. The roofs of the houses being nearly flat, no fireplace in the houses, the cooking is done outside in the yard. The wind-ows are simply iron cross bars without glass in the sleeping room. They tie together bamboo cane reeds (which grow plentifully there) with string, forming a bed from twelve to fifteen feet long by four feet wide, raised from the floor about four feet high. The worms are spread all over these beds formed of cane, and are fed five times daily by covering them with mulberry leaves. Before feeding all the dead and sickly worms are picked out so that the others are kept in a healthy state. The worm lives about fifty days, during which time they sleep three days at a time, in all twelve days. When they are ready to spin into the cocoon they creep upon branches of small trees out of the gardens, which are placed over the worms. They are taken off, put into vinegar, where they remain for six hours, then put into water. Some of the country people make a special business of this and purchase the worms from others, and employ girls to draw out the gut, which is done by taking off the head and taking hold of the entrails by the thumb and finger and pulling them out as long as they will come, then placing the gut in clear water again. When a sufficient quantity of two or three thousand are made, it is tied in bunches and hung up to dry in the yard or garden. Some worms produce one gut, some two, and a few three guts. It is afterward sold by the pound weight or rolls to the gut makers. The very severe weather of the last three weeks has killed thousands of worms and destroyed a great quantity of grapes and other fruits, so that the production is nearly one-fourth of the gut which is usually produced. The gut makers boil the gut with soap and a little soda, when the outer skin or film comes off easily. It is then washed, bleached and hung up in rooms. Then girls are employed who place each gut between their teeth, holding the other end with their fingers and rub it with wash leather. It is then sorted, the strength, lengths and quality, re-rubbed and tied in bundles of 100, then in 1,000 each for sale.

(Of Redditch, England.)

NEW YORK FISH LAWS.

Editor Forest and Stream:

Please allow in your valuable paper brief notice of the new trout law, Chapter 124, Laws of 1886, amending Section 19 of the game laws, just published and now in effect. It seems to have become a law without the assent of the Governor. Its first change is to prohibit the "trout caught on Long Island in April" from being sold in the Adirondaeks (forest preserve). A more senseless piece of legislation it is difficult to conceive. Will some legislator who originated or voted for it rise to explain it or the evils or dangers from Long Island trout being brought or sold in the Adirondaeks (Franklin, Essex or Hamilton counties, for example) by which this provision is protective or necessary? Without an explanation, it appears at this distance folly or worse.

Its second provision is to repeal the important provision of 1885 against marketing trout under six inches long, intended to protect State fry by allowing them a two-years growth; also to promote and induce more effort in stocking waters which theretofore had seriously lagged for want of this protection. Probably no provision in the game law has been more beneficial, or has received more universal sanction or been better lived up to by all classes of sportsmen, than the six inch provision (fish dealers under a scarcity of trout alone excepted). It has appealed both naturally and easily to the sympathies and sentiment of all as affording a proper recommendation to give a second year's growth to the fry. Hence its general approval. The expressions of thanks which its author has received in its behalf from all classes may be regarded with just satisfaction and pride, as well as its merits. Why any legislator could seek to tear it away, or even to allow it to pass by his neglect, is a matter yet to be explained. Its other benefit has been that, until this protection of fry was afforded, the restocking of waters with fry was generally abandoned as useless.

It costs money and great effort of individuals to go to the State hatchery to procure the fry, bear the expense of transportation, watch them on the way night and day, and still greater effort, expense and hardship to transport them in the difficult winter season from the railroads far into the wilderness without roads, and there properly deposit them in waters where they are to flourish. When thus deposited they are free for all, whether contributing to the hardship or expense or not. Can it be expected that individuals will continue to do all this without at least one year's protection? Is this likely, when they may be immediately caught by the "stream robbers," and are sold in the market to supply "trade"? Is it protection to trout that fry should be so traded in, or that should make this repeal expedient or necessary? At this distance unexplained these provisions seem inexplicable except as possibly indicative of ignorance or carelessness, incompetency or the like. There are at present no facts upon which to base any of these motives or conditions, and none are charged; the reader is left to his own opinions until explanation can be made.

If game laws intended to promote and protect the food supply are to be made a farce or football for legislators, it is time the laws and appropriations for State hatcheries and protectors be done away with, else that the public should see to it that competent and practical men be chosen to make laws, and that all tricksters, paupers, incompetent and bad men of all sorts should be left at home regardless of caucuses or party.

The protection of fish and game is for economic purposes of food supply and is both general and public in nature to the whole State, and as such demands both the wisdom and honesty of legislators in the domestic affairs of the whole State. In no other sense has it any place on our statute books. The matter of sport and recreation came in of their own accord as incidental only. If fish and game are to be committed or left to the tender mercies of the ignorant, half-starved and greedy population of those sections where they happen to exist, for protection or consumption, let them be so committed wholly; let all other general provisions and appropriations be repealed so that the other sections of the State may turn their attention to other sources of food supply and leave legislators more time to bestow wisdom upon other objects. The bill passed and now in effect seems to corre-

KINGFISHER.

pond with Assembly bill No. 609, bearing the impress of being championed by Hadley, of Franklin county, made chairman of the Assembly committee on game laws by the Speaker, a professed sportsman, of which committee Berry, of Fulton and Hamilton, and White, of Oneida, are members. This is all that is known of its origin, history or motive.

It may be presumed that these men, as others aiding to pass it, have correctly represented their constituents and will return home at the end of the session in the glory of their efforts, their salaries in their pockets and decorated with the title of "honorable" to their names. Be it so, while the public must submit to the law and individuals condole themselves with their own private opinions upon the event of their work, for so is the law.

It will take years, however, if it ever can be, to repair the benefits which this change has undone. Under the law of 1885, the efforts in time and money to re-stock waters the past year have been more than doubly increased over previous years upon the faith of that law. The coming year will most likely witness its relapse or abandonment—a prospect anything but cheering to those having the matter at heart. It looks, and is doubtless intended as the first step toward repeal of all laws protecting fish and game in the interests of the great marts of trade. Whether so or not, it will have a most depressing influence upon all further efforts by the treatment it has received at this legislative session. The other defects and changes need not be noticed.

Another specimen of the same kind is the bill (by Hadley) professing to protect song birds for "five years," only with an exception that it should not apply to those who kill them to study their "habits or history" without limitation. Of course, all who kill song birds can say they are studying habits and history. Hence the law would be nugatory. Whether this is by oversight, incompetence or by design or otherwise, the reader may judge. Comment is unnecessary.

JOHN D. COLLINS, Secretary.

UTICA GAME AND FISH PROTECTIVE ASSOCIATION, May 17.

LARGE AMERICAN TROUT IN ENGLAND.

AN enormous American trout has recently been taken in England, as will be seen by the following letter to *Land and Water*:

SIR—A pond trout of 9½ pounds may well make a troller's mouth water. Yet this was the weight of a "trout," 2 feet 1 inch long by 7 inches deep, which was captured in the ponds of Mr. Basset, of Tehidy, near Camborne, just a week ago.

I have seen the fish and identified it as a specimen of the American lake trout (*Salmo fontinalis*), with which Mr. Basset stocked his ponds some nine years since. This one was taken on a ground line, but the fish is said to show excellent sport when taken on a trolling bait, and it is an exceedingly voracious feeder. I apprehend, however, that its presence in a pond probably means the extermination of all common trout in it.

THOS. CORNISH.

PENZANCE, April 26.

Although Mr. Cornish speaks of it as a "lake" trout, by which name we know the *S. namaycush*, this is no doubt a slip of the pen. The editor of *Land and Water* appends the following to the above letter:

"Mr. Cornish's information will be of the greatest interest to fishcultivists, both in England and America. In America, where the *fontinalis* is indigenous, the weight recorded is rarely exceeded; and recent investigations have tended to show that the largest ever captured weighed 12 pounds 2 ounces. The fish is commonly called a brook trout, although Mr. Parker Gilmore has contended in these columns that it is a char; and the knowledge that it can attain so great a size in a mere pond in England will doubtless be a surprise to the majority. The big American fish referred to above was caught in the Rangeley Lakes, noted waters for producing large *fontinalis*, which are widely known as Rangeley trout in the States. We note that the fish took nine years to attain to the weight of 9½ pounds; it would be interesting to learn how large the fish were when placed in the pond. We read in *FOREST AND STREAM* that an Oquassa trout is said to have grown 10 pounds in six years."

BRANDY POINT TROUT.

Editor *Forest and Stream*:

In reading over Capt. Barker's letter on the above subject in your issue of April 22, it occurred to me that a short history of Brandy Point might be interesting to at least a portion of your readers, especially to those who visit the Rangeley lakes. Away back in the forties this point was known as a famous Indian camping ground from time to time unknown.

All the old growth of trees were marked with Indian hieroglyphics made with stone implements, and the grounds were cleared near the extreme point, and many Indian relics have been found there.

The Point is situated about two miles above Upper Dam, on Lake Mooselucmaguntic, making out into the lake a mile or more from Sandy Cove. No one in later years knew of this fishing ground except a few of the old hunters of this region. Annance, the Indian who was educated by the State, and did some hunting on these lakes; also Mettallac, the lone Indian of the Magalloway; and to Phillips the famous hunter of the thirties, who froze to death on the Cuscutic; also to your correspondent from 1840 to the present time.

In 1880 we accompanied Mr. John A. Monheimer with his brother and a gentleman from Kentucky on a fishing trip up through the Rangeleys, who were also guided by the famous John Danforth. Arriving at Upper Dam we found the camps crowded with some fifty fishermen from all parts of the country, all trying for and expecting the big trout, but only securing some five or six fish a day. This was about the middle of September. We secured our rooms and rigged our rods, and tried the old places below the dam, capturing several pound trout, and after satisfying ourselves that the river was being overfished and the chances slim for much sport there, I proposed to my party to go on up the lake for a try, and one of them joined me, and we pulled directly to Brandy Point, and soon found we had struck them, for in two hours we had netted seven trout weighing thirty-five pounds, the largest one seven and a quarter. Coming on night we returned to camp, and had the pleasure of surprising about fifty men by moonlight, with our seven fish spread out on the grass and the men standing in a circle around them. One of the guides came to me privately and offered me fifty dollars to tell him where we caught them. Probably his party sent him.

The next day we all went up and camped there for several nights, and caught a satisfactory lot of trout and smoked them Indian fashion—spread on cross sticks over a slow night fire.

After my party left the lakes, I introduced Gen. Hubbard and his friend from New York to the Point. They were stopping at Camp Kennebago, and they had such good success that they came the next year and camped twenty days on the Point, but that year the trout did not come on until October, when it was close time.

While at the Point with Gen. Hubbard, a gentleman from Philadelphia, with a lady for a guide, came down from their camp on the Cuscutic and fished a day or two, and while there the woman caught an eight-pound trout and played him very handsomely, and reeled him in and netted him alone. These trout were very highly colored and very gamy. They were coming on to their beds to spawn. The beds are formed of pebbles collected together by the trout themselves, in a surface several feet across; and every year they come on and clean off all moss and sediment that gathers there during the past year some time before the spawning season arrives, and at such times they will readily take the fly.

All the trout I have ever seen taken at Brandy Point were taken legitimately—with fly hooks only.

Steamers running up and down the Mooselucmaguntic pass very near the point and parties can send and receive their mails daily, and the scenery from this place is the finest on the lake, and being only five miles from Captain Barker's camps at Bemis stream, a party might occupy one of his beautiful camps and go daily for a fishing excursion to this place and return in season for tea at camp. The fishing grounds are sufficiently extensive to give plenty of room to several boats and on certain days large catches are frequently made.

The name "Brandy" Point is very suggestive to gentlemen of the "old school," but nowadays the State laws prohibit brandy.

BETHEL, Me.

I. G. R.

KINGFISHERS GETTING LOST.

THE idea of "Kingfisher" and old Ben being lost in the "bresh" and almost in sight of their old camping grounds, where one would imagine they knew every section post, not only in the Intermediate region, but in the whole Traverse region; but the tenderfoot may smile his best smile, even "Yo" and "Wawayanda" will indulge in a hearty laugh at the dilemma, and "Nessmuk" will give us something trite at our expense, for I must confess "I've bin thar," and got lost within gunshot of a public road. "Norman" can extend a hand of greeting and a word of sympathy, because I have not only been lost but have dumped out a basketful of beautiful trout climbing over just such a network of fallen trees and limbs, the results of those "capfuls of wind" that once in a while sweep across the Traverse region and almost cover up the trout creeks and streams in Northern Michigan. Sore and bruised I again set to work to replenish my creel (for it was all my life was worth to attempt to recover the trout fallen from their creel in my tumble. I could not cut a stick long enough to strike bottom). How readily the genuine angler gets over such little mishaps, and goes in for such sport as only comes on a Michigan trout stream. There are times when I almost long to drop a worm into the old streams or cast a fly for grayling in the feeders of the Manistee, or jump into the Boardman and lay out long casts while trout are rising to the fly, while Pine Lake streams rise into my dreams as I turn over the memories of the past. May the fates ever favor old Ben when he hooks "spotted sardens." I was hoping he had taken to the fly, even though he can lay "a'out" half a mile of line to hang on to a tree. Try it, Ben, and you'll get something bigger than "sardens."

"Kingfisher" will remember I have always held up the brook trout as the sport *par excellence* for the angler, but his telling combats with *Micropterus dol.* stirs the blood, makes him an object to be envied. Here are waters teeming with fish while running up the river—but not to stay—but some how nary a bass comes to our hooks. A splendid bay, with favorable surroundings and everything denoting bass, but the water is fouled with sawdust—sawdust that stifles fry by the millions, and that a bronze-back could not exist in.

North of us, south of us, within a day's sail, lie trout streams that Ben would delight to fish; big boulders, massive rocks, swirling waters, deep holes full of big fellows where a "little sardene" won't stand a shadow of a show, and fishing palls on the senses because of the voracity of these spotted big ones, who will often rise to anything like hair and wool, even a salmon fly will draw them jumping from the waters, and the angler is obliged from shame to quit fishing. I presume eternal sunshine cannot be the home of the brook trout, but as I write this, a vast expanse of pack ice thirty miles by ten miles wide is waiting for the balmy spring breezes to move it out and permit us to get up to the trout streams. Seeing this dreary, frigid mass makes one long for some of the soft, warm days that come in April at the home of the Kingfishers! May they ever enjoy their summer outings in dear old Michigan; but if they ever desire a change, let them communicate with "Norman," and the boy who so longed to pull the oars for the old one-armed veteran while he "tussled" with his big bass, who has almost grown into manhood, promises not to "wrestle" with him, but run him up along the north shore to fishing grounds that will warm the cockles of the old bass fighter's heart. Minnesota has not the soft lambent beauty of Michigan, and our fishing grounds do not please by drawing masses of dude sportsmen to enjoy the smiles of summer resort belles, but to the angler who loves quiet nooks, wild rugged beauty, towering rocks, huge monoliths towering skyward around whose base old Superior ever beats in somewhat mournful cadences, or lashes in storm-tossed grandeur, but where rock fishing for speckled trout is perfection. To the angler who loves to push up against a seething mass of waters into a chasm where the sunlight rarely reaches; where cliffs rise 150 feet above you, and big trout twenty-four inches long are caught every summer and are not considered as rare specimens.

I would not say for a moment that Minnesota is no place for ladies to come for fishing, because they do come here, and some of them prove themselves adepts in taking the brook trout; but the nights are cool, decidedly so; and camping is something that must be provided for more liberally than in the regions in which the Kingfishers have made themselves a name. Even "Kelpie" would not go out and roll up in a blanket and sleep all night in this cool region; but the days are loveliness, the fishing superb, wild fruits in abundance, and the air an elixir for many of the woes of humanity.

DULUTH, Minnesota.

NORMAN.

THE TRAVELERS, of Hartford, has no empty "classes" to cheat its policy-holders; it has \$3,055,000 assets and \$2,089,000 surplus for their protection.—*Adv.*

BLACK BASS PROTECT THEIR NESTS.—At Newton Center, Mass., about seven miles from Boston, there is a handsome sheet of water called Crystal Lake, which was stocked with black bass some years ago. This season a pair of these fish chose a spot where the village boys bathe as the proper place for them to make their nest. Last week one of the boys stripped and walked in at the customary place, but had not gone far before his companions heard him scream and he rushed ashore with a bleeding toe. Investigation showed that the toe was lacerated with fine scratches, and while the boy claimed to have been attacked by a snapping turtle, the others ridiculed the idea and suggested that he had been scratched by a brier. Another boy tried the place with the same result and declared that something had bitten him and had tugged away at his toe. A council of war was held and three boys ventured cautiously in to investigate. Hand in hand they went, peering anxiously into the water, when they saw a rush and the two outside boys were bitten while the middle one escaped. One of the bitten boys fell flat on his back, and as his feet went up a large black bass came to the view of his comrades on shore and the mystery was solved. The boys having found out what sort of an enemy they had to deal with now take in sticks and drive the fish from the nest before venturing in. As the teeth of the black bass are like minute bristles no serious harm was done, but three boys were badly scared for a while.

THE WORCESTER FISH DAY.—Worcester, Mass., May 22.—On Tuesday evening the Worcester Sportsmen's Club held a special meeting, at which the subject of the annual fish day was discussed, and sharp criticisms were made of the manner of making returns on the part of some of the members. A motion to substitute a field day with trap shooting was laid on the table. The committee, L. G. White, G. J. Rugg, David M. Earle, E. S. Knowles and A. B. F. Kinney, were instructed to draw up strict rules and regulations, and to rule that a man's returns of fish shall be looked upon as honest only in accordance with his ability and reputation as a fisherman. The contest will be for honors only, and each man who attends the supper is to pay for himself. The committee yesterday reported in print, as follows: "The committee appointed by the Sportsmen's Club to make arrangements for the annual fish day decided upon Thursday, June 3, for the fishing and the following evening for the supper. With regard to the day, a radical departure from that of former years is proposed by the committee. There are to be no sides chosen, but the day is to be devoted to a fishing trip for individual honors and records. It is hoped by the committee that every member will join in the sport. A first-class supper is to be furnished, and a good social time is promised."

KILLING A SALMON.—One evening W. J. Florence, the actor, sat in the club room telling of his exploits on a salmon river in New Brunswick. "How many salmon did you catch?" a visitor inquired. Florence nearly fell from his chair at the ignorance displayed in the question. "Fishermen, sir," said he, with freezing hauteur, "never use the word catch as you apply it. They kill salmon. They never catch them." The rebuked listener turned scarlet, but made no response. A moment afterward Lawrence Jerome, the uncle of Lady Randolph Churchill, and an excellent story teller, began to talk of his adventures on a salmon stream. He was describing himself as standing on a bank at daybreak whipping a "Jack Scott" over the water, when he hooked a big salmon. "I was so excited," he said, "that I dropped my slungshot into the water and lost the fish." "Dropped what?" Florence asked in open-eyed astonishment. "My slungshot," Jerome replied. "Why, what could you do with a slungshot at such a time?" Florence inquired. "Best thing in the world to kill a salmon with," Jerome said, going right on with his story while everybody roared.—*Philadelphia Press.*

SALMON ANGLING IN MAINE.—We have lately published several accounts of the capture of salmon in the Penobscot with rod and reel, and in consequence of these reports Mr. Thomas J. Conroy concluded to try his flies in those waters. Mr. Conroy had never killed a salmon, but had cast with a salmon rod in the annual tournaments of the Rod and Reel Association and had carried off some prizes for his skill. He left for Bangor on the evening of the 18th and three days later took a twenty-pounder, which we saw on Saturday last at 65 Fulton street. He writes that there were twenty rods on the river that day and that six fish were hooked, but only two were brought to gaff. His fight lasted one hour and twenty minutes and the fish led him nearly a mile. Mr. Conroy thinks that it will pay the angler to go there about June 1 and try his skill. It is gratifying to know that the stocking of the river is beginning to bear fruit.

THE TROUT IN THE MILK CAN.—The Bangor (Me.) *Commercial* tells this pretty little sequel of the trout in the milk can story: "A few days ago the New York newspapers published the story that a milk dealer of that city had found a trout in a can of milk which had been shipped from the dairies of Capt. J. W. Benedict, of Warwick, N. Y. Now Capt. William Hobson, of the Seventeenth Maine Regiment, and Capt. Benedict were in the same army corps during the war of the rebellion. They became the warmest of personal friends, but were separated in 1862, since which time neither had heard anything of the other. Two days after the appearance of the trout story Capt. Benedict received a letter from Capt. Hobson. The latter had read all about his old comrade's trout in the milk can. The result has been the opening of a warm correspondence between the two veterans and the arranging of a pleasant reunion at an early day."

MICHIGAN ANTI-SPEARING LAW.—Editor *Forest and Stream*: Permit me, through your columns, to acknowledge the receipt, through the mails, of a copy of the seventh annual report of the Michigan Sportsmen's Association, and to call attention to the absence from its synopsis of our fish laws of the Statutes of 1872, Section 2,191, making it unlawful to take fish, except with hook and line, in the counties of Mecosta, Newaygo, Osceola, Wexford, Manistee, Grand Traverse, Leelanaw, Antrim, Emmet, Cheboygan, Mackinaw, Charlevoix and Barry. I am not aware that these laws have been repealed. They are embodied in a "warning notice," a copy of which I inclose, which was drafted by two of the lawyers of this county, and was intended to prevent spearing.—F. H. THURSTON (Central Lake, Mich., May 19, 1886).

ARKANSAS.—Clarendon, Monroe County, May 18.—White River is one of the prettiest and best fishing streams in the United States, and contains many kinds of fish, from the long gar pike, some of which weigh 150 pounds, to the game and nimble trout and bass; also four or five kinds of perch, and the much talked of and dreaded catfish. Have seen catfish caught here that weighed 100 pounds. All we have to do to catch "catty," is to suspend a line 150 to 200 feet long from the Texas & St. Louis Railroad Bridge which crosses here. The 15 to 25 large hooks on the line are baited with almost any kind of fresh fish or meat. Crayfish or crawfish, of which there is an abundance, make fine bait for perch and catfish.—CAVALIER.

ADIRONDACK PRESERVE ASSOCIATION.—A new organization under this title has secured possession of the old Rhineclander estate in Hamilton county, N. Y. The property embraces 22,000 acres, with trout streams and lakes. The Association will erect club houses, engage gamekeepers, and otherwise improve and protect their possessions. Mr. J. L. Marvin, No. 1½ Cedar street, New York, the active organizer, is enthusiastic in his estimate of the advantages the new club will offer its city members. The officers are: Henry C. Squires, President; James L. Marvin, Vice President; W. E. Freer, Secretary; Geo. W. Stiebler, Treasurer. The membership will be limited to 200, shares being \$100.

FLY-FISHING FOR SHAD.—Baltimore, May 24.—*Editor Forest and Stream:* You are in error in asserting that shad may be successfully taken with the fly only in the Connecticut and Housatonic rivers. Whether they may be successfully taken anywhere is, I think, debatable; but that shad do rise to the fly in the Chattahoochee River, at Columbus, Ga., is a fact. In proportion to the number of fishermen who try for shad with the fly at Holyoke and Columbus, I feel confident the result is decidedly in favor of Columbus. Shad also rise to the fly in the Patapsco, at the Relay House, B. & O. R. R.—CHES. A. PEAKE.

TROUT FROM A POND.—Detroit, Mich., May 21.—I received from my brother, now in Muskegon county, this State, per express yesterday, a dozen fine trout, taken from a pond that was stocked five years ago; and as they have not been disturbed, there are now some excellent fish in it. One, that was 18 inches long, was taken by hand on a flume recently built. Those I had were all taken with the fly, but the worm is preferred, it is said. The latter are only obtainable some four miles distant.—C. J. THOMAS.

MARYLAND.—Amateurs at Port Deposit and Lapidum are having fine times trolling for rockfish. One day recently Oscar Morrison caught 73 and George Stephenson 40, with hook and line, in a few hours. They were small, however, weighing from three to four pounds. Some very large ones have been captured by gilliers and seine-haulers, one Saturday fully three feet long. Black bass fishing will also soon commence in the Susquehanna, and parties from the cities are already making fishing arrangements with our local boatmen.

A MONSTER SALMON.—Last Tuesday an enormous salmon arrived in New York from the Columbia River, Oregon. It lay on the slabs of Commissioner Blackford, in Fulton Market, and was labeled, "The largest salmon ever caught." It then weighed 64 pounds, but is said to have weighed 72 when caught. Many people estimated its weight above these figures.

NEW HAMPSHIRE NOTES.—New London, N. H., May 24.—*Editor Forest and Stream:* The big trout of Sunapee Lake and the landlocked salmon are beginning to take hold, but very little fishing has been done so far. One hundred thousand brook trout fry and 30,000 landlocked salmon fry have been successfully hatched and liberated.—SUNAPEE.

STRIKES AND RUMORS OF STRIKES have filled the columns of the daily papers for weeks and months. The business man who reads FOREST AND STREAM finds there too a good deal about "strikes," but his spirit is not perturbed thereby.

RED BANK, N. J., May 19.—Took five bass yesterday P. M., first of the season. Water too thick for good trolling. Prospects good for bass this summer.—WILD.

ROBERT BRYANT, of High Bridge, N. J., publishes an attractive catalogue of rods, reels and anglers' supplies manufactured by him.

THE WORLD'S PASTIME EXPOSITION, a display of all classes of goods relating to different pastimes, will open in Chicago, July 3.

CHAUTAUQUA LAKE, N. Y., is cursed with a set of dynamite fish-killers, who are rapidly cleaning out the bass and pickerel.

SAN LUIS OBISPO, Cal., May 4.—The fishing is better at Sancho Poho than at any other part of this section of country.—C.

PUBLICATIONS RECEIVED.

A HANDBOOK OF ENGLISH HISTORY, based on the lectures of the late M. J. Guest, and brought down to the year 1880, with a supplementary chapter upon English Literature of the Nineteenth Century. By Francis H. Underwood. With maps, tables, etc. Boston: Lee & Shepard. Cloth, 64 pp. Price, \$1.20.

THE AMERICAN ANGLER'S BOOK, embracing the natural history of sporting fish and the art of taking them. With instructions in fly-fishing, fly-making and rod-making; and directions for fish breeding. To which is added *Dies Piscatorie*, describing noted fishing places, and the pleasures of solitary fly-fishing. Fishculture.

WORK AT COLD SPRING HARBOR, N. Y.

BY FRED MATHER.

[Read before the American Fisheries Society.]

THIS station of the New York Fish Commission, of which I am the superintendent, is on the north shore of Long Island, and is intended for both salt and fresh water fish. Some work is also done for the United States Fish Commission, and the expense of this is borne by the general government, and the fish hatched are mainly distributed within the State. These latter fish are mainly salmon, land-locked and lake trout. In some cases, such as the whitefish and shad, the eggs are given by the United States, and are distributed by the State, an arrangement of great value to the latter.

During the past season we have had 262,000 trout fry at the station. Of these there were 40,000 eggs taken at the station, 112,000 eggs bought by Mr. John D. Hewlett, of Cold Spring Harbor, from James Annin, Jr. and W. L. Gilbert, the fry from which went into the waters of the north and south sides of Long Island, and 110,000 fry were received from the New York hatchery at Caledonia, in charge of Mr. M. A. Green. We have on hand at present writing 3,000,000 eggs of the smelt, 1,000 eggs of the *Ogusasa* trout from Sunapee Lake, New Hampshire, a gift of Mr. Elliott B. Hodge, Commissioner of that State. One million whitefish from eggs sent from the Northville, Michigan, station, of the U. S. Commission, under charge of Mr. F. N. Clark, by order of Prof. S. F. Baird, have been hatched and distributed to Great Pond, near Riverhead, Long Island, and to Lake Ronkonkoma, a large lake in the center of the island. Previous plantings have been made in these lakes, but we have been unable so far to learn the result of them. It is hoped, however, that this fish may find a suitable home in these waters.

On this subject the County Treasurer of Suffolk county writes me from Riverhead, under date of Jan. 30, 1886, as follows:

Fred Mather, Esq.: DEAR SIR—I will be very glad to assist you in any way. I have two parties out trying to get a specimen of the whitefish for you, but have failed so far on account of the ice, but will give it a thorough trial when the ice is gone and report to you. I am having a net fixed now to try to catch one or more. There is a pond one and a half miles long just above Riverhead, good running water, which I hired two men to clean out of all worthless fish, such as catfish, suckers and what we call "roach." They caught about two and a half tons of turtles, which we carted off and buried. I was in hopes to get some black bass to place in this pond, and would like some whitefish for it now. We have a good place for lake trout, and if you will send us some and let us know when they will arrive, I will take especial pains for their care. Perhaps the brown trout might do well here. (Signed) J. HENRY PERKINS.

In the salt-water department, we have hatched and turned out over two million tomcods, or as they are sometimes called on the coast, frost fish, a small relative of the cod which seldom exceeds a pound in weight but is quite an important little food fish in our harbors. In January we had some 2,000,000 codfish eggs of which a very fair percentage were developing, until a blizzard blew through our old dilapidated shanties, which we use for hatching houses, and froze up the pipes and the eggs in the jars. We had watched the development of these eggs daily under the microscope with great interest and felt sure of success until the cold snap put a stop to all further development.

Of the brown trout, which by the way I believe to be the gamest trout in America, we had some three thousand eggs from our own fish, and have received 25,000 from Germany through the courtesy of our good friend, Herr von Behr, president of the German Fishery Association; with a promise of 50,000 more from Herr von dem Borne, the well-known fishcultivist of Berneuchen.

From the United States Fish Commission we have 500,000 salmon hatched from eggs received from the hatching station at Orlando, Me., under charge of Mr. C. G. Atkins. These will go into the headwaters of the Hudson, the Salmon River, emptying into Lake Ontario, the Oswego River and some 50,000 will go by request of State Commissioner R. U. Sherman to the waters of the Saranac, whose outlet is into Lake Champlain and down into the St. Lawrence. These fish are now ready for distribution. We have also about 34,000 land-locked salmon from the United States works at Grand Lake stream, Me., in charge of Mr. H. H. Buck, also sent at request of General Sherman, for the waters near the Adirondack hatchery, either in Saranac or in Lake Brandon, formerly known as Little Clear Pond, now set apart for the State hatchery, on whose outlet it is located. The hatching season has been exceptionally good, and the losses of eggs and fry have been down to the minimum. The work at the station was done by two men and myself, until in February we were reinforced by Mr. F. A. Walters, superintendent of the Adirondack hatchery, who in former years had been my foreman, but who by an accident to the dam at the hatchery under his charge was relieved from duty there for the present.

Last fall some new ponds were made; the only ones which were there when the State took possession were drained and quantities of eels taken from them, which, no doubt, destroyed many fry in former years. A fence has been put around the place and the grounds greatly improved. A new hatchery is sadly needed, as the two buildings now used for this purpose are not only small but so decayed as to be ready to tumble down. The men have worked in these buildings with six inches of ice under their feet, and at times with water freezing within ten feet of a red hot stove, and while ice has occasionally formed to the depth of a quarter of an inch in the hatching troughs it has done no damage there. But the two-inch iron pipes which convey the salt water to the jars did freeze and the flow was stopped. The eggs of the cod, being so light that they would not bear a strong current, consequently the flow had to be shut down to a very small quantity, and all froze, as did some small English soles also.

The station, with these advantages of fresh and salt water, could be made, with a proper expenditure of money, the most important one in the United States. Its flow of fresh water is not anything like as great as at some other stations, but the height from which this water is taken—some forty feet above the hatchery, renders it possible to use the water over many times; in fact, we do so now. The brick building on the hill, in which there are twelve troughs with a capacity for 30,000 salmon each, receives the water first; it then flows into a little pool, where egg shells and dirt may settle, and is conveyed on the upper floor of the main hatchery, in which there are eleven troughs, and it then passes into the ponds. Another spring supplies the lower floor of the hatchery, which has nine troughs, and hatching tables on which twenty-five McDonald jars can be placed and either salt or fresh water turned into them.

The fresh-water supply is capable of running more troughs than we now use, but the floor surfaces of the buildings will not permit them. The salt water which is within three hundred yards at low tide, is pumped into a reservoir on the hill and led into the buildings through a two-inch iron pipe, so that practically the sea is above us. The density of the water is sufficient to hatch codfish and oysters, and many oysters were hatched here last season by order of Mr. E. G. Blackford, of the New York Fish Commission, who is in charge of the oyster investigations of the State, an account of which is given in another paper. We have successfully hatched shad in the spring water here, and may repeat the experiment this year. It is now three years since we began work here, and our last season's work will foot up to about six millions of fry of different species, hatched and distributed.

COLD SPRING HARBOR, N. Y., April 10.

PROTECTING MACKEREL.—A bill to prohibit the capture of mackerel during the spawning season has been before Congress for some time, and on Monday last the House spent the day in considering it. Mr. Hewitt (N. Y.), in opposing the bill, said there were three results that would follow from its passage: First, it would deprive a very large number of people of cheap and nutritious food; second, it would deprive more than two thousand fishermen of employment between the months of April and June; third, it would confine mackerel fishing to the States of Massachusetts and Maine. The mackerel arrived on the coast about the end of March at the mouth of Chesapeake Bay and proceeded northward, reaching Massachusetts and Maine in the month of June, at which time the operations of this bill would cease. He denied that spring fishing produced fish of an inferior grade, and he quoted from a letter from Prof. Baird to the effect that that gentleman could see no beneficial results that would come from the bill. The spawn of a single mackerel produced 500,000 eggs, and it was impossible for man to destroy these ocean fish. A fisherman had told him that he had met a school of mackerel seven miles long and two miles wide, so densely packed that it seemed as though the water had no room among them. Mr. Milliken (Me.) said the same argument that was made against this bill had been made against the proposition to restrict the catching of menhaden. It had been said that menhaden could not be destroyed by man, but for the past few years menhaden had been so scarce off the coast of Maine that the fishermen could not catch enough for bait. The same was true with the lobster fisheries. When he was a boy he used to catch plenty of lobsters one and a half and two feet long. Today they were not only scarce, but so small that they seemed to have hardly left off their swaddling clothes before they were caught. Mr. Lore (Del.) said that the bill was a practical prohibition to the catching of mackerel from Cape Hatteras to Massachusetts. The people of Delaware did not wish to be confined to salt mackerel, as they would be under this bill. They wanted fresh mackerel now and then. Finally the bill was passed—yeas, 120; nays, 80. It prohibits for a period of five years, from March 1, 1887, the importation into the United States or the landing upon its shores of mackerel (except Spanish mackerel) caught between March 1 and June 1 of each year. The penalty prescribed for a violation is the forfeiture of the mackerel imported or landed, and, if the vessel violating the act be a United States vessel, a forfeiture of its license. Nothing, however, in the act is to be held to apply to mackerel caught off shore with hook and line from open rowboats less than twenty feet keel and landed in said boats.

EVERY pair of Allen's bow-facing oars warranted. Send for little catalogue, free. Fred A. Allen, Monmouth, Ill.—*Adv.*

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3689.

MASTIFF JUDGING AT NEW YORK.

Editor Forest and Stream:

May a high private venture to differ, fundamentally and radically, from your views on the above subject? And may he express the opinion that the many and grievous sins toward the mastiffs that the W. K. C. has been guilty of are almost to be pardoned for the service they did the breed in the selection of Dr. Perry as their judge this year? He had the courage to award his prizes according to what he believed the best and truest type of dog, and to disregard what is supposed to be the ruling fashion in England (mark me, I say "supposed") meaningly, and will prove it further along. For his first prize winner he selected the dog with the fewest faults of any shown. A dog, beaten in some points by several others in the class, yet without the other defects that these dogs had, and which far outweigh their special merits, and this dog Baby is of an average high order of merit all over, if not of superlative greatness in any one point. The philosophy of dog judging seems to have generally commenced at the wrong end by selecting dogs for special merits and then making allowance for faults that condemn them, even as dogs. Surely this is nonsense and illogical, and is there any reason why judging should not be logical? For instance, Snoozer may have a wonderful head, short in face, broad and flat in skull, deep and broad in muzzle, but he may have "layback" enough for a fair bulldog, ears that would honor a second-rate bloodhound, legs that would ornament a spider in their crooks and a walk that would put a broken-legged grasshopper to shame. Now a mastiff should have a broad skull and short face, but he should also have a blunt, squarely truncated muzzle; does layback fill this bill, or is a pug really square in muzzle? Yet the short face carries all before it; or this "shortfaced" specimen may not have the foregoing defects, but he is about the size of a big setter; a mastiff used to be supposed to be a big dog, size is a natural requirement, yet the pigmy goes first; or worst of all, this marvel of perfection may be actually a cripple. Is lameness or lack of power in his legs a characteristic of the breed? Yet the judge overlooks all these vital defects and blindly bows down at the feet of "short face." Is this philosophical? Pen your judge up in this corner and he deftly evades you by "character." Now character is an essential mark of any breed, but it must be a logical deduction from the standards and scales set up by the fanciers of the breed, not the judge's private opinion of what the ruling fashion may be in England, and unfortunately the practice with us, is too much to imagine that English fanciers are all crazy on the subject of head. Now the course of some of the lights of the Old English Mastiff Club, certainly seem to point to the conclusion that all that a dog need have is a head, and that if that can be seen sticking out of his stall, it is a waste of time and trouble to take him into the ring.

But after all is that the authority on the matter? Let us see. Mr. Hanbury must surely be accepted as one of the authorities of the club; with the exception of Mr. Nichols, he is the only breeder of long standing and great repute; he put Prince Regent over Crown Prince, Prince Regent being

longer in face, squarer in muzzle, and good in hooks and legs, Crown Prince having as much layback as a pug, hocks that are so straight that like the man that stood so straight that he leaned back, his hocks bend forward, and forelegs that are as big at bottom as at top. It would seem that Mr. Hanbury reasoned that he was sufficiently eminent as an authority to smile at the storm of adverse criticism his ruling would evoke. Then Mr. Beaufoy judged and reversed the logic of Mr. Hanbury's ruling; does this show that Mr. Beaufoy preferred the pug-nosed type to all other virtues and merits in a mastiff? Stop a bit. Shortly after this Mr. Beaufoy wanted a stud dog, at Dr. Forbes-Winslow's sale. Did he buy Crown Prince? Nary a buy; he took Prussian Prince (money could not have been the deciding point here). Then his famous stud dog, Beau, the best all-round dog in England, died. Crown Prince was still in the market. Did he buy him? Not he; he bought H. M. King Canute, another good all-round dog. So the logical deduction seems to be that Mr. Beaufoy judged the way he thought the rage was running, but when he wanted a dog for his own use, he took one of the type that pleased him the most. Again, why does Crown Prince go begging in the market? He can be bought for less than King Canute cost. If short face, straight hocks, upside down legs, etc., are the true type of English mastiff, why does this exemplar of these glories seek a purchaser in vain? Now the fact is that the idea that the extreme of short face is the necessary qualification in a mastiff, even in England, is a delusion and a snare. I think I have proved that Mr. Hanbury and Mr. Beaufoy do not so hold, and from all I can gather from English fanciers, the sober sound judgment of the majority of English fanciers is against it. Richard Cook, Esq., the honorable secretary of the O. E. M. Club, a great admirer of Crown Prince, freely admits that the dog is "too bulky." Messrs. Taunton, Portier and Nichols are also unequivocal in their commendation of the ultra bulldog type, and M. B. Wynn, enthusiast as he is for short face and an approach to the bulldog type, yet is as emphatic as any one in condemnation of weak loins, straight hocks, large ears and general lack of power.

Two notable instances of the uncertainty of what the ruling English type really is occurred to me at the New York show. Mr. S. W. Smith said that Baby was the type of dog that he would have put first a few years since, but that it was now difficult to say what the English fancy really asked for. Another well known English fancier told me that Baby was the type of dog that was winning when he left England ten years since, and that he had been puzzled on his visits there within the last few years to determine whether the fancy went for mastiffs, or an enlargement of his special fancy, the pug. This last gentleman kindly obliged me by bringing his pug alongside of a "short-faced" mastiff; point after point we went over their heads, and finally concluded that the only difference in their types was that the pug's nose was fairly straight on top, while the mastiff's was dishd, and that the pug had nice, neat ears, and the mastiff beastly big flaps; the mastiff having rather more "layback." Of course in legs, feet and body, the pug was way ahead.

Will it not be well for us to stop and consider what we want in a mastiff and what his characteristics really are, and not go dreaming off on rolling twenty pug dogs into one and calling him a mastiff, robbing the pug of his power and soundness in the meanwhile?

You, Mr. Editor, have mentioned dogs of late that are absolutely disqualified under the scale. The minimum for height is fixed at 27 inches, and some of the dogs you have commended fall a very big inch short of this. How then can they be good specimens?

May I ask you, as a favor to American mastiff fanciers, to publish the standard I inclose? It is that prepared by M. B. Wynn, Esq., and that prepared by Mr. Portier for the Old English Mastiff Club is about the same, only hardly as intelligible.

And will not our judges take this standard, think it over, reflect on the type of dog it contemplates, and ask themselves if a logical application of this standard justify them in some of the rulings they have made.

W. WADE.

HULTON, Pa., May 17.

POINTS OF THE ENGLISH MASTIFF.

(Prepared for the Mastiff Club by M. B. Wynn.)

Head.—General, very massive and short, with great breadth and depth of skull, and squareness of muzzle. Expression lowering. Forehead, broad, flat and wrinkled; eyebrows heavy, with a broad stop extending well into the forehead. Cheeks, full. Eyes, wide apart, small, and sunken, dark brown in color. Muzzle, short, truncated, deep and broad, not tapering toward the nose; jaws very wide; line of profile from stop level, not drooping toward the nose (i. e., not hound muzzled), black in color. Nose, large; nostrils large, and a well-marked line between. Lips, thick and pendulous, they should fall forward not hang at the corners of the mouth as in the bloodhound. Teeth, large, undershot or level. Ears, small, pendent or semi-erect, not placed so low as in the hound, the darker the color the better.

Body.—General, thickest and muscular, with great length and bulk, on comparatively short legs. Neck, short, thick, and muscular; dewlap slightly developed. Chest, deep, wide between forelegs. Shoulders, wide apart across breast and back; shoulder blades deep. Back, long and broad. Loin, broad, flat, and muscular. Thighs, straight, muscular and thick. Stern, fine, short, straight, thick at root, tapering to tip, and carried down generally. Forelegs, short, from elbow to ground straight, with plenty of bone and muscle. Hind-legs, straight, well curved from stifle to hock, with plenty of bone; dew claws admissible. Feet, round, large and compact. Coat, hard, short and fine. Color, fawn, with black ears and muzzle, or good brindles equal. Pies are admissible and equal for purity—award no points for color.

Height.—General, produced by depth of body, not by length of limb. Dogs, from twenty-seven inches at shoulder and upward, the greater the height the better, providing there is no loss of symmetry and character, and that the weight increases in proportion. Bitches, generally average three inches less than dogs.

SCALE OF POINTS FOR JUDGING.

Head 40 Points.

Shape of skull.....	10
Girth of skull.....	10
Ears—carriage and size.....	5
Bluntness.....	3
Breadth.....	3
Depth.....	3
Lips.....	3
Color.....	3

Body 35 Points.

Neck.....	4
Breadth of Breast.....	4
Loin and Back.....	4
Girth of chest.....	4
Shoulders.....	4
Length.....	4
Thighs.....	3
Stern.....	3
Legs.....	3
Feet.....	2

General 25 Points.

Size, height, and general appearance of bulk.....	15
Coat.....	5
Fawns with dark ears and muzzle	5
or brindle with dark ears and muzzle	
Red with black muzzle, or all black, award 3 points only.	

Total 100

Fawns without dark points, ditto brindles, reds without black muzzle and pies, award no points for color.

Dogs of 27 inches at shoulder should weigh 120 pounds; 28 inches, 130 pounds; 29 inches, 140 pounds; 30 inches, 150 pounds; 31 inches, 160 pounds; 32 inches, 180 pounds; 33 inches, 190 pounds; 34 inches, 200 pounds.

Award a lesser number of points in proportion to the deficiency in the specimen being judged.

[When it comes to expression of opinion, we cheerfully concede that our correspondent is unapproachable. As a logician, however, in reporter's parlance, "he should be content with vhc." He starts off by complimenting Dr. Perry upon having awarded his prizes to what he believes to be "the best and truest type of dog." This deduction would be more logical had Dr. Perry followed this type by giving first in the open bitch class to Ilford Cambria, of the same type as Baby, instead of following "the ruling fashion" by awarding the prize to Lady Gladys, an undersized specimen, with the same faults behind that are seen in Ilford Caution, and had he in the champion bitch class placed Rosalind over Prussian Princess, not so good in loin or legs, and not nearly so good a mover as Rosalind, but with a head more in accordance with "the ruling fashion." In writing of the ruling fashion in England, Mr. Wade emphasizes the word "supposed" in a manner that leads one to believe that the ideas of our judges upon this point are all wrong. Then with delightful frankness he proceeds to prove the contrary by pointing to the course of some of the lights of the Old English Mastiff Club, and quoting a single instance where a judge made a decision not in accordance with "the ruling fashion" (condition of dogs not stated), adding "that he was sufficiently eminent as an authority to smile at the storm of adverse criticism his ruling would evoke." As Mr. Wade has quoted Mr. Sidney W. Smith, we take the liberty to add his closing remark, which was, "Baby may be the best dog, but Ilford Caution is the better mastiff." Mr. Wade cites the purchase by Mr. Beaufoy of Prussian Prince and His Majesty King Canute instead of Crown Prince, and adds, "Money could not have been the deciding point here," but does not tell us what the deciding point was. We will supply the missing link. Mr. Beaufoy is too well versed in the science of breeding to purchase a six-year-old worn-out stock dog that has a disputed pedigree when he can procure a "good all-round dog" (except for a weakness behind) like King Canute, the best living representative of his old favorite, Beau. Mr. Wade says that dogs under 27 inches are absolutely disqualified. In order to make this statement as intelligible as his remarks upon "the ruling fashion," he should have added to it the last paragraph of the standard, which says, "Award a lesser number of points in proportion to the deficiency in the specimen to be judged." A "deficiency" is not a disqualification. Mr. Wade's request that judges read and ponder the standard is all right; but in view of the fact that the rules of the kennel clubs are silent upon the subject of standards, we fail to see just how a judge who makes a wrong decision can be brought to book save by the intelligent criticism of the public press. If Mr. Wade will "take this standard, think it over, reflect on the type of dog it contemplates," he will learn that while a perfect head will score 40 points to the good, a weak loin—counting it equal in value to back—will only take 2 points and bad legs but 3 points from the grand total, and in case only two legs out of the four are bad, the "logical deduction" is that 1½ points only will be demerited. He will also learn that "a walk that would put a broken-legged grasshopper to shame," does not count as a demerit, and that "size is an absolute requirement" to the extent of 5 points only. He will not learn, however, from this or any other standard that the muzzle of the pug should be other than cut off square or that he has any "layback." We are not discussing the merits of the standard which Mr. Wade recommends, but merely pointing out some of its plainer teachings and the "logical deductions" which naturally follow.]

ST. LOUIS DOG SHOW.

[From a Special Correspondent.]

THE third annual dog show of the St. Louis Gun Club was held in the east nave of the Exposition Building May 18, 19, 20, and 21. The entries numbered 88, and but very few were absent. The judges for pointers, English setters, beagles, dachshunds, greyhounds and deerhounds was J. M. Taylor of Cleveland, Ohio; Irish and Gordon setters, Mr. W. H. Pierce, Peekskill, N. Y.; Dandy Dinmonts and Scotch and hard-haired terriers, Capt. C. W. Bellairs, St. Louis, Mo.; St. Bernards, collies, fox-terriers, spaniels and all non-sporting except as above, J. H. Naylor, Chicago, Ill. The judging gave general satisfaction, and the local visitors as well as those from a distance, expressed themselves well pleased with the exhibition. The prizes in the regular classes were liberal, and the specials were very numerous, amounting to 114. As has been stated in these columns before, special prizes are becoming a nuisance at shows, and in place of assisting the finding out of the best dog of the different breeds are in many cases so offered as to become a gift to the animal. The management, especially Mr. Geo. Munson, worked hard to make the show a success financially and otherwise, and we are pleased to say their efforts were crowned with success. The weather was warm, in fact we might say on Friday it was too warm for the real comfort of the dogs, and there was a falling off in the attendance during the afternoon. The quality of the dogs in most of the non-sporting classes was poor, while that in the pointer and most of the setter classes was good.

POINTERS.

Robert le Diable was the only entry in the champion class for large dogs, and he was absent. There were no entries in the heavy weight bitch class. In the open class for large dogs, eight faced the judge and they were an excellent lot. Young Meteor, placed first, is an exceedingly good one, back of his neck which is too short, his head is a trifle coarse, and his ears are placed too high. Second went to Topsy, a good dog with the exception of being very throaty. Third went to Sweep, coarse in head and a trifle weak in stifles and hocks, otherwise a good one. In the open class for heavy weight bitches first went to Belle Faust, a good one, and well known to your readers. Second went to Vixen, a very large bitch with little lumber about her, except for her bad ears, and being a trifle long in barrel, we like her very much. Third went to Nellie, a fair bitch, plain in head, short in neck and light in stifles. Robin Adair was alone in the champion class for light weights, and received the award. Vanity alone in the bitch class, also received the award. There were three dogs shown in the open class; first went to Krupp, transferred from the larger class. He was shown bad in coat, and is short in head, otherwise he is an exceedingly well made dog. Second went to Krupp's litter brother Rod, also shown in bad coat, he is a good all round dog and we liked him better for first. In the open class for light weight bitches, seven faced the judge. First went to Keswick, she was placed first at the late N. Y. show; and is well known to your readers. Second went to Dell, a nice little bitch full of quality, excellent in neck, shoulders and chest, her ears are not as good as we would like them, and her feet are not good. Third was withheld. Ten dog puppies faced the judge. First went to Maximum, a big puppy strong in bone, he is a trifle throaty for a puppy, and too long between the couplings. Second went to Colonel Faust, he is well put together with plenty of bone for a youngster. In the class for bitches first went to Miss Woodford, a fair all round puppy. Second went to Nellie B., like her brother Colonel Faust, she is a good puppy well put together.

ENGLISH SETTERS.

There were two dogs shown in the champion class, Paul Gladstone and his illustrious sire old Gladstone, for exhibition

only. He was looking remarkably well and is exceedingly active for a dog nine years of age. Paul received the award. He was shown in grand shape and was as hard as a rock. The more we examined him, the more we were impressed with him. He is a small dog of great substance, and is so exceedingly well put together that it is difficult to find many faults in him. His head appears much better than when we last saw him. Juno A. was first in the champion bitch class, she is a fine bitch and is well known to your readers. In the open class first went to Mandan, a description of him will be found in your report of the New York show. His condition has much improved. Second went to the well known field trial winner Roderigo. His bench show form has improved since we last saw him, and it takes a good one to beat him. Third went to Bridgeport, a well made dog with but few faults. He is of a heavier type than Major Taylor likes. In the bitch class eighteen faced the judge. First went to Dixie, excellent in head, chest, shoulders, legs and feet, she is a trifle sway-backed and long between the couplings. Second was given to Vixen III., a description of her will be found in your report of the late New York show. Third went to Haidee, a sweet little all-round bitch, we think her good enough for any company. In dog puppies first went to Goldstone, a very promising youngster. He is a trifle light in muzzle and long in the back. He will be heard from again. Second went to Dashing Prince, a fair puppy well put together. In bitch puppies first went to Darkness, a fairly well made one. Second went to Fawn II., a very nice all round bitch, we thought her fully equal, if not better, than Darkness.

BLACK AND TANS.

were a weedy lot; Nora, the only entry in the champion class, was absent. In the open class for dogs first was withheld, and second went to Don, a poor specimen. In the open class for bitches the best bitch was Patti, in fact she was the only good specimen shown, and through the careless handling of an attendant, who brought her before the judge, she would not stand on her feet to be looked over, and Nellie, a bitch, weak in stifles, hocks, pasterns and too long in the body, was given the place. If Mr. Pierce had seen Patti on her limbs as he did later, she would have been given the place, as she is a very symmetrical bitch, with capital limbs; Nellie was the better in head and feathering, and the tan was much better in color behind. Nellie was also given the place for puppies. Second went to Nell, poor in head, legs and feet, and a trifle weak in back.

IRISH SETTERS.

Elcho, Jr., was the only entry in the champion class for dogs, and he was awarded the prize. Faun, alone in the class for bitches, received like honors. In the open class for dogs, first went to Glenclair, he is a typical Irish setter, with few faults, and was properly placed. Second went to Patsy, he is put together for work, his plain head is his worst feature. Third went to Frank, a racy built youngster with lots of substance, but shown too thin. In the open class for bitches Laura B. was properly placed first; she is a symmetrical bitch with rare substance and quality, we might add that her head is a trifle to much of the English setter type. Second went to Grace Glencho, a new bitch, she is of the true Irish type all over, combined with substance; if shown in condition she will be heard from again. Third went to little Lorna; her faults which are few are well known. In the class for dog puppies two poor specimens were shown, first was withheld and second was given to Bob White. In the class for bitch puppies, first was given to Bridget D. II., a fair specimen but not first rate in color. Second was withheld.

A full list of awards in the regular and special classes will be found below.

AWARDS.

MASTIFFS.—CHAMPION—No entries. **OPEN—Dogs:** 1st, E. Mansfield's Suda's Amant Sam; 2d, W. F. Suda's Chub; 3d, W. F. Suda's Caesar II. **Bitches:** 1st, E. Mansfield's Ashmont Sam; 2d, A. J. Pierce's Queen Victoria. **Com.**, G. P. Jones's Beech Grove Queen.

ST. BERNARD.—CHAMPION—No entries. **OPEN—ROUGH-COATED—Dogs:** 1st, E. S. Marston's Switzer; 2d, W. P. Dye's Frank. **Bitches:** 1st and 2d, Mohawk Kennels' Noma and Clio. **Puppies:** 1st and 2d, Mohawk Kennels' Jumbo and Snowflake. **SMOOTH COATED—Dogs:** 1st, J. H. Garth's Rector II. **Bitches:** 1st, A. M. Maunell's Emir. **Puppies:** No entries.

NEWFOUNDLANDS.—CURLY-COATED—1st, M. Rowan's Carlo; 2d, J. H. Holmes's Prince Albert. **WAVEY COATED—1st,** S. S. McCuen's Miro; 2d, B. F. Lewis's Carlo. **Very high com.**, W. J. Cuddy's Jumbo.

GREAT DANES.—1st and 2d, Dr. G. Nicolai's Caesar and Nero. **GREYHOUNDS.**—CHAMPION—G. S. Parvin's Major—**OPEN—1st,** J. F. Nicholson's Belle; 2d, B. O'Keefe's Longfellow. **High com.**, R. H. Henry's Darby and R. S. McDonald's Gypsy. **Com.**, G. W. H. Benton's Fly and R. S. McDonald's Richard III. **Puppies:** 1st, B. O'Keefe's Speed. **High com.**, V. Loth's Colonel.

DEERHOUNDS.—1st, withheld; 2d, R. S. McDonald's Gold Dust.

POINTERS.—CHAMPION—Dog, Absent. **Bitch:** No entry. **OPEN—LARGE—Dogs:** 1st, C. J. Engel's Young Meteor; 2d, F. Fink's Gypsy; 2d, Pittsburgh Kennel Club's Sweep. **Very high com.**, St. Louis Kennel Club's Drake and W. H. Linn's Shot. **High com.**, C. J. Bremmer's Bow Faust. **Bitches:** 1st, St. Louis Kennel Club's Belle Faust; 2d, C. B. Rode's Vixen; 3d, J. Drees's Nellie. **High com.**, J. H. Kraft's Betsy Hawkins. **Com.**, J. Drees's Black Bird and L. Labadie's Jessie. **UNDER 55 LBS.** **CHAMPION—Dog:** J. H. Kraft's Robin Adair. **Bitch:** St. Louis Kennel Club's Daisy. **OPEN—Dogs:** 1st, G. A. Castleman's Krupp; 2d, J. B. Castleman's Rod. **Bitches:** 1st, St. Louis Kennel Club's Keswick II.; 2d, G. A. Castleman's Dell. **PUPPIES—Dogs:** 1st, W. E. Hughes's Maximum; 2d, C. B. Rode's Colonel Faust. **Very high com.**, E. R. Hickerson's Snipper. **High com.** and **com.**, J. Drees's Black Prince and unnamed. **Bitches:** 1st, E. L. Munson's Miss Woodford. **Very high com.**, J. H. Kraft's Llewellyn and C. J. Munson's Meekness.

ENGLISH SETTERS.—CHAMPION—Dog, Memphis and Avert Kennels' Paul Gladstone. **Bitch:** Memphis and Avert Kennels' Juno A. **OPEN—Dogs:** 1st, R. B. Moran's Mandan; 2d, Memphis and Avert Kennels' Roderigo; 3d, Colorado Kennels' Bridgeport. **Very high com.**, J. A. McDonough's Count Gluckstone. **High com.**, Colorado Kennels' White Cloud and J. N. Macklin's Gath's Mark. **Com.**, A. H. Blanke's Dashing Dan. **W. A. Albright's Shot** and S. H. Scowell's Lake II. **Bitches:** 1st, W. Bedford's Dixie; 2d, Mrs. E. C. Franklin's Vixen II.; 3d, Memphis and Avert Kennels' Haidee. **Reserve,** Dr. W. G. Moore's Bess II. **Very high com.**, Colorado Kennels' Galatea and J. N. Macella's Dora Berwyn. **High com.**, Burnap and Lane's Ma Belle and E. F. Morgan's Akron Girl. **Com.**, J. Durling's Reno. **Pittsburgh Kennel Club's Daisy Queen II** and **South St. Louis Kennels' May B.** **PUPPIES—Dogs:** 1st, P. H. & D. Bryson's Golosone; 2d, Pittsburgh Kennel Club's Dashing Prince. **Very high com.**, J. A. McDonough's Brook and South St. Louis Kennels' Dick. **High com.**, F. Fink Jr.'s Dick. **Com.**, South St. Louis Kennels' Dan. **Bitches:** 1st, Collins & Whiting's Darkness; 2d, Colorado Kennels' Fawn II. **High com.**, South St. Louis Kennels' Madge S.

BLACK AND TAN SETTERS.—CHAMPION—Absent. **OPEN—Dogs:** 1st, withheld; 2d, Dr. S. Whitaker's Don. **Very high com.**, T. T. Washington's Grover Cleveland. **Bitches:** 1st, W. Ehler's Nellie; 2d, J. B. Wickroy's Patti; 3d, F. A. Pratt's Sue. **High com.**, A. Kaunmeyer's Nona. **Puppies:** 1st, W. Ehler's Nellie; 2d, J. B. Rothwell's Nell. **Very high com.**, T. T. Washington's Grover.

IRISH SETTERS.—CHAMPION—Dog, Dr. Wm. Jarvis's Elcho, Jr. **Bitch:** F. M. Brasher's Fawn. **OPEN—Dogs:** 1st, Claire-Retta Kennels' Glenclair; 2d, R. C. Van Horn's Patsey; 3d, J. H. Naylor's Frank. **Very high com.**, C. Hanitch's Dash. **High com.**, H. A. Comstock's Royal C. **Com.**, F. Thorne's Bismarck, E. B. Frost's Grover C. and W. F. Rupphoff's Doc. **Bitches:** 1st, J. M. Lukley's Laura B.; 2d, J. M. Freeman's Grace Glencho; 3d, Dr. Wm. Jarvis's Lorna. **Very high com.**, E. F. Weiss's Clara Belle. **High com.**, J. J. Lucas's Flash. **Com.**, H. Rider's Beauty, Belle and C. B. Beck's Biddy B. **PUPPIES—Dogs:** 1st, withheld; 2d, J. E. Law's Bob White. **Very high com.**, W. M. Fairbault's Shane Rhue. **Bitches:** 1st, Mrs. W. Fitzgerald's Bridget D. II. **Very high com.**, W. R. Fairbault's Maid of Erin.

IRISH WATER SPANIELS.—Dogs: 1st and 2d, J. D. Olcott's The O'Donoghue and Storm; 3d, W. T. Campbell's Harry. **Bitches:** 1st and 2d, J. D. Olcott's Chippewa Belle and Jepsy; 3d, C. B. Rodes's Nora. **Puppies:** 1st, J. D. Olcott's Wad; 2d, C. B. Rodes's Captain Slash.

FIELD SPANIELS.—CHAMPION—No entries. **OPEN—1st** and 2d, withheld. **Very high com.**, T. C. Martin's Dick.

COCKER SPANIELS.—Dogs: 1st, J. S. Lewis's Keno; 2d, Mrs. E.

C. Franklin's Prince Obi. Very high com., Mrs. E. C. Franklin's Colonel Mac. Bitches: 1st, Jos. Lewis's Vic; 2d, Lake Shore Kennels' Blue Silk. Puppies: 1st, F. E. Scheele's Black McDonald; 2d and very high com., Mrs. E. C. Franklin's Fanchon and Count Leo.

FOXHOUNDS.—1st, R. Hyatt's Pat Malloy. Very high com. and high com., P. Chew's Jack, Tim Driver and Boss.

BEAGLES.—Dogs: 1st, Mrs. Geo. H. Hill's Banker; 2d, C. Thomas's Dan. Bitches: 1st, Mrs. Geo. H. Hill's Marjory. Puppies: 1st, withheld; 2d, H. Roach's Oak Wild.

BASSET HOUNDS.—1st and 2d, B. F. Seitzer's Nimrod and Fanchon.

DACHSHUNDE.—1st, A. Willbrandt's Bergman; 2d, B. F. Seitzer's Prince. High com., C. Bibbinger's Rowland.

FOX-TERRIERS.—Dogs: 1st, P. H. O'Neill's Halo; 2d, Trinity Fox-Terrier Kennels' Veto Joe. Very high com., T. McHugh's Punch. High com., W. Wilson's Viper. Bitches: 1st, Trinity Fox-Terrier Kennels' Lily; 2d, W. R. Over's Flimsy. Very high com., St. Louis Kennel Club's Fay II. and W. H. Thompson's Rye. Puppies: 1st, E. L. Munson's Virus; 2d, Trinity Fox-Terrier Kennels' Vagabond. Bitches: 1st, C. J. Munson's Vic; 2d and very high com., Trinity Kennels' Vim and Nellie Bly. High com., Jos. Lewis's Lent.

COLLIES.—CHAMPION.—Dog: J. A. Long's Rob Roy. OPEN.—Dogs: 1st, J. A. Long's Clifton Hero; 2d, J. Ridsy's Young Rob Roy; 3d, A. & J. Hosie's Jock. Reserve, Tower Grove Kennels' Rob Roy III. Very high com., D. E. Esenhardt's Keno. High com., Tower Grove Kennels' Ben Lomond, T. E. Doan's Bruce and H. S. Turner's Bruce. Com., J. B. C. Lucas's Mountaineer and R. F. Henry's Ben Lomond. Bitches: 1st, 2d, 3d and high com., J. A. Long's Picture, Madge Wildfire, Cornet and Flyaway. Reserve, Tower Grove Kennels' Frisco. Very high com., L. Crawford's Bess and Tower Grove Kennels' Queen Victoria. Puppies: 1st, A. K. Sawyer's Mack; 2d and high com., Tower Grove Kennels' Ben Lomond, Mack Dhu and Ben Dhu. Reserve, W. S. Henry's Nelson. Very high com., J. A. Long's Dundee and R. F. Henry's Ben Lomond. High com., S. Stewart's Sullivan, C. T. Maxwell's Clifton Hero, Jr. Bitches: 1st, Tower Grove Kennels' Frisco; 2d, L. Crawford's Bess. Very high com., J. Ridsy's Heather Belle.

BULLDOGS.—1st and 2d, J. P. Barnard, Jr.'s Brimstone and Kinz. BULL-TERRIERS.—1st, J. Lewis's Maud Lee; 2d, W. H. Over's Kit. Very high com., C. H. Bailey, Jr.'s Jack. High com., C. J. Voorhees's Grange and J. Busby's Pet. Puppies: 1st, C. H. Bailey's Tiger.

BLACK AND TAN TERRIERS.—1st, Mrs. B. F. Lewis's Smart; 2d, H. Muss's Lady. Com., M. E. Nolan's Flora. Scotch.—1st and 2d, J. H. Naylor's Heather and Whinstone Yet.

DANDIE DINMONT TERRIERS.—1st and 2d, Mrs. J. H. Naylor's Pansy and Bonnie Briton.

SKYE TERRIERS.—Prizes withheld.

PUGS.—Dogs: Mrs. G. H. Hill's Joe; 2d, withheld. Very high com., Mrs. Dr. Mulhail's Pop. Com., Dr. R. N. Kealhofer's Rex and Mrs. M. A. Fanning's Mugwump. Bitches: 1st, Miss Fanni's W. Baker's Lady Dufferin; 2d, Mohawk Kennels' Todv. Com., Miss Mollie Roersch's Pearl of York. Puppies: 1st, Mohawk Kennels' Todv; 2d, withheld. Very high com., C. Roersch's Fairy. High com., H. Roersch, Jr.'s Cupid.

YORKSHIRE TERRIERS.—1st, J. Clancy's Jack; 2d, withheld. Very high com., C. Hillman's Tiny. Com., J. Clancy's Folly and J. G. Chapman's Jesse.

TOY-TERRIERS.—1st, Mrs. J. D. Phillips' Clip; 2d, Mrs. F. E. Benton's Flossie. Very high com., Mrs. Martin Nolan's Betsy Trotwood. High com., Miss Mary J. Keane's Dick II. Com., Miss Eliza N. Keane's Gillye.

KING CHARLES SPANIELS.—1st and 2d, Mrs. B. F. Wilson's Prince Albert and Flora. Very high com., M. Nolan's Patti.

BLENHEIM SPANIELS.—1st, Mrs. B. F. Wilson's Jim.

ITALIAN GREYHOUNDS.—1st, J. C. Irwin's Babie; 2d, C. Weyrich's Pedro.

POODLES.—1st, A. Sander's Lillie. McCELLANEOUS.—1st, Glendoch Collie Kennels' Sir Lucifer; 2d, Dr. Leidner's Mexican terrier Bats. Reserve, D. Tipping Jr.'s retriever Black Jack, Jr. Very high com., W. Kamphman's Irish retriever Rover and Miss Maggie Stevens's Mexican spauel Don. High com., E. Krome's retriever Sport and H. Russell's Mexican spauel Chiquita. St. Louis rough terriers.—1st and 2d, A. Bower's Tippi and Lillie.

SPECIAL PRIZES.

MASTIFFS.—Best dog, Ashmont Sam; bitch, Beauty; puppy (two) As'mont Sam; bitch puppy, Queen Victor.

ST. BERNARDS.—Best rough-coated, Switzer; puppy (two), Jumbo; smooth-coated, Recty II.

NEWFOUNDLANDS.—Best curly-coated, Prince Albert; wavy-coated, Miro; best of either, Miro; kennel (two), J. H. Holmes's stud dog Prince; brace puppies, Prince and Prince II.

GREYHOUNDS.—Best, Belle puppy; Emir; brace, Longfellow and Speed. Best deerhound, Gold Dust; Great Dane, Caesar.

POINTERS.—Best (three), Keswick II.; bitch (two), Keswick II.; black, Speed; dog puppy, Maxiumum; bitch, Miss Woodford; kennel, St. Louis Kennel Club.

ENGLISH SETTERS.—Best (three) Paul Gladstone; bitch, Juno A.; in open classes, Maudan; dog puppy, Goldstone; kennel, Memphis and Avenet Kennel.

IRISH SETTERS.—Best (two), Elcho, Jr.; bitch, Laura B.; dog in open class, Glenclaire; bitch, Laura B.; puppy, Bridget D. II.; brace, Elcho Jr. and Laura.

GORDON SETTERS.—Best, Nellie; dog puppy, Grouse; bitch puppy, Nellie.

IRISH WATER SPANIELS.—Best (three), The O'Donoghue; bitch (two), Chippewa Belle; brace, The O'Donoghue and Chippewa Belle; puppy (two), Wad.

COCKER SPANIELS.—Best dog, Keno; bitch, Vic; puppy, Black McDonald; pair, Keno and Vic; owned in St. Louis, Prince Obi.

FOXHOUNDS.—Best, Pat Malloy; pack, P. Chew.

BEAGLES.—Best dog, Banker; bitch (two), Marjory; brace, Banker and Marjory.

FOX-TERRIERS.—Best dog, Virus; bitch, Fly; dog puppy, Virus; bitch, Vico; dog in open class, Halo; bitch, Fay; pair, Veto Joe and Fly.

Pugs.—Best (four) Joe; bitch, Lady Dufferin; puppy, Teddy; owned by St. Louis lady, M. E. Esenhardt.

Handsomest dog, Paul Gladstone; ugliest, Dundee; best owned by lady, Vixen III. Mexican spauel, Don. Brace from St. Louis, Clifton Hero and Picture. By child under 10 years old, Dundee.

DEATH OF LANG.—Blairsville, Pa., May 21.—*Editor Forest and Stream*: All dog fanciers who attended the recent bench show at Pittsburgh will remember R. W. Wehrle's Gordon setter puppy Lang. This dog attracted considerable attention from the fact that he was one of the most promising puppies of his class in Western Pennsylvania, and we might add the entire State. His owner received several very good offers for the purchase of the dog, but refused them all, in the idea that by keeping him in this section of the country and under his own control he would be enabled to do something toward the introducing and maintaining of a pure and fine breed of dogs of this sort. Shortly after Lang was brought home from the Pittsburgh show his owner noticed that he seemed to be affected by a lung disorder, and this soon developed into quite a serious trouble, but by good management and careful treatment it subsided. A few days ago the same trouble in an aggravated form made its appearance. All was done for his relief that possibly could be done; but to no avail, and Lang "passed in his chips." The primary intention of this communication is to call the attention of managers of bench shows to the fact that they should exercise great care in excluding from the show all dogs who have the slightest indication about them that they are suffering from disease. When Lang was at the Pittsburgh show his owner noticed that in the same kennel with him was a dog affected with sore eyes and whose general appearance indicated that he was diseased, and Mr. Wehrle feels confident that dog is the innocent cause of Lang's death. Until a few days after the Pittsburgh show Lang was in the best of health, and there is no doubt in the minds of those conversant with the affair that had the diseased dog been excluded from the show Lang would to-day be alive. It cost Mr. Wehrle \$500 to learn this lesson, and managers of bench shows and other interested ones here have it for nothing. If the lesson is heeded it will, perhaps, have not been too dearly bought.—THE DUKE.

THE BEAGLE BITCH TRINKET.—*Editor Forest and Stream*: Recently Mr. A. C. Krueger reported the beagle Trinket (Flute—Queen) as bred to Bannerman. In reply I stated that a party in Pittsfield, Mass., advertised a beagle bitch for sale. He wrote me that he would sell her for \$12, and added, "I have her pedigree which I will let the man have that buys Trinket." Knowing Trinket as a show winner and the dam of show winners, I was suspicious regarding her identity. And although I replied at once that if his bitch was the original (Flute—Queen) Trinket, winner at Meriden, I would take her, he did not reply until some weeks later, when he wrote that she was, and had won two prizes at Meriden, but that he had sold her. Trinket won one prize at Meriden; she was bred by N. Elmore and sold to Mr. J. W. Marroway, and I bought her from him. Mr. Krueger has probably been imposed upon regarding the breeding of the bitch and I requested the use of another name. I claimed priority of name, which it is customary to acknowledge, particularly as my Trinket is a show winner, and registered in the *American Kennel Register*. Notwithstanding, Mr. Krueger further advertises the beagle Trinket for sale in the *FOREST AND STREAM*. After the publication of my former letter I feel compelled to state that I am the owner of the beagle known to the public as Trinket. As I showed that the Pittsfield party gave a fictitious show record for his hound, and also claimed her to be the same name and breeding as another well known one, Mr. Krueger certainly should have taken time to investigate the breeding of his hound, which is doubtless fictitious.—H. F. SCHELLHASS (Brooklyn, N. Y., May 18).

CHANGED NAME AT SHOWS.—New Haven, Conn., May 22.—*Editor Forest and Stream*: I have a dog that won first in a puppy class at New York in 1884, and was commended at the last show. I have lately changed his name and have registered him in the A. K. R. Would his A. K. R. number be sufficient identification in entering him at future show, or shall I have to give his former name as well?—E. S. PORTER. The A. K. R. rules say: "2. All dogs entered for competition or exhibition only shall be entered in the name of the bona fide owner. Such entry must be identified by the name of the dog, its date of birth, and, if known, the name of its sire, dam and breeder; otherwise, it must be entered 'pedigree unknown.' If the name of a dog which has won a first prize has been changed, its name at time of winning any and every such prize, and the place thereof, must be given. 3. If a dog is entered without being identified, as directed in Rule 2, it shall be disqualified from competition."

AN UNFAILING REMEDY FOR ALL SKIN DISEASES.—*Editor Forest and Stream*: Take train oil, one quart; petroleum oil, one gill; turpentine, one-half gill; sulphur, one pound; mix to the consistency of cream; then dress the dog all over with the mixture, rubbing well in with the hands until every part of the dog is saturated; allow to remain for a week or ten days, then wash off with strong solution of soda, warm water and softsoap. If the dog licks off the mixture, all the better, it will help him. The only medicine (if needed) is a dose of salts twice a week for a fortnight or three weeks. A few weeks after the above treatment the dog will look like a new animal with a fine healthy coat. If very bad case of mange repeat dressing, but it is seldom necessary. I have cured the very worst cases possible, including a noted stud setter now in Canada.—JOHN R. ROBINSON, representative of the late E. Laverack (Sunderland, Eng., May 12).

POINTERS FOR CALIFORNIA.—*Editor Forest and Stream*: A. B. Truman, the well known dog man of San Francisco, has received two very handsome lemon and white pointer puppies from the kennels of Dr. J. B. S. Holmes, of Rome, Ga. These puppies are very fine ones, and are a great addition to the pointer stock of the Pacific coast, and will be of great interest to all lovers of the pointer. Their sire is Sensation, and their dam is Seph G., winner of the first prize, open class, Westminster Kennel Club. Everything goes to indicate that they will make grand dogs to hunt the California quail.—PRIAR TUCK.

THE TEXAS FIELD TRIALS CLUB.—The Texas Field Trials Club was recently organized at Marshall, Tex., with the following named gentlemen as officers: President, Mr. Amory F. Starr; Vice-Presidents, Messrs. J. D. Rudd and W. M. Robertson; Secretary, Mr. J. F. Sharp; Treasurer, Mr. Edmund Key. The Executive Committee consists of Harry Blocker, C. B. Cook, Jr., S. H. Green, Frank Y. Hall, Edmund Key, W. H. Pope, W. V. Richardson, W. M. Robertson, W. J. Rosborough, Jr., J. D. Rudd, J. F. Sharp, Amory R. Starr, A. B. Waskom, W. E. Winston and E. P. Womack.

ST. BERNARD AWARDS AT NEW YORK.—*Editor Forest and Stream*: My bitch Belle II., open class smooth St. Bernards, was awarded vhc. at the recent Westminster Kennel Club show. This award does not appear in the published list, as it was made after the first day of the show. Through an oversight on the part of Mr. W. W. Tucker, the judge, he did not notice her when in the ring. The award was afterward duly recorded in the judge's book.—K. E. HOPP.

SPANIEL SPECIALS AT NEW YORK.—*Editor Forest and Stream*: In your list of specials at New York, you omit the one for best liver and white field spauel won by Dash II. (A. K. R. 36009). E. M. OLDHAM. [There was no special of the kind in the published list, nor did the secretary mention it in the additional list sent us and published last week. Will the W. K. C. kindly explain?]

POINTER IMPORTATION.—Lad of Bow, Beppo III. and Lass of Bow, the property of the Graphic Kennels, of Jersey City, reached Hoboken on Saturday last on the German steamer Eider. They arrived in excellent condition, and the owners are greatly pleased with them. Lad and Lass of Bow are heavy-weight pointers, and Beppo III. is a light weight; all of them are liver and white. Lass of Bow won second prize at the recent field trials in England.

TOM BALL.—May 12.—*Editor Forest and Stream*: I notice in your issue of April 22, that "Lilibulero" states in his letter of March 27 that my bulldog Tom Ball could be purchased for \$100. This is not correct. I refused \$100 for him four times and sold him for more.—J. C. LYALL.

IMPORTANT SALE OF GREYHOUNDS.—Mr. H. W. Smith, of Worcester, Mass., has disposed of his kennel of greyhounds, with the exception of Friday Night, which he will keep.

MR. WM. TALLMAN has bought out the Blackstone Kennels, comprising Foreman, Plantagenet, Mack B. and some very nice Laverack bitches, and is now the owner and manager.

A NEW ONE.—England is to have a *Pet Dog Journal*, to take special notice of ladies' pets. It will be published at 211 Cardigan Lane, Headingley, Leeds.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Pop. By H. C. Miner, New York, for orange, with white markings, St. Bernard dog, whelped March, 1885, by Ditty (Sirias—Thora) out of Orgar (Hector II.—Nres II.).

Count Ranger. By N. Palmer, Baltimore, Md., for white, black and tan ticked Liwellin setter dog, whelped Aug. 12, 1883, by Count Noble (Count Wind'em—Nora) out of Gertrude (Gladstone—Sanborn's Nellie).

Belle. By Neally Morgan, Newmarket, N. H., for red Irish setter bitch, whelped Feb. 8, 1885, by Dash (Berkley—Bennett's Lily) out of Beauty (Rocket—Madge).

Bessie Gladstone. By E. A. Melzar and Dr. Homer Emerson, Milton, Mass., for black, white and tan English setter bitch, whelped Nov. 2, 1884, by Don Gladstone (Gladstone—Juno) out of Bessie T. (Gladstone—Major Taylor's Floy).

Whisper. By J. L. Wyckoff, Perry, N.Y., for black, white and tan foxhound dog, whelped Feb. 20, 1886, by Whcopy (Dick—Spotty) out of Flora.

NAMES CHANGED.

Bertha to Betsy Trotwood. Black, with white frill and feet, cocker spauel bitch, whelped Nov. 19, 1885 (Kiddlewink—Gretchen), owned by Geo. W. King, Denver, Col.

BRED.

Notes must be sent on the Prepared Blanks.

Belle—Thunder. Theo. B. Stubbs and Wm. M. Wood's (Linwood, Pa.) English setter bitch Belle to Thunder, April 27 and 28.

Justly—Sir Lucifer. Glendoch Collie Kennels' (Bethlehem, Md.) English bitch sherdog bitch Judith (A.K.R. 3161) to their Sir Lucifer (A.K.R. 3678), April 12.

Patsy—Dash. J. J. Lanigan's (Boston, Mass.) Irish setter bitch Patsy (Prince—Peg) to Mrs. H. Edmonds's Dash (A.K.R. 1465), April 20.

Vic—Dash. Mr. Murphy's (Boston, Mass.) Irish setter bitch Vic (Sam D.—Rory) to Mrs. H. Edmonds's Dash (A.K.R. 1465), May 7.

Myrtle—Rattler III. W. S. Diederfer's (Baltimore, Md.) beagle bitch Myrtle (E. 15,725) to his Rattler III (A.K.R. 2798), May 19.

Faustina—Ross. E. A. Melzar and Dr. Homer Emerson's (Milton, Mass.) English setter bitch Faustina (Dash III.—Nellie Dale) to E. A. Melzar's Ross (A.K.R. 2169), May 17.

Maud—Black Pete. E. S. Bird's (Rockland, Me.) cocker spauel bitch Maud (Sam—Daisy) to J. P. Willey's Black Pete, April 22.

Shina—Black Pete. J. P. Willey's (Salmon Falls, N. H.) cocker spauel bitch Shina (A.K.R. 1484) to his Black Pete (A.K.R. 3071), March 10.

Jet W.—Obi II. W. Scott's (Waterbury, Conn.) cocker spauel bitch Jet W. (A.K.R. 351) to J. P. Willey's Obi II. (A.K.R. 432), March 27.

Ada—Obi II. J. W. Kelley's (Woodstock, Ont.) cocker spauel bitch Ada (Obi II.—Woodstock Dinah) to J. P. Willey's Obi II. (A.K.R. 432), May 7.

Critic—Obi II. W. O. Partridge's (Boston, Mass.) cocker spauel bitch Critic (A.K.R. 309) to J. P. Willey's Obi II. (A.K.R. 432), May 5.

Doric—Obi II. S. R. Hemingway's (New Haven, Conn.) cocker spauel bitch Doric (A.K.R. 2787) to J. P. Willey's Obi II. (A.K.R. 432), April 11.

Jet B.—Obi II. F. J. Smith's (Farmington, N. H.) cocker spauel bitch Jet B. (A.K.R. 1200) to J. P. Willey's Obi II. (A.K.R. 432).

Woodstock Queen—Obi II. Jas. Luckwell's (Woodstock, Ont.) cocker spauel bitch Woodstock Queen to J. P. Willey's Obi II. (A.K.R. 432), Feb. 4.

Blackstone Gladstone. E. W. Clark, Jr.'s (Philadelphia, Pa.) English setter bitch Blaze (Count Noble—Rosahnd) to P. H. Bryson's Gladstone (Dan—Petrel), April 1.

Jolly Nell—Black B. A. J. Calahan's (New Haven, Conn.) English setter bitch Jolly Nell (Prince—Jolly May) to Blackstone Kennels' Mack B. (Dick Laverack—Twilight), April 1.

Countess B.—Foreman. B. Thorpe's (Woodbury, N. J.) English setter bitch Countess B. (Dashing Lion—Victoria) to Blackstone Kennels' Foreman, April 28.

Pansy—Mack B. Blackstone Kennels' (Tarrytown, N. Y.) English setter bitch Pansy (Plantagenet—Jessie) to their Mack B., April 24.

Jessie—Mack B. W. Tallman's (Tarrytown, N. Y.) English setter bitch Jessie (Blue Dan—Flake) to Blackstone Kennels' Mack B., May 13.

Orphan Girl—Foreman. E. R. Troxell's (Pittston, Pa.) English setter bitch Orphan Girl (Leicester—Peers) to Blackstone Kennels' Foreman, Washington Market (Fairly II.), April 3.

Lulu—Foreman. Blackstone Kennels' (Tarrytown, N. Y.) English setter bitch Lulu (Mack B.—Beauty) to their Foreman, April 12.

Belle of Bridgeport—Plantagenet. John White's (Bridgeport, Conn.) English setter bitch Belle of Bridgeport to Blackstone Kennels' Plantagenet, April 8.

WHELPS.

Notes must be sent on the Prepared Blanks.

Leo. Elu City Kennels' (New Haven, Conn.) greyhound bitch Leo, May 3, six (two dogs), by Dan.

Wanda T. E. P. Thomas's (Hoboken, N. J.) cocker spauel bitch Wanda T., May 16, seven (three dogs), by Hornell Silk (A.K.R. 1937).

Red Rose. W. O. Rogers's (Jefferson, Pa.) Irish setter bitch Red Rose (A.K.R. 839), May 4, eight (five dogs), by S. C. Colt's Barney O'Shea (A.K.R. 421).

Scouty. J. L. Raub's (New London, Conn.) cocker spauel bitch Scouty (Snipe—Flake), April 17, nine (five dogs), by Ideal Kennels' Pilot (Dan—Daisy Lee).

Bessie Gladstone. E. A. Melzar and Dr. Homer Emerson's (Milton, Mass.) English setter bitch Bessie Gladstone (Don Gladstone—Bessie T.), April 18, five (two dogs), by E. A. Melzar's Ross (A.K.R. 2169).

Frolic. W. Tallman's (Tarrytown, N. Y.) English setter bitch Frolic (Foreman—Jessie), May 8, nine (six dogs), by Blackstone Kennels' Mack B.

SALES.

Notes must be sent on the Prepared Blanks.

Max and Nellie. Black, white and tan English setter dog and bitch, whelped Oct. 26, 1885, by Count Gladstone out of Glen (A.K.R. 1938), by Theodore Potter, Glendale, O., to C. C. Richardson, same place.

Dupe. Lemon and white English setter dog, whelped Oct. 26, 1885, by Count Gladstone out of Glen (A.K.R. 1938), by Theo. Potter, Glendale, O., to John Smith, Cincinnati, O.

Count Ranger. White, black and tan ticked Liwellin setter dog, whelped Oct. 12, 1883, by Count Noble out of Gertrude, by H. Pape, Hoboken, N. J., to N. Palmer, Baltimore, Md.

Nellie Husted. Red Irish setter bitch, whelped Aug. 17, 1884, by Glencho out of Red Lassie, by Thos. J. Farley, Albany, N.Y., to J. A. Garlaud, Jr., New York.

Jessie III. Black, white and tan English setter bitch, whelped Oct. 29, 1883, by Foreman out of Old Jennie, by W. Tallman, Tarrytown, N. Y., to N. Wallace, Watertown, Conn.

Whisper. Black, white and tan foxhound dog, whelped Feb. 20, 1886, by Whcopy out of Flora, by H. E. Cook, Hillsdale, Mich., to J. L. Wyckoff, Perry, N. Y.

Count Gladstone—Glen (A.K.R. 1938) whelp. Black, white and tan English setter bitch, whelped Oct. 26, 1885, by Theo. Potter, Glendale, O., to Thos. Goff, Batavia, O.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

J. G. H., Shamokin, Pa.—A pointer pup four months old, after eating is frequently troubled with biccoughs. Ans. Your puppy probably eats too fast—bolts his food. If the trouble continues so as to annoy him or you, feed from the hand and note the effect.

E. J. B., Scarborough.—My pointer bitch through accident was bred to a mongrel dog. Will it affect the pups she has in the future, that is, pups from a finely bred dog? Ans. It may or may not. If she has never had puppies it is more likely to than if she had had one or two litters. Authorities and observations differ on this point. No absolute answer can be given.

M. H., Philadelphia, Pa.—1. What is the best wash and ointment for general use in kennels for slight heat or irritation of the skin? 2. What is the best food for weaning and breeding puppies, and also for pups? 3. What is the best food for pups from 10 to 14 days old away from the mother? Ans. 1. Carbolic or sulphuric soap, balsam of Peru ointments. 2. Ashmont's milk is probably what you want.

W. H. K.—I am unable to report any change in my dog. He certainly is no worse. I conclude that the treatment must be continued for some time. His belly is considerably drawn up. Ans. Give five drops of Fowler's solution of arsenic twice daily in the food in place of the mix after the latter has been continued for ten days from the first administration. Feed principally fluids.

J. A. F., Steelton, Pa.—A whippet will not eat anything and is getting very thin, but seems all right in everything else, and is lively enough when taken out. Ans. Keep the dog's bowels in good order with reasonable doses of syrup of buckthorn when needed. Give five drops of Fowler's solution of arsenic three times daily for two weeks, and if your dog is not better let us know.

C. F. L., Haverhill, Mass.—1. One of my four weeks old pointer pups is swollen up to nearly twice his normal size. Was all right until ten days ago and growing as well and as rugged as any in the litter; he does not appear to be in much pain and eats fairly well. I treated him for worms and he passed a large quantity. 2. One of the same litter had an abscess form and break on its belly just inside his hind leg. I kept it clean with water and carbolic acid, it has healed all right, but has left a small bunch, looks like a rupture. Can it be trussed any way so as to reduce it? Ans. 1. You must rid the dog of the worms

Martin first, Crawford second, Williams third.

THE BUFFALO TOURNAMENT.

BUFFALO, May 18.—The three days' shooting tournament opened auspiciously to-day at the Driving Park. Peoria blackbirds are used, and prizes aggregating \$900 are being contested for. Two contests are on the programme for each day. The tournament has brought together many of the best shots in the country, including most of those who were present at the State shoot of the New York State Association for the Protection of Fish and Game held in Buffalo on September 13th. Among those who contested to-day were H. B. Whitney, of Phelps, N. Y., the boy wonder, who won the Pierce diamond badge in 1884, D. M. Levever, C. Wagner, and A. Baker, of Rochester; Eugene Smith, of La Salle, W. H. Fleischer, of Irondequoit, Ed. Hudson, Geo. Luther, A. G. Courtney, Wm. Erb, alias Coter, a Lafayette, Ind., professional shot; F. L. Chamberlain and J. J. Wightman, of Cleveland; Francis Drake and J. C. Lineman of Bradford, and others equally well known. The tournament is considered the first there was of the kind, and the pluck of Messrs. Ed. Taylor, president of the Audubons, J. P. Manning, J. P. Fisher, Otto Besser, Jr., and Eugene Bertrand in holding it is commendable. Buffalo shots were conspicuous by their absence, which may easily be accounted for by the fact that there are no Buffalo sportsmen able to compete with those from outside who make shooting their business.

The day was all that could be asked, there being no wind. Two sweepstakes were shot before the regular contests, the entrance being \$1. Five traps were used and 5 birds shot at in each sweepstake. In the first there were 16 entries. The scores follow:

F L Chamberlain.....	11101-4	Frank Drake.....10111-4
C Wagner.....	11111-5	D M Levever.....01111-4
William Myers.....	10001-2	E H Smith.....11111-5
A Baker.....	11111-5	E Hudson.....01110-3
William Coter (Erb).....	10111-4	George Stauben.....10111-4
George Luther.....	10111-4	A G Courtney.....01110-3
J A Prechtel.....	10111-4	H B Whitney.....11111-5
J J Wightman.....	10111-4	H H Fleischer.....1 out-1

The two were Coter and Coter took first money, 50 per cent., Smith and Whitney divided second money, 30 per cent., and A. G. Courtney took third prize, 20 per cent., of the \$16.

In the second sweepstake there were 21 entries, making the purse \$21. The score follows:

C Wagner.....	11110-4	F Drake.....11101-4
E H Smith.....	11110-3	George Luther.....10111-4
A Baker.....	10100-2	William Richmond.....11111-5
J J Wightman.....	11111-5	J J Wightman.....11110-4
H B Fleischer.....	10110-3	A G Courtney.....00000-0
Ed Hudson.....	11101-4	Otto Besser, Jr.....01101-2
H B Whitney.....	11111-5	P A Poole.....00101-3
D M Levever.....	11100-2	J A Prechtel.....01011-3
J Koch.....	10111-4	George Stauber.....10011-3
J Grau.....	10001-2	William Myers.....00000-0
F L Chamberlain.....	00111-3	

When the ties were shot off Richmond took first money, Drake, Luther and Wagner divided second and Whitney took third.

The first regular contest was at 10 birds, the prizes aggregating \$150, being \$50, \$30, \$20, \$10 and \$5 respectively. Thirty-one of the sportsmen entered at \$5 apiece. Some very good shooting was done. Coter, Lineman, Wagner and Whitney killing a straight string of birds. The following is the score:

E H Smith.....	101111111-9	Henry Quinn.....011000011-5
W Coter.....	111111111-10	O Besser, Jr.....010101001-4
A Baker.....	111111111-8	Louis Fritz.....010101001-4
C Chamberlain.....	111111111-7	J O Manning.....100101110-6
F Drake.....	100011111-7	Geo Stauben.....110110111-8
J C Lineman.....	111111111-10	Wm Richmond.....110110111-8
Ed Hudson.....	101110111-8	Geo Luther.....111110110-8
J Prechtel.....	111111111-9	J Koch.....1100110101-6
Ed Taylor.....	111110010-7	H B Whitney.....111111111-10
C Wagner.....	111111111-10	D M Levever.....1100110101-7
E Hudson.....	010101011-5	A G Courtney.....110111111-9
Geo R Vine.....	010101011-6	H H Fleischer.....111111111-9
G E Fisher.....	111110111-8	J J Wightman.....111110001-7
J F Jones.....	110000001-2	W Myers.....1111000101-6
Geo Jenne.....	001100011-6	John Grau.....001010101-4
F Schwartz.....	100101001-5	

The first three prizes were divided by those who were tied on 10, 9 and 8 birds respectively. Wightman took fourth money and Myers fifth prize.

The second contest was at 10 birds for a purse of \$150. There were 26 entries and the score resulted:

George Jenne.....	011011001-6	J Koch.....000111000-4
Ed Hudson.....	111111111-10	W Myers.....010101010-6
H B Whitney.....	010110111-7	J A Prechtel.....111101110-8
H H Fleischer.....	111101111-9	A G Courtney.....111011011-7
E H Smith.....	101101011-7	George Luther.....111101111-9
W Richmond.....	111101111-9	W Coter.....111111111-10
A Baker.....	011111111-9	F Kimball.....111111111-10
F L Chamberlain.....	110111111-9	Geo R Vine.....000101101-4
Frank Drake.....	101101111-5	J J Wightman.....111001010-4
C Wagner.....	111111111-10	J P Fisher.....010110101-6
J C Lineman.....	111110111-9	O Besser, Jr.....000101000-2
J Dingens.....	001010111-6	J O Manning.....0100101000-3
E Taylor.....	1111011011-8	Sol Scheu, Jr.....000000000-0

Those tied on 10 birds divided first money. Richmond and Luther tied on 9 birds, divided after the others had been shot out. Those tied on 8 and 7 birds respectively divided.

A sweepstake followed the regular contests, which was won by Smith who took first money. Whitney took second money.

May 19.—The second day attracted a larger crowd than on the first day and the contests were at times very exciting. The shooting began at 11 o'clock, a sweepstake being the first match.

The first regular contest was for a purse of \$150, at 10 blackbirds and brought out 20 of the sportsmen. Hudson and Barnes tied for first money, \$50, which they divided; second money, \$40, was divided by Wagner, Courtney, Koch and Greene, who were tied on 9 birds. Koch, a Buffalo hunter, did some very good shooting and his success rather encouraged some other Buffalo shots. Third money, \$30, was divided among Luther, Baker, Chamberlain, Whitney and Richmond, Courtney and Baker divided fourth money, and fifth was divided between those tied on 6 birds. The following is the score:

J A Prechtel.....	011101110-8	A J Mmter.....	101010101-6
A Baker.....	110011010-7		
There were 37 birds in the second contest, which was the same as the first. The purse of \$150 at 10 birds. Ties were numerous and the money was all divided except third, which was shot for and won by Baker. The score follows:			
E H Smith.....	110111010-7	J Koch.....	111011001-7
W Gombert.....	111110110-8	A Baker.....	010111101-7
W Richmond.....	111110110-8	J O Manning.....	000111111-7
F L Chamberlain.....	110101001-5	J J Wightman.....	111111100-8
G Geo Luther.....	011111101-8	H B Jones.....	100010001-8
J S Barnes.....	111111101-9	C Greene.....	110111010-7

Allen.....11111-5	

Duffy, Damsel and Allen divided first, Aston, Mason and Mack divided second, Buntin and Wickersham divided third.

Second match at five Lowsky clay pigeons:	
Aston.....11101-4	Buntin.....00110-2
Southwick.....01010-2	Wickersham.....00111-3
Gugle.....01101-2	Allen.....01011-3
Damsel.....01111-4	Webb.....00101-2
Drake.....10111-4	Siebert.....10100-2
Mason.....11111-5	Kiefer.....10101-2
Wendt.....10101-5	Ackerman.....11011-4
Duffy.....10101-3	Mack.....11011-4
Graham.....01010-2	

Mason took first prize, Damsel and Mack second and Duffy and Wickersham third.

Third match, at 5 American clay birds:	
Gugle.....00101-2	Buntin.....11111-5
Southwick.....01111-4	Allen.....11011-4
Damsel.....10101-2	Webb.....10010-2
Wickersham.....10101-2	Kiefer.....11110-4
Mason.....11111-5	Ackerman.....11011-4
Wendt.....11111-5	Mack.....00101-2
Duffy.....10101-3	Buck.....11101-4
Graham.....11011-4	

Mason, Wendt and Buntin divided first, Southwick and Allen divided second, Drake and Duffy divided third.

Fourth match, at 7 Lowsky clay pigeons:	
Aston.....11101-4	Damsel.....10110-4
Kiefer.....01111-5	Graham.....11111-5
Duffy.....10111-6	Webb.....10000-3
Ackerman.....11111-7	Wendt.....11011-6
Wickersham.....11111-7	Webb.....00100-3
Drake.....00110-4	Mack.....10100-4
Mason.....01111-6	Allen.....10111-5
Buntin.....11101-6	Southwick.....10011-4
Ackerman, Wickersham and Damsel divided first, Duffy and Mason divided second, Kiefer and Allen divided third.	

Fifth match, at 7 American clay birds:	
Aston.....11111-7	Buntin.....11111-7
Kiefer.....01001-3	Allen.....00011-4
Duffy.....11101-6	Mack.....10010-3
Wendt.....10101-5	Ackerman.....10010-3
Wickersham.....01010-4	Harlow.....00111-5
Webb.....01111-5	Hamel.....10111-6
Siebert.....01101-5	Gugle.....00101-3
Mason.....01010-4	Southwick.....11100-5

Aston, Buntin and Allen divided first, Duffy and Damsel divided second, Southwick and Harlow divided third.

Sixth match, 5 singles and 2 pairs of American clay birds:					
Duffy.....	11111-5	11 10-8	Mason.....	10111-4	11 00-6
Wendt.....	11100-3	10 11-6	Webb.....	10111-4	10 10-6
Buntin.....	09010-1	00 00-1	Damsel.....	01011-3	01 11-5
Aston.....	10110-3	11 10-6	Gugle.....	00101-2	11 10-5
Ackerman.....	01011-3	01 01-5	Kiefer.....	10110-3	11 10-6
Buck.....	11100-3	11 11-7	Southwick.....	10111-4	10 10-6
Wickersham.....	10111-4	00 10-5	Graham.....	10010-2	11 00-4
Allen.....	11100-3	11 11-7	Harlow.....	11101-4	10 11-7
Duffy took first prize, Buck, Allen and Harlow divided second, Mason and Kiefer divided third.					

Duffy took first prize, Buck, Allen and Harlow divided second, Mason and Kiefer divided third.
